favors such reforms in the tariff as will properly prepare the way for the final triumph of free trade; and this triumph not in the distant future. "This generation of workmen" must have its benefits. Meanwhile he is for a tariff for revenue only, which he thinks he has proven to be the same as a tariff for revenue with incidental protection. Moreover, so long as we must bear the infliction of a tariff which yields even incidental protection, he would confine that protection to the manufacturers alone and wipe out the wool-growing industry and every other industry producing raw materials. And to this feast of free trade the workmen of this generation are invited.

PENNSYLVANIA AND THE TARIFF.

The State of Pennsylvania has been charged with being purely selfish and unjust to her sister States by insisting upon ample protection for her iron and steel industries. True, Pennsylvania is more deeply interested in maintaining protection for these industries than any other State, but I deny that she is unmindful of any other State or unwilling to claim equal protection for every other industry adapted to our people and soil. This nation needs protection for iron and steel in the interest of other States more than in the interest of Pennsylvania. The competition which will give cheap iron and steel must come from this country and should come from different sections of it. Under the present tariff this industry is extending into new States and Territories. Thirty States made iron in 1880, and about half of these made steel, we are told by Mr. Swank in his able report embodied in the tenth census.

If Pennsylvania prospers under the tariff other States will share that prosperity and are free to engage in the same profitable industry. With the varied climate and immense resources of this country, with capital in abundance, free to change from unprofitable to profitable employments, there cannot long be even the semblance of monopoly. There should be no jealousy between industries. Pennsylvania claims that all should be protected. If any one has less than it needs, give it more. If capital anywhere thinks the iron business is most profitable, let it invest and share the risk and the profit. What we demand is work for all our people. We cannot afford to be idle and import what we can make at home. No nation can be independent which does so. Nor can we permit our scale of wages to be reduced in order to compete with cheap labor of other countries. Our workmen must assume the responsibilities of government as foreign laborers do not. They must have means to educate their children, to contribute their share to the establishment of such civil and religious institutions as will prepare our whole people for usefulness and for the greatest comfort. Our highest national duty, it seems to me, is to so shape our customs laws as to secure necessary revenue while we specifically protect every industry possible to our people, for we shall need them all. The struggle of the ages has not been after cheap food and clothing, as our Democratic friends seem to think when they ring the changes upon the per cent. of tax, so called, that the laboring-man has to pay on what he buys. The struggle is for work, work—steady employment. No man ever failed to get food and clothes if he had work. Nor did any workingman care particularly that the goods and produce of the merchant were cheap when the mill and the factory were idle.

Start the mill, the furnace, the factory, by the imposition of a tariff, and how soon will the farmer be able to get 20 per cent. more for his produce? Even if it were true, which we deny, that prices are permanently higher under the operation of the tariff, labor is employed and labor is the source of all wealth.

Wealth can therefore afford to pay higher prices for manufactured goods and have larger savings than before. This we shall show has been the experience under the protective tariff.

Pennsylvania is proud of her iron and steel industries. As appears from the report of Mr. Swank, the total production of iron and steel in the United States in 1880 was 7,265,140 tons, of which amount Pennsylvania produced 3,616,668 tons, or a trifle less than 50 per cent. of the whole. The total production of the country in 1870 was 3,655,215 tons, of which amount Pennsylvania produced 1,836,808 tons, or a little over 50 per cent. The increase in the entire product in ten years of present tariff was 98.76 per cent. The increase of Pennsylvania's product was 97 per cent. The county of Lawrence, which is within my district, has increased its iron product—pigs, forged and rolled iron—from an annual value of \$138,500 in 1860 to \$1,139,326 in 1870, and \$2,864,509 in 1880, an increase of 90 per cent. in the last ten years. Since the census of 1880 the increase has been greater still. It will not be an easy thing to convince the farmers of that county, whose wagons throng the streets of Newcastle, that the tariff oppresses them. Nor will the argument find greater favor with merchants, doctors, lawyers, blacksmiths, or men in any honorable occupation.

COAL INDUSTRY.

The magnificent development of the coal industry is largely dependent on the iron production, and both on the tariff. Coal is a prince among forces. The area of the coal-fields of the world is said to be 260,000 square miles, of which the United States contains 192,000 square miles—74 per cent. of the whole. True the value of deposit is estimated not alone by area; quality, thickness of vein, and accessibility are essential. The bituminous coal-fields of Western Pennsylvania in 1880 furnished nearly 25 per cent. of the entire product of the country, which was 260 per cent. greater than in 1870,

as will appear in the admirable document issued by the Pittsburgh Chamber of Commerce, from an advance copy of which I quote. Western Pennsylvania has 14,000 square miles of coal territory; Great Britain has less by about 3,000 miles, and yet Great Britain produced in 1872 53 per cent. of the world's production. What may not our State and our country produce if capital and labor are protected as they should be?

It is said that the energy or force contained in a pound of coal is equal to the average day's work of a man. If so, the coal-miner is a benefactor to his race. If he digs one hundred bushels of coal in a day he adds by his labor to the labor forces of the world an equivalent to the labor of 8,000 men. In 1880, 3,396,331 tons of coal were sent through the locks of the Monongahela River alone, 92 per cent. of which went south by the Ohio River. And here we stop to emphasize the importance of improving the navigation of that river. Coal can be shipped 2,000 miles by water to light the fires of industry in southern and western cities at a cost of ninety-five cents per ton, including return of boats, while for distances of eight to twenty miles by rail in the neighborhood of Pittsburgh the freight is from twenty to forty cents per ton. Railroads are the largest consumers of iron and steel, and they alone have made it possible by immense competition and great reductions in through freight to send the products of western farms across the continent and over the sea to redeem our bonds in foreign hands and to change the balance of trade so largely in our favor.

But I must hasten. The immense resources of this country clearly demonstrate the duty of our people to produce at home what we need and to have a tariff that will compensate for the difference in wages, interest, and transportation until we do produce all we need. When that point is reached the tariff will not affect the price to the consumer, but the cost of production and that alone will. That cost, under our system and by virtue of the inventive genius of well-paid, intelligent labor, is diminishing every year.

TAX ON THE CONSUMER.

So much is said about the heavy tax paid by the consumer for products of protected manufactures that it is a pertinent question how much of the living expenses of a family go out for manufactured products or products that are affected by the tariff. It will scarcely be claimed that flour and beef and agricultural products generally are any higher than they would be if the tariff upon them was 100 per cent. Why? Because we can raise them, ship them by rail to New York, pay freight across the ocean, and sell them in foreign markets. They are all cheaper to the American laborer, while his wages are double those of foreign laborers. An English writer, who is good authority on this subject, Professor Leone Levi, of King's College, London, thus speaks of the expenditures of workmen:

The expenditures of our workmen may be divided into four distinct heads; namely, first, food; second, house-rent, with fire and lighting; third, clothing; fourth, education, health, and recreation. The proportion which each of these bears to the whole must, of course, vary considerably; but generally we may calculate that more than half, or rather two-thirds, of the income is devoted to food, and the remainder is expended in the other three items.

BENEFITS OF PROTECTION TO LABOR.

The strongest plea for protection is that it does materially increase the returns of labor. The most skillful handling of figures I have yet seen to disprove this proposition is in the speech of the gentleman from Kentucky, [Mr. CARLISLE;] and yet I quote his words to show that his own figures are in themselves the refutation of his argument. He says:

In the census year 1860, when the average rate upon all dutiable goods was 19 per cent. ad valorem, and the rate upon all goods, dutiable and free, less than 15 per cent., there were employed in all the mechanical and manufacturing industries in this country, consisting of more than six hundred different branches, 1,311,246 hands, whose wages amounted to \$378,878,966; the capital invested was \$1,009,855,715; the cost of material was \$1,034,605,092, and the total value of the product was \$1,885,861,676. Labor received a little over 20 per cent. of the value of the product. In 1870, after nearly ten years of high protection, the number of hands employed was 2,053,996, and the wages paid amounted to \$775,584,345; the capital invested was \$2,118,208,769; the total cost of material was \$2,488,427,242, and the value of the product was \$4,232,325,442. The excess of the product over the total cost of labor and material was \$968,313,855, which was 45.7 per cent. on the whole amount of capital invested. Labor received only a little over 18 per cent. of the value of the product, nearly 2 per cent. less than in 1860.

If this means anything it means that the workingman in 1860 under a revenue tariff was better off than in 1880 under protection.

Now take his figures. In 1860, 1,311,246 hands employed; aggregate wages, \$378,878,966, an average of \$288 per annum. In 1870, under protection, hands employed were 2,053,996; aggregate wages, \$775,584,345, an average of \$377 per annum.

Of course one day's labor in 1870 produced more than in 1860. For instance, a man might in 1860 have made one vest in one day and been paid \$1; value of product, \$5. He would receive 20 per cent. of product for labor. If in 1870 he should make three vests in a day by the aid of machinery and get \$2 for his day's work, value of the product, say \$12, we should find that he had only 16 2/3 per cent. of the product, while he had 100 per cent. more wages. And at the same time the manufacturer would in the instance I have named be giving the consumer or purchaser goods in 1870 for \$12 for which he paid \$15 in 1860.

So I might go through all other fine-spun theories and deductions from statistics to show the workingmen of this country what they know and what every immigrant that seeks our shores knows, name-

ly, that labor has gained immensely under the American system of protection.

The workingman of to-day lives better than he did in 1860. Our per capita consumption of woollens, as I have shown, rose from \$2.33 in 1860 to \$5.32 in 1880. Our per capita consumption of all cereals, according to figures which Mr. Edward Young furnished me, rose from 38 bushels in 1860 to 48 bushels in 1880. In 1850 it was only 35 bushels, round numbers. The homes of workingmen have become tasteful. Children have the benefits of schooling as never before. The hours of labor are being shortened and with gratifying results. On this point I quote from Mr. Swank's report:

AN INNOVATION IN THE EMPLOYMENT OF LABOR.

In this connection reference may be made to the innovation which has taken place at a few of the blast furnaces and steel works of the country in dividing the day of twenty-four hours into three turns, or shifts, of eight hours each, with one set of hands for each turn. The recent experience of the general superintendent of the Edgar Thomson Steel Works may be quoted in favor of the proposition that this new departure in the employment of labor in exhausting situations at American iron and steel works is beneficial alike to the employer and his workmen. He says: "In increasing the output of these works I soon discovered that it was entirely out of the question to expect human flesh and blood to labor incessantly for twelve hours; therefore it was decided to put on three turns, reducing the hours of labor to eight. This has proved to be of immense advantage to both the company and the workmen, the latter now earning more in eight hours than they formerly could in twelve hours; while the men can work harder constantly for eight hours because they have sixteen hours for rest."

The above is a very important indorsement of the principle of eight hours for a day's labor. I hope it may lead to a fuller test of the system in other branches of industry. No one doubts the possibility of compressing more professional work in eight hours than is usually done in ten—all that is needed is the will to do it—and better work is the result. The added time for rest and recreation is certainly needed. Health, education, and culture, contentment and good order would be subserved by it. No lover of free institutions should wish to see the wages of labor reduced or the hours of labor increased. Contrary to the teachings of other countries, we have found that the best labor in all places is educated labor, which recognizes in capital but the accumulation of labor.

One of the brightest illustrations of the position workingmen may and should hold in the public and educational assemblages of the country was the presence and *extempore* speech of John Jarrett, of Pittsburgh, in the New York tariff convention. I will quote a few extracts as published:

MR. PRESIDENT AND GENTLEMEN: I was requested simply to say a few words here. I have not got any prepared speech. I am simply here to express the sentiments of the workmen. I presume I represent about 65,000 workmen; a solid phalanx of protectionists.

I do not care for one moment that there should be any insinuations thrown out that may reflect upon either capital or labor. I stand here as a workman, having for some twenty-five years worked in a rolling-mill; and during that twenty-five years I have always advocated the principle that the interests of capital and of labor are identical. What will conduce to benefit capital will conduce to benefit labor. We are glad to recognize that fact. Labor is beginning to recognize the fact that whatever will conduce to benefit capital also benefits labor.

We must not be controlled or governed in our actions by any other country, or the opinions of any other country. We want to be free from every other land. We do not want cheap labor imported here; neither do you, gentlemen, want cheap raw materials imported here. I regret that we have a market here for so much of the raw materials of other countries while we have the same materials here in the bosom of our mother earth; and I think that we ought to utilize them. I would like to see as high a tariff on raw materials as on many manufactured materials that come into our markets. I want to give the farmer the same chance as every other man who works by the labor of his hands. An increase of industry is what we want.

EXPERIENCE IS THE BEST ARGUMENT FOR PROTECTION.

The history of our country for the past ten or twenty years under protection contrasted with its history under a revenue tariff from 1850 to 1860 is abundant answer to the distinguished gentleman from Kentucky, [Mr. CARLISLE;] who spoke as follows:

There never has been such a period of general prosperity and growth in this or any other country as that extending from 1850 to 1860, when we had, not free trade, but a tariff for revenue with such incidental protection as necessarily resulted from the imposition of moderate duties upon imported goods; a tariff under which the average rates during the whole period on all dutiable articles were less than 23 per cent., and on free and dutiable only 19 per cent. It was the golden era in our history, notwithstanding the financial disturbance of 1857, from which the country recovered in a single year.

In the midst of that golden period a Democratic President, James Buchanan, gave us his opinion of the situation in a message to Congress in December, 1857. He says:

The earth has yielded her fruits abundantly and has bountifully rewarded the toil of the husbandman. Our great staples have commanded high prices, and, up till within a brief period, our manufacturing, mineral, and mechanical occupations have largely partaken of the general prosperity. We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country, in its monetary interests, is at the present moment in a deplorable condition. In the midst of unsurpassed plenty in all the productions and in all the elements of national wealth, we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want. The revenue of the Government, which is chiefly derived from duties on imports from abroad, has been greatly reduced, while the appropriations made by Congress at its last session for the current fiscal year are very large in amount.

Not even revenue was produced from the so-called revenue tariff, much less industry and thrift.

It was a time of profound peace at the close of that period in 1860, expenditures of the Government were light—no war debt, no pensions

to pay, and yet, as every school-boy knows, the Government had to borrow money at 12 per cent. to meet current expenses.

The distinguished chairman of Ways and Means, [Mr. KELLEY, of Pennsylvania,] my colleague, has graphically described the period referred to from the establishment of the revenue tariff of 1846 until the year 1860. I quote from one of his speeches:

At the close of that brief term, the ship-yards of Maine were almost as idle as they are now when railroads traverse the country in all directions and compete with ships in carrying even such bulky commodities as sugar, cotton, and leaf tobacco; and while the families of thousands of unemployed workmen in our great cities were in want of food, Illinois farmers found in corn, for which there was no market, the cheapest fuel they could obtain, though their fields were underlaid by an inexhaustible deposit of coal that is almost coextensive with the State. Capital invested in factories, furnaces, forges, rolling-mills, and machinery was idle and unproductive, and there was but a limited home market for cotton or wool. Taking advantage of this condition of affairs, foreign dealers put their prices down sufficiently to bankrupt the cotton States, to induce many of our farmers to give up sheep raising, and to constrain many thousand immigrants who could not find employment to return to their native countries.

Contrast with this exhibit the condition of the country in 1880, as I have already partially shown it, after twenty years of high tariff. Not only have our people employment under the present tariff, and at better wages than those of foreign countries, but the purchasing power of wages is ever increasing. While our workmen live better and spend more than ever before, they are also saving more of their wages. It is said by good authority that seven-eighths of the deposits in savings banks are wage earnings of laboring men and women. Take the State of New York, the largest in the Union—I refer to Bankers' Magazine, volume 29, page 415, when I state that in the year 1860, at the close of the golden era, mis-called by the gentleman from Kentucky, the deposits in New York savings-banks were \$58,178,110, or say \$15 per capita. In 1870, under ten years of protection, deposits were \$194,360,217. In 1880, after twenty years of protection, they were (as shown by the report of Comptroller of Currency) \$353,629,657, or about \$70 per capita. I quote from same volume, page 417:

The deposits of the savings-banks per head of the population in New York (1874) is \$65; in Massachusetts, \$129; in Connecticut, \$134; in Rhode Island, \$203. In Austria, the amount per head is only \$8.20; in France, \$3; and in England, \$9.20. These European figures offer a suggestive commentary on the statements of those who pretend that the sober, industrious mechanic in this country is in no better circumstances, and can save no more of his wages than in the Old World.

Thus hastily and imperfectly I have tried to group some facts which sustain the American people in the demand voiced in the last Presidential election, that a protective tariff as against a tariff for revenue only (which when last tried under Democratic auspices yielded neither revenue nor protection) a comprehensive, fair, and just protective tariff must and shall be maintained.

If ever a doubt existed as to the wisdom of a protective tariff and a sound financial policy as they have both been maintained against all opposition for the past twenty years, that doubt should yield now to the inexorable logic of events. In the past decade we have reduced taxation about one-third, the per capita of debt over 40 per cent., of interest over 50 per cent. We have paid the principal of a huge war debt at the rate of \$116,000 a day in round numbers, for every day in the year, including Sundays and holidays; we have paid many millions in pensions as an additional legacy of sacred debt left us by the war, and withal we are to-day richest in all that constitutes material prosperity of the nations of the earth. Let us stand by the systems, revenue and financial, which have yielded such fruitage.

The mission of the Republican party has not been fulfilled. The attempt now being made with such desperate vigor to so revise the tariff as to destroy its protective features, to so cripple the national banks as to produce a monetary panic, must be met by the party which has so wisely established them. The party to safely deal with corrective legislation in the interest of both is the party that has proven the friend of free labor and a sound currency.

Tariff and Tax Commission.

SPEECH

OF

HON. JOSEPH H. BURROWS,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. BURROWS, of Missouri, said:

Mr. CHAIRMAN: We have been engaged in discussing the tariff-commission bill ever since the 28th of March with some little cessation, and what has been said *pro* and *con*. would make a respectable volume; and still I do not believe that a single vote has been lost or won to either side; and as the discussion has progressed I have fancied the effort was more to gain a partisan victory rather than

arrive at a wise and just conclusion as to the best means and methods of adjusting the tariff and collecting the revenues of the nation so as not to discriminate against any interest, calling, or vocation, and at the same time give such protection and encouragement as was possible or practicable, and this without arraying section against section, State against State, or calling against calling.

Surely the object of good government and true statesmanship is to protect life, property, and advance the general well-being of society, and at the least cost or tax to the whole. The taxes of a nation or State should be so justly and evenly distributed and apportioned among its citizens as to bear with equal force upon the high and the low, the rich and the poor, in proportion to their wealth or what they possess. This, it is true, is not so easily done as may at first appear.

And then, again, our country is so vast, its industries and products so varied, that it is a very difficult task to adjust the laws in the collection of the revenues, whether by tariffs and internal revenues or either, so as to prevent murmuring and the feeling: that one avocation is oppressed and burdened for the benefit of another. This is a serious question.

That the nation must have money no one doubts, and large quantities of money; and the question is how shall it be collected? Ninety years ago it required less than \$1,000,000 per month to defray the expenses of government, or for the year 1791, \$10,210,025; now almost \$1,000,000 per day, and it has been over \$2,000,000. Now, in the collection of this vast sum of money we should experience no trouble if the products and industries of each State and section were alike; but instead of this we have a vast empire or domain 4,000 miles east and west and half as much north and south, embracing every diversity of soil, climate, and product, with forest and field, mines and manufactory; some on the seaboard and others interior and far removed from the markets of the world. It is not strange that we should differ in our views and opinions; it would be if we did not. And then our local interests, jealousies, and State pride are sure to bias our judgments and prejudice our conclusions.

It is very difficult to make a purely agricultural district and (we have many) see how it is to their interest to be taxed to build up and protect a manufacturing or mining one, and yet neither is independent of the other; and that nation or community that can come nearest supplying all its requirements must ever be regarded as the most independent. Then, again, the home market must ever be regarded as the best, the safest, the most regular, and the varied industries become so interwoven that we are mutually dependent, the one upon the other. In the South they have too much cotton, sugar, and rice; in the West and North it is wheat, corn, oats, rye, beef, and pork; in the East it is boots and shoes, cotton cloth, and other manufactured articles; then, again, some States and localities are blessed with an abundance of iron, coal, timber, salt, building material, &c., and still others the precious metals. Now, what we want to do is to protect, encourage, and promote each others' interest, and good must result to the whole.

"Tis said a 'rose would smell as sweet by any other name.' Now, if a 'tariff for revenue only' protects, and a protective tariff does no more, what is the difference? Ninety-nine men out of every one hundred would prefer a tariff to a direct tax. More than one-half the money paid into the Government Treasury is collected from import duties. If these be taken off, by what methods are the revenues to be collected? All may see at a glance that for many years to come we shall need from \$300,000,000 to \$400,000,000 per annum to meet the expenses of the Government. That the internal-revenue laws need amending there is no doubt, and that some things that are among the common necessities of life and are purchased by the poorest in the land should be stamp free and duty also. While this bill was being discussed in the Senate, Senator BROWN, of Georgia, while upon this particular point presented my views as well or better than I can myself, and I here incorporate them:

FREE TRADE AND DIRECT TAXATION.

Senator BROWN, of Georgia, sees the logic of free trade with a clear vision. In a speech in the Senate in favor of the tariff-commission bill on Monday, March 27, he said:

"I notice by turning to the report of the Secretary of the Treasury that there were collected during the last fiscal year \$198,159,676.92 on imports. In round numbers I will call it \$200,000,000 per annum. How do we propose in future to raise this sum if we cannot dispense with it? How do you propose to collect this \$200,000,000? There are but two modes that I am aware of. One is a direct tax upon the people, the other is to collect it upon imports. Which will we choose? I have heard no Senator on this side who has discussed what might be termed the free-trade side of the question propose to raise it by a direct tax. What would it amount to? We have thirty-eight States. Take my own State, Georgia; say it is an average State. If \$200,000,000 should be raised by direct taxation, Georgia must raise each year, in addition to what is now raised by the collection of internal revenue, a sum amounting to over \$5,000,000. Her people must submit to the present State tax, school tax, county tax, corporate tax, and all the taxes now collected which they consider burdensome, and we must add to that, if we are to collect it by a direct tax, more than \$5,000,000 a year, which would be about four times as much as we now raise by taxation added.

"I take it for granted no Senator on this floor representing any one of the States will advocate that course for the collection of all our Federal revenue. If he does my opinion is he will find a large proportion of his constituents differing in opinion with him. Then how do we propose to collect it? We must collect it as heretofore, by levying a tariff upon imports. The addition of about five and a quarter millions a year to the internal revenue paid in cash by the people of Georgia for Federal purposes would knock all the poetry out of the able free-trade speeches to which we have listened with so much interest. Doubtless the same would be true in all the other States. Our people prefer a tariff to direct taxes. They are will

ing that those who buy the most imported goods shall pay the most tax. * * * What will you put the tariff upon? Will you protect American industry and American productions, or select such articles as tea and coffee and others that we do not cultivate in this country, and in which we do not compete, and put it upon them to avoid the protection of American industry? I presume not. Then where will you place it? You have to collect it, or if not, tell me how you will get rid of it, and what substitute you will put in its place as a mode of collection of revenue to support the Government? I apprehend no one will suggest a new plan. Then it seems to me that it is proper we should adjust it as to afford, as far as possible, incidental protection to every American industry and every American laborer."

These words are as true as if inspired. Missouri tax would not be less than six or seven millions of dollars, in addition to her pro rata of the amount collected through the internal-revenue laws.

This whole subject when condensed and brought down to the simplest questions and answers are:

Do we desire to develop and bring out all the capabilities and possibilities of our country as a whole? Do we want to render it independent and free, commercially speaking, in that sense that enables it to supply all its wants as near as is possible, and thus make us as free commercially as we are politically of the nations of the world?

Do we desire to afford the amplest compensation for labor, a fair remuneration for capital invested, and a steady and regular protection to both? If so, our policy must not be vacillating nor attempt to walk in the foot-prints of the Old World. If we do, we shall as surely arrive at the same results. I will read a short article from our German consul, Mr. Wharton, of Sonneberg. The facts are undeniable, the reasoning good, and the recommendation excellent:

CHEAP GERMAN MANUFACTURES THE RESULT OF CHEAP LABOR; REPORT BY CONSUL WHARTON, SONNEBERG.

I am fully convinced that the most important method of increasing American trade, especially in regard to such articles as form the chief exports from this part of Germany to the United States, is to cheapen the price at which they are placed on the market. We need no higher proof than articles of German manufacture of like character and quality with those made and sold in the United States are cheaper than said articles that we find in the large and ever increasing shipments which are made to that country by German manufacturers, against the small imports brought hither, while the German manufacturers at the same time labor under the disadvantage of a tariff of 50 per cent. ad valorem imposed by our Government, and an additional cost of 10 per cent. for hauling. The importer of German goods in New York is compelled to add this 60 per cent. to the cost he pays in Germany for his goods, and yet the facts show that he is still able to cope successfully with the American manufacturers of these goods. By looking at the statements of declared exports from the Sonneberg district, it will be seen that they consist almost entirely of dolls, toys, china and glass ware, cotton hosiery, musical instruments, guns, seed, and plants; and yet all these articles are manufactured in the largest quantities in the United States.

In order, therefore, that American manufacturers should increase their trade at home as well as abroad, they must manage to diminish the price at which their goods are offered for sale. The great question is, How can this be done? I answer, first, by diminishing the cost of production; secondly, by diminishing the cost of transportation—two things that enter into the price of any article. First, then, the cost of production must be diminished. This can be done by cheapening labor. One reason why German articles are made so cheaply is labor is so plentiful and so cheap here. Compare the prices paid in the United States for skilled labor with the following table, which shows the prices paid here, and the correctness of this remark will at once be seen. For example, cabinet-makers receive per day 70 cents; carpenters, 60 cents; blacksmiths, 60 cents; doll-makers, 50 cents to \$1; females and children, 25 to 50 cents; glass-makers, 50 to 75 cents; glaziers, 60 to 80 cents; gun-makers, \$1 to \$2; kid-glove makers, 50 to 75 cents; females, 25 to 40 cents; machine sewers, 30 to 50 cents; locksmiths, 53 to 70 cents; painters, 60 to 75 cents; papier-maché makers, 50 cents; females, 25 cents; polish, (French,) 75 cents; tobacco-pipe makers, 50 cents to \$1; females, 25 to 50 cents; upholsterers, 70 to 75 cents; weavers, 40 to 50 cents. A most important industry in china-ware making, and the following is a schedule of prices: modelers and chief decorators, \$1.50; decorators, 80 cents; formers and turners, 75 cents to \$1; females, 38 to 60 cents; firemen, 60 to 75 cents; packers, 50 to 60 cents.

If laborers cannot be found in the United States, let our manufacturers import them; for there are thousands here living on mere pittance who would be only too glad to find employment in the United States. The laborers already employed there could be induced to work more cheaply if the German habits of living could be adopted by them. Here, "as for their means they husband them so well they go far with little." While articles of diet are dearer here than in America, the laborers manage to live on less. They eat meat but once a day, living chiefly on vegetables; their staple diet being rye bread and beer. They work ten hours a day, and sometimes twelve and even fourteen hours. Secondly, the cost of production can be diminished by lessening the cost of materials. Another reason why German articles are so cheap arises from the fact that all materials employed here, except, perhaps, wools and cottons, are much cheaper than in America. This is especially true of chemicals, so largely used in the manufacture of dolls, toys, and other painted goods. If our manufacturers cannot buy materials sufficiently cheap at home, let them buy them here in bulk and import them; and this course will obviate the difficulty, and soon result in the reduction of the price of materials in their own land. Another thing to cheapen our manufactures is to encourage cottage industries and discourage the idea that vast sums must be expended in brick and mortar in the erection of magnificent factories, which, in consuming the capital of the owners, at the same time increase the prices of the articles manufactured. Some of the most splendid and beautiful goods shipped through this consulate to America come out of the plainest warehouses, with nothing of an appearance of beauty about them save the glittering contrast presented by the beautiful wares they contain.

There is no disputing the fact that the American laborer and American mechanic is much better paid than the European or Asiatic, and that they live better and enjoy more of life, and I have no sympathy with that party, principle, or policy that would rob our toiling citizen of one particle of the comforts they now have. Labor is man's inheritance, and his honor and glory. The world owes us nothing but what we labor for, though we owe the world much. But what a man works for should be his to enjoy. The higher our civilization, the more numerous our wants and the greater will be the labor required to supply them. Our desires are to a great extent measured by our means of gratifying them. Pay a laborer \$1 per day and he is compelled to bring the expenses of himself or family within that limit; increase it to \$2 and his desires at once in-

crease, and so on. We thereby increase consumption of food, clothing, and the comforts of life in general. To restrict the laborer to such food and clothing as are barely sufficient to support existence is to rob society and sink humanity to a level with the lower animals, which is the case with millions of our race in the Old World. I beg to incorporate the following tables; they are reliable; they will show the comparative prices of the necessities of life and of labor in the United States and Europe:

Retail price of necessities, 1879.

CLARK THREAD COMPANY.

Newark, New Jersey, January 25, 1882.

DEAR SIR: As requested, we herewith send to you a list of wages paid the workers in Clark & Co.'s, Paisley, Scotland, and the wages paid the same class of workers in Newark, New Jersey:

Employés.	Paisley.	Newark.
Girls:	Per week.	Per week.
Spoolers.....	\$3 50 to \$3 75	\$7 00 to \$9 00
Reelers.....	3 50 to 3 75	7 50 to 8 50
Cop-winders.....	3 50 to 3 75	7 50 to 8 50
Twisters.....	2 25 to 2 50	5 00 to 6 00
Strippers.....	1 50 to 1 75	3 00 to 3 00
Bobbin-cleaners.....	1 25 to	2 50 to 2 50
Men:		
Carpenters.....	7 00 to 7 50	16 50 to 18 00
Machinists.....	7 00 to 7 00	16 50 to 18 00
Dyers.....	7 00 to 7 00	15 00 to 15 00
Bleachers.....	6 50 to 6 50	13 50 to 13 50
Firemen.....	6 00 to 6 00	12 00 to 13 00

The above is, to the best of my knowledge, correct.

These facts and figures plead more eloquently than I can, and we behold them as in the mirror of truth and would do well to ponder them. It will be seen that the necessities of life are higher here than in Europe, showing conclusively that the home market is better than our foreign. I do not desire to enter into a detailed defense of this question as against free trade. This has been done repeatedly. I am dealing with the question rather in the abstract, and would say in this connection we have done some things which we should not have done and that we should repent of, and I allude as one instance to the treaty with the Sandwich Islands, the effect of which has been evil, and that continually. I incorporate the following article from a New York paper, the Truth:

THE SANDWICH ISLAND TREATY.

This treaty was made through the efforts of Senator Newton Booth, of California, in 1876.

By its terms the United States was to be allowed to carry machinery, &c., into Hawaiian ports free of duty, and the Sandwich Islands to send to this country certain staples, among which was sugar, on the same terms.

It was supposed in this country that the effect of the treaty would be, first, to open a new market for the sale of our manufactures, for, up to the time of the passage of the treaty, the Sandwich Islanders had bought what they needed from the countries which held protectorates over them; second, to reduce the price of one of our most necessary articles of food.

But neither our people nor Congress suspected the power that was engineering the treaty or the purpose intended to be subserved.

It is only after a trial of four years that we have been brought face to face with the concealed African—namely, sugar monopoly in the West, the effect of which is to cripple our dealers in sugar in the East.

And the treaty has been of no benefit to our people; for while the duty on Hawaiian sugar has been taken off, we have to pay as much for sugar now as we did before the treaty was made.

Further, in four years we have paid out, in addition to what we have exported to the Sandwich Islands, nearly \$1,700,000 a year in money for their sugar. This money, if the same conditions had existed in the West as in the East, would all, or nearly all, have been sent to the sugar plantations of the South in exchange for their products, and thus nearly \$7,000,000 would have been saved to this country.

Our exports to the Sandwich Islands for the four treaty years from 1877 to 1880, inclusive, amounted to \$6,516,940; while our imports from that country for the same period amounted to \$12,960,900. The imports exceeded the exports by \$6,443,960, or 97.3 per cent., in these years. In 1880 the excess of imports was the greatest, being \$4,832,600, against exports, \$2,139,400; leaving an excess of imports, \$2,693,200, or 125.9 per cent.

All sugar brought from any foreign port into the eastern ports of the United States has to pay a duty of from 3 to 5 cents per pound, while that brought into the port of San Francisco from the Sandwich Islands is admitted free of duty; so that when we consider the duty paid on sugar brought into the port of New York, which averages about 3½ cents per pound, as a basis on which to calculate the duty that ought to be paid at all ports of the United States, we find that our Government loses a duty of \$67.20 on every ton of sugar brought into the port of San Francisco.

But this is not all. Admitting sugar duty-free from the Sandwich Islands means great injury to the interests of the sugar-planters of Louisiana, who have as much right to the benefits of a protective tariff as the iron-workers of Pennsylvania or the cotton-spinners of Massachusetts and Georgia.

It is a sad commentary on the judgment of our national legislators that they should allow such a state of affairs to exist—free duty at one end of our country and a high tariff at the other.

We do not charge ex-Senator Booth with having known what the result of the treaty he pressed upon this Government would be, but we now know what it has been.

The people of the Pacific coast have to pay the same price for sugar now that they paid before this reciprocity treaty was made, and the western market has been closed so far as eastern merchants are concerned.

And now there is in existence a combination between the sugar monopolists and the Union and Central Pacific Railroads, by which the former are enabled to bring their sugar as far east as the Missouri River, there to compete with sugar brought into eastern ports and sent west by our merchants; and it is a fact that in New Mexico, Colorado, and parts of Texas the Hawaiian sugar is driving our eastern imported sugar out of the market. These railroad companies will bring the western sugar east to the Missouri for 1 cent per pound, while our merchants have to pay 2 cents per pound to eastern railroads for taking their sugar west. When we consider this extra charge of 1 cent and the average duty of 3½ cents our merchants have to pay to place their sugar in the Western States, it can easily be seen that competition on their part is impossible when the non-duty-paying sugar of the Sandwich Islands is brought forward as a rival.

There is still another little game in progression among the sugar monopolists. It is in the cards that they will shortly, to increase their supply of sugar, commence the shipment of that article from the East Indies to the Sandwich Islands, from which point it will be sent to San Francisco as an Hawaiian production.

The sugar question now resolves into a simple proposition of justice. If sugar is admitted into our western ports free of duty, it should be admitted duty-free into our eastern ports; if a duty has to be paid on sugar brought into our eastern ports, a duty should be paid on all sugars entering our western ports, regardless of whether it comes from the Sandwich Islands or any other place.

Protective tariffs give but little relief so long as monopolies like these are created by acts of Congress that prey like cormorants upon the people, eating up their substance and demanding tribute of all.

A special correspondent of a New York journal, under date of March 15, 1882, writes from Rome, Georgia, as follows:

The new South of to-day and the old South before the war are very different sections. Then it was almost purely an agricultural country, relying upon the North and the mother country for nearly all her manufactured articles; now it is an agricultural as well as a manufacturing country. Before the war only a few tobacco and cotton factories dotted it here and there at great distances apart; now in every State, and notably in Georgia and Alabama, mines are being opened, furnaces lighted, mills of almost every conceivable kind erected, and an era of agricultural and mechanical thrift is being evidenced in every direction. The South now feels a sufficient assurance to lift the shield of the Constitution over her head and prepare for the fruitful works of peace; she is no longer threatened with political changes, and hence capital is bold and labor gives a steady hand to the implements of industry.

To retrospect a little: the war closed in the greatest spectacle of ruin of modern times. There were eleven great States lying prostrate; their capital all absorbed; their fields desolate; their towns and cities ruined; their public works torn to pieces by armies; their system of labor overturned; the fruits of the toil of generations swept away into a chaos of destruction. But, animated by that invincible will and determination which characterizes the Anglo-Saxon race, the people aroused with a lion's strength, went to work to repair their losses, and to-day the new South has sprung, phoenix-like, from the ashes of the old, and has put on her robes of gladness, prosperity, and joy. To give your readers a glimpse of what the South is doing, I mention a few examples in the line of her fleecy staple alone.

A northern company, with \$15,000,000 stock, has organized to build an immense cotton-mill at Athens, Georgia.

The immense buildings of the Atlanta cotton exposition have been bought by a company that will fill them with looms and spindles.

The Sibley Mills, with the aid of a million dollars, turned their first spindles last month.

Mr. Benjamin McAdams is building an immense mill near Charlotte, North Carolina.

The Central Falls Manufacturing Company, of Ashborough, North Carolina, will begin operations next month with 3,000 spindles.

Mr. Benjamin Ricks, of Mississippi, will soon erect a two-thousand-spindle mill, with ginnery and cottonseed-oil mill attached.

A mill to cost \$500,000 is to be erected at Weldon, North Carolina, by Mr. Robert Peoples, of Northampton County.

Mr. W. H. Inman, of your city, has subscribed \$500,000 for a new cotton-mill at Augusta.

The Adams Manufacturing Company of Montgomery, Alabama, has just started a yarn-mill with 5,000 spindles.

The Wesson Mills, of Mississippi, pays 20 per cent. dividend, with stock worth \$300.

The John P. King Mill of Augusta will cost \$1,000,000.

The Langley Mills, of Augusta, pays 47½ per cent. dividend, in addition to which it has a surplus from earnings of \$200,000.

The Clifton Manufacturing Company, Clifton, South Carolina, in their semi-annual report for the six months ending December 31, 1881, show a net profit of \$21,829.11, being 10.99 per cent. on their capital of \$200,000. They manufacture yarns, drills, sheetings, and shirtings, and have the reputation of making a first-class grade of goods. Their yarns, as well as that of other mills, which are sold in the northern markets, are said to be of a superior quality, and are eagerly sought for at highest market rates.

A northern company has recently paid \$30,000 for property near Athens, upon which it will erect factories costing \$750,000.

A cottonseed-oil mill is flourishing in Selma and Montgomery, Alabama; one is being built in Rome, Georgia, and others are in progress of erection.

Thus, in part, the work progresses, and everywhere our people, appreciating the fact that it is best to bring the mills to the cotton; that our climate is well adapted to the manufacture of the fleecy staple, and that for divers reasons it is better to manufacture the cotton where it is produced, are pushing forward and bending every energy to start the spindle and the loom. Nor is this confined to cotton alone, for everywhere new mines are being opened, new furnaces erected, and fires kindled in them for the first time. The traveler, in passing through Georgia and Alabama, would be astonished at the large number of iron furnaces he beholds on every side with their happy, well-paid workmen, who produce a striking contrast to the half-starved and ill-paid pauper laborer of Belgium and other European countries. And this prosperity is not alone confined to the laborer; the employer is making money, and even the farmers are greatly benefited by the ready market those furnaces establish for every product of the farm. Thus they spread over the country a face of thrift, gladness, and prosperity heretofore unseen.

PROTECTION IN THE SOUTH.

The question of tariff has undergone a marked change in the South in the last year. Before the war free trade was taught in the newspapers, in colleges—everywhere. Now, these old ideas, derived from text-books, are giving way and the South is beginning to open its eyes to the fact that "protection," which built up the North and West, will foster, protect, and encourage its enterprises, and build it up also—in fact, it is building it up as fast as pick and spade, and nerve and muscle can do it. As an evidence of this fact, it may be cited that one year ago the Rome (Georgia) Tribune was the only protective-tariff paper in the State, while now quite a number of representative papers, seeing the error of their ways, have reformed. Indeed a new party is forming in Georgia with protection as its main plank, and it is rapidly gaining, and will doubtless sweep the State at the approaching elections. Thus the South is progressing, blooming, budding, and giving forth fruits, justifying the utterances of Mr. Orr, late governor of South Carolina, who said: "I am tired of South Carolina as she was. I court for her the material prosperity of New England. I would have her acres teem with life and vigor and intelligence, as do those of Massachusetts."

And, Mr. Speaker, I would court for the whole country this same degree of prosperity, and as a means to an end I would demand "protection for all with special privileges for none." Now, Mr. Speaker, while we seek to protect the industrial and laboring classes from the ravages and competition of pauperism in the Old World—and in this my keenest sympathy is enlisted—would it not be well to so change our financial legislation as to place the control of the money of the nation wholly and solely with the Congress of the United States? We would in so doing give to labor, enterprise, and commerce in this country such protection, encouragement, and stability as it has not enjoyed for almost a score of years; and we would at the same time take from the national-bank oligarchy a power more inimical and dangerous to labor than "free trade" ever was or could be, because they have the power to inflate the currency and increase the volume of money and thus advance prices, and when to their interest, and inside one week if they choose, can contract and depress prices, force collection, and bring about general consternation. Is this not a very dangerous power?

I call the attention of the House to the action of one single bank, as reported by United States Treasurer Gilfillan in the financial reports for 1880; and if one national bank may do this all may do so; and is there a man upon this floor wise enough to portray the evil which would result from such action if it were a united action by the 2,200 national banks? He says:

In January and February, 1875, a certain bank retired its circulation from \$308,490 to \$45,000 by deposits of legal-tender notes. Between September 26, 1876, and May 26, 1877, and before that deposit was exhausted, it increased its circulation to \$450,000. Between August 14 and September 10, 1877, it again reduced its circulation to \$45,000. On September 19, 1877, nine days after completing the deposits for this reduction, it began to take out additional circulation, although \$42,550 of prior deposits remained in the Treasury, and by the 26th of that month its circulation had again been increased to \$450,000. July 22, 1872, its circulation had again been increased to \$450,000. July 22, 1878, it for the third time reduced its circulation to \$45,000, and in August and September, 1879, again increased it to \$450,000, at which it now remains, the balance of its former legal-tender deposit then in the Treasury being \$112,615. From January 13, 1875, to the date of this report, \$778,275 of its notes have been redeemed, of which only \$40,700 were redeemed at the expense of the bank, although during more than one-third of that period it had outstanding and was deriving the benefit from the full amount of circulation which its capital authorized. The only assessments which have been made on the bank for the expense of redeeming its notes were \$24.14 in 1875, and \$4.39 in 1878. At one time there were in actual circulation \$852,550 of its notes, although the highest amount ever borne on its books was \$450,000.

Is this a safe power to be lodged anywhere outside the people themselves, through their representative, the Congress of the United States? I beg to read in this connection the reasoning upon this point by the venerable sage, patriot, and philosopher, Peter Cooper, in his Review of Comptroller Knox's Report. It is timely and to the

point. I commend it to the candid consideration of every member of the Forty-seventh Congress:

The Treasurer informs us that other banks have been increasing and decreasing their circulation in a similar manner. Now, in what situation does such a condition of currency place the business of the country, we ask? A stable currency is one of the essential elements of stability and prosperity to business enterprises. A fluctuating volume of currency is one of the worst devices ever discovered to enable the manipulators of that currency to bankrupt business men and defraud the producing classes of the country.

In strong contrast to this fluctuating bank currency stands the legal-tender notes, the volume of which has only changed under the grinding force of laws enacted by bankers especially for the purpose. Since May 31, 1878, the volume of Government currency has been invariable, and it will so remain until some law is passed either to increase or decrease that volume.

The banks, on the contrary, inserted a clause in the resumption act giving them the power to increase their circulation to more than five times its present volume, or to within 10 per cent. of the entire bonded debt, and under existing laws, also, they can retire the entire amount of their circulation at their pleasure. In February, 1881, in order to defeat a bill passed by Congress depriving them of the power to thus suddenly contract and expand their circulation, they retired about eighteen million dollars of their notes in a few days' time. We all know the disastrous effects caused by that act. Had not the Secretary of the Treasury come to the rescue and put legal tenders in circulation by the millions in exchange for bonds, widespread business disaster would have followed. The business interest of this country must not be left at the mercy of men who would thus abuse the power placed in their hands. These banks should be deprived of the power they now hold over the volume of currency.

The facts and figures here given are mainly taken from the reports of the officers of the Government, and therefore they cannot be ignored nor set aside by the members of Congress. It will not do either for the present legislators to reject them. The men now in Congress have it in their power to strangle this monopoly that is sucking the life-blood out of the people. Many of these banks have now about outlived their legal chartered existence given to them by ignorant and corrupt legislators, and the verdict of the people is, Let them die. This Congress should pass an act forever prohibiting the organizing or rechartering of banks of issue. A general law authorizing banks of deposit and discount, by which the money of the people shall be made secure, is desirable. But no bank should be allowed to issue currency or to control its volume. Why should the Government create money and give it to rich bankers for nothing? The legal-tender notes were issued in exchange for labor and property given to the Government by the people who received them. The bankers have given nothing of value to the Government for the \$362,000,000 of currency they have received.

The amendment to Senator SHERMAN's bill, offered by Senator PLUMB, of Kansas, contains some of the best features in reference to the currency and public debt of any bill yet presented that we have seen. It could be improved by making the coin certificates and notes it provides for issuing a legal tender for all debts public and private. Senator PLUMB's bill, or one similar, should certainly be passed by this Congress.

As suggested in my letter to Senator BECK, if Congress was to pass a bill to issue \$362,000,000 of legal-tender Treasury notes, to take the place of the present bank currency, it could provide the labor and material to build and equip two lines of railroads from the Atlantic to the Pacific Ocean, and place fifty first-class iron steamers on the ocean, thus providing cheap transportation both for our national and international commerce; and it would leave the currency in a far better condition than it is now in.

Is the present Congress wise enough to see, appreciate, and inaugurate these great reforms in our currency? We ardently hope and trust that it is, and will. The facts and figures here given may be verified by consulting the late reports of Comptroller Knox and Treasurer Gillfillan. They are submitted with the ardent hope that Congress may see the immeasurable importance of our preventing banks of issue, and of providing a currency of Treasury notes based, as they should be, upon the embodied wealth of the nation, and made receivable for all forms of taxes, duties, and debts. Such a currency would be unfluctuating in volume and as uniform in its measuring power as the yard-stick and pound weight.

These are words of wisdom and are sustained by an experience of nearly three-fourths of a century. Their author has witnessed six or eight of the most distressing panics that have swept over our country, and, judging the future by the past, it is safe to say we may still expect these periodical financial panics whenever it is to the banking interest to produce them and thereby bring about a change in the ownership of property, which is sure to be the case when bank accounts are closed, margins, discounts, and interests settled. The living issues before the country and the questions that are most vital and that most affect the peace and prosperity of the nation are finance, transportation, the labor problem, and the payment of the indebtedness of the whole country, for there is no disputing the fact that we are a debt-cursed people; that our debts are not only millions but billions. I have recently read with great interest the "Solution of the Labor Problem," by Walter S. Waldie, of Philadelphia, and I will incorporate a good part of the same in my remarks and commend its perusal. It is full of common sense, justice, and wisdom:

To labor men:

The present movement among workmen is a repetition of similar movements periodically and spasmodically made every time business begins to recuperate after panic prostrations, and like its predecessors will accomplish no permanent improvement in labor position, though it may procure temporary relief in some cases.

Either there is or there is not a remedy for this inharmonious relation of employer and employed. If there is no remedy let it be so understood at once and have a well-arranged system of serfdom, where the duties of each party are distinctly defined, with power to enforce their fulfillment. Proclaim at once that "the right of life, liberty, and pursuit of happiness" is alienable, and by this contract is made void except in so far as this contract permits.

But there is a remedy and can be obtained, as I think every one will admit who will carefully read the following pages.

The principle of republicanism is not a failure, though legislative errors may retard its development. It is bound to win.

PRESENT CONDITION OF THE PRODUCING CLASSES.

Comparing the condition of the labor-producing classes, as graphically portrayed by Walter Scott in his novels of "Ivanhoe" and "Monastery," with the condition of the same classes to-day, there is a great contrast for the better in the present condition, but the social improvement is not equal to the political. The right of labor has not kept pace with the right of suffrage.

XIII—451

In the past all land was owned or controlled by the feudal baron or the monastery. The peasant laborer had to purchase protection to his life and privilege of earning a miserable existence by paying the larger share of his productions. To-day, the political equal of all, he is still dependent for the privilege of earning an existence, none of the best when granted, and often denied.

Who it is that controls this power over labor, and how it manages to make a political freeman a social slave, will be explained in following pages:

THE INSTRUMENT OF MEASURE.

When civil power supplanted feudality, the old form of vassalage was commuted into payment of stipulated rent, sometimes paid in kind, but gradually settled into payment of rent in coined money, generally of gold. The peasant tenant, unable to produce coin of any kind, had his services measured by what his productions would bring in gold.

All monarchical countries to-day retain the coin measurement, though at same time granting apparently liberal political freedom, because political liberty is merely a sentiment easily coerced by social arrangement. Coin measurement takes the place of the standing army. Feudalism still prevails, though robbed of its former grossness.

A republic adopting coin measurement has no right to expect different effects of its use, and if republican legislation was honest in its intention, it would be extremely jealous of monarchical arrangements, but on the contrary our national legislators are extremely servile in their adoration of monarchy. The opinions of English economists have more authority and influence in our national legislation than the opinions of the ablest of American statesmen.

Coin measurement of industrial services brings American freemen and monarchical serfdom upon same level.

At Saratoga in 1879 a convention of national-bank presidents officially declared in their report that—

"The farmer was not rich according to the number of bushels of grain, nor the iron manufacturer rich according to the pounds of iron he produced, but were rich according to the amount of gold these articles would bring."

Do American industrial producers want any better evidence to convince them that the bank power of to-day is the lineal descendant of the feudal baron and monk? These bankers do not give any reason why productions are only valuable according to the gold they will bring. With such valuation the productions of all non-gold-producing States would have no value.

The gross absurdity and still grosser injustice of the bankers' assertion is apparent to common sense, and if it were not for the fact that our national financial policy is based upon its assumption it would not be worthy of a moment's notice.

Whatever man cannot produce at will cannot ever be a suitable agent to represent his services. These bankers are well aware "that the enslavement of man, when not by brute force, is done by making man dependent upon an agent he cannot produce." Coin being an accidental occurrence entirely beyond the control of man, all coin-based money is an unreliable agent, and cannot avoid producing social confusion even when honestly intended, and it becomes, under unscrupulous legislation, a most terrible instrument of oppression.

GOLD DOLLAR AND BANK DOLLAR.

While bankers assert that gold measures industrial productions they deny the same standard to their own productions.

The Federal coin table reads:

10 mills make one cent.
10 cents make one dime.
10 dimes make one dollar.

This is a coin dollar.

A mill is not represented by any material, it is a mere expression for the sake of calculation. There is not any law defining what a mill shall be, so the bankers "coin" a dollar from a mill of their own standard. They say:

10 bank mills make one bank cent.
10 bank cents make one bank dime.
10 bank dimes make one bank dollar.

Let me show you what a bank dollar is. From the sworn statement of one of the most conservative banks in Philadelphia as to its condition on March 11, 1882, it shows that the bank owed in round numbers—

Individual deposits subject to check.....	\$6,338,000
Demand certificates and checks.....	27,800
Cashier's checks.....	277,500
Due to national and State banks.....	841,600
	7,484,900

Nearly 7½ millions of dollars the creditors have the right to claim any day between 10 and 3 o'clock. To meet which the bank held—

Specie, including United States Treasury gold certificates..	\$1,030,600
Legal-tender notes.....	240,000
Other cash items.....	800,000
	\$2,070,600

Excess of immediate liabilities over cash on hand..... 5,414,300

These \$5,414,300 are bank dollars, (based upon debts of its customers,) and what the bankers call "honest money." It is "honest" money because they create and control it, and "coin" immense profits from its use.

This bank dollar is the real dollar of business, as about 95 per cent. of business settlements are made with its use.

The ratio of actual gold to liabilities in the foregoing statement is about 1 to 7. That is while industrial productions must have a ratio of 1 to 1, the bank dollar needs only one-seventh of its value to make it equal to wheat or iron. The assertion of a day laborer that he was worth seven days' wages for every day's work he performed would not be any more absurd than the banker's assertion that his bank dollar is worth seven coin dollars.

What is sauce for the bank gander is not sauce for the labor goose under this arrangement.

If business transactions cause gold to leave the country so as to make a drain on the banks, the banks in self-defense are forced to contract the amount of their dollars and business contracts in proportion, less men are employed, and consumption diminishes, raising the cry of "overproduction," and the laborer becomes a tramp.

This bank dollar is the author of all our panics.

THE DOLLAR OF PRODUCTION OR ANTI-PANIC DOLLAR.

As production precedes and creates the need for an agent of exchange known as money, it is self-evident that producers have an inherent, inalienable right to select a money best adapted to serve their purpose, and to discard the use of any money that fails to keep ever flowing the current of exchanges of productive industry.

No workman would use a tool not adapted to his work, if he could help it. The coin dollar and bank dollar have both failed to serve the interests of producers. They were not created for that purpose, and producers should blame themselves

for permitting the use of such useless agents, when they have the power to create an agent obedient to their welfare.

How shall we create a dollar capable of doing its duty?

As each production or service has its special relative value to every other production or service, which values are determined by their respective owners, according to circumstances, it is self-evident there cannot be any standard of value.

We want a dollar to express the various relative values of productions, but not to measure them. The measuring or valuing them must be done by the producers.

The coin dollar and bank dollar started with an imaginary mill, but we will start our labor dollar upon a tangible mill, which may be represented by one or more blows of a hammer, stitches of a needle, or of any other act of industry. We can see multiples of our mill in the production of some article of the innumerable avenues of industry.

Our money table reads:

10 mills of labor make one cent of production.
10 cents of labor make one dime of production.
10 dimes of labor make one dollar of production.

Who shall create or issue this labor dollar? Shall it be the producer or non-producer? Shall it be any one or chartered few of the producers?

Is it not self-evident that justice demands an equal voice from each and every producer to grant the power to "coin" this labor money?

Congress is theoretically the voice of the nation, and if producers will be true to their duties as citizens, they can make Congress practically the voice of the nation. To such a Congress should be given the power to create this money.

Not on any pretext should Congress be allowed to delegate this money power to any man, or set of men, chartered or unchartered. To create the money of a nation is too important a duty to be intrusted out of the hands of the direct representatives of the people.

The "greenback," redeemable in coin, is but little better than the bank-note redeemable in coin. The ebb and flow of coin will fluctuate the greenback almost as much as the bank-note.

Every form of money redeemable in what labor cannot produce with certainty will fail to free labor from dependence, no matter how large the volume of money may be.

The expansion and contraction of the bank dollar opens and shuts your shops and other avenues of employment. It is the "boss" of your boss and makes him do many things he otherwise would not do.

What is called the conflict between "capital and labor" is in reality the fight between labor and the bank dollar.

The "labor dollar" is the perfect union of labor and capital, harmonizing alike the interest of employer and employed.

Witness the greenback before its contraction began. There was no difficulty then with employers, except that they wanted all the hands they could get. The contraction began and the "greenback" was no longer a labor dollar, because it was steering for a coin basis. Then the troubles began, ending in the panic of 1873, from which we are just beginning to recover.

When contraction and expansion of industry goes step and step with contraction and expansion of the bank dollar it is difficult to realize that producers are freemen with political power. They certainly can read and think if they will; but how few do think. A few weeks of comparative good wages and their past troubles are forgotten, with no lookout for the future.

Permit me here to suggest that while labor organizations have a right to get the best price for their labor, let them not conceive the idea that such organizations create a demand for labor, for they do not. It is the expansion of the bank dollar that gives the present impulse to business, but if labor gets too sanguine in its expectations of high prices the bank dollar will contract and shut the shop and send labor adrift, as it has done time after time in the past. Labor is better off to-day than a few years ago, when thousands were made tramps, and should be cautious in its movements until it can get command of the labor dollar.

HOW TO GET THE LABOR DOLLAR.

As Congress is the only power capable of giving this dollar, every energy must be concentrated in each Congressional district upon some reliable, intelligent debater to be sent from the district. There is time to organize and effect such a purpose if men will determine to do it.

Earnest action does not require much money. Sensible talk with your neighbor will do much and will be successful. At no time in our political affairs were the intelligent men of each party so disgusted with their political leaders as at present. The hour is ripe for a new movement. In the West is growing rapidly a movement for this labor dollar, and only needs co-operation in the East to elect the next President and Congress.

Until producers get possession of this labor dollar they may "whereas," "resolve," "parade," and talk about the right of labor until doomsday, the bank dollar will always conquer in every conflict.

If the bank dollar working from ten to three o'clock, five hours, can earn immense fortunes for bank capital, why cannot the labor dollar do as much for labor?

CONCLUSION.

Money is the greatest instrument of man's association. In fact the want of money is the root of all evil, driving men to despair, crime, or suicide, while the supply of a legitimate demand of money is the author of all blessings.

Money is indeed the great engine and lever, and it is worse than useless to talk of protective tariffs in the interest of labor so long as organized and legalized monopoly is permitted to ride rough-shod over the people, selecting and rewarding its few and robbing and plundering the many. The fact is monopoly is the order of the day, and the evil goes on while Congress and the State Legislatures stand aghast or as if stricken with paralysis, and unable to move hand or foot in defense of the tax-ridden people.

Once more I ask the attention of the House to a statement made by the able chairman of the Committee on Ways and Means, Hon. W. D. KELLEY, of Pennsylvania, in a speech before the anti-monopoly convention held in New York some months ago. I do not do this because the matter presented is new and unknown to the country, but because the statements are trustworthy and reliable. Here is a danger and a power more to be feared and dreaded than the half-paid, half-clothed, and half-fed laborers of Europe, because concentrated in the hands of so few men with no limit to the tribute that may be demanded or the guarantee of justice save that which greed and avarice will alone prescribe. He said:

A good example of the rise of monopolies is furnished by the Standard Oil Company. [Hisses.] Of the 650,000,000 gallons of petroleum which are annually produced in this country all but a trifling amount passes through the Standard Oil Company. Every man in the country who uses petroleum is forced to pay a price 75 per cent. higher than is right, and this 75 per cent. goes to John Rockefeller and his associates. [Hisses.] The Standard Company, on a nominal capital of \$2,500,000,

is said to pay an annual dividend of over \$10,000,000. How was this monopoly attained? By means of the railroads. Less than twenty years ago the Standard Company was started by Rockefeller, who was then a clerk, together with a laborer named Andrews. But they soon obtained the assistance of the railroads, and their oil was carried over the New York Central for 62 cents per barrel, when other refiners paid \$1.37 per barrel. The Pennsylvania Railway contracted with the Standard to double its rates for freights and to pay back to the Standard \$1 for every barrel of oil which was carried over the road. The end was that the Standard Company ruined the other refiners. Of 58 oil refineries which existed in Pittsburgh in 1867, 28 have been crushed and 29 are now run by the Standard Company. That company now owns the oil-cars, the oil-reservoirs, the oil-pipes. Not only the public, but the owners of oil-wells are at the mercy of the company, and the stores of oil which bounteous nature has given us are made, by the railroads and the Standard Company, a costly luxury.

This is but one of many examples. Does it occur to the public that two men in this city now exercise, by their railroads, a greater practical control over the country than lies in the power of our President? If W. H. Vanderbilt and Jay Gould should desire to greatly increase the freights to and from New York, they could in a few years transfer our trade to Baltimore and Boston, and ruin the great commerce on which the prosperity of New York City depends. It is not too much to say that two men, if unchecked by legislation, could in a few years ruin this city, which has been the work of generations. The history of the world shows that the grants of lands given by kings have made the people almost slaves, because the rulers hated to give up possession, and the people, who expended their time in developing the land, only had a small subsistence for their families.

The Saint Paul and Sioux City Railway received in 1864 a grant from the National Government of 400,000 acres of the best farming lands of the country. At present it is said that the president and nearly every director owns a large farm on the road, and receive special reduced freights on their produce. This is disastrous to the small farmer, and is forcing him to sell out his small farm to the owner of thousands of acres. This is the case through all the West. If we are to protect our people we must legislate for them.

By protecting our laborers and mechanics from competition with the poverty-ridden labor of the Old World we enable them to earn more and save something, only to be fleeced and taxed in a legitimate way and indirectly by the power of organized capital which we call monopoly. It stalks abroad at noonday, and flaunts its chartered rights (so called) in the face of legislative powers and bids defiance.

Some one has said, "Let me make the songs of the people and I do not care who makes their laws." This may do for a song or ballad writer whose bread and butter depends upon his compositions and their sale. But give to me or any set of men outside of Congress the power to provide, issue, and regulate the circulating medium or money of a country, and it is only a matter of time before that power will possess all the wealth of that country. Next to this, and almost as omnipotent as the first in a country like ours, is the power to levy tribute and lay taxes upon commerce between the States, and which we are pleased to term interstate commerce. The transportation question is one of which the people have complained for years, and our predecessors were almost inundated with petitions for protection in this direction. The States through their Legislatures have tried, but their power was limited by the boundary of their territory, and hence only partial success.

The late Executive, James A. Garfield, was led to describe this evil as follows:

The modern barons, more powerful than their military prototypes, own our greatest highways and levy tribute at will upon all our vast industries. And as the old feudalism was finally controlled and subordinated only by the combined efforts of the kings and the people of the free cities and towns, so our modern feudalism can be subordinated to the public good only by the great body of the people acting through their Government by wise and just laws.

An honest management of the railroads is not and will not be objected to. It is what the country needs, and badly needs. No people in the world have welcomed and encouraged the building of railroads and entered into their construction so joyfully as Americans. No nation ever did so much by land-grants and loans of the public credit; and our people recognize the true value of railroad transportation. And if this generosity, confidence, and cordiality has decreased, and distrust has sprung up in its place, railroads have no one to blame but their shortsightedness and crookedness. Railroad pools and rings and watered stock have done the work, and the united voice of the American people is for an abridgment of the powers of these corporations that to-day menace the liberties of our citizens and threaten our free institutions. I cannot refrain from reading the statement of a railroad president before a committee of this House:

On the twenty-seventh day of January, 1880, Mr. Gowen, then president of the Philadelphia and Reading Railroad, in an argument before the Committee on Commerce of the House of Representatives of the United States, in Washington, said: "I have heard the counsel of the Pennsylvania Railroad Company, standing in the supreme court of Pennsylvania, threaten that court with the displeasure of his clients if it decided against them, and all the blood in my body tingled with shame at the humiliating spectacle."

The late Secretary of the Treasury, Hon. WILLIAM WINDOM, in a letter to the president of the Anti-Monopoly League, said:

The channels of thought and the channels of commerce, thus owned and controlled by one man, or by a few men, what is to restrain corporate power or to fix a limit to its exactions upon the people? What is then to hinder these men from depressing or inflating the value of all kinds of property to suit their caprice or avarice, and thereby gathering into their own coffers the wealth of the nation? Where is the limit to such a power as this? What shall be said of the spirit of a free people who will submit without a protest to be thus bound hand and foot?

Senator WINDOM here alludes to the telegraph as well as railroad monopoly. Shall these great powers of steam and electricity which God and nature has given to us, and that are and should be a blessing, be permitted to pass into corporate organizations who will employ them as a means of unduly and unjustly taxing the public for

their use? Is it not high time that the statesman and law-maker awake to this widespread feeling of discontent and danger and see that in the future corporate grants shall be environed with safeguards and a limitation of powers, and that the constitutional functions of the Government be employed to protect our commerce and guard the rights of every citizen? Laws should be passed compelling all transportation companies to base their rates or charges upon the "cost and risk of service," with a fair profit or interest added.

The fifty millions of people in this land should not be at the mercy of those whose pity is governed and rates are fixed by "what the traffic will bear." It is unwise to array labor against capital; they should be friends, allies, not enemies, and our laws should mete out justice and protection to both. I believe in the rights of the many. I am opposed to privileges for the few. The mutterings of the "voice of the people," which is said to be the "voice of God," is heard all over the land, through the press, by public meeting, and in petitions, and I beseech you to "put not off the evil day," but act now and at once. Let not these issues be ignored, for if delayed a few years longer nothing but a miracle will save us from a revolution as violent as that of France to overthrow these oppressions. Daniel Webster said:

The freest government cannot long endure where the tendency of the law is to create a rapid accumulation of property in the hands of a few and to render the masses of the people poor and dependent.

The bank monopoly, railroad and telegraph monopoly, standard oil monopoly, Hawaiian sugar monopoly, and some others of less note are, in my opinion, more dangerous to-day if left unrestrained than free trade could possibly be; yes, tenfold greater.

I would remind the House that within the short period of two weeks the bankers were enabled to advance the value of money in Wall street to 1 per cent. a day, and had President Hayes not vetoed the funding bill they threatened to reduce values 50 per cent. in thirty days.

Secretary Folger, on page 11 of his report for 1881, says:

There need be no apprehension of a too limited circulation. The national banks are ready to issue their notes in such quantity as the laws of trade demand, and as security therefor the Government will hold an equivalent in its own bonds.

Yes, there can be no doubt that the "national banks are ready to issue their notes" and just as ready to withdraw or retire them, as I have once before shown, and instead of their being governed by the "laws of trade" as assured by the Secretary, they will be governed by the price of United States bonds and the interests of the banks as determined by those who control them. This is the truth.

But did not the national banks furnish the money to put down the rebellion, &c.? Upon the contrary they lacked a great deal of it. When Lee surrendered there was about \$92,000,000 of United States bonds owned by national banks. On this they would be entitled to almost \$83,000,000 in circulating notes. The cost of putting down the rebellion, including the present debt and interest paid to date, is not far from \$5,000,000,000. Thus it may be seen at a glance how fraudulent this claim to patriotic sympathy on this score. The war dollar is the greenback; the bank dollar cannot possibly be better; it is a good currency because secured by the Government. But what would be thought of a man who should pay for the privilege of indorsing another man's note? It seems to me he would be liable to be called a lunatic.

That eminent and able statesman who for thirty years was a Senator of the United States from Missouri, Hon. Thomas H. Benton, said:

The Government ought not to delegate this power if it could. It is too great a power to give to any banking company whatever, or to any authority but the highest and most responsible which is known to our form of government.

Jefferson said:

The nation may continue to issue its bills (Treasury notes) so far as its wants require and the limits of its circulation will admit. * * * Let banks continue if they please, but let them discount for cash alone or for Treasury notes.

Jackson said:

If Congress has the power to regulate the currency, it was conferred to be exercised by Congress and not to be transferred to a corporation.

Mr. Speaker, I have made a great many quotations during my remarks because I greatly prefer the wisdom and statesmanship of others rather than self, and especially when I can bring to my support the fathers and founders of the Republic.

I will make one more and conclude my remarks. This is from ex-Treasurer Spinner. In a letter to a former Treasurer he says:

The greenback currency, or Treasury notes, which the banks are strenuously laboring to have suppressed or funded into an interest-bearing debt, at an annual cost to the nation of \$20,000,000, is the one redeeming feature in the American financial system. * * * The whole system on which the American national banks is predicated is nothing but a gigantic fraud on the public and a gross absurdity when brought to the touchstone of scientific reasoning.

This to me is the acme of financial reasoning and arrives at the climax of wisdom in its conclusion.

Mr. Speaker, I shall vote for the bill, but shall be far more impatient to vote for measures looking to the correction and remedying of the evils I have labored more to present for consideration than I have to explain the tariff-commission bill, believing its passage assured.

Chinese Immigration.

SPEECH

OF

HON. JOSEPH R. HAWLEY,

OF CONNECTICUT.

IN THE SENATE OF THE UNITED STATES,

Wednesday, April 26, 1882.

The Senate having under consideration the bill (H. R. No. 5804) to execute certain treaty stipulations relating to Chinese—

Mr. HAWLEY said:

Mr. PRESIDENT: I supposed that the Senate was done, and certainly that I was done, discussing this bill; but having listened to some of the remarks in favor of the bill, I am impelled to submit a few myself, in opposition. I propose only to make some few points and not to enlarge upon them. I caught part of the words of a Senator yesterday, dwelling upon the evils of cooly immigration, and I desire to correct him simply in a matter of fact. I believe there is none of such immigration or importation, and certainly this bill does not attempt to legislate upon it if there were any. It would be unnecessary; there is a law upon the statute-book, passed, I think, in 1862, which prevents cooly immigration. As to the question of fact as to whether there is anything of the kind nowadays, I beg to read a few words from a constituent, if not an American citizen, of my own town. By the way, I have had in my own district a Chinaman by birth, a naturalized American citizen, an intelligent and educated gentleman, who did me the honor to vote for me when I was a candidate for Representative in Congress. I believe there are none such there now.

Mr. FARLEY. Will the Senator allow me to ask him one question?

Mr. HAWLEY. Certainly.

Mr. FARLEY. Were they naturalized in the State of Connecticut, or where were they naturalized?

Mr. HAWLEY. They were naturalized in Connecticut, I believe. One of them I know was a graduate at Yale College, had taken prizes in English composition there, and was regarded as a man of superior ability and education. One of these intelligent Chinese gentlemen, residing in my own town and within a quarter of a mile of my own house, communicates to the New York Herald the following:

I constantly see in the newspapers, particularly the California ones, the statement that the Chinese immigration is a kind of slave trade. On this ground the Alta California charges the Senators from Massachusetts with inconsistency in having opposed negro slavery and now advocating a system of Chinese slavery. Remarks like this are based upon a false assumption. Emigration from China, whether to Australia, Singapore, or the Pacific coast, is in no sense cooly emigration. In fact the only cooly emigration that ever did occur was from the single port of Macao to the two countries—Cuba and Peru. Macao is a Portuguese colony, and trade was conducted by Portuguese, who reaped the benefit. The Chinese Government always opposed it, and Chinese law prescribes the penalty of beheading to any of its citizens who shall engage in it. This offense is put upon the same level with piracy.

After persistent efforts the Chinese Government succeeded in inducing the Portuguese Government to abolish the cooly trade in 1874.

KWONG KI CHIU.

He was late a member of the Chinese Educational Commission.

Therefore I conceive that the argument against cooly immigration has no force here for the reason that it is already sufficiently forbidden by statute twenty years old, and for the further reason that there is none, and there is no tendency of it toward this country, because cooly emigration is punished by beheading in China.

The Chinese immigration, while it affords a serious question to the people of the California coast, and I sympathize with certain of their feelings, has not, in my judgment, reached anything like the threatening proportions which have been represented. I am sorry it is not distributed more throughout the country, for I appreciate the painfulness of my position in discussing a matter that does not immediately affect my own State at all, and I am willing to contribute to the charitable and sympathetic feeling for those who sincerely feel themselves afflicted.

I am willing to regulate the immigration. I think the Chinese Government is willing. I am willing to limit it; to restrict it. I admit, nay more, I assert, the right of a government to defend itself against a hostile or dangerous immigration. It is a question of fact as to whether this is such. It is further a question for rightful consideration whether we are wisely legislating against it even if there be an evil. If we could suppose a bill that should admit only such Chinamen as came with their families, and admit such only as came with a purpose to permanently settle with us, admitting none to be citizens and voters unless they should be able to speak and read the English language, you certainly could defend such a bill with much more consistency than you can defend this bill as it stands with the clause forbidding naturalization, because that makes no distinction upon the ground of merit or education or intelligence or patriotism. It simply excludes a man by reason of his race or color, and we have said as emphatically as we could to the world that no man should be excluded for that reason.

An exclusion based purely upon race or color is unphilosophical, unjust, and undemocratic. For the purposes of my argument I do not care what you make the restrictions, but make them such as may be overcome, and then apply them to one race or to all races if you choose. When you say that a man is excluded because he is of a certain race or a certain color, that is something from which he can never recover by his own efforts, and, as I say, it is not only contrary to our fifteenth amendment, but contrary to our whole tradition and policy.

Possibly I could draw a bill that I should be willing to support, but it would not base a distinction upon the fact that a man is a laborer, which I consider an insult to labor all over the world, nor upon the fact that he belongs to any particular race. I should base it rather upon his moral and intellectual character and his purposes in coming to this country.

You say these men come and make a little money and go away and leave their families at home, where they support them cheaply; and that they compete with our laborers at a very small price. I admit there is some force in it; but in answer to that I can say that the prices of labor are very high in California certainly, and I can say that one of the objections to this very Chinaman is that he is too shrewd in taking care of his own interests. Therefore I am very sure that he is not permanently going to labor for less wages than he can get; he will get all he can in the end. I think that objection is rather overstated; too much weight is given to it, but it has some.

Mr. President, it is best for us to legislate in times of excitement and under popular impulses rather in accordance with the principles that we have adopted in cooler days or when no imagined emergency was resting upon us. The general determination of this country after a hundred years of experiment in free government is different from that enacted in this bill. I beg leave to say that I think this American Congress is acting under the influence of a temporary passion and a prejudice that I am sorry to say is not so temporary.

It is not the first time in our history that we have felt these storm-waves of class and race prejudice. All of us of middle age here can well remember that it is but a comparatively short time, as it seems to us, since there was something more than a prejudice against a race of whom no politician now says any evil—against the Irish. All remember that in some of the leading cities of the country their schools and convents were destroyed. I remember how Philadelphia was disgraced by the riots of the anti-Irish; I remember how the neighborhood of even conservative Boston was disgraced by riots—

Mr. MORRILL. And Baltimore.

Mr. HAWLEY. And Baltimore and other places. I remember further, when the prejudice not only went against the Irish but when it went against all men of foreign birth, and when a great party, a secret party, an oath-bound or promise-bound party—I never belonged to it, thank God—a secret party of some description, arose in this country and carried portions of it as by a tornado, based upon a hatred and jealousy of the foreigner of all sorts.

The good sense, the democratic principle, the Christian principle of the American people may be trusted to ride over and put down all such temporary hatreds and prejudices. I have mistaken the country I love if it was intended to be a country of such sentiments. The prejudice against the French, the cultivated and generous and chivalrous French, who were our friends in the Revolution, was very great at certain periods in our history. I need not speak, of course, of another prejudice which we are overcoming; a prejudice against the Englishman and the very name of Englishman. The prejudice of class hatred and race hatred against the African has made the great chapters of our history. I did think until this bill arose that if there were any question in the world this people had discussed in the light of republican and Christian principle it was the question of race hatred.

For purposes known to Him best, the Almighty permitted us to bring to this country hundreds of thousands, now millions of Africans. It is not necessary that I should discuss the prejudices under which they were compelled to labor. I wish I could quote literally the words of Abraham Lincoln when he said, in substance, that for every drop of blood drawn from the back of the slave by the lash white men must shed another drop. We have done so. I think we have overdone it. We have upon the statute-book at least recovered from this. That hatred, despised, and condemned and lashed African stands now as a freeman. He has occupied this Chamber; he has occupied this seat; he is a voter and a citizen. He is spoken of with respect in all our debates, and if I could speak of executive sessions, which I do not, I could tell of the high commendations given to individuals, eminent men among them. We are as nearly recovered from that as a nation can well be after four years of awful war in which we made due atonement to Almighty God for our sins.

I do not know but that I am preaching. I am a little too much, perhaps, of an old-fashioned Puritan, but I was taught to believe that a government not founded upon the truths of God was founded upon sand, and that it is unsafe to disregard them.

This bill is vastly improved, but I hold it to be still a violation of the treaty, for as I read the reports of our commissioners concerning their conferences with the Chinese commissioners I do not understand that they were anticipating any such exclusion as even a ten years' limitation. The utmost of which they speak is five years.

The impression one gets from reading the reports of the commis-

sioners that the Chinese anticipated not perhaps a diminution of the total number, but a temporary limitation, a restriction of one year, or two years, or three years, or even, it is said, to the extent of five years, or alternating years, the immigration so regulated by a certain number admitted each year that the total should not be increased in the country.

I object very seriously to that section of the bill which prohibits naturalization, and I have indicated perhaps sufficiently my reasons. It is undemocratic and un-American. I object further to certain very odious details in this measure. I casually referred to some of them yesterday. I find in the second section that the master of any vessel who shall knowingly bring within the United States or permit to be landed any Chinese laborer shall be punished by a fine of not more than \$500 and imprisonment for not more than a year. I find further in the eleventh section something I think contradictory to that, or which may perhaps require attention from the friends of the bill:

That any person—

Not a master of a vessel alone; he might be supposed to be more guilty than anybody else, but—

That any person who shall knowingly bring into or cause to be brought into the United States by land, or who shall knowingly aid or abet the same, or aid or abet the landing in the United States from any vessel of any Chinese person not lawfully entitled to enter the United States, shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be fined in a sum not exceeding \$1,000, and imprisoned for a term not exceeding one year.

The same term of imprisonment, but double the money penalty. The captain of the vessel may be fined \$500 and imprisoned a year, but any citizen, which includes in its general term, of course, the master of the vessel also, shall be punished by a fine of \$1,000 and imprisoned for a term not exceeding one year. Mind, this is not alone the bringing in of Chinese deliberately from China, 3,000 miles across the sea, when the captain knew well what he was doing all the time, or might well have known, or ought to have known; but it is knowingly bringing in or causing to be brought in, or knowingly aiding or abetting the same. That is the clause to which the Senator from Florida [Mr. CALL] instinctively objected yesterday as contrary to his reading of our doctrine of liberty as brought down from English law and history.

Mr. EDMUNDS. Will the Senator from Connecticut allow me to suggest to him—

Mr. HAWLEY. Certainly.

Mr. EDMUNDS. That I think on a more careful reading he will see that he is mistaken in supposing that there is a difference in the quantity of penalty in these two cases. In the first case it applies, as he has correctly stated, in section 2, to the master of a vessel who knowingly brings in Chinese laborers, and he shall be punished, on conviction, by a fine of not more than \$500 for each laborer so brought in. When you come to section 11, it is now so framed, as the committee thought, as not to touch the master again; but, first, applies to bringing by land into the United States; and, secondly, to aiding or abetting the bringing in by water. It then provides that such a person shall be deemed guilty of a misdemeanor and be punished by a fine not exceeding \$1,000. Under that section, if one aids and abets in landing twenty, fifty, one hundred Chinese laborers, it makes one single offense; whereas the second section is more intense in its punishment, I submit to my friend, than the eleventh section is.

Mr. HAWLEY. Yes, but the eleventh section punishes any one who aids or abets in the landing in the United States from any vessel of "any Chinese person."

Mr. EDMUNDS. Yes.

Mr. HAWLEY. Therefore, if there be a hundred or more, is the aider and abettor punishable for but one offense, when the law threatens punishment for aiding the landing of "any Chinese person?"

Mr. EDMUNDS. The Senator is mistaken, if he will pardon me. The law is clear in a statement of that kind. It has been decided a thousand times that if you aggregate a hundred persons they merely make the mass. In order to hold the master liable there for each person it is necessary to say so, as it is said in the second section.

Mr. HAWLEY. Then the Senator holds, and I bow to his judicial construction, that if I should aid or abet in the landing of a thousand I could be punished no more than the man who aided or abetted in the landing of one; I could be punished by a thousand-dollar fine and imprisonment not exceeding one year.

By the way, the twelfth section provides that no Chinese person shall be permitted to enter the United States by land, and any Chinese person found unlawfully within the United States shall be caused to be removed by the President.

I should feel, I think, a sense of shame if I were called upon to explain that provision to an intelligent Chinaman or an intelligent citizen of any European government. I think I should have to say to him that my individual preference would have been to impose that duty upon a marshal or deputy marshal, or the collector of a port, or some officer of inferior importance; but by this proposed statute the Chief Magistrate of the United States is made the captain of the hunters; he is compelled to cause those Chinamen to be removed.

Mr. MILLER, of California. Will the Senator allow me to interrupt him?

Mr. HAWLEY. Certainly.

Mr. MILLER, of California. Does the bill say that the President of the United States shall do this?

Mr. HAWLEY. I said he would have to cause it to be done. I referred to the section which provides that it shall be done by direction of the President.

Mr. MILLER, of California. That means that the President shall make such needful rules and regulations as he may prescribe, and he may designate a marshal or any one else for the purpose.

Mr. HAWLEY. It is to be done by the direction of the President. He is the chief of police for that purpose, and ought to issue a code of instruction to all the deputy marshals, and I suppose perhaps also a proclamation, and an earnest request if not a command to me and to you and to all of us to disclose a Chinaman, to catch him if we could. I do not know but he would have authority to direct me as a citizen, as part of the *posse comitatus*, to assist in arresting such a person or to have something to do as a witness before the court to prove that he is unlawfully here. He would call a long time on me before I should go under those circumstances. It is too much like the old fugitive-slave law. I do not understand this aiding or abetting the landing of a Chinaman. I am very sure if I were standing on the wharf in San Francisco or in New York, and looking at the landing of passengers from a ship coming from no matter where to the land of liberty, of universal freedom, and where we are forbidden to exclude any man by reason of race, color, or previous condition of servitude from citizenship even, and if I should see coming down the gang-plank some yellow men among the rest, I should not trouble myself to inquire whether they had papers or not; and yet if I should hear anybody on board say, "These men are not coming, I think, under the law; I think they have not their permits, they have not their passes," (after the fashion of the old slave system,) and if I should say, "Very well, I do not care," I am quite sure I should be guilty of aiding and abetting the landing of those people. I think under such a statute it would be my duty to inform the President of the United States, so that he might cause those people to be removed under his direction.

Sir, do you suppose that you will get anybody to obey such a law outside of the sand lots? We have made experiments like that. I referred casually to that yesterday. I refreshed my memory of a bitter old time by looking at the fugitive-slave law of 1850. It is not necessary to go into details, for that terrible law burned itself into the memories of the people of that day; but it is extraordinary in its despotism. It provided—

That any person who shall knowingly and willingly obstruct, hinder, or prevent such claimant—

of a negro—

or shall rescue or attempt to rescue such fugitive from service or labor; * * * or shall aid, abet, or assist such person so owing service or labor as aforesaid, directly or indirectly, to escape from such claimant, * * * or shall harbor or conceal such fugitive—

Shall permit him to sit in a shed in the back yard or lie there over night and give him a crust of bread. Any such person—

shall, for either of said offenses, be subject to a fine not exceeding \$1,000, and imprisonment not exceeding six months.

The penalty was not so great as it is to be in the case of aiding and abetting the unlawful landing of a Chinaman. Moreover, when the hue and cry was raised against the black man the law said:

And all good citizens are hereby commanded to aid and assist in the prompt and efficient execution of this law, whenever their services may be required, as aforesaid, for that purpose.

The marshal was authorized to call out the *posse comitatus*, to call upon the bystanders and good citizens of every community to aid him, and they were subject to penalty if they did not go. I justify my reference yesterday to the pending bill as analogous somewhat in its general character and in its antagonism to Christianity and humanity, and in its non-conformity to old-fashioned English laws, to the fugitive-slave act.

Mr. BUTLER. May I ask the Senator if the words "aiding and abetting" have not a very well-recognized meaning in the criminal law of this country?

Mr. HAWLEY. Certainly, I suppose they have, and I will confess that I do not precisely remember what it is. I am not sure but that I will make my case a little stronger; I will suppose myself standing upon the wharf, and, if you choose, giving my hand to a Chinese man or woman coming down the gang plank, and being informed by the Chinaman that he had no pass or certificate I invite him home to dinner in my house. I will make it aiding and abetting.

Mr. BUTLER. The Senator certainly has not read the law-books, or he would not put that construction upon it.

Mr. HAWLEY. Then I will say that I did aid and abet. Will the gentleman give me his own definition of aiding and abetting? I should be very happy to have the Senator from Vermont [Mr. EDMUNDS] tell me what aiding and abetting is if it be not physical assistance, as housing and feeding and moral approval also. I will suppose that the moment such a Chinaman landed I take him to my house and give him a free dinner, tell him that I thank God he came to my country, teach him what the flag means, and read the Declaration of Independence to him, and ask him to send for his wife and children. Would not that be aiding and abetting?

Mr. BUTLER. He would be here then.

Mr. HAWLEY. He would not be here when I first saw him; he would be on the deck of the vessel.

Mr. BUTLER. He must be here when you invite him to your house.

Mr. HAWLEY. He would be on the deck of the vessel; I would meet him beyond the harbor, three miles beyond Sandy Hook, if you please. I will make it aiding and abetting.

Mr. EDMUNDS. If my friend from Connecticut is really in earnest, as I presume he is not, in talking this kind of law, I should be glad to say to him that I think he will find that what aiding and abetting means in any unlawful enterprise, (granted that we declare it shall not be lawful for a certain particular description of Chinese to come,) is the entering into a scheme of bringing Chinese into the United States against the law and in spite of it, and in order to defy and evade the law. If the Senator wishes to do that, it is merely because he does not like the law and thinks it is unconstitutional; but short of that he could not be convicted of aiding and abetting anybody.

Mr. HAWLEY. I do not pretend to measure my knowledge of the law, criminal or civil, with the Senator from Vermont, but I venture to say that it is quite possible for one to make himself an aider and abettor without going to China for that purpose.

Mr. EDMUNDS. I think so.

Mr. HAWLEY. I venture to say that it can be done on the street or the wharf at New York.

Mr. BUTLER. It requires some overt act.

Mr. EDMUNDS. It requires both the intention and the act to defeat the law.

Mr. HAWLEY. Then, I say, make what limitations you please upon it, men will aid and abet in spite of your law and in contempt of it and be justified by public sentiment eventually, as they were in the case of violations of the fugitive-slave law, and that to a large portion of the country your law will be substantially a dead letter, as being against the moral sentiment of the people.

I object to the expression "laborer" without further specification or description. Let this proposed statute be read a hundred years hence, dug out of the dust of ages and forgotten as it will be except for a line of sneer by some historian, and ask the young man not well read in the history of the country what was the reason for excluding these men, and he would not be able to find it in the law. He would find the Chinese laborer excluded for no cause except that he is a laborer. Will that answer the question? Is that in accordance with the doctrines of the dignity of labor which we have taught? If he goes further for a reason, all he can find is in the preamble, where it says that the coming of Chinese laborers may endanger good order. I think that is a monstrous preamble. I should have supposed that when the committee had time for sober second thought and amended this bill they would have in some way modified it in that respect. [Mr. FARLEY rose.] I know it is quoted from the treaty.

Mr. FARLEY. I was about to remark to the Senator that if the student a hundred years hence should read the law, the chances are that he would also read the treaty, in which it is provided that such legislation may be had as is set forth in the bill.

Mr. HAWLEY. It may be, but the treaty does not disclose any good philosophical or economic reason for it. It says this immigration endangers the peace of the country, the good order of the country, but there is no explanation of the reason why it endangers good order.

Mr. EDMUNDS. I might make a suggestion to my friend from Connecticut, if it would not disturb him, on this point.

Mr. HAWLEY. Not at all.

Mr. EDMUNDS. As I think he knows, I agree in his general notions about the value of universal humanity; but history does seem to prove that good order on the Pacific coast has been disturbed, to put it from his point of view and mine, not by the misconduct of some Chinese laborer or gang of Chinese laborers, but by the sand-lot people, who have raided Chinatown and have upset everything with cruelty and wrong. That therefore endangers the good order of the community. It does not make any difference which class of the community it is that disturbs the public peace, the public peace is disturbed and if you can save it by giving time for reason to restore itself and passion to cool, is it not wise?

Mr. HAWLEY. The Senator from Vermont has not at all modified what I was saying or my impression of it. The student will read the expression "endangers good order," and his first thought will be that the people who were coming here were very bad.

Mr. EDMUNDS. Then he will not be a philosophical student.

Mr. HAWLEY. That is what the preamble says.

Mr. EDMUNDS. Oh, no.

Mr. HAWLEY. Let us see:

Whereas in the opinion of the Government of the United States the coming of Chinese laborers to this country endangers the good order of certain localities within the territory thereof.

Mr. EDMUNDS. It is not the people who come who endanger it of themselves, but it is the act of coming. That does not imply that it is the act of the people who come, but that the fact existing of their coming here produces a disturbance. We all know that it does produce a disturbance; but I believe with my friend, in general, that it is without their fault.

Mr. HAWLEY. The Senator from Vermont, I understand, believes that it is without the fault of the Chinese?

Mr. EDMUNDS. In general I think so.

Mr. HAWLEY. I think any stranger to this history reading the preamble would say that the fault does not appear on the face of it to lie with the Chinaman. It appears to be a fact that if the Chinese laborers come here, somebody on our soil will trespass upon the personal rights and natural rights of the Chinaman, which is the fact.

Mr. EDMUNDS. Then let us protect the Chinamen by having them hold up a little while until they get over their trouble.

Mr. HAWLEY. But unless there be some reason beyond that our first duty is to compel the people on our own shore to obey the law. That is the first question; it is not to say that these sand-lot riots are to be excused. The mobs of California or of any other part of the country would be excused upon that ground. A statesman and an executor of the laws of this country has no right to begin by the removal of the innocent party. I protest against that doctrine. I had my first lesson in the putting down of mob law during the theater riots of New York in 1849, when as a youth I was in and out of the theater both of the riotous nights, and I was never more proud of the execution of law in my country as when I heard the rattle of musketry under the windows of the theater and stood there close to the wall and watched the shooting down of twenty-five of the mob. I went the second night with the greatest satisfaction to the theater because Mr. Macready was invited by the leading citizens of New York to come there and repeat his performance, though under the view of the Senator from Vermont Macready should have been removed from New York because his coming the second night was going to endanger the good order of society.

Mr. EDMUNDS. The Senator is entirely mistaken, and he entirely misrepresents me, without meaning to do it. Mr. Macready had a natural right, under the law as it stood, to go where he did and do what he did, and probably it was a wise thing for law and good order that all the forces which he and his friends and the law could muster should carry it out. I maintain that no foreigner has a natural right to come to this country at all. If I am wrong about that, my whole case is gone. It turns upon our own judgment of what is wise for our own welfare. If that be so, the foreigner having no natural right to come, if his coming produces, with no fault of his, a riot and discontent of wicked men on any coast, be it East or West, that disturbs the peace and good order of innocent men as well and upsets society, then I say it is wise for that society to hold up a little while and see what can best be done next. That is the distinction. I hope my friend sees it.

Mr. HAWLEY. That is not the precise point of difference between us. I hold the first duty of a decent government to be to compel the rioter to be silent, that the law-makers may have time to consider whether they will exclude the men hereafter or not.

Mr. EDMUNDS. So that if the nihilist or whatever criminal may exist in any other country—

Mr. HAWLEY. That is dodging the question. The Senator says a "nihilist or any other criminal."

Mr. EDMUNDS. I know, but we are on the principle of the question whether the Government can say to any foreigner, "Wait until we can get our own state of society so that it may be willing to receive you." The nihilist, the murderer of kings and princes, and of all other people who do not agree with him, chooses to say, "It is a little too hot for us in Russia, or Germany"—or wherever it may be, the socialist, the communist in Paris says, "The Republic cannot stand us any more, and it is too hot for us here; we will now all emigrate to the United States." They come. The people of New London and Burlington, and so on, do not want that sort of people; they are not their kind, and they are discontented at it. Now, my friend says, if I understand him, "Let them come in; do not stop to inquire the propriety of their coming, but first let them come in peace, and establish themselves and their doctrines, and then consider the matter." I do not agree to that.

Mr. HAWLEY. I am glad the Senator does not, because I do not know anybody so foolish as to do so.

Mr. EDMUNDS. It is the same case exactly.

Mr. HAWLEY. Not at all. I was not talking of men known as the political thugs of the world, universal conspirators and murderers, nor was I speaking of criminals of any description. I was speaking of a peaceable, industrious, too economical and careful class of people, who come to this country.

Mr. EDMUNDS. Then it comes to a mere question of expediency. You have to judge first.

Mr. HAWLEY. It is a question of expediency whether we will exclude them or not. They are not criminals. They are confessedly, according to all men's testimony, not doing anything themselves to disturb the peace of any community. They are here under a solemn treaty with the same right to protection that Macready had. They labor. They labor too much. They work. They work too cheaply; they save too much money, and therefore certain people in this country are so dissatisfied with their coming that they raise riots and threaten greater riots.

What did I see on the floor of the Senate? I saw a Senator arguing in support of this bill and another Senator rising when the

question of consideration was raised and asking what was the condition of public sentiment on the Pacific coast, and the Senator who was anxious to bring the bill up said there was a condition of very great excitement over there, and there was danger of riot, and that was considered an argument in the American Senate in favor of immediately bringing up the bill for consideration. The American Senate should have said, "The consideration of this question is postponed one month. General Sherman, keep order on the Pacific coast. They raise the question of riot or no riot; we will have no debate on that question." That is what the American Senate ought to have said.

Mr. FARLEY. Will the Senator allow me a moment?

Mr. HAWLEY. Certainly.

Mr. FARLEY. The Senator I suppose refers to the remark I made in the Senate.

Mr. HAWLEY. I do not remember really who it was; I remember that it came from that side of the Chamber.

Mr. FARLEY. At the time the proposition was made to refer the veto message and bill to the Committee on Foreign Relations, after the original bill had been vetoed, I stated as an objection to such a reference that the people on the Pacific coast were anxious and excited over the proposed veto and that there was perhaps danger of violence, violence having been heretofore resorted to in my State; but the better classes of people, all classes, not the sand-lotters that my friend from Connecticut refers to, but the most respectable people in that State, united in order to avoid that state of things; and I stated that the excitement there was so great that they were afraid of violence in the midst of that great turmoil.

I want to correct the Senator in another statement which he made in regard to the sentiment of the people of the Pacific coast, and particularly of California. The feeling there is not confined to the element that he has referred to, the sand-lot element. It extends throughout the entire State, embracing all classes, merchants, farmers, lawyers. The mayor of the city of San Francisco, a leading Republican, a man who has been probate judge and county judge of that city for years and years, publishes to the world his views upon this subject, and does not go further than the people the Senator refers to, who have been sand-lotters, except in their violent way of expressing themselves. The people of that State, 152,000 out of 161,000 voters, voted against the further immigration of Chinese into this country and excluding those who are here if we could do so legitimately under the forms of law.

Mr. HAWLEY. I am well aware that a majority of the people of California love peace and will obey the law; but they are not the people to whom I refer. It runs through all of the gentleman's own statement just made that there is an element in California of which he was afraid, and he had good reason to anticipate the open, defiant violation of law if we did not act speedily upon this subject.

Mr. FARLEY. I did not say that I was afraid of any particular element of the State. The whole people of the State were alarmed for fear that there would be riot or violence. I did not say by whom; I did not say by the sand-lotters or any other class of people.

Mr. HAWLEY. I will not bring the gentleman into such a condition as to prejudice him with the sand-lotters, if I can help it. He has just said and repeated it that the people of that coast were greatly apprehensive that a certain element known as sand-lot people would break out into open violence if we did not act speedily. He has said that three times over now. That is all I said to begin with. But I have prolonged these remarks fourfold beyond what I intended.

Mr. FRYE. Before the Senator sits down I want to call his attention to one point that he has not noticed.

Mr. HAWLEY. Certainly. I marked several points in the bill, but I did not care to prolong the debate.

Mr. FRYE. Section 10 is the most outrageous one of the whole lot; under which, if Mr. Low, of New York, sends a ship worth \$100,000 to China to buy tea, and the master of the ship takes a Chinaman and brings him into San Francisco, the master may be fined \$500 and imprisoned one year, and in addition to that the vessel-owners are punished by a fine of \$100,000; that is, a forfeiture of the ship with-out any remedy whatever.

Mr. HAWLEY. I thank the Senator. I had marked that section on this copy of the bill particularly. I call attention to that again:

That every vessel whose master shall knowingly violate any of the provisions of this act shall be deemed forfeited to the United States, and shall be liable to seizure and condemnation in any district of the United States into which such vessel may enter or in which she may be found.

The man who knowingly brings one Chinaman over here illegally is to be fined \$500 and imprisoned one year, and the \$200,000 clipper ship is liable to seizure and forfeiture.

Mr. President, these things overleap themselves. When this question was taken up yesterday, I took the bill and silently thought "they have really modified the bill a good deal now, and I will read along patiently and try to avoid saying another word on this question; I am overruled; I am temporarily in the minority, but I can wait." I read on, and read on, until I came to these provisions, and then I uttered five lines of denunciation—I could not help it. I leave the bill to posterity for its condemnation. I plant myself here now, this moment, on the ground of unconditional hostility and denunciation. I will make no terms with it now or elsewhere here or hereafter, at any time.

Miami Lands in Kansas.

SPEECH

OF

HON. WALPOLE G. COLERICK,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1882,

On the bill (S. No. 328) to provide for the sale of the lands of the Miami Indians in Kansas.

Mr. COLERICK said:

Mr. SPEAKER: This bill affects the rights and involves the interests of a large number of Miami Indians residing in the Congressional district which I have the honor to represent, and as the bill in its present form ignores their rights and extinguishes their interests in the lands referred to in the bill, it becomes my duty to oppose its passage, unless it is first amended so as to protect their rights and guard their interests.

I ask the attention of the House for a few moments until I briefly state the reasons upon which my opposition to the bill rests.

By the provisions of a treaty made on the 6th day of November, 1838, by the United States with the Miami tribe of Indians, then a powerful tribe, who held and occupied the territory which now constitutes a large portion of Northern Indiana, the tribe ceded to the Government a vast area of land, and as a part of the consideration to be paid for the same the United States, by the tenth article of the treaty, stipulated, in the language of the treaty, "to possess the tribe of, and guarantee to them forever, a country west of the Mississippi River to remove to and settle on when the said tribe may be disposed to emigrate from their present country, and that guarantee is hereby pledged. * * * And when the said tribe shall have emigrated the United States shall protect the said tribe and the people thereof in their rights and possessions against the injuries, encroachments, and oppressions of any person or persons, tribe or tribes whatsoever." (See Revision of Indian Treaties, page 5047.)

The next treaty was made November 28, 1840, and proclaimed June 7, 1841. By the first article of this treaty the tribe ceded to the United States all of the remaining lands then owned by the tribe in Indiana, and the United States by the twelfth article of the treaty, in part consideration for the cession so made, set apart and assigned to the tribe for their occupancy a tract of land therein described, west of the Mississippi River, and estimated to contain 500,000 acres, to which the tribe agreed to remove within five years. (Revision of Indian Treaties, pages 510, 5117.)

The last treaty was made June 5, 1854. By its first article the tribe ceded and conveyed to the United States the 500,000 acres which had been so assigned and set apart to them, "excepting and reserving therefrom 70,000 acres for their future homes," and by the second article of this treaty it was provided that the lands so reserved shall be surveyed, and within four months after the approval of the survey "each individual or head of a family of the Miami tribe now residing on said lands shall select, if a single person, 200 acres, and if the head of a family a quantity equal to 200 acres for each member of the family."

By the same article of the treaty it was provided "that if by reason of absence or otherwise any single person or head of a family entitled to land as aforesaid shall fail to make his or her selection within the period prescribed, the chiefs of the tribe shall proceed to select the lands for those thus in default;" and it was also further provided that "after all the selections shall have been made, the chiefs shall further proceed to select in a compact body and contiguous to the individual reservations the residue of the 70,000 acres, * * * which body of land shall be held as the common property of the tribe, * * * provided, that if any single person or family entitled to land shall have been overlooked or wrongfully excluded, and shall make the fact appear to the satisfaction of the chiefs, such person or family may, with the approbation of the Commissioner of Indian Affairs, receive their quantity by the rule prescribed in this article out of the tract to be thus selected and held as the common property of the tribe."

At the time of the making of the treaty of 1840 all the members of the tribe resided in Indiana, and afterward, in 1846, a large number of them went to the State of Kansas, where the reservation was located, and took possession of it, but more than one-half of the tribe remained in Indiana, where nearly all of them still reside. Those who went to Kansas received their allotments of land, consisting of two hundred acres each, while those who remained in Indiana, excepting certain ones to whom I will hereafter refer, have been denied the right to participate in the division of the lands by the action of the chiefs of the tribe, who refused to recognize their right to receive allotments of lands, although the treaty expressly declared that "if by reason of absence or otherwise any single person or head of a family shall fail to make his or her selection within the period of time prescribed, the chiefs of the tribe shall proceed to select lands for those thus in default." This imperative duty the chiefs failed and

refused to perform, and now it is proposed by this bill to sell the lands unallotted and pay the proceeds arising from their sale to those Indians who received their allotments, and thereby wrongfully exclude and unjustly deprive the Indians residing in Indiana from making selections of lands or participating in the distribution of the money arising from their sale.

The Miami Indians as a tribe no longer exist, as their tribal relations were abolished by an act of Congress passed March 3, 1873. (See United States Statutes, volume 17, page 631.) By reason of this statute the allotments of lands to which the Indians residing in Indiana are entitled cannot now be made in the manner provided by the treaty, as the Miami Indians are no longer recognized by the Government as a tribe, and those who went to Kansas have since united with other tribes, and have not maintained a separate tribal existence, and have no chief clothed with legal authority to execute the power conferred and perform the duty imposed by the treaty in making assignments of lands to absentees, and, therefore, in order to make allotments to them it becomes necessary for Congress to confer authority to do so upon some other person or power. The question to be decided arises out of the construction to be given to the provisions of the treaty, whether or not those members of the tribe who reside in the State of Indiana are entitled to receive allotments of these lands.

That they are entitled to receive such allotments has been determined by Congress, by an act approved June 12, 1858. (See United States Statutes, volume 11, page 332.) The Secretary of the Interior was authorized and directed to place upon the pay-roll of the Miami Indians of Indiana the names of a large number of Indians residing in that State who prior to that time had been excluded from the roll, and cause annuities to be paid to them thereafter the same as those then on the roll; and it was also provided in the statutes to which I have referred "that the Secretary of the Interior is also authorized and directed to cause to be located for such persons, each, 200 acres of land out of the 70,000 acres reserved by the second article of the treaty of 1854 with the Miamis, to be held by such persons by the same tenure as the locations of individuals are held which have been made under the third article of said treaty."

And thus Congress construed the treaty, and determined that Miami Indians residing in Indiana were entitled to receive allotments of these lands, and directed the Secretary of the Interior to make them, and he, in obedience to the mandate of this law, did afterward make the allotments to them as directed to do, and no one has ever disputed their right to hold the lands so allotted.

It is true that afterward the names of those persons who were so placed upon the pay-roll were stricken therefrom by means of an opinion rendered by the Attorney-General, to whom the question was referred as to the power of Congress to add additional names to the pay-roll in the face of an express provision of the treaty prohibiting it from being done. While their right to be placed upon the pay-roll was denied by reason of the mandatory provision of the treaty, which expressly declared that they should not be placed on the roll, yet no question was raised or presented, and none has been since then, as to their right to participate in the division of the lands.

I also desire to call the attention of the House to the fact that section 7 of the act of March 3, 1873, to which act the bill under consideration refers and relates, provides:

That the provisions of this act shall not in any way affect the rights or claims of those individual Miamis or persons of Miami blood or descent who are named in the corrected list referred to in the Senate amendment to the fourth article of the treaty of June 5, 1854, or their descendants. (See United States Statutes, volume 17, page 633.)

The Indians referred to in the provision of the act which I have just read are those residing in the State of Indiana, and I have embodied this provision in the amendment which has been offered by the gentleman from Kansas, [Mr. HASKELL,] who, as chairman of the Committee on Indian Affairs, has charge of this bill. The amendment was carefully prepared by me and presented to him, which he accepted and has offered the same in accordance with his promise to me. The amendment so prepared and offered has an additional provision that the question whether these Indians are entitled to receive allotments of lands or participate in the distribution of the proceeds arising from the sale of the lands shall be submitted to the Attorney-General for his opinion, and if he decides that they have such right, then that the Secretary of the Interior, out of said proceeds, shall pay to each of said persons in money a sum equal to the value of 200 acres of said lands as appraised for sale.

Under an act of Congress, approved March 3, 1873, a large quantity of the unallotted lands have been sold, and this bill is to authorize the Secretary of the Interior to sell the quantity yet remaining unsold. For the purpose of ascertaining the quantity unsold and other information in relation to these lands, I addressed a letter to the Commissioner of Indian Affairs on the subject, and in his answer to me he says:

Under the treaty of June 5, 1854, there were set aside as a reserve for the Miamis 70,633.55 acres of land; of this 60,025.58 acres were patented to 300 members, including the 73 above referred to—

Meaning the ones to whom allotments were made by the Secretary of the Interior under the act of June 12, 1858, to which I have referred—of the tribe between the ratification of the treaty and the year 1870, thus leaving 75 persons of the original roll of 1854, of 302 names, to whom no allotments have been made.

By the act of March 3, 1873, Statutes 17, page 6317, the Secretary of the Interior was directed to have the unallotted lands and the school sections, 10,607.97 acres, appraised and sold. The appraisement was made and approved October 30, 1873, and 3,293.55 acres were then sold. On February 7, 1874, there was sold at auction 120 acres additional, leaving 7,194.42 acres undisposed of. Of this last amount 404.64 acres have been settled on, and one-third of the purchase-money paid, and 4,416.74 acres have been settled upon but no entries made.

You also state that a number of persons embraced in the list of 1854 have never received allotments, and ask "What is necessary to be done by them in order to obtain the same?" As these lands have been opened to sale and settlement by the act last above referred to, it would be necessary for Congressional action to be taken covering their cases.

Mr. Speaker, it will be observed by this letter that but a small quantity now remains unallotted and unused, but I am informed that the proceeds which were realized from the sale of those lands that were sold by the Secretary of the Interior has not been distributed, and it is for the purpose of reaching this money, as well as that which will be received by him from the sale of the residue of the lands, that my amendment, presented by the gentleman from Kansas, [Mr. HASKELL,] was prepared and offered, which amendment is in these words:

Amend by adding after section 3 the following:

"SEC. 4. That the provisions of this act shall not in any way affect the rights or claims of those individual Miami or persons of Miami blood or descent who are named in the corrected list referred to in the Senate amendment to the fourth article of the treaty of June 5, 1854, or their descendants. And before the proceeds which have been or may be hereafter realized from the sale of said lands shall be applied for any purpose, or distributed, the Secretary of the Interior shall obtain the opinion of the Attorney-General as to what rights or interests, if any, said persons have or had in and to said lands; and if in his opinion they are or were entitled to have parcels of said lands allotted to them, under the provisions of said treaty, and failed to receive the same, then said Secretary of the Interior is hereby authorized and directed to pay to each of said persons, out of the proceeds of the sale of said lands as aforesaid, a sum equal to the value of two hundred acres of said lands, as appraised for the purpose of making said sale, for and in lieu of their interest in said lands, and that of the surplus of said proceeds which may then remain, if any, that they receive their *pro rata* share thereof the same as other members of said late tribe of Miami Indians."

The wisdom of submitting this question to the Attorney-General is demonstrated by the result which occurred when the question of the right of Congress to add additional names to the pay-roll to which I have referred was submitted to him. He decided that the names so added, and which had then been on the roll for about ten years, must be stricken therefrom, which was done, and now a bill is pending in this House for the relief of the persons who were properly on the roll, and whose money was taken to pay those who were improperly placed thereon, and by which bill they seek to recover the amount of the money which was during those ten years wrongfully paid to others. It involves thousands of dollars, which the Government in honesty and justice must repay. Safety to the Government and justice to these Indians require the adoption of the amendment which has been offered, and I hope that it may be adopted.

Tariff and Tax Commission.

SPEECH

OF

HON. CHESTER B. DARRALL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. DARRELL said:

Mr. CHAIRMAN: It was not my intention or desire to engage in the debate on the bill under discussion. The proposed measure is not one that, it appears to me, admits of any extended discussion or should admit of any great difference of opinion among those who only desire the greatest good to the greatest number of our people, and no unfair or unjust discriminations, either in favor of or against any of the great industries of the country.

But the members of the committee reporting this bill, and others who have spoken, following them, have gone into a discussion of the tariff question to its fullest extent, and in its bearings on all the industries of the country—agricultural, commercial, and manufacturing. Under such circumstances, representing as I do an agricultural constituency, whose two principal productions are directly affected, I feel it my duty to briefly give my reasons for supporting the tariff-commission bill, and to state as near as I may be able to do so the views of the people whom I represent, the sugar and rice planters, and the laborers on those plantations, on this whole question of tariff and protection—protection not only to the products of the rich alluvial lands of that State but protection to the laborers on those lands against the slave labor of Cuba and the cooly labor of China and India.

Let me refer first to the measure under discussion and state my reasons for believing that it is wise and judicious and should be adopted by Congress. I may be indulged, Mr. Chairman, perhaps, for a few moments in calling the attention of the committee to the bill under discussion, the proposal to create a commission to whom this subject of a revision of our tariff laws and regulations may be referred. Gentlemen who have preceded me in this debate have for the most part, in their anxiety to discuss the whole questions of revenue and tariff, lost sight of the bill simply to create a commission now under discussion. And of all the speeches so far made only one, that of the gentleman from Ohio, [Mr. TOWNSEND,] has been confined to the wisdom and justice of obtaining the views of a commission of experts representing all the industries of the country, and these views obtained by a thorough investigation made on the ground before action be taken by Congress.

Let us look at the bill and its provisions. Section 1 provides for the appointment of a "tariff commission," composed of nine members; section 2 provides for their compensation and traveling expenses; and sections 3 and 4, defining their duties and powers, and the time of making their report, are as follows:

SEC. 3. That it shall be the duty of said commission to take into consideration and to thoroughly investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff, upon a scale of justice to all interests; and for the purpose of fully examining the matters which may come before it, said commission, in the prosecution of its inquiries, is empowered to visit such different portions and sections of the country as it may deem advisable.

SEC. 4. That the commission shall make to Congress final report of the results of its investigation, and the testimony taken in the course of the same, not later than the first Monday of December, 1882; and it shall cause the testimony taken to be printed from time to time and distributed to members of Congress by the Public Printer, and shall also cause to be printed for the use of Congress two thousand copies of its final report, together with the testimony.

The above act is the one we are discussing, and as I said at the outset it seems to me that its passage would be wise and judicious, and I am at a loss to understand the opposition that has been made to it on any other ground than the fact that it comes from our friends on the other side of the House, of whom it has been said they learn nothing and forget nothing. For six years they had complete control of the legislation of this House, and on this question of tariff showed conclusively that they had learned nothing by being witnesses of the unparalleled prosperity of the country under a policy of protection. And now that it is proposed to secure for our guidance on this all important question of a revision of the tariff the views and opinions of a commission representing all the various industries of the country, to the end that exact and equal justice may be done to each and all, we find our Democratic friends in opposition. Their failure of the last six years has learned them nothing, and their course on this measure is evidence that they forget nothing.

In listening to the various speeches from that side of the House I have been surprised to find so few objections to the actual bill under discussion. The inequalities, iniquities, and injustice of the present tariff has been the burden of their theme, and but little has been said, nothing really of any weight, against this plan of securing before action all the light possible to be obtained on the subject.

Now, Mr. Chairman, let us look at the practical side of the question. Let us consider what the effect of the appointment of the proposed commission will have on the duties and labors of this Congress and on the probability of our being able to accomplish that which all admit to be both desirable and necessary, a change or revision of the existing tariff laws.

This Congress, elected November, 1880, met in session December, 1881, and has been in continuous session ever since. The committees were not appointed in time to do any work till after the holiday recess. Our Committee on Ways and Means, appointed from members of most experience and service of greatest length, have as the result of their labors up to this date reported by a majority of their members this bill, and have urged upon the House in able and exhaustive speeches its passage. They have shown us the absolute necessity, if we desire action by this Congress, of the passage of this bill and the creation of this commission, whose duties shall be as specified in the sections I have quoted, to consider the whole subject, to visit different sections of the country, to print and distribute to Senators and members of Congress from time to time during the summer the result of their investigation and inquiries, and to report the final result of these inquiries with all the testimony taken on or before the first Monday in December next.

They have said to us that it is not possible for their committee to do this work without the assistance of this commission of competent and experienced men specially appointed for this purpose. And, as I said, if we desire action it is the part of wisdom and common sense to follow the advice of our committee. Further than this, the same or a similar bill has been before the Senate, has received there the fullest discussion and consideration, and was passed by a large majority, thus giving evidence that it is the opinion of that body—the Senate of the United States, representing the States themselves—that on this subject they desire this commission to be appointed, this investigation to be had, and this report to be made before they proceed to act on the question.

The Senate of the United States have said to us that they are not prepared to act on this subject, that they desire time for further con-

sideration, and that they desire the assistance in the investigation of this vital question of this commission of experts, representing all industries and all sections of the country. Now, while I claim that this House and each member thereof is the only and sole judge of its and his duty, still we must bear in mind that no act can become a law through one branch of Congress alone, and if we desire, as all claim we do, action by this Congress on the tariff question, if we mean to accomplish something by the Forty-seventh Congress for the relief and good of the country, we must in our action consider what is likely to be the action of the other legislative branch of the Government. Simply then, Mr. Chairman, the situation is this: the Senate have said to us that they are not prepared, without further information, to act on any bill that we might pass and send them. Our own committee, charged under our rules with the special duty of preparing and presenting to the House all bills of this nature, have come before us, after considering the subject for several months, and tell us in their report that they are not able with the present light before them to bring into the House such a bill as they can recommend to our favorable consideration, and, as I said, they ask us to adopt the Senate bill or a similar one providing for the appointment of a commission. Under such circumstances what else is there for the House to do? Nothing but to pass the bill; the sooner the better; and but for the opposition of our Democratic friends the commission bill would have been a law before this, and we would even now be receiving its benefits from the investigation being had of the industries of different sections of the country, their development and necessities.

For myself, Mr. Chairman, the appointment of this commission has commended itself to me as being the very wisest act we could do. It is provided that there shall be nine members of the commission. We may presume that the President in making his appointments to this important body will be governed by the peculiar fitness of each individual selected, not only that each one shall be thoroughly qualified for its duties, but shall represent and be qualified to speak for one or more of the great industries of the country. We may presume that all portions of our great country will be represented; that in making these selections the President will know neither North nor South, East nor West, but will select from each their wisest and best; that the first and leading industry of the country, the source and foundation of our wonderful prosperity, our agricultural industry, will be represented by at least four members of the commission, selected from practical agriculturists of different parts of the country; that our next greatest industry, our manufactures, may be represented, and also our commercial, mercantile, and mining interests. From the labors of such a commission, so constituted, visiting and inspecting different parts of the country, consulting with and taking the testimony of leading men of all our great industries, we may, it seems to me, expect the best results.

We may expect when we meet the first Monday in December next to have such evidence and such a report on which to act that this Congress may proceed at once to establish a judicious tariff or revise the existing tariff upon a scale of justice to all interests; may be able to make for the country a tariff law that will be permanent for at least a number of years, and till such time as our increasing population and changed condition may demand a new law. What we want now is no half-done work, but work that will stand for years. Nothing cripples and injures the business and industries of the country so much as the uncertainty in regard to what Congress may do on this measure. We want wise, judicious, and final action that will give the country security for at least twenty years.

And now a few words here as to the necessity of a change or revision of our present tariff laws and regulations. It is well known to every member of this House that for several years the various Secretaries of the Treasury have called the attention of Congress to the pressing need of this revision in their annual reports, and, during the last Congress, Secretary Sherman appeared in person before the Committee on Ways and Means and urged immediate action. He especially urged action on that part of the law which regulates the collection of the duties on imported sugars, but Congress failed to take any action. The necessity for some further law regulating the collection of duties on sugars arises from the fact that under the color or Dutch standard of classification sugars are artificially discolored in making, and then imported at much less than their proper grade, and the duty collected instead of being $3\frac{1}{2}$ to 4 cents per pound is $2\frac{1}{2}$ or less than $2\frac{1}{2}$ cents per pound. This the Secretary endeavored to remedy by the use of the polariscope, but the courts have decided that under the law as it now is he could not adopt any other than the color or Dutch standard test, and, as a consequence, near \$2,000,000 justly collected will have to be refunded and the gates will be wide open to a further continuation of this fraud on the Treasury, by importing high grades of sugars artificially discolored so as to pay only the duty of the lower grades.

On this necessity of a revision of the tariff I beg to quote from the last annual report of the honorable Secretary of the Treasury. He says:

A revision of the tariff seems necessary to meet the condition of many branches of trade. That condition has materially changed since the enactment of the tariff of 1864, which formed the basis of the present tariff as to most of the articles imported. The specific duties imposed by that act, for instance, on iron and steel in their various forms, had then a proper relation to the ad valorem duties imposed on the articles manufactured from those metals; but by a large reduction in the values, especially of the cruder forms of iron and steel, the specific duty imposed

thereon now amounts, in many cases, to an ad valorem duty of over 100 per cent.; while the ad valorem duties on manufactured articles have not been changed. The growing demands of trade have led, also, to the importation of iron and steel in forms and under designations not enumerated in the tariff, and the great disproportion between the specific and ad valorem duties is a constant stimulus to importers to try to bring the merchandise under the ad valorem rate. This produces uncertainty, appeals from the action of collectors, and litigation, which prove embarrassing to business interests as well as to the Government; and what is instanced as the case with iron and steel will be found to be the case with other articles. An equalization of the tariff and a simplification of some of its details are needed.

And in a letter to a member of the Committee on Ways and Means, [Mr. DUNNELL, of Minnesota,] from which I beg to quote, he speaks of specific articles as follows:

SUGARS.

The action of the Treasury Department in regard to the collection of duties upon sugars is based upon the order of Mr. Secretary Sherman, of September 2, 1879, which related to sugar claimed by the officers of the Government to have been artificially colored for the purpose of evading the duty due thereon by the Dutch standard. A copy of that order is inclosed herewith. Some three hundred snits are now pending at the port of New York upon the question involved, and the claims therein amount to over one million two hundred thousand dollars, besides interest. One case was tried at New York, and the verdict was against the Government. The question was lately argued in the Supreme Court of the United States on a writ of error, and it is expected that a decision will be reached at an early day. Considering the fact that the duties on sugar collected last year amounted to \$43,000,000, or about 21 per cent. of the total revenue from customs, the importance of some plan by which disputes can be avoided, and the proper duties collected, cannot be overrated.

COTTON-TIES.

Schedule E imposes duties ranging from $1\frac{1}{2}$ to $1\frac{3}{4}$ cents per pound, according to width and thickness, upon band, hoop, and scroll iron. A cotton-tie is a piece of hoop-iron which has been cut to the proper length of 11 feet to go around a cotton-bale. In connection with the band is a buckle, designed to fasten both ends around the bale. Some of the bands as imported have the buckles riveted to the end of the band, while others have the buckle detached, to be placed on the end of the tie in the act of baling.

The question in this class of cases is whether cotton-ties are to be classified as hoop-iron, or, as claimed by the importers, as a manufacture of iron not otherwise provided for, at 35 per cent. ad valorem. Under the present decisions the cotton-ties which have the buckle permanently attached to the bands are admitted at 35 per cent. ad valorem, while the bands not having the buckle permanently attached are classified as hoop-iron. The courts have ruled against the classification of the latter as hoop-iron and in favor of 35 per cent. ad valorem; and a case involving the question is now before the Supreme Court of the United States. The minimum rate of duty on hoop-iron is $1\frac{1}{2}$ cents per pound, or \$28 per ton, while the duty at 35 per cent., based on present prices in England, is about \$13.50 per ton.

SILK AND COTTON GOODS.

Under the act of February 8, 1875, (18 Stat., p. 307,) all goods made of silk, or of which silk is the component material of chief value, not otherwise named in the act, are liable to a duty of 60 per cent. ad valorem, provided they do not have as a component material 25 per cent. or over in value of cotton, flax, wool, or worsted. If the goods have over 25 per cent. in value of either of these materials they are remanded for duty to the provisions of Schedule H.

A large number of appeals have been taken on the question of fact whether goods have 25 per cent. or over of the named materials, and it seems unwise to have a double test for the classification of these goods, namely, silk, chief value, and then 25 per cent. in value of the named materials.

WOOL KNIT GOODS.

The question in this class of cases is whether such goods are dutiable under the provision in Schedule L, reproduced from the act of March 2, 1867, under which they have been classified by the Treasury Department both before and since the passage of the Revised Statutes, or whether they are dutiable under the provision in Schedule M for articles made on frames of whatever material composed, except silk and linen, at a duty of 35 per cent. ad valorem. One case involving the question went to the Supreme Court, which decided in favor of the lower rate of duty. The mandate was, however, subsequently stayed, and the case is now waiting a motion for permission for a reargument. It is a very important question, involving large interests to importers and to domestic manufacturers of this class of goods. This question arose out of a blunder in the Revised Statutes, which reproduced in Schedule M the paragraph referred to, and which had been repealed, so far as concerns woolen goods, by the act of 1867.

STEEL BLOOMS.

Schedule E, reproduced from the tariff act of 1864, provides for duties according to value on steel in ingots, bars, coils, and sheets. These duties range from $2\frac{1}{2}$ cents per pound to $3\frac{1}{2}$ cents per pound and 10 per cent. ad valorem. The first form of steel is an ingot. An ingot is cut into a number of pieces and rolled, and is then a bloom. Blooms are not named in the tariff, and it has been stated that at the time of the passage of the act of 1864 the name "blooms," as applied to steel, was not known in the United States; at all events blooms are not named in the law. The question arose in 1867 whether steel blooms were liable to the duty imposed on steel in ingots and bars, and it was held that they were not, but were dutiable under another provision in Schedule E for manufactures of steel not otherwise provided for. Against this decision appeals have been taken, based upon the ground that the article is not a manufacture of steel, but is dutiable at the rate of 30 per cent. ad valorem under the provision in Schedule E for steel in forms not otherwise provided for. It certainly is anomalous that steel in ingots, which is the first form of steel, and bars, which is a more finished form, should be assessed with the high rate of duty imposed by the tariff, while the intermediate forms of steel in blooms should be subject only to a duty of 45 per cent. ad valorem, or 30 per cent. ad valorem, which is only about one-fourth of the duty on steel in bars, according to the present prices of the materials abroad.

There are some other articles specified on which, under the present law, it has not been found possible to fairly fix and collect the duties, but I have quoted enough to show the losses to the Treasury and the difficulties under which our customs officers labor with the present law and regulations. Of course no exact estimate can be made of the loss in duties that should justly be paid, but I am informed by one of the best-posted officials of the customs branch of the Treasury Department that the annual loss is at least \$20,000,000. Besides this loss to the Government of its just dues, we must take into consideration the annoyance, loss, and detriment to the business of the persons engaged in the importation and sale of these various articles, and the resort even to the courts to decide and settle disputes.

between the customs officials and citizens, which should all be avoided, and could be if the law was amended, made plain and specific.

If there be any one of our industries that has just cause of complaint against the present tariff it is the sugar-producing industry of Louisiana and other Southern States. If there be any of our people who can fairly ask from the Congress of the United States a change and revision of the existing tariff laws, it is those engaged in the cultivation of the sugar-cane in the South and the sorghum-cane and sugar-beets in the North and West. Let us look at the existing tariff and its manner of enforcement and effects, both in giving protection to our sugar-producing industries, as also in defrauding the Treasury of large amounts of revenue. The present tariff differs from all former tariffs in providing that raw sugar, so called, that is, sugar under No. 13 Dutch standard in color, should be classed into six different grades, from No. 7 up to No. 13, according to the lightness of color. Under all former tariffs the duty was levied as so much on raw or brown sugars, and so much on refined sugar. That is, as an instance, the duty from 1819 to 1830 was 3 cents on brown sugar and 12 cents on refined sugar, and so on up to the time the present tariff was made. But by it the Dutch standard of color alone and not quality or saccharine strength is made the test; and while it is said that the duty on sugar is in proportion higher than on many other articles, being according to the tariff schedule about 62½ per cent., it is not in reality over 40 or 45 per cent., because of the fact that sugars of a very high saccharine strength, which should pay at least 60 or 70 per cent., by being discolored so as to grade low according to the color standard, pay only 30 to 40 per cent. ad valorem; and therefore it is that the present, instead of being a high protective tariff on sugar, is really comparatively the lowest on this article that we have ever had, except perhaps from 1857 to 1861, when the duty was only 24 per cent. ad valorem. The Secretary of the Treasury, in his last annual report, says this:

The duties connected with sugar, molasses, and melada during the past fiscal year amount to \$47,997,137, or nearly one-quarter of the whole amount of our revenues from customs. The difficulties attending the collection of these duties have largely occupied the attention of committees of Congress during several past years. The Dutch standard of color as applied to the apparent color of imported sugars is no longer a test of the saccharine strength or value for refining purposes.

This fully bears out what I state, and shows the absolute necessity of going back to our old method of a uniform tariff on all raw sugar tested both by color and by the polariscope and chemical tests, this to include all sugar below No. 13, which may be considered the line of division, and all above that to be classed as refined sugar and pay a higher duty in order to protect our refining industries. But to further illustrate this branch of the subject I beg to call attention to the following table, showing the grades of sugar imported into this country for the year ending June 30, 1881:

Statement showing the quantity of each grade of sugar and the total quantity of sugar of all grades imported into the United States and entered for consumption during the year ended June 30, 1881, not including sugar imported from the Hawaiian Islands under the reciprocity treaty.

Description or grade.	Pounds.	Tons of 2,240 pounds.
Not above No. 7.....	401,626,484	179,298
Above No. 7, and not above No. 10.....	1,323,451,981	590,827
Above No. 10, and not above No. 13.....	142,797,277	64,749
Above No. 13, and not above No. 16.....	1,267,216	566
Above No. 16, and not above No. 20.....	12,241	5
Above No. 20, and all refined, loaf, lump, crushed, powdered, and granulated.....	18,699	8
Total dutiable.....	1,869,173,898	834,453

According to this table it is shown that nearly all the sugar brought into this country is of the lowest grades, below No. 10 in color. It is entirely safe to say that 90 per cent. of this low-grade sugar according to color-test is of a much higher grade according to a saccharine test. And therefore it is that while sugar producers are charged with receiving the highest protection of any agricultural product, in reality the protection is lower than on many other articles. The present tariff is unfair, unjust, and unsatisfactory to the sugar-producing industry, and they desire such a revision and amendment as will give them in fact what they now have the credit of receiving, that is 62½ per cent., instead of 35 to 45 per cent. Under such a tariff, instead of sending abroad yearly nearly one hundred millions in gold to purchase the slave-grown sugar of the West India Islands, at least half of that sum could be saved to the country, because at least half of the sugar consumed can be produced from our cane-fields in Louisiana, Georgia, Alabama, and Texas. More than this sugar would be furnished at cheaper rates than ever before in the history of our country.

This bill, therefore, receives my heartiest support, because I am entirely satisfied that a revision made and based on the investigation and report of such a commission will give to the sugar-producing interests of the section I represent and of other portions of the country protection fairly and justly of at least 62½ per cent. and not as now, of 30 to 45 per cent., with continual openings for fraud, and will at least retain the present duty on rice, the other important

production of that section. The sugar and rice producers of the country ask no more in the way of protection than is granted to all other industries, agricultural, manufacturing, and commercial, but they do ask and insist on two things: first, that any duty levied shall give actual protection to the full amount claimed by the schedule on a basis of quality as well as color, and not an apparent high protection which is in reality very low; and second, that some final action be had fixing the rates of duty on these articles of sugar and rice for a term of years. One of the greatest drawbacks to the prosperity and advancement of the sugar and rice industries of the South has been the continual tinkering at the tariff by Congress and the fear arising therefrom of legislation inimical to those industries. The production of sugar, the planting, cultivation, and making into sugar of the canes requires an immense outlay of capital, and requires large credits which can only be based on a permanent investment and income.

The reclaiming of the rich alluvial lands of our southern coasts, the best rice-producing lands in the world, can only be done at large expense, and in order to be successfully carried on must have the products of those labors and that expense protected, if it be protected at all, on some permanent basis. I feel safe in saying to this committee that a revision of the tariff on a basis of this kind, with an assurance that it would be permanent for at least twenty years, would in less than ten years' time so accelerate the production of sugar that at least 50 per cent. of our consumption of that article would be produced at home, and instead of importing, as we now do, one-third of the rice we consume, we would in the same length of time from now—that is, ten years—not only be producing all the rice we consume, but be exporting it, as we did before the war. And more than this, the prices to our people of both articles would be less than they now are. The statistics of the production and consumption of rice in our country before and since the war are very interesting. Rice as an article of food, especially in the southern half of our country, cannot be overestimated. It is highly nutritious and wholesome, in warm climates especially, and much more should be used as an article of food both in warm and colder climates. It is especially adapted to the use of the laboring classes, and its production and consumption by them should be encouraged. The following tables show the condition of the exportation, production, and consumption of rice before the war:

Years.	Tierces.	Pounds.
1791.....	96,980	58,368,000
1800.....	112,056	67,233,600
1810.....	134,341	78,804,600
1820.....	71,663	42,997,800
1830.....	130,697	78,418,200

Beginning with 1840, the statistics, until then wanting in positive data as to production, become more instructive as they become more complete. The following table exhibits the production, export, and home consumption in the decades stated:

Years.	Production.	Export.	Home consumption.
	Pounds.	Pounds.	Pounds.
1840.....	80,841,422	60,996,000	19,845,422
1850.....	215,313,097	68,000,000	147,313,097
1860.....	187,167,032	75,878,000	111,794,632

During the war the whole system of home production, till then so successful, was almost totally destroyed and the States not in rebellion were compelled to depend entirely on the foreign production. Since the war the production has steadily increased, as has also the consumption. The following table fully illustrates this, and shows that we may reasonably expect inside of ten years, and perhaps inside of five, to produce all the rice we consume.

Table showing domestic production, exportation, and consumption of rice.

Years.	Domestic production.	Domestic rice exported.	Domestic rice consumed.	Total consumption.
	Pounds.	Pounds.	Pounds.	Pounds.
1865-'66.....	11,592,600	639,080	10,953,520	63,362,280
1866-'67.....	12,206,720	2,212,901	9,993,819	76,851,823
1867-'68.....	14,602,000	1,394,007	13,208,593	53,314,734
1868-'69.....	26,790,200	3,074,043	23,716,157	70,947,911
1869-'70.....	53,937,000	2,232,833	51,704,167	85,900,697
1870-'71.....	47,348,000	2,133,014	45,214,986	73,126,692
1871-'72.....	39,625,990	445,842	39,180,148	93,023,048
1872-'73.....	52,634,400	403,835	52,230,565	114,621,237
1873-'74.....	62,900,380	276,637	62,623,743	120,176,147
1874-'75.....	68,241,400	558,922	67,682,478	115,099,817
1875-'76.....	72,360,800	277,357	72,083,443	119,145,857
1876-'77.....	81,391,800	439,991	80,951,809	135,903,047
1877-'78.....	77,240,400	1,306,982	75,933,418	125,462,837
1878-'79.....	84,739,200	631,105	84,108,095	121,941,280
1879-'80.....	86,996,800	178,534	86,818,266	135,389,719
1880-'81.....	117,766,000	150,451	117,615,549	175,535,691

Retain the present duty on rice, and give the producers assurance that they can depend on that protection for at least ten years, and I venture to assert before the expiration of those ten years we will be producing all the rice we will need, and at a price at least 25 per cent. cheaper than at the present time. Before the war very little rice was produced in Louisiana, but of late years the production in that State has increased to a wonderful extent, being for each of the last three years over 40 per cent. of the total amount produced. And there are in that State enough suitable rice lands, easily reclaimed and of inexhaustible fertility, to produce at least as much as is now produced in all the Southern States. The rice lands of the one district in that State which I have the honor to represent, including as it does nearly the whole Gulf coast line of Louisiana, from the mouth of the Sabine to the mouth of the Mississippi, are sufficient in extent, if all were reclaimed and worked, to produce at least 100,000,000 pounds of rice. The finest natural rice lands in the world are those bordering on the Calcasieu, Atchafalaya, and Mergentau Rivers, and the Vermillion, Terre Bonne, La Fourche, and other small bayous of that section of the State.

It is the part of wisdom then, Mr. Chairman, to foster and protect these two great agricultural industries, the production of sugar and rice, to the end that the millions of dollars now sent abroad to purchase these articles may be kept at home, that those rich and fertile lands may be improved, and, instead of remaining wild and uncultivated as they now are, may be teeming with happy and contented people, and that here, right at the door of the great food-producing States of the Upper Mississippi, may be found a market for much of their surplus products; that the barges and boats plying backward and forward on that mighty river may come to us of the South laden with the flour and meal, the grain and meats, the live stock and implements of husbandry produced on the farms of the West and in their factories, and shall go back to them in return laden down with our sugar, rice, and molasses, with our tropical fruits and vegetables.

In conclusion I will only briefly state why the people whom I represent on this floor believe in protection in preference to free trade, reserving to the discussion and consideration of the new tariff bill, which I hope to see perfected and reported by our Committee on Ways and Means at the next session of Congress, any extended remarks on the special needs and development of the sugar and rice industries of my State.

While it is true that most of the owners of the sugar and rice lands of the South are at the present time Democrats, and vote with that party because of the feelings and prejudices engendered by the war, many of them, indeed a large majority in the sugar and rice section, were Whigs before the war, and believed firmly in the principles of protection advocated by the great Whig leader, Henry Clay. And they are protectionists for the great part because they believe in the policy of protecting not only the products of their lands but equally in protecting the products of the farmers of the West and of the manufacturers of the East. While, as I said, they may vote with the free-trade, tariff-for-revenue, go-as-you-please Democratic party on a national ticket, no man can come here to represent them in Congress unless he is a firm believer in protection and as willing to vote protection to the cotton and woolen manufacturers of Massachusetts and the iron and steel manufacturers of Pennsylvania as to sugar and rice in Louisiana.

But, Mr. Chairman, the day is soon coming when the sugar and rice planters in our State can be chained down by war feelings and past prejudices to the Democratic party no longer. They have seen a free-trade Democratic majority in this House for the last six years endeavoring by every means in its power to crush out and cripple their industries. They know that for many years that party, in their platforms and by the votes of a large majority of its members in the House and Senate, have at all times favored either absolute free-trade or what is called a tariff for revenue only. And they will observe from the debates and the votes cast on this measure that the Democratic party is now, as it has been from the days of Henry Clay down, the consistent and persistent enemy of all their interests. Under such circumstances these men will in the near future not only continue to be protectionists, but they will ally themselves with that party in the nation which always has believed in the doctrine that it is the first duty of a nation to protect its own people. This question, I admit, should not be a party question, but it is no fault of the Republicans that it has become so. The Democratic party, from the early days to the present time, have insisted on making it a party issue, and we are compelled to accept it as such. This being true and unavoidable, it is time that the owners of the sugar and rice lands of the South should waken to their own interests, and the speeches and action on this bill will go further to open their eyes to the true position of the two great parties than anything that has occurred for years.

But, Mr. Chairman, the laboring people of that section and of the whole South, the people whose willing hearts and strong hands have redeemed and built up all those industries, are both protectionists and Republicans; whether they be owners of small farms or tenants, whether they be manufacturers in a small way or only laborers by the day, week, or month on the lands of others, they are all alive to this vital question, and are as well informed as to what would result to them from the adoption of a free-trade policy as any man on this floor. They believe and feel with their brother laborers of the

North and West, "the toiling millions all over the country," that it is the first and paramount duty of the Government to protect them and their labors from competition with the poorly-fed, ill-paid, pauper labor of England and other European countries, and the slave and coolly labor of Cuba, India, China, and the Hawaiian Islands.

Many of these people, indeed a large majority of them, know by sad experience what slave labor means, and after these years since the war, of freedom, happiness, and prosperity, they do not want their labor to be placed on a level with the slave labor of Cuba, as is proposed to be done by our free-trade Democratic friends. These people made free as the result of a long and bloody war, enfranchised and clothed with all the rights and privileges of American citizenship by acts of Congress, have come up from the degradation of slavery and assumed these new duties with grateful hearts. They have for the most part remained on the old plantations, the homes of their former years. They are working there for or with their white neighbors, either as tenants or hired laborers, and between them exists only the friendliest and kindest feeling. They have proven themselves since they have been made free so worthy, so competent, and so faithful that nowhere can be found any one of their former owners but that rejoices they are free, and will say that with free labor the South is entering on an era of prosperity never dreamed of under slavery.

Speaking then, Mr. Chairman, for the planter and the laborer, I say continue the policy of protection to the products of our lands and to the laborers in our fields. Aid us, from an overflowing Treasury, to protect our country from the floods of the mighty Mississippi by a national system of levees, and the delta of that great river will become what nature intended it to be, the garden-spot of the world.

Hennepin Canal.

SPEECH

OF

HON. SEWELL S. FARWELL.

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 5, 1882.

On the bill (H. R. No. 2248) to provide for the construction of the Illinois and Mississippi Canal, and to cheapen transportation.

Mr. FARWELL, of Iowa, said:

Mr. SPEAKER: The Legislature of Iowa at its recent session, recognizing the needs and wishes of that State, and of the great grain-growing and stock-producing regions of the Northwest, by a unanimous vote passed a memorial asking Congress to provide for the extension of the great eastern water system of transportation to the Upper Mississippi Valley, by the construction of a commercial canal from Hennepin, on the Illinois River, to the Mississippi River, at a point at or above Rock Island, thereby securing a continuous water route from the head of navigation on that stream to Chicago and New York, as well as connecting that system with the southern system, having its outlet at New Orleans and the Gulf of Mexico. For years the attention of our people has been called to this project, and its great value to the commerce of the country has become deeply impressed upon their minds. It is my purpose to call the attention of the House to some of the reasons why this so-called Hennepin Canal should be built, and also to answer some of the objections which have been submitted to the House by the minority report of the Committee on Railways and Canals.

Early in the session the gentleman from Illinois [Mr. HENDERSON] introduced a bill (H. R. No. 2248) providing for the construction of the Illinois and Mississippi Canal, from Hennepin, on the Illinois River, to a point at or above Rock Island. The bill was referred to the Committee on Railways and Canals, and carefully considered. Governor CARPENTER, of this House; Edward Russell, editor of the Davenport Gazette; General Henderson; Hon. J. C. Dore, of Chicago; A. B. Miller, chairman of transportation committee of the New York Board of Trade, and others, made carefully prepared and able speeches before the committee, pointing out the great advantages which would result from the construction of the work. After several weeks' deliberation, the committee decided, by a vote of 8 in the affirmative and 2 in the negative, to report the bill back to the House, and recommended the passage of the same.

In the brief report accompanying the bill the committee say:

One of the great questions of the present day, which deeply interests the people of every section of this great country, and especially such parts of it as are remote from the seaboard, is the transportation question, and that every improvement which gives the people cheaper transportation and increased facilities to enable them to reach the markets of our own country and of the world in the exchange of the productions of their industry, is demanded by the highest wisdom and the ablest statesmanship. One of the highest objects of all good government is to promote the public welfare, and there is no higher duty which our Government owes to the people than to provide for them the cheapest and best facilities

for reaching the markets with their surplus products. For this purpose the Government annually expends millions of dollars in improving our rivers and harbors, has granted millions of acres of our public domain, and guaranteed large sums of money to aid in building railroads, and may, in the opinion of your committee, with just as much propriety construct, or aid in the construction, of a canal when such canal will promote the public welfare and benefit the commerce of the country to such an extent as to justify the expenditure for that purpose.

By the construction of sixty-four miles of canal * * * the Upper Mississippi and its tributaries will be connected with the lakes, and we will have a continuous water-route from Minneapolis, on the Upper Mississippi River, to the Atlantic seaboard. It will open up a new avenue of transportation and trade, and enable the farmers and producers of the Upper Mississippi Valley to reach the merchants, the manufacturers, and mechanics of New England and the Middle States largely engaged in manufacturing, at much less cost with their products, while the manufacturers can also reach them with their manufactured fabrics at cheaper rates of transportation.

The report concludes as follows:

In view, therefore, of the earnest, urgent, and increasing demand, especially of the agriculturists of the country, for cheaper transportation, to which they are justly entitled, and in consideration of that sound public policy which demands such transportation facilities as will most conduce to the increase of the agricultural exports of the country and to the cheapening of the same to all consumers in the Eastern States who receive their supplies so largely from the West, your committee are of the opinion that said canal should be constructed without unnecessary delay, and they, therefore, report back said bill and recommend the passage of the same.

THE MINORITY REPORT.

The two distinguished gentlemen composing the minority of the committee have presented their reasons for opposing the bill in a very elaborate and exhaustive manner. An attorney employed to exhaust every argument against having the Government continue to carry on the great work of extending the people's highways of commerce and cheap transportation could hardly have improved upon this effort to influence the House against this bill. Unfortunately for the country, it is not always possible for members of this House to command the time to make a careful presentation of the merits of the measures on which they are required to report, and they are often compelled to rely upon such statements as are presented to them by interested parties, which frequently prove incorrect and misleading to those who are seeking an accurate knowledge of the facts. Thus it is that, while in the exercise of the most conscientious care, members are frequently led to give the sanction of their names to allegations and assertions which will not stand the test of examination.

Of this the minority report bears evidence on every page. Indeed so striking and palpable are the misunderstandings in that report of the plainest facts involved in the discussion of the Illinois and Mississippi Canal bill, that the conclusion of every careful and candid mind examining the report must be that the honorable gentlemen whose names appear thereto as signers have, under the pressure of other duties, hastily accepted as their own statements offered for their adoption by careless or reckless aids or attorneys for opposing interests.

It would be much more congenial to choice and taste could the errors of statement thus referred to as clearly made in the minority report be here passed over without challenge. This, however, cannot be. The vast importance of the interests involved forbids that the demand so urgently made by our people of the Northwest that the water-ways of the Upper Mississippi shall be connected with and become a part of the great eastern water route to the seaboard shall be allowed to be ignored by Congress under an utter misconception of the essential facts.

First, then, as to the more noticeable errors of fact embraced in the minority report.

1. There is no "Rock Island Canal" alluded to on page 2.

2. The "merits of the proposed canal" were not "discussed in the constitutional convention of Illinois in 1870." (See page 3 of report.)

The question as to the construction of the Illinois and Mississippi Canal was not at all in issue in that convention. The section (not an amendment) of the constitution referred to makes no mention of "this canal," and was never understood by the people of Illinois as having any sort of relation thereto. The sole object of that section of the present constitution of Illinois was expressed in its own words, as follows:

The Illinois and Michigan Canal shall never be sold or leased until the specific proposition for the sale or lease thereof shall first have been submitted to a vote of the people of the State at a general election, and have been approved by a majority of all the votes polled at such election.

The general assembly shall never loan the credit of the State or make appropriations from the treasury thereof in aid of railroads or canals: *Provided*, That any surplus earnings of any canal may be appropriated for its enlargement or extension.

The object had in view by the above provision is evident enough. It applies with special force to railroads as well as to canals. The secretary of state, Col. Henry C. Dement, writing under date of April 22, 1882, in a letter now before me, says:

The Hennepin Canal question was never considered in our convention *per se*, but the convention desired to prevent a repetition of our early experience in internal improvements, which cost the State millions and had nothing to show for it.

3. The "residents along Rock River," in whose behalf the minority of the committee have had their sympathies aroused, have wickedly imposed upon the person who wrote the report. The statements of the citizens of Sterling copied by the minority are gross ex-

aggerations, misrepresentations, and in one instance a direct forgery. As the last mentioned vitiates the whole of the marvelously concocted document, of which it forms an important part, it is sufficient for the present to point out and expose that shameless imposition upon the minority of the committee and the country.

In this letter from citizens of Sterling (page 7 of report) it is asserted as a fact of official record that "Mr. F. C. Doran, who had charge of the survey of the Hennepin Canal, estimates the amount of water required for such improvement at 2,064 cubic feet per second." This allegation is wholly untrue, and has no foundation whatever. No "report of Colonel John N. Macomb, made to the Chief of Engineers, United States Army, January 25, 1875," gives any estimate of "the amount of water required" for the Hennepin Canal, as made by Mr. Doran. No such report gives any such estimate from anybody at that date as to such or any other amount of water required for that canal. Mr. Doran never made such a report at any time, nor ever made such an estimate or any estimate as to water for said canal. Mr. Doran did make a survey, and a careful one, of the Illinois and Michigan Canal from Chicago to La Salle. As to that, and that only, Mr. Doran reported to Colonel John N. Macomb, under date of January 9, 1875, that the supply of water required and to be used for that canal (the Illinois and Michigan) would, when the contemplated improvements should be completed, equal 2,064 cubic feet per second. His report, embodied in that of Colonel Macomb, dated January 25, 1875, is as follows:

It is proposed to draw the supply of water for the canal and river from the lake, (Lake Michigan.) * * * I have calculated the probable quantity of water necessary to supply the river and canal after improvement and find that 2,064 cubic feet per second will be required. (See page 528 of report of Chief of Engineers for fiscal year ending June 30, 1875.)

Thus it will be seen that the words of Mr. Doran, written solely with reference to a water supply from Lake Michigan for the Illinois and Michigan Canal are falsely and by direct forgery applied to the Hennepin Canal, and to a supply therefor from Rock River. As well apply to the harbor at Cleveland, Ohio, soundings taken on the Potomac flats!

But why were not the exact facts pertaining to the water supply of Rock River and the probable demand thereon for the use of the proposed canal given in this report. They were easily procured; indeed they must have been directly before the vision of whoever looked at and copied into that statement the estimate of Assistant Engineer Gorham P. Low as to the flow of water in Rock River on October 11, 1870. Instead, however, of copying those facts entire for the information of this House, the investigator of former surveys found it more convenient to the purpose in hand to jump from the report of the Chief of Engineers dated June 30, 1871, to the report of that officer dated June 30, 1875; then, by putting together the fragments of these two widely separated reports, which had no relation the one to the other, a seeming case is made against the Hennepin Canal.

What, then, were the statements in the report of Mr. Low, from which a few lines are quoted by the Sterling people? I quote from pages 304-306 of report of Chief of Engineers for 1875, thus:

For the supply of the canal it will be necessary to bring water from the Rock River at Dixon to the summit level north of Sheffield. * * * The length of the main canal between the Illinois and Rock River, or that portion to be supplied through the feeder, will be sixty miles. The length of the feeder will be 38.12 miles. The loss from evaporation and leakage I assume at 2.5 cubic feet per second per mile, or 245 feet per second total loss. Assuming the number of passages over the summit level in twenty-four hours corresponding to 180 lockages, 656 cubic feet per second will be required to supply the locks, making the total demand for the canal and feeder 901 cubic feet per second.

Now, referring to the third paragraph of the Sterling statement as printed on page 7 of the minority report, it will be seen that only the three and a half lines of the report of Mr. Lowe which immediately follow the words which have just been herein quoted are presented or at all noticed. "We were fortunate," Mr. Lowe is correctly cited as saying, "in making a careful measurement of the amount of water flowing in Rock River at a time, October 11, 1870, when, according to the residents of that city, [Dixon,] the river was at its lowest known stage." The amount of water at that date was "found to be 2,446 cubic feet per second." There the Sterling statement ends its quotation from Mr. Lowe. It had carefully hidden from view the fact, as hereinbefore shown in full quotation above, that Mr. Lowe had estimated and expressly stated that even for a ship-canal only 901 cubic feet per second would be required, and boldly falsifies the record by making Mr. Doran say that 2,064 cubic feet per second would be required from Rock River for the Hennepin Canal, when in fact he had said nothing about that river or that canal, but had simply estimated the flow of water needed from Lake Michigan for the Illinois and Michigan Canal.

But let Mr. Lowe be heard for himself as follows, copying from his report of April 10, 1871, (pages 304-306 Chief Engineer's report for 1875) in continuation from the words "for the canal and feeder 901 cubic feet per second":

We were fortunate in making a careful measurement of the amount of water flowing in the Rock River at a time, October 11, 1870, when, according to the residents of that city, [evidently Sterling or Dixon,] the river was at its lowest stage. The amount of water at that date was found to be 2,446 cubic feet per second, which under the present available head of seven feet gives theoretically 1,942 horsepower. To economize earth work upon the feeder line and the summit level it will be advisable to raise the crest of the Dixon dam two feet, thus increasing the head of water to nine feet. After deducting 901 cubic feet per second for the

canal there will be available for manufacturing purposes in the driest times 1,545 cubic feet or 1,578 horse-power under the nine-foot head. The loss of power at this point, after allowing for increased height of dam, will be equal to 365 horse-power or 18.8 per cent. of that at present available. The loss at Sterling not being compensated for by a higher dam will be equal to 36.8 per cent. of the present power. The dimensions of the feeder section recommended and estimated upon are 140 feet in width at the water surface, 112 feet on the bottom, and 7 feet deep, giving an area of 882 feet and calling for a velocity of 1.1 foot per second to pass the necessary supply. The slope given to bottom of the feeder, as shown on the profile, is a little over one-tenth of a foot to the mile, or 4 feet in 38 miles. (See page 305.)

These estimates, it is very important to note, are all given for a canal feeder of nearly four times the capacity required by the pending bill, which alone the House is asked to consider. For the latter, as will be seen in the quotation yet to be given, the area of the feeder will be only 228 feet, against that of 882 feet for the ship-canal. But let Mr. Lowe state the case himself. (See page 306 of his report:)

The facts in relation to the large canal having been brought to your notice, you verbally directed me to report and estimate upon a smaller section. I have therefore proposed a canal section 60 feet wide at the water-line and 6 feet deep, and having a slope of 2 to 1, with locks 150 feet in length and 21 feet in width. These dimensions correspond with those adopted by J. O. Hadnut, civil engineer, in his estimates for a canal over nearly the same route, based upon surveys made in the summer of 1866.

The line recommended for this work corresponds nearly with that shown upon the maps for the larger canal, and the elevation of its surface and bottom are indicated by broken and dotted lines upon its profile. Upon the main portion the bottom of the channel corresponds with that before proposed, making its water line one foot lower. Composite locks have been estimated for, and in number, location, and lift are similar to those already enumerated. No swinging bridges or inside protecting walls will be necessary. The amount of water for this canal is estimated as follows: for evaporation and leakage 1.33 cubic feet per mile per second, or 130 cubic feet per second for canal and feeder; for two hundred lockages in every twenty-four hours 87 cubic feet per second, making a total demand from Rock River at Dixon of 217 cubic feet per second. With a feeder 50 feet wide and 6 feet deep, with slopes of 2 to 1, the sectional area will be 228 feet, and the velocity required to the above quantity 0.95 feet per second. To obtain this velocity through the above section it will be necessary to give the bottom of the feeder an inclination of 0.16 feet to the mile, or 6 feet fall from Dixon to the junction with the main line.

These are the simple facts pertaining to the supply of water to the canal from Rock River, as given after a careful survey and estimates by an officer of the United States Army. They effectually dispose of the pretense of these Sterling people that their water power will be ruined by the construction of this canal. Mr. Lowe concedes a loss of only 217 cubic feet per second out of 2,446 cubic feet flowing in Rock River at its lowest stage, and gives as the basis of this loss "two hundred lockages in every twenty-four hours," whereas the average lockages for the season in the Erie canal are officially stated at only one hundred each twenty-four hours. The most enthusiastic supporter of this canal will not claim business for it in excess of the Erie Canal, and yet a business as large as has ever been done on that canal can be carried on with less than one-twentieth of the water flowing in Rock River at its lowest stage. Another fact which should be noticed is that the proposed feeder will take its water from above the Dixon dam, which furnishes water power no less valuable than is obtained at Sterling, a few miles below; yet not a solitary voice has ever been heard from Dixon in opposition to the feeder and canal. Instead, the unanimous desire of the people of that city is that the canal shall be immediately constructed. Mr. Lowe continues his report as follows:

The eastern division, from the Illinois River to the feeder, is estimated to cost \$1,467,202.44, or \$56,736.37 per mile; the western division, from the feeder to the Mississippi, \$1,429,708.50, or \$36,241.03 per mile; the feeder, \$1,002,811.70, or \$26,306.71 per mile; making the total for the whole work \$3,899,722.64, or \$8,579,970.63 less than for the larger canal. A tabular detailed statement of this estimate accompanies this report. The surveys were made wholly for the purpose of locating a canal 160 feet wide, and the narrower section would probably admit of following the bluffs more closely and thus effect a large saving of earthwork. The locks proposed for this work will admit boats of a capacity of 280 tons. At three lock-falls to a boat, 18,700 tons could be passed daily. Freight could be brought in tows from points on the Upper Mississippi to the canal, and thence by horse-power through this canal to the Illinois River, and through the Illinois and Michigan Canal to Chicago without breaking bulk. I have not considered it any part of my duties to report upon the commercial advantages of the project, nor have I at hand sufficient data for the purpose. I have endeavored to make the estimate sufficiently high, and am of the opinion that the amount stated above would fully cover the cost of construction. The amount of earth-work would probably be somewhat reduced upon a final location. (Page 306 of report.)

Thus do the facts of record fully meet and dispose of the gross violations of truth so recklessly indulged in by the Sterling statement. Indeed, so glaring are the misrepresentations to any person acquainted with the actual facts, no answer would have been required had not the halo of respectability been thrown around it by its adoption into the minority report. The assertion of these Sterling people that "the loss to the manufacturing establishments by the destruction of the water-power could possibly be estimated by taking into account the sum of \$200,000,000 invested therein and the sum of \$600,000,000 of manufactured articles shipped therefrom every year" is of apiece with all the rest. The figures would be gross exaggerations had they been reduced from millions to thousands. Verily, these people are the champion liars of America.

The statement of the minority report as to estimated cost of a ship-canal from Hennepin to Rock Island (page 7) is so misleading as to constitute a real error of fact. It does not matter whether a "ship-canal" would cost \$12,500,000 or any larger sum, for a ship-canal is not proposed or thought of. All that is proposed by the pending bill, and all the people desire, is a commercial canal, the cost of

which has been placed at less than \$4,000,000, on a careful estimate of the United States engineers.

The statement also of the minority (page 7) as to "the estimate of Colonel Macomb for a commercial canal from Chicago to Rock Island" is also misleading and erroneous in fact; for this bill does not embody any proposition for a canal to "Chicago." It simply provides for a canal from Hennepin to the Mississippi River, with a requisite feeder. A water route from Hennepin to Chicago is now in successful operation, and is equal in its present condition to all demands upon it as a connecting line with the proposed Hennepin Canal. In approving of the construction of the latter canal, as provided in the pending bill, Congress does not authorize the expenditure of a dollar between Hennepin and Chicago.

It is wholly erroneous as to fact to state, as does the minority report, (page 5,) that "few memorials have been received favoring the Hennepin Canal except from a limited section of the country, in the vicinity of the proposed canal." The truth is, Congress has been memorialized to authorize and provide for the construction of the Hennepin Canal from a "section" more widely extended in area than has been heard from in behalf of any other single work of internal improvement yet presented to the attention of our National Legislature. By specific and unanimous votes of the Iowa General Assembly such memorials have four times been forwarded to Congress from that body, namely, in 1864, in 1870, in 1874, and now again in 1882. The Illinois Legislature has similarly memorialized Congress at different times. These two bodies represent five millions of the people of the United States. The Chicago Board of Trade, the Buffalo Board of Trade, the New York Board of Trade and Transportation, and the New York Produce Exchange and other commercial bodies have sent their memorials to Congress requesting the Government to take hold of this work.

The minority report seriously misleads and conveys a wrong impression of the facts when it affirms (pages 1 and 4) that there are now "five distinct channels of water communication" between the two systems of water-route transportations, *i. e.*, between the east and west system of the lakes and the Erie Canal and the north and south system of the Mississippi River. It was going a long distance for a very small argument against the passage of this bill to parade the fact that the Ohio River was connected with Lake Erie by canals from Portsmouth to Cleveland, from Cincinnati to Toledo, and from Evansville to Toledo, constructed more than forty years ago, and which were of untold benefit to the people, the country, and the world in developing and furnishing an outlet for what was at that time "the West" of the United States.

The other routes named are the Wisconsin and Fox River and the Illinois and Michigan Canal. The minority report affirms that through these routes "boats have gone from the lakes and down the great river, and *vice versa*," which is true, and so, too, boats did so pass over these routes a century ago, before either was in part improved. As a matter of practical fact, however, whenever has a single boat-load of produce passed from the mouth of Wisconsin River up that stream and into Green Bay, or *vice versa*? Can anybody tell? Still more to the purpose, where is the proof that such passage is at all possible?

Whatever may be the merits of that improvement in other directions, it is clear that it can promise but exceedingly small benefit to the Upper Mississippi commerce even when completed. This for the simple reason that when Green Bay, the eastern terminus of that improvement, is reached, there still remains a distance of two hundred miles to be traversed to reach Chicago. But thus far only the one hundred and sixty miles of canal, river, and lake improvement, extending from Portage City to Green Bay, is completed and capable of use. This is undoubtedly of vast benefit to the State of Wisconsin, and to the Lake Michigan commerce therewith. There yet remain, however, the one hundred and eighteen miles of canal to be constructed along the Wisconsin, from Portage City to the mouth of that river, before any boat or barge or a pound of freight can pass from the Upper Mississippi to Portage City and thence to Green Bay. That is to say, there must yet be one hundred and eighteen miles of improvement made before the producers of the Upper Mississippi can so much as attempt to transport their cereals over the three hundred and seventy-eight miles stretching between the mouth of the Wisconsin and the great grain market of the Northwest at Chicago.

The route of the Illinois River and the Illinois and Michigan Canal is of no practical use to the people of the Upper Mississippi, for the simple reason that from Rock Island to the mouth of the Illinois River and thence up that stream to Hennepin is more than five hundred miles; a detour, together with the up-stream navigation of the Illinois, or *vice versa* of the Mississippi, which utterly precludes the possibility of freighting at reasonable rates, whereas the distance from Rock Island across to Hennepin by the proposed canal is only sixty-five miles. Here, then, are no less than seven distinct errors of fact in the statements of the minority report. Others might be cited, but these are specimen illustrations of the heedlessness with which that document has been gotten up and the carelessness with which it has been attested to this House by the signers thereof.

It would not be a difficult task to take up the reasons given in support of opposition to the pending bill. Were they examined one by one in the light of historic precedents, the now clearly established policy of the Government, the demands of commerce, the needs of the producers and consumers of the country, the actual facts in

regard to the cost of the proposed canal and the real merits of the project, they would be made to appear no less unworthy of acceptance than are its proven errors of fact. The "minority doubt" as to the "constitutional right" of the Government to undertake a work of this kind would have been very forcible twenty-five years ago, in the days of strict construction, and when a great political party denied the right of the Government to improve the navigation of the great rivers of the country; but we have moved forward a great way in the right direction since that time, and now only a few, except old fogies and croakers, are found raising the constitutional question when new works of internal improvement are proposed, and which are necessary on account of the growth and development of the country. It is too late to raise constitutional objections to undertaking works of this character when already the United States own, operate, and keep in repair canals as important and expensive as the one proposed, and lying within single States.

The question is, Shall the Government of the United States undertake the construction, maintenance, and control of the Hennepin Canal, so as to secure for the benefit of the people, east and west, an all-water route from Minneapolis and Saint Paul, and all the country tributary to the Upper Mississippi, to Chicago and New York? In other words, shall the cheapest possible channel of communication be provided between the grain and stock growing regions of the West and the manufacturing and commercial regions of the East? The Legislatures of Iowa and Illinois have asked unanimously that this question be answered in the affirmative. Two great commercial conventions were held last year in the Mississippi Valley, one at Davenport, Iowa, and the other at Saint Louis, and each passed resolutions urging upon Congress the importance of immediately taking hold of this work, in the interest of cheap transportation, and in order that the railroads should be regulated in their charges by the competing rates furnished by a water route to the eastern seaboard at every point where their lines cross the Upper Mississippi.

But the minority urge that this work cannot be undertaken by the Government without "rings for political and corrupt purposes" being the result. Now, I undertake to say that while the Government has been expending from eight to ten millions of dollars yearly for the improvement of rivers and harbors and in such work as is now going on at Hell Gate, New York, on the Saint Mary's Canal, in Michigan, and on the canal around the lower rapids at Keokuk, under the direction of United States Army officers, not an instance can be found where the money was not honestly, wisely, and necessarily disbursed, or where it has been expended for any political, dishonest, or corrupt purpose whatever. The ring rule or corruption evolved in public works in Pennsylvania or any other State should not be evoked to bring into discredit the work of the engineers of the Army, a body of men holding office for life on good behavior, educated to service for the nation, jealous of our national fame and of the interests of the Government. These men do not carry on the work placed in their hands in the interest of any political party, and they can be relied upon to do honest service for the people.

The Hennepin Canal thus to be constructed by the United States engineers is a very simple and easily understood work. From Hennepin to the summit it will be twenty-five miles in length, with nineteen locks, the aggregate lift of which will be two hundred and seven feet. From the summit to the Mississippi River will be nearly forty miles, with nine locks and a fall from the summit of ninety-two feet. The canal, with feeder, Mr. Lowe estimates, will cost \$3,899,722.64, or \$747,277.36 less than was expended by the United States in the construction of the canal around the lower rapids at Keokuk, a distance of seven and six-tenths miles.

It will furnish a vast region of country—the most fertile in the world—with a competing water route to Chicago, the great market of the Northwest. What is furnished by that country for the Chicago market is shown by the following table, prepared by Colonel Milo Smith, of Clinton, Iowa, a railroad expert, for the report of Mr. Nimmo, for 1879. (Appendix, page 97:)

Eastward over bridge at—	Tons.
Wmونا	46,000
La Crosse	202,450
Prairie du Chien	153,970
Dubuque	16,736
Sabula	36,636
Clinton	709,990
Davenport	743,460
Burlington	572,070
Keokuk	46,342
Quincy	175,752
Making a total of.....	2,851,406

The eastward tonnage, Colonel Smith states, was much less in 1878 than in 1875 in the aggregate, because of the "almost total failure of the wheat crop" in Northern Iowa and Minnesota for the former year. But of that aggregate "65 per cent. was grain and flour, 20 per cent. live stock and 15 per cent. miscellaneous. All of this immense product of Western farms and industry is carried hundreds of miles before it reaches the point where the influence of water competition and a low rate of freight is reached, and it is safe to assert that this produce pays more freight charges for being carried across the State of Illinois than it pays on all the rest of the way from Chicago to New York. On through bills of lading there were exported to Europe in

1881 from Chicago 256,653 barrels of flour; 3,237,319 bushels of wheat; 7,638,535 bushels of corn; 222,850 pounds of hides; 535,822 boxes of bacon and hams; 264,551 tierces of lard, and 154,661 other packages of lard; 1,776,339 pounds of fresh beef; 14,195,737 pounds of cheese; 2,774,027 pounds of butter, besides large quantities of seventeen other specified products. During June last the total shipments of grain from Chicago for markets east and exportation reached a total of 413,449 bushels in a single week. (See Randolph's report to Chicago Board of Trade.)

These statistical facts show that it is cheap transportation to Chicago which is needed by the farmers of Iowa and the Northwest, because from Chicago eastward the great water route by the lakes and the Erie Canal exerts, in the language of Mr. Nimmo, "a potential regulating influence over the charges imposed on railroads for the transportation of the Western and Northwestern States to the seaboard." This is admitted by Mr. R. C. Blanchard, the attorney for the railroad companies, in his argument against the Reagan bill, when he says:

The rates being fixed from Chicago in manner I have proven, that city is now recognized as the Western pivotal point on which all others hinge and turn, and all other competing points, whether of railway against water, or railway against railway, rail rates are fixed by certain percentages of difference more or less from Chicago as their distances vary.

The Upper Mississippi Valley, therefore, needs a connection by water with Chicago not only because that is the market for its cereal products, but because the highest price can always be obtained at that point on account of the minimum of freight rates from that city eastward permanently secured by the influence of the lakes and the Erie Canal on all freights carried both by water and by rail.

In order to show the vast importance of this subject to the whole country I quote again from Mr. Nimmo, (report of 1880, page 154:)

The price of all commodities of low value in proportion to weight is in every market greatly affected by the cost of transportation. Especially is this the case in regard to the surplus agricultural products of the Western and Northwestern States. The low rates which prevail for transportation upon the northern water-line, therefore, exercise an important regulating influence over the price of all the surplus products of the West, not only in the markets of the Atlantic seaboard States, but also in foreign countries. It is due chiefly to this fact that during the last ten years the value of domestic exports from the United States has greatly increased, and that since the year ended June 30, 1875, the value of exports from the United States has largely exceeded the value of imports to the United States.

That is to say, the cheaper freights secured from Chicago by means of the competition of the northern water-route have made possible the large exportation of Western products, from which has resulted the inflow of gold from Europe by which the resumption of specie payments was made easy, the large reduction of our national debt accomplished, the interest greatly reduced on what is still unpaid, and the entire country aided to a full return of prosperity after the panic of 1873, with its accompanying depression of business and commerce. Surely, then, in "the cant phrase of cheap transportation" (see minority report, page 4) is wrapped up concerns which may well arouse true statesmanship to the mighty interests which surround this question.

Again, in his report for 1879, Horatio Seymour, jr., State engineer and surveyor of New York, thus directed attention to the advantages conferred upon the entire country as a result of the competition in freight charges of the Erie Canal:

The property carried to the seaboard through our canals amounts to 3,973,369 tons. [This was for 1879. In 1880 the Erie Canal carried 6,462,000 tons.] But this shows only a part of the service they have done. They have kept down freights and increased our exports, as no combination or pooling arrangements can be made by roads with the owners of thousands of boats. In this way the Erie Canal has been of great value to producers in all parts of the Union who send grain or provisions to the Eastern or European markets.

Yet again let a distinguished railroad authority be noted on the same subject. Once more I quote from Mr. G. R. Blanchard, in his argument before the Committee on Commerce of this House last March, (as see printed report issued for Mr. Blanchard in New York, page 16:)

The rail-carrying charges upon the great east-bound traffic to the seaboard for both consumption and export are therefore, and must continue to be, limited by natural causes, and cannot be beyond or as much as those which in their absence would be deemed fair and reasonable, and are always below the rates for like distances, articles, and speed by rail anywhere in the world. So potent are these facts that it is within the power of and is often the case that the combination or independent action of a few sail-vessels at Chicago can, in their seasons of navigation, procure rates from owners of an equal capacity of Erie Canal boats from Buffalo to New York, which, added to their own rates to Buffalo and transfer charges, will fix and have in actual practice, fixed and regulated, the entire eastward through maximum rail freight charges for a time upon all kinds of grain and many other articles.

This combined wealth of interior water-ways forms an aggregate of parallel rivalry unknown in other countries, and so restrains not only through but local and interior rates to maxima which have been constantly decreasing for the past ten years, which can never exceed the water prices, risks, and charges, and which afford the people a strong and just security against transportation extortion or abuse. Can any safer limitation or check be legislated than the inflexible limitations nature enforces in its uncontrollable rivalry? * * * The application of water results ascertained as I have described are inexorable in their effects upon railroad rates within periods ranging from seven to eight months in each calendar year, and usually all the year in rivalry with Western rivers. * * * In view of all these facts I now say, with Mr. Fink: "Compared with this natural powerful regulator of railroad transportation tariffs the efforts of State or Congressional legislation to prevent extortionate charges appear to those at all conversant with the subject as perfectly useless."

With this testimony of a railroad attorney, embodying the emphasized opinion of the great railroad freight tariff adjuster of the country as to the efficacy of water-ways as regulators of freight charges, the case may well be rested so far as this division of the argument is concerned. It only remains for this Congress to extend to the Upper Mississippi Valley opportunity to share fully in the benefits of which Messrs. Blanchard and Fink, as railroad experts, speak so assuringly.

That the construction of the Hennepin Canal will do this is the conviction of many of the leading minds of the country; men who have devoted years to the study of the transportation problem. As long ago as January 12, 1875, Senator WINDOM expressed his views as follows:

With reference to the Hennepin Canal I desire to say that having carefully investigated its merits I am very earnestly in favor of it and will exert every effort in my power to secure favorable action upon it. In the report I submitted to Congress last spring I gave it prominence among the improvements I recommended and urged it upon the attention of the country. I shall continue to do so and hope to have it included in a system of improvements to be entered upon at the present session. I have studied this subject until I have become an earnest and enthusiastic advocate of improved water routes, and I know of none that will make a greater return for the money invested than the Hennepin Canal.

Senator ALLISON says:

The experience of the New York Canal shows that one central water route not only enables the products to be transported cheaply by water, but also has the effect to reduce the rates of freight on all railways moving in the same direction. The proposed Hennepin Canal would probably save to the producer and consumer annually nearly the entire cost of the improvement.

Governor Gear, of Iowa, in a carefully prepared address, estimated that the saving in moving freights from the different points on the Mississippi River over the proposed canal, instead of paying the present charge by railroad, would be from 45 to 56 per cent.; and says:

Assuming the cost to be \$4,500,000, less than three years' savings in the cost of moving Iowa crops eastward could suffice to pay for it.

Governor Merrill, in his message in 1870, said:

The great want of our State is cheap transportation to the markets of the world. The most feasible plan to secure this end is to provide a direct and continuous line of water communication between the Mississippi and the Atlantic seaboard.

Hon. Carter Harrison, mayor of Chicago, says:

France has paid for canals and canalized rivers, of which she has over 5,000 miles, the enormous sum of \$205,000,000. England, up to 1874, had spent \$370,000,000, while America, a government of the people, by the people, has expended but \$46,000,000. The Mississippi River should be improved and the Hennepin Canal constructed.

Hon. R. W. TOWNSEND says:

The improvement of the water-ways by which the lakes and the Mississippi may be connected will prove of incalculable advantage to a very large portion of the producers of the Mississippi Valley, and will afford them one of the surest means of protection against the extortions of railroad monopoly.

F. H. Parker, esq., president of the New York Produce Exchange, says:

The New York Produce Exchange will use its influence in all legitimate ways for the construction of the Hennepin Canal.

Governor Carpenter says:

I am in favor of the Hennepin Canal. I see * * * the renewal of a purpose to connect the Mississippi and the Atlantic seaboard by canal and river and lake, which has seemed to me for many years to be the true theory of opening a practical route for the heavy and bulky freights to an eastern market.

Extracts from the views entertained by leading statesmen and newspapers might be multiplied indefinitely, but I will introduce one more, an extract from an able editorial reviewing the report of the minority from the Syracuse Journal of April 14, 1882:

One link in a chain has all the value of the whole; and such is the relation of this proposed public improvement, which completes a great east and west inland water-way of more than two thousand miles with ramifications reaching into seventeen States and Territories. It is not, then, a mere local enterprise, but by reason of its necessary and indispensable connections, part of a great system of interstate water-ways, by far the greater portion of which would be cut off from the vast commerce of the Northwest were this apparently insignificant link to be left uncompleted.

Another objection, that the canal would be inadequate as a remedy for excessive freight charges, is not borne out by experience. Though this canal may in fact carry but a small amount of the vast production (1,300,000,000 bushels) of the Northwest, it is inevitable that it will affect the cost of transportation of every pound of produce seeking a market by whatever route. The history of the Erie Canal, of the great lakes, and of the Illinois and Michigan Canal emphatically refutes this objection.

Locally there is naturally deep interest in the opening up of the vast regions of the Northwest as a market for our salt productions. While this may not be an argument in favor of the construction of the canal, it is a strong reason why the completion of this link in the chain of water-ways extending to the great States and Territories of the Northwest, and also to the West and South, should engage and hold the sympathies of this section.

After the foregoing it is hardly necessary to give further answer to the final objection of the minority to the passage of this bill, which is in effect that it will interfere with the business of the railroads. The people of Iowa have no quarrel with those corporations. A few years ago rates of transportation to the Eastern markets were so high that our farmers burned corn for fuel, because it did not pay them to haul it to market and buy coal. They attempted to remedy the evil by enacting the "granger law," but soon learned that a single State was powerless to regulate the rates of freight to the markets of the world, and the law was repealed. They believe Congress should provide in some way against unjust discriminations and exor-

bitant charges, and if it can be done by improving and connecting water-ways, they will be satisfied, but if the railroad or any other influence unites to prevent this it will only require a return of hard times, low prices, or poor crops to make the producers of the West unite in demanding of Congress such legislation as will protect the country from all discrimination and extortion and uncertainty as to rates.

Since Congress has been in session we have seen the passenger rate from Washington to Chicago increased 300 per cent., without a day's notice being given to the public, and similar fluctuations in freight rates are of frequent occurrence. I for one am willing and anxious that the plan of controlling railroad rates by improving, extending, and connecting our water-ways shall be tried and carried to the utmost limit, but if this plan proves unsuccessful, and that, too, by reason of the hostility of railroad corporations, it will be found that "the American people are as just as they are determined, and while they are resolved to solve the transportation problem, they will do it as they have others of great concern in the past, firmly, but justly. If they make mistakes they will correct them; for they mean to do right to all interests involved. There is no wrong without a remedy. They know they have the power to effect that remedy."

Tariff and Tax Commission.

SPEECH

OF

HON. JOHN F. DEZENDORF,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. DEZENDORF said:

Mr. CHAIRMAN: I am in favor of the bill now under consideration, and desire to present a few suggestions which may, I think, be of value to the commission when appointed and to the Ways and Means Committee.

One of the most interesting problems now taking up the attention of the thoughtful business men of the country is, How are we to restore the ocean carrying trade to the control of citizens of the United States? On the 19th day of December, 1881, I introduced the following bill, which was referred to the Committee on Ways and Means, and which I doubt not will receive such consideration as they may think it deserving when reached:

A bill providing for a drawback of 10 per cent. of duties on all goods hereafter imported in American-built ships owned exclusively by citizens of the United States, &c.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a drawback shall be allowed, equal to 10 per cent. of the duties, on all dutiable goods hereafter imported in American-built ships belonging exclusively to citizens of the United States, and whereof the master shall also be a citizen of the United States.

This, sir, is a very short bill, but I believe its adoption would revolutionize the carrying trade and build up the American merchant marine to and exceeding its *ante-bellum* proportions, and at the same time afford a reduction of duties which would in most instances be for the good of the people. The value of dutiable merchandise entered for consumption for the year ended June 30, 1881, amounted to the sum of \$448,061,587.95, upon which the duties collected were \$193,800,879.67, or 43.25 per cent. of the value of dutiable merchandise entered for consumption. The total amount of foreign tonnage entered at ports of the United States was in the year 1856, 3,117,034 tons, and in 1881, 12,711,392 tons, an increase of 308 per cent.

The total amount of American tonnage entered from foreign ports in 1856 was 1,891,453, and in 1881 was 2,919,149 tons, an increase of only 54 per cent.

In 1856 38 per cent. of the tonnage entered from foreign ports was carried in American bottoms, while in 1881 only 18½ per cent. was so carried.

Under present law the American ship-owner and ship-builder compete in the matter of freight charges upon the same terms with the ship-owners and ship-builders of other countries while they are laboring under greater local taxation and cost of construction.

The growth of the American merchant marine was rapid from 1800 to 1850, and even up to the outbreak of the late war. Our merchants, ship-owners, and seamen were by their energy and skill and by the superiority of our ships making serious inroads against their foreign competitors for the carrying trade.

The war came on and the operations of the Alabama and other confederate cruisers caused a rapid transfer of American ships to foreign owners. This, together with many other causes, combined to

bring the condition of the American merchant marine to the low condition in which we now find it.

The English have in the mean time been active and control the large portion of the carrying trade of the world. Of the tonnage from foreign ports entered in the United States during the last fiscal year 66½ per cent. was in British vessels.

Cromwell and the Long Parliament framed the navigation laws and founded the prosperity of the British Empire. They provided that the importation of foreign articles into British ports should be in British ships, and that ship must have been built in England; and they insisted that the master and three-fourths of the crew should be British subjects, who were always ready in case of war through the admirable system of apprenticeship; and in consequence of this wise provision the flag of England has floated upon every sea, and her merchant marine is now doing, as I have said, the large proportion of the carrying trade of the world. This act, now repealed, was perhaps one of the wisest laws ever framed.

A merchant marine, large and powerful, is one of the best defenses against war, furnishing, as it does, at a moment's notice thousands of well-trained officers and seamen "ready for the fray."

Great Britain and other nations have encouraged the building up of their merchant marine by postal subsidies, and France has recently granted subsidies for ship-building for the purpose of compensating ship-builders for the duties on imported materials entering into ship-building, as follows: for iron and steel vessels, 60 francs per ton; wooden vessels, of 200 tons or more, 20 francs per ton; wooden vessels, less than 200 tons, 10 francs per ton; composite vessels, 40 francs per ton; steam-engines and apparatus connected therewith, 12 francs per 100 kilograms.

The subsidies granted for the employment of vessels are for the purpose of compensating the merchant marine for the service it renders the country in the recruitment of its navy, and are as follows: one franc fifty centimes per registered ton for every 1,000 miles run for new vessels, confined to vessels engaged in foreign trade, and to be reduced annually for ten years, when it ceases altogether.

This bounty is increased 15 per cent. for steamers built in France and according to plans furnished by the Navy Department, and is reduced one-half for vessels of foreign construction, but sailing under a French flag. Ship-building is reviving in France under these influences.

We have thus seen, sir, that England, France, and other foreign governments are taxing their people by way of subsidies to build up their merchant marine.

I believe, Mr. Chairman, that the same result would be accomplished in this country, and much more effectually, by the passage of the bill above referred to, and at the same time we would reduce the tariff upon many articles which enter into daily consumption, and upon which almost all agree that a revision of the rate of duty would be desirable.

Tariff and Tax Commission.

SPEECH

OF

HON. WILLIAM D. KELLEY,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 5, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. KELLEY said:

Mr. CHAIRMAN: I felicitate you upon the near approach to the termination of this protracted debate. Charged with the duty of summing up so elaborate a discussion I cannot promise to be brief but will promise to be as brief as circumstances will permit.

PATERNITY OF THE BILL.

It was not my purpose to allude to the paternity of the bill under consideration; but the suggestion that it is in the nature of an affidavit for a continuance, just made by the gentleman from Virginia, [Mr. TUCKER,] requires me to do this. I beg gentlemen to remember that the affiant was a Democratic Senator, Mr. Eaton, of Connecticut, and that his application was granted by a Democratic Senate.

Why should they resort to such a dilatory or evasive measure as the gentleman declares this to be unless they felt that the Democratic party had been in power for six years and shown itself incompetent to deal with the tariff question? Is it not probable that it was to relieve their party from this responsibility that the Democratic promoters of the measure asked for a commission to give them counsel and guidance? Sir, it may be that the bill is in the nature of

an affidavit for a continuance; but if so, the fact is to the discredit of the party which, though it maintains a perpetual clamor for immediate tariff reform, in six years of power was able to make a change in the duty on but one article, quinine.

Though neither I nor my party is responsible for its origin, I am in favor of the passage of the bill. In its support I adopt as my own all that was said yesterday by the gentleman from Massachusetts [Mr. CANDLER] as to the impossibility of Congress as now constituted dealing wisely with this concrete and complex question. That gentleman is a merchant of large experience. This is his first term in Congress, but his representative position as a merchant has made him familiar with the difficulties that beset the consideration of the tariff question. Through three successive Congresses he and his associates sought modification of the provisions of law regulating the means of ascertaining the proper duty on colored sugars. They found each Congress alike unable to deal successfully with that single question. He could have told us of the fate of the Robbins sugar bill in the Forty-fifth and of the Tucker bill in the last Congress. He could also have reminded us of the absence of proper provisions on this subject from the tariffs proposed by Mr. MORRISON and his successor, Mr. Wood. His experience in this connection justifies me in saying that I do not believe that the tariff law can in many years be judiciously revised, unless it be by the aid of such a commission as this bill proposes.

THE REAL QUESTION AT ISSUE.

The controversy which has so fiercely raged in Congress for some years is not on questions of detail. Were it, these might be arranged; but it is on fundamental principles, being, Shall our impost duties be adjusted in accordance with the abstract doctrine of free trade as we have heard it presented by the gentleman from Virginia [Mr. TUCKER] in the last two hours, or upon the basis of a national polity, the aim of which shall be the promotion of the power of the nation by the development of its material resources, and the quickening into profitable activity of the genius and aptitudes of its people? In the presence of this doctrinal controversy, judicious action and harmonious conclusions are impossible. There is no common ground on which the adherents of these antagonistic theories can meet for compromise.

Sir, who can doubt that had the Committee on Ways and Means reported a bill proposing to change the duty on any one commodity, it would have opened to the free-trade side of the House the coveted opportunity to force by innumerable amendments the discussion of every item in the tariff law?

The effect upon the productive and commercial interests of the country of such an agitation is always prejudicial and sometimes disastrous, though the subsequent action may be to lay the whole bill on the table, as was done with the one submitted by my immediate predecessor.

PRESENT TARIFF NEEDS ONLY AMENDMENT.

Mr. Chairman, I am not prepared to admit that the existing tariff needs such revision as implies overthrow and reconstruction. It needs amendment in matters where, by the development of new resources or the progress of science, art, and inventive power, new commodities, new forms of matter, novel combinations of materials in familiar use have been called into existence, and new commercial designations into invoices. These should have their appropriate classification in the tariff law, and not depend on departmental decision under rates designated for articles "not otherwise provided for," a phrase to be found in each schedule of the statute. The report of a commission, consisting of nine discreet men, uninfluenced by the partisan spirit that pervades this House and the Committee on Ways and Means, will, I believe, while suggesting appropriate modifications of some of its provisions, vindicate the patriotism, wisdom, and prescience of the framers of the existing law. I have no apology to make for the part I have taken in maintaining and, in accordance with my judgment, perfecting that law. Its provisions are philosophical and harmonious. Its framers regarded all forms of American labor, and, placing a duty upon the primary element of an article if of native production, advanced the rate as the article was advanced by an increased expenditure of labor.

In this they followed not only the teachings of social science but the example of France, who still maintains many of the provisions of her tariff law of 1793. Her tariff from the days of Colbert has been a series of graded duties, increasing with the increased labor involved in each step of the advancement of the article. Let me invite the attention of the committee to the result of the industrial stability secured by this permanence of wisely adjusted rates of duty. Dynasties have risen and perished; the doctrine of the divine right of kings was swept away by the breath of a new-born democracy; an empire subdued the violence of this new-born giant, and restored monarchy succeeded the empire. But, though political revolutions have occurred at brief intervals throughout the century, the industries of France have been stable, the French people have prospered and French industry and art have conquered the world by their excellence and elegance; and it is still true that a pound of cotton manufactured in France, and beautified by her cultivated artisans, will pay for scores of pounds of coarse and adulterated British fabrics. France, while aiming to combine beauty with utility, fashions raw material into the finest textures, into the most

delicate forms of beauty; and what she saves in raw material she devotes to the augmentation and further improvement of her productive power. On the necessity for the steady increase of the workshops of a nation M. Leon Say, in his latest contribution to the commercial and industrial literature of France, said:

Has any one pictured to himself what would happen at the moment when the capital account of the French industries should be closed; that is to say, when the industrial workers should cease to enlarge their workshops, when they should buy no more machinery, no more tools, when none of them should endeavor to enlarge the field of his industry or the amount of his capital? If such a moment arrived it would be on the day when French industry entered on a period of decadence. All is bound together in industrial life. Year after year industry demands four hundred or five hundred millions more of capital; and that the movement shall not slacken is a necessary feature of the progress of the country of that economical power on which depends its political weight.

It was in conformity with the experience of France that our tariff was framed. Its classifications, like its scales of graded duties, were scientific. With the law here before me, I challenge gentlemen to indicate where confusion is to be found in its original classification of commodities. Its works are its ample vindication. It has accomplished the objects its framers had in view; has promoted the development of the vast and varied resources of the country by such a diversification of employment as secures work, wages and an opportunity for the exercise of the aptitudes of all our people, whether the brawny man with ax or sledge-hammer or the feeble but gifted girl with her pencil; work for all, but not for women and children the work in which they are engaged in Britain and in the iron regions of France and Belgium. For such rude toil our tariff secures such rewards as enable unskilled men to earn support for wife and children.

I do not exaggerate, and I appeal to the gentleman from New York, who represented the iron interests of our country at the French exhibition of 1867, to check me if I exaggerate, when I say that women and girls, little girls and little boys, are employed in all the coarser branches of unskilled labor in the countries I have named; and that it requires the services of both parents to bring food which shall include meat at one meal in each week to the family. Thank God our protective tariff has, by stimulating the diversification of our industries, furnished attractive and gentle employment to the feeble, the crippled, the early-orphaned, and has thus called into exercise the genius and special endowments of our people. While doing this it has so augmented the power and glory of the country that we have come to be a beacon-light, seen of all the world, and by the luster of our career are showing oppressed nations the means by which to escape from the fangs of the vampire of nations, England.

A NATIONAL VAMPIRE.

Sir, this ghastly figure of speech is not mine, nor is it the language of one who was given to heated debate or rashness of speech. I borrow it from a philosopher whose fame, which is world-wide and undying, rests on the persistency with which he labored to promote the application of nature's laws and subtle forces to the amelioration of the condition of his fellow-men. Said Baron Liebig:

England is robbing all other countries of the conditions of their fertility. Annually she removes from the shores of other countries to her own the manual equivalent of three millions and a half of men, whom she takes from us the means of supporting and squanders down her sewers to the sea. Like a vampire she hangs upon the neck of Europe, nay, of the entire world, and sucks the heart blood from nations without a thought of justice toward them, without a shadow of lasting advantage for herself.

It is impossible that such iniquitous interferences with the divine order of the world should escape its rightful punishment; and this may perhaps overtake England even sooner than the countries she robs. Most assuredly a time awaits her when all her riches of gold, iron, and coal will be inadequate to buy back a thousandth part of the conditions of life which for centuries she has wantonly squandered away.

Sir, her day of retribution for this iniquitous interference with the divine order of the world is at hand, and the vampire nation is shrinking from inanition, because, having exhausted the powers of Ireland, Turkey, India, and other victims to purchase her productions, she can find no others upon whom to feed. Yes, England can no longer boast that she is the workshop of the world. The American people conduct the world's most successful workshop, though we do not manufacture, nor attempt to manufacture, for all the world. No, sir; we cannot yet supply the ever-increasing power of our prosperous people to consume; and the world's markets offer us quick purchasers at remunerative prices for every commodity we can produce in excess of our own wants.

Nations governed by sound economic laws export only surplus productions. The condition of a country which has to cross oceans to obtain its food and to sell its manufactures is in an artificial position which cannot long be maintained. It must find markets for its wares and fabrics or starve. To monopolize markets it must sell more cheaply than others can, and to do this it must put its laborers on such wages as will furnish them with the humblest measure of sustenance that will enable them to live and labor; it must also cheapen the cost of material by adulteration wherever this can be resorted to. Thank God, we cannot enter the world's markets with articles which can be produced only by reducing the laboring classes to the condition of the British workman. Thank God, we cannot offer clothing to Turkey in competition with the shoddy cloths of Lancashire; that we cannot make articles of so low a grade for our own market that there can be a surplus of cheap and nasty American goods to be thrown upon subordinated markets in competition with England.

We cannot produce to sell at prices that prevail in India, or make goods mean enough for Egypt and Turkey; and I pray God that the day may never come when we shall be able to enter these markets in successful competition with England. [Applause.]

WHY I SUPPORT THE BILL.

Mr. Chairman, I support this bill with increasing earnestness because the discussion it has invoked on this floor has demonstrated the unfitness of Congress in its present temper to handle the subject judiciously, and has in the exposure of the conflict of opinion that prevails in this Hall given us an insight into the condition of the popular mind upon this question. During twenty years, the life of the existing tariff, the Cobden Club, which embraces the entire British Government except the Queen—her sons, her prime minister, and his official associates are the life of the Cobden Club—and these eminently proper advisers for the Republic of America have for twenty years, through this governmental club, been lying and lying and lying again about the provisions and effects of the American tariff and flooding our country with their specious falsehoods.

With unblushing effrontery this club enters into our Congressional and Presidential campaigns. Look at the pamphlets it distributed in the campaign of 1880. Take the letter of Augustus Mongredien to the American farmer. Examine it carefully, gentlemen, and if when you shall have finished its perusal you shall have found a paragraph that contains an unqualified truth you will be prepared to conclude that it got there by accident.

Again, the Cobden Club is not without agents in this country. Many able American writers have entered its service. Then, again, we have a number of mad philosophers, some of whom occupy professorial chairs, who believe that the business affairs of this country are to be regulated exclusively by their system of dialectics. Their philosophy is deductive and their mode of reasoning is consequently *a priori*. I had occasion recently, when addressing a club of his adherents in Brooklyn, to apply some *a priori* reasoning to a gentleman of this school, Professor Perry, of Williams College. I had before me the report of a speech he had recently made before the same club, a number of copies of which had been sent me by his admiring friends. In spite of its many falsehoods, some of which were of a personal character, I found amusement in exposing the want of foundation for its alleged facts.

I could not speak of it with entire freedom in the presence in which I stood, but by repeating an incident in the life of President Lincoln, which had occurred under my observation, I found an opportunity to say, with the sanction of his great name, that a lie could be told just as easily in a grave paper by one who assumed to be a teacher of morals, as by anybody else; and that to misrepresent facts, or to state them imperfectly as the basis of a conclusion, was sometimes the worst kind of a lie. The professor had told his audience, as he has told many another, how I had relieved the country of the tax on tea and coffee that I might increase duties on manufactured articles. The truth is, it was my brother RANDALL who did this good work, for which I honor him. In the professor's brief address he made a large range of statements, which were entirely without foundation in truth, though stated with much circumstantiality. The vagaries of this professor are widely circulated by the Cobden Club and its affiliated clubs in this country. Being a respectable man and professor in a college of good standing, people who read his writings suppose that they are thereby acquiring knowledge of our tariff and its effects, while the writer, if he knows the facts of the matters of which he speaks, can have no appreciation of the difference between truth and falsehood.

In view of these circumstances, and the ignorance that has been disclosed in this protracted debate, I would have an intelligent commission investigate the tariff law from the egg up, and lay the results of their investigation before Congress in monthly reports, as the bill before us proposes to require them to do. Such action might bring the people at large and some of the members of this House to something like an intelligent comprehension of the questions involved in tariff legislation and the interests to be affected by action thereon.

If, by a hasty review of the speeches of two of the leading members of this House, I shall show by these their latest utterances that neither of them at the time he spoke seemed to have a perception of the questions at issue, of the sources of our public revenue, or of the character and relations of some of our leading industries, with which they both profess to be familiar, I will, I think, have gone far to make out my case. And if, in addition to illustrating the utter unfitness of these gentlemen, I shall also show that a gentleman whose candor and fairness are without challenge, and who when investigating questions in the line of his familiar studies is so exhaustive that the results of his research may be accepted as verity, has in the discussion of this question omitted vital elements, the absence of which render his conclusions valueless, I think I shall have sustained my view beyond a peradventure.

MR. ABRAM S. HEWITT.

One of the speeches I propose to examine is that of a Democrat and the other that of a Republican; the Democrat, a possible candidate for the Presidency, and some would say more than a possibility in that direction; a gentleman honored by his Government for his connection with our industries, who more than sixteen years ago was made

known to the nations of the world as a representative of our industries by the publication and world-wide distribution of his report upon the iron and steel industries of the world as they appeared at the Paris Exposition of 1867.

The other is that of a gentleman whose whole manhood has been passed in the public service of his native State, Maine, and his adopted State, Minnesota, and who told us in his speech that he has been here eleven years. I need not tell the committee that he is a member of the Committee on Ways and Means. Now, if gentlemen so distinguished as these can make such blunders that one hates to allude to them lest he may give personal offense, I take it you will agree with me that the popular mind cannot be fully and accurately prepared for the consideration of this many-sided question.

I send to the Clerk's desk the speech of the gentleman from New York, [Mr. HEWITT,] and ask the Clerk to read the passage I have marked.

The Clerk read as follows:

Resolved, That the bill creating a tariff commission be recommitted, with instructions to the Committee on Ways and Means to report within thirty days, or an earlier date if it be practicable, a bill based upon the following instructions:

First. That all raw materials, meaning thereby all materials which have not been subjected to any process of manufacture, and all waste products, meaning thereby all waste materials which are fit only to be manufactured, and all chemicals which are not produced in this country, and alcohol for use in manufactures, shall be placed upon the free list.

Second. That so far as possible specific duties shall be substituted for ad valorem duties, and that in determining such specific duties the average dutiable value of imports during the last three years shall be taken as the standard of value, upon which no higher rate of duty shall be imposed than shall be necessary to compensate for the difference in the cost of the labor at home and abroad expended in the production of such products, after making due allowance for the expenses of transportation, and that the rate of duty shall not in any case, except on luxuries, exceed 50 per cent. of such average dutiable value.

Mr. KELLEY. That I may not be deemed guilty of injustice to either my Democratic or Republican friend in associating them as I do, I beg leave to remind the committee that as soon as the resolution just read had been presented to it, the author hastened to say:

Those gentlemen who have followed the distinguished Representative from Minnesota [Mr. DUNNELL] in the remarks which he has just concluded, will find that in the resolution which has been read there is no issue to be made with him. But there is an issue which presents itself clearly and unmistakably with the doctrines which have been proclaimed on this floor by other gentlemen on his side of the House.

Mr. Chairman, the grammar, the rhetoric, the euphony of the gentleman's preamble and resolutions are perfect. It is only when you come to seek for their purport and meaning that you find them slightly defective. They want interpretation or explanation. Indeed, to make them sufficiently definite, to exclude false or double conclusions, it would require a book as big as Adam Smith's "Wealth of Nations," with all the elaborate notes that have been appended thereto. The Democratic party in six years of power was not able to originate a tariff bill which could stand on the floor of this House; yet, so high is the gentleman's estimate of the intelligence and practical ability of the Republican party, that he would order its Representatives to prepare a bill in thirty days, or less time; and before he gets through with the speech by which he supported his resolution, he tells us we must not hurry the work—that there is great danger in hurrying a matter of such delicacy and importance. Like the good master of childish story, he says, "Don't hurry; but if you don't go as quick as your legs will carry you, I will thrash you." We must complete the bill in thirty days or less, but we must not hurry. For in the course of his speech the author of this order to act with unprecedented speed says:

We must therefore proceed slowly so as not to interfere with the occupations of people, and not to dislocate industry to such an extent that men are compelled to seek new occupations by a sudden stoppage of those in which they are engaged.

The resolution of the gentleman provides:

That all raw materials, meaning thereby all materials which have not been subjected to any process of manufacture, and all waste products, meaning thereby all waste materials which are fit only to be manufactured, and all chemicals which are not produced in this country, and alcohol for use in manufactures, shall be placed upon the free list.

Who shall determine what constitutes "raw materials?" Who shall determine what is "fit only to be manufactured?" In the course of this discussion we have received some help from the gentleman in this respect; for we have learned that he includes scrap-iron in this class. In making the announcement he, with a very graceful flourish of the hand, said, "Give me these things and I ask for no protection." I should think not. I am sufficiently grasping and selfish, but if I owned iron works on tide-water, near the great commercial port of our country, and you would give me scrap-iron free of duty I would not want to deal in mines in Colorado or anywhere else. [Laughter.] I should have a monopoly that would be richer than the best of them; that would enable me to drive out of existence the whole class of well-paid laborers known as puddlers of iron, and to absorb the capital of all those engaged in iron works involving the process of puddling.

The gentleman is perfectly willing that the duty on pig-iron may remain. It is scrap-iron that must be free. I received to-day the last issue of the Iron Age. It contains its usual weekly report of the prices of iron in London, from which I read:

LONDON, WEDNESDAY, May 3.

Middlesborough pig-iron No. 1, foundry, 46s.; No. 2, 44s. 6d.; No. 3, 42s. 3d., to 43s. 9d.; No. 4, forge, 41s. 6d.

That is the article with which our pig-iron makers have to contend. Lower down in the same report I read:

Scrap-iron: The market is quiet with small demand, and prices are steady. We quote heavy wrought, nominally 24s.

The gentleman from New York is perfectly willing that you may protect by a duty of \$7 per ton pig-iron, which is worth 40s. or a little more, if you will only give him scrap-iron, which is worth 80s., free of duty; under such provisions he will not ask any protection. [Laughter.]

What is scrap-iron? What is constantly imported as such? Sir, under the existing duty on scrap-iron, which is much lower than that on steel in its lowest form, the custom-house officers have to exercise constant vigilance to prevent the importation of advanced articles of steel under the name of scrap-iron. For instance, and the case is but one of many, there came in invoiced as scrap-iron tons of steel tips for spades. They are rough looking little pieces of steel and with a little sea water sprinkled over them the surface corrodes and they look like old iron. They were thrown among real scrap-iron and when they reached the storehouse of the consignee were carefully sorted. Thus the advanced steel escaped most of the duty it owed the Government. A single other illustration—fish-plates for railroads. I have known them thus corroded to be taken by the ton from a cargo of scrap-iron.

Give the gentleman from New York free scrap-iron and he need not pay the duty on any steel or much iron. Cargoes of free goods are not closely scrutinized by customs officers. He can then enlarge his works so that when another period of depression comes he may lose \$200,000 instead of \$100,000 a year for a series of years, and make it all up, as he told us he did the loss of \$600,000, as soon as the depression passes away; for with free scrap-iron he will have but little competition in making bar-iron east of the Mississippi.

FREE WOOL.

Again, sir, the gentleman told us that wool should come in free, and it therefore goes without saying that shoddy should. I said I thanked God that we did not manufacture articles mean enough for Turkey, Egypt, and India; and I also thank Him that we do not now afford the chief markets for the products of English shoddy mills, as we did under a tariff for revenue only, when this book was written by Rev. Samuel Jubb, in 1860. It is entitled the History of the Shoddy Trade. What are shoddy and mungo? Why, sir, there is not a chiffonnier with stick and nail and bag scouring the gutters of any city on either side of the Atlantic for woolen rags who is not collecting material for the manufacture of shoddy and mungo. The cast-off clothing and the blankets which have wrapped putrefying carcasses in the lazars and pest-houses of Europe and Asia, are gathered and thrown into running streams whose waters are dammed at intervals, and when the law of gravitation and the flow of waters have made it safe to handle them they are collected and sent to Lancashire to be converted into shoddy cloths, flannels, blankets, and carpets. When gentlemen talk about the high rates of duty on low-priced woolen goods I deplore the fact that the duty is not twice as great and sufficient to protect our poorer classes from wasting their money on these nominally cheap but worthless and consequently high-priced articles. Speaking of colored blankets, Mr. Jubb says:

These have been made largely for some years for the American market; gentian, gray, blue-gray, and green are the prevailing descriptions. The widths and qualities vary materially, and consequently the values. The lowest kind is a very inferior gray fabric, at a correspondingly low price. The writer understands that the bulk of these blankets is consumed in the slave States of America, and that the low gray blankets just adverted to are designed chiefly for the use of the slaves, both as coverlets and materials for garments. Dewsbury and Earlsheaton are the centers of this manufacture.

This book incidentally pays our American woolen goods a well-deserved compliment. It grades the rags of America as first in value, those of London next; and then it gives the descending grades of other countries.

Wherever American rags are referred to by the author they are certified to be the best. This is because they are made of wool, while shoddy has entered in all others. Says the author: "Scotland sends her stockings and her mixed rags, Ireland her whites, Germany her knitted stockings," &c.

One would not suppose that Turkish rags would be worth much; for Mr. Jubb naively says:

A blue cloth of a poor description called "Turkey cloth" has been made from time to time. This, it is understood, is for the Turkish army. If this cloth may be taken as a criterion of the value of the Ottoman soldier, it is plain he is not rated very highly. The price of the article is only about 2s. per yard, 54 inches wide; and of course there cannot be much service in it.

Though the gentleman demands free wool, I hope he will unite with me in an endeavor to protect the industrious poor by duties on shoddy and shoddy cloth, flannel, blankets, and carpets. I do not want the cheap and nasty stuff to be imposed on any of our people.

British carpets, we have been told, are much cheaper than ours. I hope the gentleman who represents the Macon (Georgia) district is on the floor. I want to mention a few facts which he can probably verify. The Bibb Manufacturing Company of Macon runs 11,000 spindles in the production of carpet-yarn. Led by the persistent efforts of the Democrats of the South for what they call tariff reform to believe that the duties on carpets would be greatly reduced, Mr. Hanson, the superintendent of the mill, sought a foreign market. He sells all he can now produce to the carpet-makers of Philadelphia,

New York, and New England. The capacity of the mill is to be greatly increased in order to meet the growing home demand for its yarn.

But, impelled by fear that the duties on carpets would be reduced and his home market be thus destroyed, he addressed the most distinguished carpet manufacturer of England, sent him samples of his yarns, with price-list or tag attached to each parcel. His letter was courteously responded to, and with the answer came specimens of the yarns used by that distinguished carpet manufacturer in his immense works at Rochdale. The best of them did not equal the most inferior product of the Bibb Company, and John Bright stated candidly that such yarns as these could not be used by British carpet-makers, as they had to sell in countries in which low prices prevailed, and must consequently use the cheapest materials. No fresh cotton, said Mr. Hanson, could be found in any of those English carpet-yarns, and the lower grades were literally made of what might be called cotton shoddy, the waste of ordinary cotton-mills. I say again, let high duties defend and protect our farmers and laborers from being swindled into the purchase of these worthless fabrics. To this end I will vote to increase the duties on all such goods whenever opportunity may offer.

SPECIFIC DUTIES AT FIXED AD VALOREM RATES.

But let us consider another clause of the gentleman's carefully prepared instructions to the committee. It is, "so far as possible," to report "specific duties," and to so adjust them that they shall not "in any case except on luxuries exceed 50 per cent. of their dutiable value." Mark the practical character of these provisions. The duties are to be fixed specific rates. That is easy of accomplishment; but by what process are we to so regulate prices that the specific duty will never be more than 50 per cent. ad valorem? Prices fluctuate.

A MEMBER. Make the duties ad valorem.

Mr. KELLEY. But they are not to be ad valorem. The gentleman's resolution says they are to be specific, and at a rate not to exceed 50 per cent. ad valorem. What I want to know is how can we, by statute, establish precise and fixed relations between fixed and fluctuating quantities? To illustrate my difficulty, let me remind gentlemen that in 1870, when \$28 a ton duty was imposed on Bessemer rails, they were selling at \$106.75. Therefore \$28 was 27 per cent. ad valorem; but when, during the depression, there was no market for either American or foreign rails the price fell to \$40; and then \$28 was equivalent to an ad valorem duty of 70 per cent. Will the gentleman in his next speech indicate the legal machinery by which we may so regulate prices as to prevent a fixed specific duty from representing ever-changing ad valorem rates? Shall we have a tariff commission every week to readjust relations, or may we possibly take the risk of running for a month or a quarter before restoring the defined measure of equality?

Let me further illustrate the difficulty of maintaining an established relation between a specific duty and the ad valorem rate a commodity will pay at different times under that duty by referring to that portion of the speech of my friend from Minnesota in which he descanted upon the fact that the duty on rice, which in 1864 was put at 2½ cents a pound, at which it still remains, is, if calculated at an ad valorem duty, now 105 per cent. Such a duty should in his judgment be promptly reduced. In 1864 rice was selling at from 15 to 17 cents a pound, and we imported our entire supply from China. Now we derive half our supply from the rice fields of the Southern States; and I will let Colonel John Scriven, of Savannah, tell how the duty on rice, of which the gentleman complains, has reduced the price of that article of almost universal consumption from 17 to 5½ cents a pound, and thus raised a specific duty of 2½ cents from 25 to 105 per cent. ad valorem. In addressing the tariff convention at New York, Colonel Scriven said:

The interest I represent is a very humble one in comparison with the great interests I have heard set forth in this assembly. It is simply the rice industry. The time was, before the war, when this industry formed a very important integer in the business of this country. We then had a system of labor so cheap, so entirely controllable (I speak not of sentiment, for even in that, slave-holder though I have been, I go with you there also) and so economical as to enable the rice industry of the South and the cotton industry of the South to compete; no, not to compete, but to make its products stand king in the markets of the world. Now these facts are all changed. The war has obliterated our system of labor. It has now become free labor; and I, as a Southerner and as a man, rejoice in the fact. I have no complaint to make of its consequences, nor is there anything under the beneficent influences and results of the system under which you are existing today, nor is there anything in the results of the changed system with us for these Southern men to regret.

It under the change of the system of labor, and the consequent changes of the price of labor, we had been placed under the continued manipulation of Mongolian and East Indian labor, the rice industry of the country must necessarily have succumbed and been obliterated from American soil. But the facts are these: in the crop year 1865-1866 there were produced 11,600,000 pounds of rice; in the crop year just passed, 1880-1881, the production has been 117,766,000 pounds. I may say that the whole of the American product of rice is consumed in this country, for but 150,000 pounds of the American crop were exported in the past year. And the same instructive lesson is to be derived from the investigation of the facts of the decade anterior to 1881. The gross production of rice in the Southern States from 1870 to 1880 was 667,000,000 pounds. Of this, nearly the whole crop was consumed.

Now, come nearer to the point. You must be aware that there is a very large importation of eastern rice into the American ports. Therefore, in the decade I have named there were imported into the United States 639,000,000 pounds. It must strike you with remarkable force that the American people are permitted to consume as much foreign rice as they please, and that the quantities of American rice and foreign rice consumed in the United States are so nearly equal that

it absolutely puts the foreign rice and the American rice in a system of competition, and purely under the influences of the present duty upon foreign rice.

I have only to add that the total consumption of rice in the United States at the present time is 135,000,000 to 145,000,000 pounds per year. We will assume that nearly half of this is foreign rice. It is plain that if you abolish the duty, and take away the sustaining power afforded by it to the Southern producer, the result will naturally be the establishment of the same monopoly which brought large quantities of foreign rice into the United States during the late war. What was the result of that? Simply that prices of rice then rated per pound at from 13 to 17 cents. What do we see now? The average price of rice in this country is about 5 to 5½ cents per pound. That is brought about for the benefit of the American people, and I believe solely and entirely from the beneficial influences of your tariff.

CHEMICALS.

But to recur to the gentleman's resolution of instructions. It demands the transfer to the free list of "all chemicals which are not produced in this country." I have here our tariff, and I want to show gentlemen the largest free list ever embodied in a tariff law. It covers eight pages of the Revised Statutes, and embraces three hundred and fifty articles or paragraphs, each of which includes a number of articles. What chemicals are there that we cannot produce that are not already in this list? It was my privilege to put most of them there, and while engaged in the work I corresponded with every chemical-producing city and town in the country; and if the gentleman can show me any chemicals which we cannot produce, and therefore have to import, it shall be my labor to transfer them to the free list, as I am now trying to put all spices there.

ALCOHOL.

But to proceed: "And alcohol for use in manufactures shall be placed upon the free list," says the resolution.

Mr. Chairman, this brings me to a rather delicate question, but one which being thus presented I must discuss. I beg gentlemen to contemplate the impolicy of this provision, in the gross outrage it would inflict on the farmers of the corn-growing States of the country.

We impose a tax of 90 cents on every peck of corn the farmer or his patron advances by one stage of manufacture, and that the simplest and most prompt and economical process of conversion. Three dollars and sixty cents a bushel is the minimum tax imposed by our internal tax law on corn when advanced one degree in manufacture. The tariff we are told robs the farmer. What will this proposed provision do? The gentleman's respect for the commercial system of England should have protected our farmers, if sympathy with them did not, against the suggestion of such a wrong as this proposition involves. Here is England's so-called free-trade tariff. Here in the Statistical Abstract is an official copy of the tariff of Great Britain. It appears under four heads: "Ordinary import duties," in which division duties appear which involve protection amounting to several hundred per cent. against American competition and in favor of British manufacturers of tobacco, snuff, and cigars. There is a high duty on raw tobacco, but when the Government of free-trade England comes to deal with it in any of its manufactured forms, duties are imposed which are so protective as to put ours to the blush for the modesty of their proportions and to prohibit the importation of manufactured tobacco.

The second division of this tariff embraces "Import duties to countervail excise duties upon British beer."

The third "Import duties to countervail excise duties on British spirits."

And the fourth and last division is made up of "Import duties to countervail stamp duties on British-made articles."

England taxes all these classes of articles, and then makes them the basis of further revenue by putting protective, or what she calls countervailing, duties upon them for the protection of those who have paid the excise taxes. But the gentleman would tax our farmers 90 cents a peck on distilled corn, and to further oppress them he would invite foreign manufacturers of alcohol to send it in free of duty, and thus drive the American product out of our own market.

Mr. HEWITT, of New York. Will the gentleman permit me to say a word in this connection?

Mr. KELLEY. Certainly.

Mr. HEWITT, of New York. I find that my proposition was not only misunderstood by the gentleman from Pennsylvania but largely also by other gentlemen who have criticised it. My proposition was intended to remove the internal-revenue tax on alcohol used in manufactures. I admit that it was very crudely expressed; but that was the intention, and of course the gentleman from Pennsylvania in criticising that portion of my speech will accept my interpretation of it. Further, the gentleman from Pennsylvania knows, or ought to know, that alcohol used in manufactures in Great Britain is relieved from duty by special statute. A bonded system is provided by which manufacturers may procure alcohol free of duty for manufacturing purposes.

Mr. KELLEY. I am sorry the gentleman from New York did not say what he meant in his resolution, considering that its purpose was to instruct the Committee on Ways and Means.

Mr. HEWITT, of New York. I had rewritten the resolution with a view to this correction before I heard the remarks of the gentleman, because I understood that the language had been misunderstood. We are exporters of alcohol, and therefore a repeal of the customs duty would not help the manufacturing interest. It is the internal-revenue duty which hurts.

Mr. KELLEY. I hope the error has been corrected in the two hundred and fifty thousand copies of the gentleman's speech he has caused to be printed for circulation by the Democratic campaign committee. [Applause on Republican side.]

Mr. HEWITT, of New York. There are no copies being circulated through the Democratic campaign committee, and the correction, certainly as to the meaning of the phrase, will probably reach the public without the interposition of any campaign committee.

Mr. KELLEY. I have heard from what I considered very good authority that there were tons of copies of the gentleman's speech being folded in the room below, but probably the time of the gentleman and his associates has been so much taken up during the discussion of this question, and they have been so much interested in the debate, that they could not spare time to frank and direct them.

Mr. HEWITT, of New York. The number folded, I will say to the gentleman from Pennsylvania, are those for which application has been made to me personally or by letter, and I pay that portion of the expense myself, and suppose that I shall also pay for the folding.

Mr. KELLEY. I have heard that the gentleman paid for them most liberally. [Laughter and applause on Republican side.]

Now, as to the English provision for allowing alcohol to be used in the arts. There is a statutory provision that methylated spirits can under certain restrictions be used. Methylated spirits are a mixture of wood naphtha with alcohol, and I have heard wood naphtha spoken of as the skunk of chemistry. [Laughter.] Its odor is not attractive; and, what is more, that it is so persistent and enduring that while scientists admit that it is possible as a test of the powers of science to extract naphtha from alcohol, they assure us that the process is so expensive that it is impossible it should be resorted to for practical use. The amount used in England is very small, and is confined to that which is used in the process of manufacture and which is recovered so as to leave neither alcohol nor methyl in the product.

Methylated spirit cannot be used in any of the finer chemical operations. It cannot be used in chloroform, collodion, cologne water, the ethers, or in any of the infinite variety of products of which 95, 97, or 99 per cent. in bulk and gravity are spirits. Of all such articles we would, but for the spirit tax, be large exporters. This tax is retarding our manufacturing progress and restricting our exports. An improved process for the manufacture of tobacco has been discovered, but this tax precludes its extensive use. Mr. Goldsborough Robinson, of Louisville, Kentucky, appeared before our committee in this connection. A more intelligent and well-bred gentleman I have rarely met. Let me read a brief extract from his argument.

Alcohol is nature's great solvent, and is required in nearly all industrial pursuits. In this use it is as absolute a necessity as machinery or a paint-brush, and in taxing it we tax a product of our own industry, and through it lay a burden upon our own manufacturers.

The tax is so excessive as to be almost prohibitory, and our people are placed at a great disadvantage in competition with those of foreign countries who have free alcohol.

No government, wisely conducted, will levy excessive taxation on its own industries.

This principle is so well established that machinery is in many cities exempt from local taxation.

The only justification of the extreme tax on spirits (it is six times their value) is the popular belief that they are harmful luxuries, and should therefore bear the burden. But this justification fails utterly where spirits are used in manufactures, in the preparation of drugs, as a burning fluid, and in all the common wants of the people. This tax being almost prohibitory every shift has been adopted to escape its burden; benzine (dangerous always) is substituted as a burning fluid, and fusil oil (a poison) as a solvent.

All inventions leading in the direction of the use of alcohol are barred. It has great bleaching powers, and might be employed with advantage on textile fabrics; but its cost prevents any experiment in this direction. For nearly twenty long years—the most progressive years in the world's history—the American people have been practically deprived of the use of this great solvent. Its absolute necessity in scientific pursuits has been admitted, and colleges have been granted, by special enactment, its use without tax; but no provision has been made for that army of humble laborers in the scientific fields to whose efforts all our great inventions are due and who have no access to college laboratories.

The constantly increasing surplus in the Treasury, the impossibility of applying that surplus to our debt except by buying bonds at an extravagant premium, forces the conviction on all minds that taxation must be reduced.

What is more reasonable than that this reduction should take place in that direction which will encourage industries and remove from the burden which the people carry those points of friction which gall and irritate more than the weight of the burden itself? The people have made no complaint of the tax on matches, and who will thank the representatives of the people for its removal? But for many years petition after petition has come to this committee-room for relief from this alcohol tax on industry.

In support of Mr. Robinson's views let me invite attention to a letter addressed to me by William A. Gellatly, of the firm of W. H. Schiefflin & Co., importers and manufacturers, of New York:

I beg to hand you herewith inclosed some remarks with reference to the taxation of alcohol used in chemical and pharmaceutical manufactures, which I trust will be of some interest to you, and perhaps of some use in the effort you are making for the relief of manufacturers who use this article largely.

I fear that not many men in Congress have had the opportunity to familiarize themselves with this subject to such an extent as will enable them intelligently to understand how great a burden this tax is on an industry which it is certainly for the interest of the country to foster and develop.

WHY ALCOHOL USED FOR CHEMICAL AND PHARMACEUTICAL PURPOSES SHOULD NOT BE TAXED.

1. Because English and German chemical manufacturers are able to buy alcohol duty-free, *i. e.*, at actual cost.

2. In the preparation of many fine chemicals the use of alcohol is necessary in order to insure a pure product. (Instance many of the expensive alkaloids, as

atropia; many salts, as iodide of ammonia; many preparations, as iodoform, chloroform, ether, &c.)

3. In the performance of the necessary manipulations much alcohol is lost through evaporation. In many cases this loss of alcohol is a greater item of expense than is the cost of all other materials, apparatus, and labor.

4. In many tinctures and fluid extracts the alcohol, necessarily used simply as a solvent, adds more expense than the total value of drug and labor. What should usually be considered a less important ingredient, a mere solvent, becomes actually the most expensive substance in the compound.

5. From what has been stated above it appears:

(a.) That the excessive tax on alcohol entirely prohibits the manufacture in this country of many of the finer chemicals and gives the whole trade to German and English manufacturers.

(b.) The cost of American-made chemicals in whose preparation alcohol must be used is artificially enhanced by the exorbitant tax on alcohol. Often the cause for the high cost of these articles is not apparent to the purchaser, because the alcohol used does not appear in the finished product, but has been lost through evaporation during the preparation of the substance.

6. Alcohol is necessary in the preparation of most medicines; there is no known solvent which can replace it. As a rule its office is that of a solvent for the extraction and preservation of valuable medicinal ingredients of drugs.

These medicines are used and must be paid for by the sick, *i. e.*, by those least able to pay exorbitant prices. The excessive tax on alcohol does, however, make the cost of many medicines very heavy, far more heavy than is just and right. The tax on alcohol used for these purposes is accordingly a very heavy and unjust tax imposed upon a legitimate industry, (manufacturing chemistry and pharmacy,) and it is also a heavy tax on individual users of medicines.

Medicines should not be excessively taxed like luxuries; they are necessities. The entire removal of the tax on alcohol used for these purposes is desirable and proper, but the immediate removal of the tax would result in financial disaster in thousands of cases, for the reason that all over the country various dealers have in stock considerable amounts of goods manufactured with alcohol which has paid this excessive tax. These goods have cost, consequently, much higher prices than they could be replaced for if free alcohol were used.

If a law be enacted which names a date, six months or a year in advance, when the tax shall be reduced say 10 or 20 per cent., and which makes provision for future annual or semi-annual reductions until alcohol is tax-free, there need be no fear of serious commercial disturbance. Such a revision of the law would result in stimulating and greatly expanding our chemical manufactures.

At present the value of a barrel, of forty gallons, of alcohol is approximately—

Cost of forty gallons of alcohol	\$21 92
Tax	67 68
Total	89 60

One hundred and eighty-eight degrees over proof alcohol is worth to-day about \$2.24 per gallon, \$89.60.

As appears above, fully three-fourths the cost of every barrel of alcohol is due to the internal-revenue tax.

Were coal thus taxed the value of iron and steel would be so enormously enhanced as to prevent their use in any but the smaller and finer tools, while iron rails and iron steamships, to say nothing of steel, would be impossible.

Manufacturing chemistry and pharmacy are just as heavily hampered, just as truly restricted and dwarfed by the excessive duty on alcohol as would be the iron industry were the tax on coal to be placed at three times its actual cost.

Yours, truly,

W. A. GELLATLY.

And here is a short letter from the Metallic Cap Company, of New York, to the Committee on Ways and Means:

NEW YORK, March 17, 1882.

House Committee on Ways and Means:

GENTLEMEN: We use from fifteen to twenty barrels alcohol per month. We ought to use fifty barrels with tax reduced. We are obliged to export alcohol to Saint Thomas and make crude material and import same back. By so doing we are able to hold a portion of trade; but if we were to pay present price of alcohol in States we could not do business, even with 40 per cent. duty on blasting caps, which is in force. Germany sends most all that is used here.

Yours, respectfully,

METALLIC CAP COMPANY.

H. S. CHAPMAN.

These communications show how greatly this tax is reducing the consumption of American corn by restricting our ability to export it in the form of alcoholic drugs and medicines, perfumery, cosmetics, and many other classes of articles.

Corn is a commodity of which we produce an annually increasing surplus, and for which we should therefore seek foreign markets. To show how rapid this increase has been and is likely to be, let me inform the committee that the production of corn in 1880 exceeded that of 1870 by 130 per cent., having been 1,754,861,535 bushels in 1880, against but 760,944,549 bushels in 1870. It is, however, too bulky and cheap for distant transportation. One bushel of corn on an Iowa or Minnesota farm will not, I am assured, pay the cost of transporting another bushel to the seaboard. To convert it into beef or pork is a slow process; and with loss of interest through the years a steer is coming to marketable condition makes beef thus produced too costly for competition with the vast herds raised on the plains of Texas and the Rocky Mountains, which feed on bunch, buffalo, and other grasses, the spontaneous growth of untaxed land. Corn is, however, easily converted and condensed into alcohol, and through it into an infinite number of preparations which readily bear the cost of transportation even to foreign countries, and for which there is always a foreign demand. One bushel of corn converted into alcohol will, I am authoritatively assured, carry five bushels to and beyond the seaboard. When the two bushels of corn in bulk have gone from the farm, their nutritive and fertilizing power have gone to enrich other fields; but when corn is distilled near the field on which it is produced, the nutritive and fertilizing power remains, first as food for cattle, and then for the land from which in its growth it extracted its own elements.

In the last report of the Commissioner of Internal Revenue I find a statement of the cattle, swine, and sheep fed on the residuum of distilleries, and of the additional weight acquired while being thus fed. This is a class of facts which were never before collected, but which

may well command the consideration of the farmers of the corn-growing States:

California.—Three distillers sell slop and feed cattle for others, but keep no data.
 Illinois.—Two distillers sell their slop.
 Indiana.—One distiller sells his slop.
 Kentucky.—A large quantity of slop sold.
 Maryland.—Distillers sell their slop.
 First Missouri district.—Slops all sold.
 Nebraska.—There were 21,635 cattle fed in transitu and 822 hogs fed, but no data as to weight could be furnished.
 First Ohio district.—One distiller sold all his slop, and all sell more or less.
 Sixth Ohio district.—One distiller fed stock, but kept no data.
 Eighteenth Ohio district.—Three hundred sheep fed, but no data as to weight.

Mr. Chairman, in view of the facts I have thus hastily presented, one may well suppose that the production of American alcohol had rapidly increased, but such is not the case. Between 1870 and 1880 our population grew from something over 38,000,000 to over 50,000,000, showing an increase of 11,597,412. With the astounding increase in our corn crop, and with this immense increase in population, what increase has our production of alcohol shown? None, sir; on the contrary, though the fact is admitted that the spirit tax was much more closely collected in 1880 than in 1870, we collected the tax upon 7,585,203 gallons more per year, by an average of the years 1870, 1871, and 1872, than we did by a like average of the years 1879, 1880, and 1881. Sir, I am unwilling that any new burdens shall be added to a tax that is already reducing the price of corn while, by restricting the use of nature's great solvent in the arts, it is increasing the cost of hundreds of articles for which the farmer must pay out of the reduced price he receives for his corn. So that, if the gentleman from New York [Mr. HEWITT] at the time he penned his resolution meant what he said, I am against his proposition; and a thorough investigation of the practicability of the scheme he now presents has demonstrated its worthlessness as a measure of relief alike to the farmer, the chemist, and the manufacturer. I am therefore opposed to it. The relief our farmers, manufacturers, and consumers should have is an immediate reduction, and the earliest practicable repeal of the last vestige of this oppressive and restrictive tax.

The CHAIRMAN. The gentleman's hour has expired.

Mr. HEWITT, of New York. I move that the time of the gentleman from Pennsylvania be extended indefinitely.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the gentleman from Pennsylvania have leave to proceed indefinitely. Is there objection? [After a pause.] The Chair hears none.

Mr. KELLEY. The gentleman from New York and the committee have my thanks for this courtesy.

THE VAMPIRE'S INSTRUMENTALITIES.

Sir, the day of England's tribulation was nearer than Liebig could have believed. It is upon her now. The vampire has exhausted the

blood of Ireland; her more than eight millions of people now number less than five millions. Turkey, in natural endowments as rich as the same number of contiguous square miles anywhere in the world, is the Sick Man of Europe, and instead of furnishing the world with Damascus blades cannot make a plow or hoe of iron. Egypt is scarcely better off than she. Representatives of British and French holders of her bonds practically administer her finances. Frequently occurring famines and insufficient means of sustenance are rapidly reducing the population of impoverished India. And the vampire, having absorbed the blood of these and other nations, is suffering and shrinking from inanition. She is feeding upon her accumulated capital, and not upon her current earnings, and is appealing to our sympathy, to our relationship by blood and language, and by every argument save the one by which she persuaded China and Japan—force—to permit her to fix her fangs upon the industries by which we live, which may Heaven forefend! [Applause.]

What are the instrumentalities and processes by which she accomplishes these terrible results? They are free trade as taught by the Manchester school, which she forces upon feeble nations at the cannon's mouth, and tariffs for revenue only, as advocated by the American disciples of the Manchester school, into a resort to which she has often beguiled us, and which are still accepted by several of her self-governing colonies.

It is by the first of these processes she is now exhausting Japan. Less than twenty years ago, through the persuasive power of her fleets and heavy guns, she induced Japan to unite with her in a commercial treaty. That treaty contained a provision for its revision at the end of ten years, and until that term had expired the Japanese believed that their thralldom would be but temporary. When, however, the term had expired, and the Japanese Government demanded a revision, British diplomacy answered that by the terms of the treaty revision could not be had until both nations desired it, and that the British Government saw no reason for revising it. This construction was a surprise to Japan. To submit or defend its ports against the British were the only alternatives open. Resistance was hopeless. Under the treaty the Japanese Government may not impose duties beyond 5 per cent. upon imports. It must therefore raise most of its revenue by internal taxation. Brief as has been the term of this treaty, its effect has been to exhaust Japan's stock, not only of gold, but of silver, which was till recently her only legal tender, and has thus forced her into dependence upon an ever-depreciating, irredeemable paper currency. Her industries languish, her revenues shrink, and Japan is now a suppliant to the representatives of the United States and other western powers to unite in rescuing her from the fangs of the national vampire. This is no fancy sketch. The files of our State Department can furnish Congress and the country with full and pregnant evidence of its truthfulness. It was the intelligent sympathy so freely expressed by General Grant on its behalf that caused the Government of Japan to treat him during his visit to that country with higher evidences of national esteem than ever before had been bestowed on a foreign citizen or official personage. If it be in the power of our Government to aid in the work of emancipating this most advanced of the oriental nations, I trust it will put forth its utmost efforts and if possible save Japan before she shall have been reduced to the condition of Turkey, Egypt, Ireland, and British India.

Such are the instrumentalities by which England enslaves nations. In one of his works, published in 1856, Henry C. Carey pointed out the processes by which these instrumentalities work the ruin of nations, however boundless and varied their material resources may be. Speaking of the Manchester school, he said:

The tendency of this system of political economy has uniformly been:

1. To prevent the application of labor elsewhere than in England to any pursuit but that of agriculture, and thus to deprive the weaker portion of society—the women and children—of any employment but in the field.
2. To compel whole populations to produce the same commodities, and thus to deprive them of the power to make exchanges among themselves.
3. To compel them, therefore, to export to England all their produce in its rudest forms, at great cost of transportation.
4. To deprive them of all power of returning to the land the manure yielded by its products, and thus to compel them to exhaust their land.
5. To deprive them of the power of associating together for the building of towns, the establishment of schools, the making of roads, or the defense of their rights.
6. To compel them, with every step in the process of exhausting the land, to increase their distances from each other and from market.
7. To compel the waste of all labor that could not be employed in the field.
8. To compel the waste of all the vast variety of things almost valueless in themselves but which acquire value as men are enabled to work in combination with each other.
9. To prevent increase in the value of land and in the demand for the labor of man; and
10. To prevent advance toward civilization and freedom.

STATISTICS.

Mr. Chairman, this discussion has been largely statistical. The speech of every member has either been heavy with figures or bristled with them. I propose to examine some of these figures. But before engaging in this part of my labor I beg leave to read a brief paragraph from Carlyle's Chartism. The second chapter is under the title "Statistics," and from this I read:

A witty statesman said you might prove anything by figures. We have looked into various statistic works, STATISTIC-SOCIETY REPORTS, POOR-LAW REPORTS, reports and pamphlets not a few, with a sedulous eye to this question of the working classes, and their general condition in England; we grieve to say with as good as no result whatever. Assertion swallows assertion; according to the old proverb, "As the

statist thinks the bell clinks." Tables are like cobwebs, like the sieve of the Danaides; beautifully reëculated, orderly to look upon, but which will hold no conclusion. Tables are abstractions, and the object a most concrete one, so difficult to read the essence of. There are innumerable circumstances, and one circumstance left out may be the vital one on which all turned. Statistics is a science which ought to be honorable, the basis of many most important sciences; but it is not to be carried on by steam, this science, any more than others are. A wise head is requisite for carrying it on. Conclusive facts are inseparable from inconclusive except by a head that already understands and knows. Vain to send the purblind and blind to the shore of a Pactolus never so golden: these find only gravel; the seer and finder alone picks up gold grains there. And now the purblind offering you, with asseveration and protrusive importunity, his basket of gravel as gold, what steps are to be taken with him? Statistics, one may hope, will improve gradually and become good for something. Meanwhile it is to be feared the crabbed satirist was partly right, as things go: "A judicious man," says he, "looks at statistics, not to get knowledge, but to save himself from having ignorance foisted on him." With what serene conclusiveness a member of some USEFUL-KNOWLEDGE SOCIETY stops your mouth with a figure of arithmetic! To him it seems he has there extracted the elixir of the matter, on which now nothing more can be said. It is needful that you look into his said extracted elixir; and ascertain, alas, too probably, not without a sigh, that it is wash and vapidity, good only for the gutters.

In the light of these reflections I propose to examine some of the statistics that have been poured upon us. I will take, for instance, some of those presented by my friend, the amiable gentleman from Illinois, [Mr. SPRINGER.] That gentleman produced a paper clipped from the United States Economist and Dry Goods Reporter, for January 31, 1882. It gives the price of wool in each year, from 1824 to 1881. He presented it as though it had been prepared by Mr. Nimmo, chief of the Bureau of Statistics, who seems only to have calculated the average of prices in certain periods indicated by the gentleman from Illinois. Mr. Nimmo certifies that the average price of wool for the fifteen years preceding 1867, was 52.8 cents per pound, and that for the fifteen years succeeding 1867 was 48.6 cents per pound.

This table and the conclusions the gentleman drew from it show the value of figures in skillful hands. In this case the bell certainly clinks as the statist thinks. The gentleman said:

I have stated that since the passage of the protective-tariff act of 1867 up to the present time, a period of fifteen years, the price of wool in this country has been less than it was for the fifteen years next preceding that time. This proposition is not left to conjecture or speculation. Fortunately for the position which I assume, the most accurate and reliable data upon this subject have been preserved, and herewith I present for careful examination the following statement furnished by the chief of the Bureau of Statistics of the Treasury Department:

Statement showing the average price of medium American washed clothing fleece wool from 1824 to 1881, inclusive.

[United States Economist and Dry Goods Reporter, January 31, 1880, data furnished by Manger & Avery, 40 West Broadway, New York City.]

Year.	Average price.	Year.	Average price.
	Cents.		Cents.
1824	44½	1853	53½
1825	42	1854	43
1826	39	1855	37½
1827	32½	1856	45
1828	36	1857	46½
1829	36½	1858	30½
1830	45½	1859	47
1831	61½	1860	47½
1832	47½	1861	38½
1833	50½	1862	50½
1834	54	1863	75½
1835	56½	1864	87½
1836	60½	1865	82
1837	50½	1866	63
1838	42	1867	50½
1839	49½	1868	46
1840	41½	1869	49
1841	44½	1870	46½
1842	37½	1871	55
1843	30	1872	70½
1844	35½	1873	55½
1845	37½	1874	54½
1846	32½	1875	51½
1847	40	1876	44
1848	34½	1877	42½
1849	34½	1878	40½
1850	38½	1879	37½
1851	41½	1880	46
1852	38½	1881	40

The average price for the fifteen years preceding 1867 was 52.8 cents per pound. The average price for the fifteen years succeeding 1867 was 48.6 cents per pound.

JOSEPH NIMMO, JR.,
Chief of Bureau.

TREASURY DEPARTMENT, BUREAU OF STATISTICS,
February 3, 1882.

From these figures I have prepared an average for the fifteen years preceding 1867, and find that the average price of wool during those years was 52.8 cents per pound, and for the succeeding fifteen years the average was only 48.6 cents per pound, showing a loss to the wool-grower of 4.2 cents per pound on every pound of wool grown from 1867 to 1881, a period of fifteen years. This is no small loss to the American wool-grower when we consider the value of the product of the wool in this country.

Mr. SPRINGER. Will the gentleman allow me to explain?

Mr. KELLEY. Certainly.

Mr. SPRINGER. The two lines which the gentleman read from the averages were not in Mr. Nimmo's letter. I have sent twice to

the Printing Office to have those two lines put below his signature. They will be so placed in the corrected copy. The first time I sent down they failed to do it, and I have sent again.

Mr. KELLEY. Then I do not see what you want with Mr. Nimmo's name at all. The article is not his, he did not compile it; he did not publish it. It comes from the Economist and Dry Goods Reporter.

Mr. SPRINGER. Will the gentleman allow me to state that Mr. Nimmo furnished this to Mr. HEWITT, of New York, in response to a letter; and it came to me over his signature just as it is printed.

Mr. KELLEY. Oh, do not try to fasten your mistake on Mr. HEWITT; that is not fair.

Mr. SPRINGER. I will let the Clerk read the letter.

Mr. KELLEY. Never mind that. I will make the matter plain. The letter will not illustrate the point I am about to make.

Mr. SPRINGER. Here is Mr. Nimmo's letter.

Mr. KELLEY. I have Mr. Nimmo here. I want, Mr. Chairman, to invite attention to the fact that we had been under a revenue tariff when the war broke out, and that consequently we could not clothe the first 75,000 men summoned for the defense of the country. We had not the wool nor had we the machinery to work wool into such fabrics as we needed for our soldiers and sailors. The emergency was pressing. We bought British goods to clothe our troops, and by the time some of the regiments which had been equipped in the capitals of their respective States reached Washington they were in a condition indescribable in the presence of an audience such as I address. Their rags did not cover their nakedness. We had bought British shoddy cloth, with which our market was then flooded. It was the product of the wool extracted from the whites of Ireland, the greys of Scotland, and the lazar-houses of the world. The protective tariff of 1861 changed all this, and when the victorious armies returned they were clothed, officers and men, in wool spun by American labor and woven on American machinery by American weavers. No army of the same size ever made God's footstool echo their tread in such apparel as Sherman's army wore when it marched to the sea, and thence with Grant's forces to the capital of the country. [Applause.]

I mention these facts to illustrate the value of the gentleman's figures. But let us examine them more nearly. If you take as separate periods ten years before the breaking out of the war, ten years after its close, and the four years in which we were clothing our Army and building up the woolen industry that now blesses our country, you will find that the figures will present three distinct averages. The average from 1852 to 1861 inclusive, a period covered by a revenue tariff, is 43.4 cents per pound for wool, not as the gentleman says, 52.8.

Mr. SPRINGER. What average is that?

Mr. KELLEY. From 1852 to 1861.

Mr. SPRINGER. I did not make that average.

Mr. KELLEY. I know you did not; why you did not is what I am showing. [Laughter.]

Mr. SPRINGER. You said my average was not correct.

Mr. KELLEY. I am not making your average. This is my average for which you furnished the figures.

Mr. SPRINGER. I understood you to say that I did not correctly make the average.

Mr. KELLEY. I say you did make an average, but erred in choosing the periods which should be averaged.

Mr. SPRINGER. I chose the fifteen years immediately after the war and the fifteen years immediately preceding.

Mr. KELLEY. The gentleman included in his free-trade period four years in which, under protection, the price of wool was not as he said, 52.8 but 79.8. I make three averages—one for ten years of free trade before the war, one for the years 1863 to 1866, inclusive. In the former the price was 43.4 and in the latter it was 79.8, which redounds a little to the credit of the protective system. In the next ten years, from 1872 to 1881, inclusive, the average price was 48.25 per pound for wool. Now, figures do not lie, but the man who arranges statistical tables may, by doctoring them, make what Carlyle calls "a wash and vapidity fit only for the gutter." The average price of wool for ten years preceding the war was but 43.4 cents per pound, and in the ten years after the war, under a protective tariff, it was, as the gentleman's own figures show, 48.25 cents per pound. I thank the gentleman for having furnished such evidence of the value of protection to the wool-growers of the country as is found in the statement of prices he quoted.

THE GENTLEMAN FROM MINNESOTA.

I now come to some of the statistics of my friend from Minnesota, [Mr. DUNNELL.] I must deal gently with him; for no man can read his speech without being satisfied that arithmetic is not one of his strong points. [Laughter.] A gentleman near me remarks that he was a school-teacher. Yes, and if I may believe the Congressional Directory he was for some years superintendent of public instruction in Maine, and subsequently filled the same office in Minnesota; yet I expect to persuade even him before I get through that arithmetic is not one of his strong points.

He told us that the Bessemer rail companies were making profits of 69 or 70 per cent. a year; that it was a crime not to hasten to repeal duties which justified such profits. Now, I pause to give him an opportunity to state anything which will show that any Bes-

semer rail company in this country ever declared anything kindred to or approaching such a dividend.

Mr. DUNNELL. Mr. Chairman, the statement which I made with regard to the profits of the Bessemer steel works in 1880 was taken from the report of Mr. Swank, a special agent of the Census Bureau. The statement is there to be found; and I think the gentleman will admit that the report states the profits of the investment for that year as I have stated them. I did not state in my speech that a dividend of that amount was declared.

Mr. KELLEY. The gentleman's speech is before me. His words were: "They ask us to continue a monopoly by a twenty-eight dollar per ton tariff, which enables them to declare a dividend of 67 per cent." If the gentleman will produce that part of the census report of James M. Swank which sets out any profit that would justify such a dividend as that I will buy a few shares of stock in a Bessemer company and present them to him.

Mr. HEWITT, of New York. You cannot do it; they are too dear.

Mr. KELLEY. There is no such thing in that report. I have gone over it squarely and fairly; I have asked Mr. Swank to examine it; and I shall incorporate in my remarks his letter showing that his business in connection with the taking of the census was to learn the amount of capital invested, the amount of wages paid, and the value of the product, and that the idea of ascertaining the profits of concerns was excluded from his duty. He also shows, as does a letter from Mr. Andrew Carnegie, that the \$15,000,000 of capital spoken of by the gentleman from New York—

Mr. HEWITT, of New York. Twenty million dollars. Get the figures exact; because I propose to prove them.

Mr. KELLEY. And I want you to prove the rest; I want you to prove that in their Bessemer works and contributory branches essential to the making of steel they have not more than \$100,000,000 of capital.

Mr. HEWITT, of New York. They might buy the whole State of Pennsylvania with their profits; yet it would not be evidence that the Bessemer steel factory did not pay them 100 per cent. per annum. If they choose to use their means in buying large properties elsewhere it is the evidence of profit, not of the absence of it.

Mr. KELLEY. But the gentleman mistakes the point.

Mr. CARLISLE. Will the gentleman from Pennsylvania, inasmuch as he has called attention to a statement made by the gentleman from Minnesota, allow me to ask whether it is not a fact that Mr. Swank states in his report that the capital invested in the Bessemer and open-hearth steel works in 1880 was \$20,975,990; that the value of the products was \$55,895,210; that the total cost of material and labor was \$41,777,277, leaving a balance of \$14,027,933, on a capital of \$20,975,990, or nearly 67 per cent?

Mr. KELLEY. Still that does not reach the question of profit. It gives but three elements—while other charges than those for material and labor precede the question of profit.

Mr. DUNNELL. It was upon that statement made in the report that I made my statement.

Mr. KELLEY. And I want to show you that if you had been used to figures you would have said that the manufactured and other materials must have come from somewhere, and probably cost something. [Laughter.]

Mr. CARLISLE. These figures are from the report of the special agent appointed by the Census Bureau.

Mr. KELLEY. I know that.

Mr. CARLISLE. And if we cannot rely on his figures, we certainly ought not to pay four or five million dollars for taking the census.

Mr. KELLEY. There is no mistake in his figures. He was giving the census facts touching the Bessemer steel and open-hearth works, of which there were fifty-odd. Let me illustrate the matter by reading a paragraph from Mr. Swank's letter. He says:

The history of the Bessemer steel works of the Colorado Coal and Iron Company, which are the latest of their kind in this country, affords a clear illustration of the necessity of embarking a large capital in enterprises contributory to Bessemer steel works, as well as in the works themselves. Before a pound of Bessemer steel could be made at these works the company found it necessary to buy and develop iron-ore lands, coal lands, and limestone deposits; to build coke-ovens, blast-furnaces, a foundry, and a machine-shop; and to make many other investments. The company was compelled to provide its own iron ore, its own coal, its own limestone, its own pig-iron, and to construct much of its own machinery. Its Bessemer works do not appear in the census statistics, but if they did the capital invested in them would, by the usages of the Census Office, be separated from the capital invested in the contributory enterprises. We have ascertained that these contributory enterprises have absorbed more than five times as much capital as the Bessemer steel works.

Mr. CARLISLE. Is not that part of their capital? This report includes real estate and everything which is really capital.

Mr. KELLEY. The real estate belonging to a company is taken by census agents as it is by assessors in the county in which it lies.

Mr. CARLISLE. He took it from the manufacturers themselves.

Mr. KELLEY. The statement under discussion relates to the steel works proper. Why, sir, some companies have a dozen different coal, limestone, and ore fields, the census returns of each of which were taken in the county in which the property lies.

Mr. CARLISLE. But if he obeyed the law he went to the manufacturers of Bessemer and open-hearth steel, and got from them the amount of their capital, wherever located.

Mr. KELLEY. I do not dispute or discredit a single statement of the report. I am only showing that when the purblind go to a Pactolus, be it never so golden, they are more likely to gather gravel than gold, as seems to have been done in this case. [Laughter.]

The mistake of the gentleman from Minnesota was in assuming that the capital of the Bessemer works themselves embraced that involved in the contributory enterprises. "We have," said Mr. Swank in the extract from his letter just read, "ascertained that these contributory enterprises have absorbed more than five times as much capital as the Bessemer steel works."

Mr. CARLISLE. If the gentleman will allow me, I would like to say a word.

Mr. KELLEY. Certainly.

Mr. CARLISLE. Their capital is included in statistics concerning those manufactures and industries. Mr. Swank includes in this all the capital invested by the manufacturers of Bessemer and open-hearth steel.

Mr. KELLEY. That is what he does not do, and the committee will be the jury to decide in this controversy, in which "assertion swallows assertion," when they read Mr. Swank's statement in the census report and his letter to me.

The gentleman from Minnesota said he had been assured by a large manufacturer of Bessemer steel rails at Saint Louis that the duty could be reduced to \$14 and the manufacturers still realize large profits. I have made inquiry on this point, and caused it to be made by others. There is but one Bessemer steel works at Saint Louis, the proprietors of which are few and well known. They each deny that they ever made such a statement to the gentleman or any other person, and they add that to have done so would have been to falsely testify against their own interests. The gentleman has evidently been hoaxed by somebody who has palmed himself on him as a Bessemer steel maker.

Mr. DUNNELL. I desire to make a statement in correction of the statement to which the gentleman alludes. In the National Hotel, a few days before I made my speech, I was introduced to a gentleman of intelligence, who had arrived from the city of Saint Louis. From a conversation with him I understood him to be a manufacturer of steel rails. I afterward learned, after my speech was made, that he was a buyer of steel rails.

Mr. KELLEY. Ah! [Laughter.]

Mr. DUNNELL. And I make this correction. But does the gentleman from Pennsylvania suppose that I would stand here in my place in this House and misstate knowingly any fact?

Mr. KELLEY. No; but I say this—

Mr. DUNNELL. I am liable to be misled by a statement. I made the statement in good faith. Whether he was the manufacturer or the buyer of steel rails, I made the statement as it came to me according to my understanding of it, and I did it in good faith.

Mr. KELLEY. He was an agent, no doubt, for the sale of British Bessemer rails. If the gentleman had said he had had a conversation with one whom he supposed to be a manufacturer of Bessemer steel rails at Saint Louis, the case would have been different; but he stated it firmly and positively, as I have given it.

Mr. DUNNELL. I have stated, Mr. Chairman, how I was led into my mistake.

Mr. KELLEY. I hope the gentleman from Minnesota will correct the misstatement in the copies of his speech he is now distributing among the people.

Mr. DUNNELL. I have stated how I was led into the mistake, and the gentleman will accept it, of course.

Mr. KELLEY. Give us the name of your informant.

Mr. DUNNELL. His name is Mitchell.

Mr. KELLEY. He is the well-known agent of British rail-makers.

Mr. HEWITT, of New York. If the gentleman will allow me now—

Mr. KELLEY. Let me finish with the gentleman from Minnesota before I turn to you.

Mr. HEWITT, of New York. I thought the gentleman was through with that part of his speech.

Mr. KELLEY. No, I am not. Now, the \$14 duty story has disappeared, as it would have done before he spoke if the gentleman had inquired from the proper sources. Seventy per cent. dividends have also disappeared.

Mr. DUNNELL. I should like to ask the gentleman from Pennsylvania a question with his permission.

Mr. KELLEY. Certainly.

Mr. DUNNELL. The gentleman from Pennsylvania, [Mr. RANDALL,] his colleague, made a speech this morning in which he stated that according to his judgment the tariff should be revised every ten years immediately after the taking of each census. The gentleman now insists that the census is no guide.

Mr. KELLEY. No, but I say that if the purblind go to a Pactolus they are liable to find only gravel. [Laughter.] And when gentlemen do not understand figures and attempt to adduce conclusions from them they must take the consequences. [Laughter.]

But to proceed to another point. If another of the gentleman's statements in his speech is true we were entitled last year from our importation of one article to revenue enough to have paid the national debt six times; to have paid all the Windoms or extended bonds; to have purchased all the 4 and 4½ percents at 100 per cent. premium;

to have paid off the debts of all the States and all American municipalities, and to still have been burdened with such a surplus in the Treasury that we could have abolished both customs duties and internal taxes. I really think, Mr. Chairman, there must be some exaggeration in the statement to which I am referring. [Laughter.] But let me read from the gentleman's speech.

Mr. SPRINGER. Was it not a clerical error?

Mr. KELLEY. We will see whether it was. If it was, there are two or three such errors just here. [Laughter.] The gentleman said:

The duty of \$28 per ton on steel rails was fixed in 1870. It is not my purpose to discuss whether the duty was then too high or what effect the rate has had in reducing the cost of rails, but insist that a continuance of this high duty is well-nigh a crime. During the last year 372,375,307 tons of steel rails were imported into the United States, paying an aggregate revenue of \$4,654,691.31.

Mr. DUNNELL. Read the remainder of the sentence.

Mr. KELLEY. Certainly; I am going to do so; I could not allow so sweet a morsel as that to be lost. [Laughter.] The gentleman says: "Paying an aggregate revenue of \$4,654,691.33." Now, sir, the amount of rails the gentleman says we imported entitled us to \$10,426,508,596 of duty. [Great laughter.] The gentleman proceeded to say:

Steel rails are now made at about the same cost of iron rails. The above table shows the growth and capacity of the mills. The profits of these mills have been for the last few years simply enormous. The census returns show that they were in 1880 from 60 to 70 per cent. on the entire investment. Every person traveling upon a railroad or sending a pound of freight on it is compelled to contribute to these vast profits. This high rate can and should be reduced at once. Experts are not needed to decide so simple a question. A large manufacturer of Bessemer steel rails in Saint Louis, within the last sixty days, assured me that the duty could be reduced to \$14 per ton and the manufacturers still realize large profits on their investments. Enhanced cost in the construction of the railroads of the country is a continuing burden upon the producer. All profits must be paid for by somebody. Reasonable profits are right and rightly fostered, but profits which create and sustain monopolies have no claim upon legislation for their continuance. It would be easy to show these profits. The production in 1881 was 1,200,000 tons.

Mr. DUNNELL. The sentence which the gentleman has read is in every respect correct, except that there is a typographical error which the most ordinary mind could have discovered at once. The difficulty is that the word "tons" took the place of the word *pounds*; and if the gentleman from Pennsylvania is driven to the strait of building up an argument based upon what is evidently a typographical error, he has a very sandy foundation on which to stand. [Applause upon the Democratic side.]

Mr. KELLEY. I am building up an argument to show the unfitness of this House to frame a tariff; and I am building it up by asking this committee to consider printed statements upon which gentlemen have gone to the public in support of what they call tariff reform. But let us look at this typographical error—

Mr. DUNNELL. One word. I am led to admit that if the chairman of the Ways and Means Committee reflects the intelligence of the committee in the interpretation of a sentence like that, then we ought to have a tariff commission. [Applause and laughter on the Democratic side.]

Mr. KELLEY. Now it may be a typographical error, and if it had stated—

Mr. DUNNELL. One sentence more. I say respectfully to the gentleman that the figures are every one of them correct as to the quantity; and the amount I have given as the revenue received is accurate to a mill. The ordinary mind, therefore, at once sees that there is an error on reading the sentence. There is no difficulty with an ordinary mind in reading the sentence to see at once that there is a typographical error.

Mr. KELLEY. Now, sir, I read from the record. The gentleman revised his speech, put it in pamphlet form, and sent it to his constituents reiterating the story of the tons. I had an idea that there was a mistake somewhere when I said the gentleman did not find arithmetic to be his strong point. [Laughter.] Because if he had divided the amount of duty received by \$28 the amount of duty on a ton, the result would have shown the number of tons imported. Familiarity with the simple rules of arithmetic would have protected the gentleman against a blunder so gross. He says the most ordinary mind would have recognized it as a typographical error. Now, let us see whether he so recognized it. He proceeded to say, and in printing the repetition put it not in figures, but in words: "Nearly four hundred millions of tons of steel rails were imported into the United States during the last year, notwithstanding this high rate of duty." Upon hearing this repetition I tried to correct him. He would not permit an interruption. He was exuberant and could not brook a suggestion. I wished to show that he must be mistaken, but he was just then exulting in the thought of the magnitude of the work in which he was engaged.

These fellows—

He was then speaking of the gentlemen who have embarked their fortunes in the production of Bessemer steel and industries contributory thereto—

These fellows are bright. They are smart, and they are as impudent as they are smart. They ask us to continue a monopoly by a twenty-eight-dollar per ton tariff, which enables them to declare a dividend of 67 per cent.

Now, if the gentleman will give me a printed copy of his speech, which having revised he put into pamphlet form and sent to his constituents, I will prove that during all this work he did not detect that

typographical error which he says I should have instantly recognized. Will the gentleman send me a copy of his revised speech in pamphlet form?

Mr. DUNNELL. Certainly I will send the gentleman a revised copy. The gentleman does not need a revised copy to know precisely what I meant.

Mr. KELLEY. I am discussing what you told your constituents. That is what I am discussing. I do not know intuitively what you and other gentlemen mean. I have to take what you say in my own dull, stupid way. [Laughter.]

THE COST OF TRANSPORTING MATERIALS.

Mr. Chairman, when I said that in this discussion so painstaking and exhaustive an investigator of topics in the line of his special study as my friend from Kentucky [Mr. CARLISLE] had omitted elements which vitiated all his conclusions, I referred to the imperfect data from which he inferred the cost of a ton of bar-iron. In response to a question of mine as to whether he had not omitted a large amount of labor involved in the transportation of materials to the point of manufacture and distribution, &c., he with characteristic frankness admitted that there was some labor expended in that way, and in the production of coal and other materials used in the manufacture of these various forms of iron, and suggested that if I would furnish him with correct figures on the subject he would cheerfully include them. I cannot furnish precise figures but can say that my colleague and friend, the distinguished Representative of the twentieth district of Pennsylvania, [Mr. CURTIN,] whose name is associated with iron-works in Centre County which are now managed by the fourth generation of his family, one of which was represented in his own person, has said that the transportation of raw materials to a fairly well located furnace in Pennsylvania is at least \$6.40 a ton. Ores of different qualities must be brought from distant sections of the State or country. Limestone may require long transportation to works whose location is favorable in all other respects. So, too, with coal. The character of ore to be chiefly used, and limestone and other ingredients may be convenient, but coal must be brought from a great distance. The charges for local transportation for a distance anywhere from ten to one hundred miles are about the same. I cannot pause to discuss the equity or the injustice of these charges on local freight, and content myself with stating the fact, remarking only that managers of railroads say the cost of labor in such transportation is vastly greater than it is in conducting through business on long roads.

While unable to produce tables that will establish the precise facts connected with this question, I beg leave to submit some collateral evidence of the magnitude of these charges and of the immensely greater per cent. of such charges to which the American producer of iron and steel is subjected than those borne by his foreign competitors. In his report on the census, Mr. Swank cites a very pertinent statement from I. Lowthian Bell, the highest British authority upon such a question. Mr. Bell, you will perceive, says that while it may and does happen that in this country distances of nearly one thousand miles may intervene between the ore and the coal, it is difficult to find a situation in England or Wales in which the two are separated by even one hundred miles. The passage in Mr. Swank's report to which I refer reads as follows:

With regard to the cost of transporting raw materials in the United States and Europe, the testimony of a distinguished English iron master will be sufficient to show the great disparity which exists in the distances over which they must be transported. Mr. I. Lowthian Bell, a commissioner from Great Britain to the Philadelphia exhibition of 1876, says in his official report:

"The vast extent of the territory of the United States renders that possible which in Great Britain is physically impossible. Thus it may and it does happen that in the former distances of nearly 1,000 miles may intervene between the ore and the coal, whereas with ourselves it is difficult to find a situation in which the two are separated by even 100 miles."

From the ore mines of Lake Superior and Missouri to the coal of Pennsylvania is 1,000 miles. Connellsville coke is taken 600 miles to the blast furnaces of Chicago, and 750 miles to the blast furnaces of Saint Louis. The average distance over which all the domestic iron ore which is consumed in the blast furnaces of the United States is transported is not less than 200 miles. Great Britain is our principal competitor in the production of iron and steel. In France, Germany, Belgium, Sweden, and other European iron-making countries the raw materials of production may not be found in such close proximity as in Great Britain, but they lie much nearer to each other than is usual in the United States.

Even when it is necessary to transport raw materials from one European country to another, as in taking the iron ores of Spain to England or Germany, the cost of removal is usually an unimportant consideration because of the short distances they are carried and the facilities which in most cases exist for carrying them by water. When this country is obliged, from any cause whatever, to import ores from Spain or from Mediterranean ports, the cost of transportation across the Atlantic and from the Atlantic ports inland imposes a heavy tax upon the consumer.

But it is not only on the raw materials that the cost of transportation operates as an impediment to low prices for manufactured products. The manufactured products themselves must frequently be transported long distances to find consumers. The conditions favorable to the production of iron and steel are not equal in many sections of the Union, and in some sections do not exist at all; iron and steel cannot, therefore, be extensively or profitably manufactured in all sections. The country too is of vast extent, while its railroad and other enterprises which consume iron and steel are found in every part of it. It is noticeable also that railroads form the principal means of communication between producers and consumers of iron in this country, and that railroad transportation is much more expensive than transportation by natural water-routes.

Heavy products of iron and steel, for instance, can be carried much more cheaply from Liverpool to the Gulf ports of the United States than from our own rolling-mills and blast furnaces, which are not situated on the sea coast or on the Mississippi River, and very few of them are so situated. Iron and steel rails for railroads on the Pacific coast can be carried more cheaply from Liverpool to San Francisco than from Chicago or Saint Louis.

My friend from Kentucky [Mr. CARLISLE] will I doubt not be surprised at the facts touching this question of the cost of transportation in the iron and steel business I am now about to present, and which more than confirm Mr. Swank's statements. The regular English correspondent of the Iron Age is alike remarkable for the industry with which he collects and reports representative facts, and for the candor with which he presents conclusions *pro* and *con*, which may be deduced from them. In his letter which appeared in the issue of the Iron Age of the 13th of last month, he says:

The effects of railway charges on the "heavy" branches of trade in districts away from the seaboard have been well set forth during the week by the statements of the directors of Charles Cammell & Co., limited, Sheffield, whose report has created a great sensation in the district where their works are situated. Cammell's undertaking is one of the largest in the world. The works are at Sheffield, Grimethorpe, near Sheffield, and Renistone, near Sheffield, with the Oaks collieries near Barnsley. From 5,000 to 6,000 men are employed in busy times, and the works turn out all kinds of iron and steel, from armor-plates and rails downward. The directors now come forward and inform their shareholders that in order to save the heavy cost, £60,000 (\$300,000) or £70,000 (\$350,000) a year, of railway carriage of materials inward and of finished manufactures outward, they have resolved to acquire the rail-mills of Wilson, Cammell & Co., of Dronfield, and the works of the Derwent Iron Company at Workington. They will remove their own rail-mills and those of the Dronfield firm to Workington, having arrived at the conclusion that in order to make the rail business profitable three conditions must be fulfilled: (1.) the rail-mills must be combined with blast furnaces; (2.) these combined works must be situated in close proximity to the sea, and (3.) the blast furnaces must be situated where hematite ore is found, with ready and cheap access thereto. These conditions will all be embodied at Workington. To carry out the change, £350,000 (\$1,750,000) additional capital is proposed to be raised by shares and debentures.

You will remember that I have alluded to the possible removal of Wilson, Cammell & Co. on former occasions. It had not then transpired that Charles Cammell & Co. had been interested in the matter. Up to now there has been no actual alliance between the concerns, although Mr. Alexander Wilson, of the firm, is a brother of Mr. George Wilson, chairman of Charles Cammell & Co., and the Messrs. Cammell, of the firm, are sons of the late founder of the company. There would seem to be little doubt as to the wisdom of the proposal, albeit it will deprive Sheffield of a good deal of work and employment, and will nearly ruin Dronfield, of which Wilson and Cammell's works are the mainstay. One railway company alone will lose carriage payments worth £120,000 (\$600,000) a year—a very forcible illustration of the folly of a grasping policy. Sheffield has been greatly agitated about this question within the week.

The proposal has more than a local significance, inasmuch as our manufacturers on the coast are in a strong position for reaching your market promptly and cheaply.

MR. SWANK'S LETTER.

In this connection let me present the letter of Mr. Swank to which I have referred:

OUR BESSEMER STEEL INDUSTRY—A LETTER TO HON. WILLIAM D. KELLEY, CHAIRMAN OF THE WAYS AND MEANS COMMITTEE.

OFFICE OF THE AMERICAN IRON AND STEEL ASSOCIATION,
Philadelphia, April 25, 1882.

DEAR SIR: During the discussion in both Houses of Congress of the scheme for the creation of a tariff commission there have been frequent references to the statistics of the production of iron and steel which I had the honor to compile for the tenth census. As some conclusions, based upon insufficient data, and unfavorable to American iron and steel manufacturers, have been drawn from these statistics, and as these conclusions involve the trustworthiness of the statistics alluded to, I beg your permission to lay before you the following statement in my own behalf as a special census agent and in behalf also of this association:

ERRORS OF SENATOR BECK, OF KENTUCKY.

In a speech in the Senate on Monday, March 20, reported in the CONGRESSIONAL RECORD for Wednesday, March 22, Mr. BECK, of Kentucky, said:

"The next question is, Who gets the benefit of the tariff tax? Mr. Swank shows it all in his report. The capital and business of the Bessemer steel rail companies for the year 1880 is thus given:

Amount of capital, real and personal, invested in the business	\$20,975,999
Cost of labor.....	4,930,349
Cost of material	36,826,928
Making labor and material cost.....	41,757,277
The value of the products when sold was.....	55,805,210
Deduct capital and labor.....	41,757,277

And it leaves a net profit of..... 14,047,933

"Or 66.9 per cent. profit upon their capital, and the pay of labor, \$4,930,000 is 8.8 per cent.; 8.8 per cent. labor, 66.9 per cent. profit to the capitalist. Mr. Swank tries to show that there are some places where they have not made money, as in Virginia and elsewhere. But, if I am not mistaken, he charges them with the original investment in the plant and everything else, and gives no credit for that as being worth anything. Some of the old establishments are in fact making far more than 66 per cent. profit; that is the average of all, good and bad, those doing well and those making nothing, taken together."

There are many inaccuracies in the above statement, in addition to its supreme error of attributing an average profit by the Bessemer steel manufacturers of 66.9 per cent. upon their invested capital. The Senator erred in stating that the exhibit he gave referred only to "the Bessemer steel rail companies." He should have said that it referred to "the Bessemer and open-hearth steel works." The correction is important, because there were in the census year only eleven Bessemer steel works, while of Bessemer and open-hearth steel works there were thirty-six in the same year. The Senator erred in confounding "labor and material" with "capital and labor," and assuming that the sum of the first two items is exactly equal to the sum of the last two, namely, \$41,757,277. He erred also in the reference to the special agent in the phrase "Mr. Swank tries to show," &c. "Mr. Swank" was and still is a sworn officer of the Government, and in the performance of the difficult task of compiling the statistics of a great industry he tried only to show that he could do his duty and accurately set down facts regardless of theories. He stated no theories, having no right to do so in a Government report.

The statistics of the production of iron and steel in the census year 1880 are not only correct, but they are clearly stated. It was never expected, however, when they were compiled, collated, and analyzed, that they could without some study be understood in all their details by those who are unfamiliar with the multifarious forms which our iron and steel industries have assumed. Ever since the Government commenced the collection of our industrial statistics the separation of the statistics of the different branches of leading industries has been kept steadily in

view, and to this rule the iron and steel statistics for 1880 have, of course, formed no exception. They have necessarily been presented in a complicated rather than simple form, but not in a way that renders them incapable of being understood and harmonized by those who will patiently sit down to study them.

The mistake made by Senator Beck and others in assuming that the "total value of all products" (\$55,805,210) produced by the Bessemer and open-hearth steel works of the United States in the census year 1880 (see page 26 of the census report on iron and steel) was obtained with an invested capital of only \$20,975,999 would not have occurred if they had reflected that these products were not made solely or even largely with the machinery and other aids and appliances of the works mentioned, but that they were the final result of successive preparatory operations and processes of manufacture which may have represented in the census year an invested capital of \$100,000,000. The \$20,975,999 expresses only the capital invested in machinery and accessories required in the immediate conversion of pig-iron and other raw materials into Bessemer or open-hearth steel, and does not include the capital invested by Bessemer and open-hearth steel manufacturers in iron ore and coal mines, in limestone quarries, in blast-furnaces, in foundries and machine-shops, in car-works, in brick-yards, in lateral railroads, and in other enterprises necessary to the production and handling of these raw materials.

The capital invested in these various contributory enterprises is separately given in the census report on iron and steel and in other census reports. To illustrate the full significance of the distinction which is here made, but which Senator Beck and others have not made, it may be stated that in the census year 1880 the proprietors of the then existing eleven Bessemer steel works of the country operated forty-nine blast-furnaces, most of which were large and the construction of which had cost a great deal of money. The statistics of these blast-furnaces, including the capital invested in them, necessarily appear in connection with the statistics of other blast-furnaces; they could not be combined with the statistics of Bessemer and open-hearth steel works because their product is pig-iron and not steel. We may also add, as illustrative of the large investments which our Bessemer steel manufacturers find it necessary to make in iron ore and coal mines, the statistics of which will be found in their proper connection, that one Bessemer steel company in Pennsylvania has recently invested one and a half million dollars in an iron-ore mine in Michigan. To say that the whole capital invested in the production of Bessemer and open-hearth steel in this country is represented by \$20,975,999 is as erroneous as to assume that the whole capital of the farmer who grows wheat is represented by the cost of his thrashing-machine.

The history of the Bessemer steel works of the Colorado Coal and Iron Company, which are the latest of their kind in this country, affords a clear illustration of the necessity of embarking a large capital in enterprises contributory to Bessemer steel works as well as in the works themselves. Before a pound of Bessemer steel could be made at these works the company found it necessary to buy and develop iron-ore lands, coal lands, and limestone deposits; to build coke-ovens, blast-furnaces, a foundry, and a machine-shop; and to make many other investments. The company was compelled to provide its own iron ore, its own coal, its own limestone, its own pig-iron, and to construct much of its own machinery. Its Bessemer works do not appear in the census statistics, but if they did, the capital invested in them would be by the usages of the Census Office be separated from the capital invested in the contributory enterprises. We have ascertained that these contributory enterprises have absorbed more than five times as much capital as the Bessemer steel works.

The showing of \$14,047,933 of profits, which forms the conclusion of the sum in arithmetic given by Senator Beck, falls short of accuracy, therefore, in two important particulars. First, these profits, if correctly stated, should have been made to apply to thirty-six Bessemer and open-hearth steel works instead of to eleven "Bessemer steel rail companies." Second, they are alleged to have been derived from a capital of \$20,975,999, whereas the true capital upon which a calculation of profits should have been based was probably five times as large.

We do not understand what significance Senator Beck intended to attach to the statement that labor was paid but \$4,930,349, or 8.8 per cent. of the price received for the products of the Bessemer and open-hearth steel works of the country in the census year 1880. Did not labor enter largely into the \$36,826,928 which represents the value of the raw materials consumed by these works? Did it not form the principal element in the cost of these raw materials? Does not Senator Beck know that these raw materials could not have been produced without a vast amount of labor, which, of course, somebody paid for, and the cost of which is largely represented in the value of the finished products? Does he not know that the principal element in the cost of all manufactured product is labor? Even in Europe, where labor is paid low wages, this is the case.

The Senator, too, reasons from insufficient and misleading premises when he assumes that labor and raw materials constitute the sole items in the cost of any manufactured product. They are, it is true, the only items of cost considered in the compilation of the industrial statistics of the census, but these statistics are not gathered for the purpose of ascertaining whether any particular industry is conducted at a profit or at a loss. Many important items in the cost of producing any given manufactured product are consequently not even hinted at. The census is sufficiently inquisitorial as it is. Rent, wear and tear of machinery, taxes, insurance, legal expenses, patents, commissions and discounts, interest on borrowed money, traveling and advertising, incidental office expenses, and doubtless other expenses should be added to the two leading items of labor and raw materials if we would include all the elements that enter into the cost of producing any manufactured article. We know of one crucible and open-hearth steel manufacturing company in this country which has paid \$60,000 for the use of the patents covering the Siemens regenerative gas furnace. In the very nature of things the census statistics can never include information of this character.

Senator Beck refers to Virginia as if the Old Dominion made Bessemer steel in the census year, which, for her own sake, we regret she did not. He doubtless intended to say that the statistics of the iron industry of some counties of Virginia in the census year show that the aggregate cost of labor and raw materials exceeded the value of the finished products. This was so in many iron districts of the country in that year, the explanation being that the census year exactly covered the period which has been designated as "the boom" in the iron trade, during the greater part of which period establishments that had long been idle were being prepared for active operations, and there were, consequently, large expenditures for repairs and for fuel, iron ore, and other raw materials. While these expenses were incurred in the census year, it happened in some cases that not a pound of iron was made until after its close, and in others that only a small quantity was made. In several of the counties of Virginia precisely this condition existed. It was never intended that the census statistics should explain, like a cash-book, in what months a Virginia iron manufacturer pays out money and in what months he takes it in; nor that they should disclose, like a diary, in what months his works stand idle because his water-power has given out or because the supply of charcoal has been consumed and all hands are busy cutting cord-wood.

ERRORS OF MR. CARLISLE, OF KENTUCKY.

Mr. CARLISLE, of Kentucky, in a speech in the House of Representatives on Tuesday and Wednesday, March 28 and 29, quoted from the report on the production of iron and steel in the census year 1880 the statistics of the Bessemer and open-hearth steel works, and added the following comments. (CONGRESSIONAL RECORD, Sunday, April 2, page 5.)

"Deducting the total cost of labor and materials from the value of the product there is left the sum of \$14,047,933, which is a small fraction less than 67 per cent. on the whole capital invested. It thus appears that while capital retains in its

hands, after paying the whole cost of production, nearly 67 per cent., labor received less than 9 per cent. of the value of the product."

It is at least unfortunate for Mr. CARLISLE that he accepted as correct the conclusion reached by Senator BECK, that, from an invested capital of \$20,975,999, there was realized in the census year a profit of nearly 67 per cent. If he had gone to the bottom of the whole subject for himself he would have found that the Senator's conclusion was erroneous, as we have shown.

Mr. CARLISLE's speech is marred by another unfortunate and equally faulty and misleading reference to the iron and steel and iron-ore statistics for the census year 1880, to which we will here allude, because it furnishes corroborative testimony of the unreliability of his judgment upon the subject just referred to. He undertook to show that the duty on bar-iron is now much greater than the cost of the labor that is employed in producing it, and in the course of his argument made the following statements, which will be found on pages 7 and 8 of the copy of the RECORD already referred to:

"Let us see what is the rate of duty necessary to equalize the cost of production, so far as the wages of labor constitute a part of that cost; and in making this inquiry I shall include the cost of all the labor employed in the production of the finished article, beginning with the material in its crudest form. * * * I will include the cost of all the labor from the very beginning, and compare it only with the duty imposed upon the finished article. Let us take for illustration a familiar article, merchant bar-iron, an article in relation to which we have the most authentic evidence showing the cost of labor in its production.

"According to the statistics of the production of iron ore, as given us by the census of 1880, the amount paid for labor of all kinds was \$1.35 for each ton produced. It requires two tons of ore to make one ton of pig-iron, so that the cost of labor in the quantity of ore necessary to make one ton of pig-iron is \$2.70. According to the same authority, the blast-furnaces in the United States produced during the last census year 3,781,921 tons of pig-iron, and paid for services of all kinds the sum of \$12,689,703, or \$3.35 for each ton. It takes 1.3 tons of pig to make one ton of bar iron, so that the total cost of labor in the pig necessary to produce one ton of bar is \$4.35. * * *

When the committee appointed by the New York tariff convention came before the Committee on Ways and Means they were accompanied by a gentleman who stated that he was the president of the Amalgamated Iron and Steel Workers' Association of the United States, a labor organization; and, in response to a question put by me, he said that the amount paid to labor for making one ton of merchant bar-iron was \$13. Accepting that as a correct statement, we have the following figures:

Cost of labor in two tons iron-ore.....	\$2 70
Cost of labor in one ton pig-iron.....	4 35
Cost of labor in one ton bar-iron.....	13 00
Total cost of labor.....	20 05

"Now, Mr. Chairman, the duty on merchant bar iron under the existing law is \$33.60 per ton, or \$13.55 more than enough to pay the cost of all the labor expended in its production from the time the crude material leaves the earth until it is sent from the mill as a finished article."

There are many errors in this calculation by Mr. CARLISLE. He has omitted the cost of the labor employed in the transportation of the iron ore to the blast furnace; the cost of the labor employed in the production and transportation of the limestone and fuel necessary to convert the iron ore into pig-iron; the cost of the labor employed in the transportation of the pig-iron to the rolling-mill; and the cost of the labor employed in the production and transportation of the fuel, fettling ore, and other supplies required in the rolling-mill, as well as the clerical and supervisory labor which are also required. He has also failed to observe that his two tons of iron ore will not make one ton of bar-iron, but that, according to his own data, two and six-tenths tons are required. In his summary he is also inaccurate in the phrase, "cost of labor in one ton of pig-iron," when he obviously meant to say one and three-tenths tons. He is also inaccurate in assuming that the duty on bar-iron is \$33.60 a ton, when in fact this duty is imposed on only a small part of the bar-iron that is imported, the great bulk of it paying a duty of only \$22.40 a ton.

Accurate calculations show that the \$20.05 mentioned by Mr. CARLISLE as representing the "total cost of labor" employed in the production of one ton of bar-iron represents only about one-half of that cost. A summary of all the elements which enter into the cost of each ton of bar-iron which is now produced at a favorably located rolling-mill in Eastern Pennsylvania shows that nine and one-third tons of raw materials are used in its production, and that in the transportation and manipulation of these raw materials \$36.27 is paid for labor, and not \$20.05. A mill less favorably located than the one referred to could not make a ton of bar-iron at a less total cost for labor than \$40, which is just twice the sum named by Mr. CARLISLE. As happened with his inquiry into the profits of the Bessemer and open-hearth steel manufacturers, he has reached a false conclusion concerning the cost of the labor employed in the production of a ton of bar-iron because he did not consider all the elements of his problem.

ERRORS OF MR. DUNNELL, OF MINNESOTA.

Mr. DUNNELL, of Minnesota, in his speech in the House of Representatives on Tuesday, March 30, on the proposal to appoint a tariff commission, made the following statement. (CONGRESSIONAL RECORD, Wednesday, April 5, page 24.)

"The duty of \$28 per ton on steel rails was fixed in 1870. It is not my purpose to discuss whether the duty was then too high or what effect the rate has had in reducing the cost of rails, but insist that a continuance of this high duty is well-nigh a crime. During the last year 372,375,307 tons of steel rails were imported into the United States, paying an aggregate revenue of \$4,654,691.31. Steel rails are now made at about the same cost of iron rails. The above table shows the growth and capacity of the mills. The profits of these mills have been for the last few years simply enormous. The census returns show that they were in 1880 from 60 to 70 per cent. on the entire investment. * * * Permit me just here to say that when we look this steel question fairly in the face we can find no possible reason for the continuance of this large duty of \$28 per ton. Nearly four hundred millions of tons of steel rails were imported into the United States during the last year, notwithstanding this high rate of duty."

We assume that the honorable gentleman did not make the calculation of "enormous" profits for himself, but, like Mr. CARLISLE, borrowed it from Senator BECK. We have already sufficiently demonstrated that the census returns do not "show that they were in 1880 from 60 to 70 per cent. on the entire investment," but Mr. DUNNELL himself convincingly demonstrates, in the extract which we have quoted from his speech, how unreliable is his statement of the profits derived in the census year by our manufacturers of steel rails. What intelligent farmer can put any faith in the figures of a statistician who gravely informs the country, as Mr. DUNNELL does in his speech, that "during the last year 372,375,307 tons of steel rails were imported into the United States?" This number of tons of rails would lay 4,231,537 miles of railroad track, composed of rails weighing fifty-six pounds to the yard—enough track to go around the earth one hundred and sixty-nine times, and sixteen times the length of all the railroads in the world to-day. All the steel-rail mills now in existence could not make in seventy-five years the number of tons of rails said by Mr. DUNNELL to have been imported into the United States last year. That the honorable gentleman fully intended to use the figures we have quoted is apparent from the fact that he repeats them in the extract which we have given, and this time, in order to emphasize them, he spells them out—"nearly four hundred millions of tons of steel rails were imported into the United States during the last year." No wonder he preceded this

statement with the remark that he could "find no possible reason for the continuance of this large duty of \$28 per ton." A duty that will pay off the national debt six times in one year may safely be dispensed with as a matter of revenue, while the protection which it affords to our steel-rail producers need not be considered, as the country, according to Mr. DUNNELL's figures, will probably not need any more steel rails from any source for several hundred years.

PROFITS THAT CAN BE JUSTIFIED.

Having shown that the excessive profits referred to by Senator BECK, Mr. CARLISLE, Mr. DUNNELL, and others, were not realized by our Bessemer and open-hearth steel manufacturers in the census year 1880, we now frankly admit that the profits realized by most of these manufacturers in that year were satisfactory; that they exceeded the 2 or 3 or 5 or 6 per cent. on their invested capital which less daring, less enterprising, and very jealous men would have conceded to them. They did not, fortunately, conduct their extensive business operations in that year at a loss, as many of them had done in previous years, nor were their profits so small that at the year's close it became a question for consideration where they could borrow the necessary money, by placing mortgages on their works, to enable them to so enlarge the capacity of those works that the increased demand for their products could be met in succeeding years. They neither lost money nor received, as a rule, small profits, but on the contrary most of them realized handsome profits, and they immediately invested these profits in extensions to their works, with the result that the capacity of these works is to-day twice as great as it was in the census year, assuring a prompt meeting of the country's demands for their products and at much lower prices than then prevailed.

In the census year we produced, in round numbers, 950,000 gross tons of Bessemer and open-hearth steel ingots; this year we can produce double that quantity if it should be required. The price of American steel rails in February, 1880, was \$85 a ton, owing to the extraordinary "boom" which then prevailed in all branches of business in Europe and America, and at the same time the price of American iron rails was \$68 a ton; in February, 1882, the price of American steel rails had fallen to \$55 a ton, through the increase of domestic competition, and at the present time it is quoted at \$50 a ton. Men who thus add to the wealth of the country, by increasing its capacity to supply its wants and by reducing the price at which those wants can be supplied, and who, at the same time, furnish employment to increased numbers of workmen, are surely not criminals but public benefactors.

PROFITS OF EUROPEAN IRON AND STEEL MANUFACTURERS.

European manufacturers of iron and steel do not ordinarily conduct their business with an annual profit of 2 or 3 or even 5 or 6 per cent.; they cannot afford to do it. As an illustration of European profits we may quote from the last annual report of Bolckow, Vaughan & Co., limited, of Middlesbrough, England, the leading manufacturers of iron and steel in that country. The report says: "Your directors have pleasure in submitting herewith the company's balance sheet and auditor's report for the year ending December 31, 1881. Having regard to the low prices ruling for pig-iron during the second and third quarters, and the unsatisfactory condition of the coal trade over the whole of the past year, the directors feel assured that the results obtained will be considered satisfactory to the shareholders. The amount of profit available for distribution is £305,806 12s. 5d." This is one and a half million dollars. We have no means of ascertaining the exact amount of capital represented by this English company, but it would have to be more than fifteen million dollars to bring the profits of last year below 10 per cent. The only statement we have seen of its capital fixes it nominally at £2,500,000, or about \$12,500,000. But the one and a half million dollars "available for distribution" does not represent all the profits of Bolckow, Vaughan & Co. in 1881. The report adds: "The plant and machinery have been kept in an efficient state, and several important repairs and improvements have been made and charged to revenue account." This means that the value and effectiveness of their works were increased last year, as a basis for future profits, and that this was done in addition to setting aside one and a half million dollars for distribution.

An illustration of the profits derived from the manufacture of steel alone in England is before us. The sixth annual report of William Jessop & Sons, limited, embracing the operations of the past year, gives the profits for that year, after paying interest and all other obligations, as £37,323 9s. 6d., or about \$185,000, on a paid-up capital of £230,610, or about \$1,150,000. This is about 16 per cent. The report adds that "the buildings, machinery, and plant have during the year been maintained in thorough repair out of revenue."

Mr. Joseph Wharton is our authority for the following incident: at the dinner given by the iron-masters of the Lehigh Valley, Pennsylvania, in December, 1874, to Mr. Isaac Lowthian Bell, a distinguished English ironmaster, a colloquy occurred between one of the younger Americans present and Mr. Bell which shows that high profits are always expected by English ironmasters. Our young countryman was setting forth the many advantages possessed by England over the United States for the cheap production of iron as so many arguments in favor of our tariff system, and ended with about these words: "And then, you know, Mr. Bell, you capitalists are satisfied with so low a percentage for your money." "What do you mean, sir?" said Mr. Bell. "I mean that you think 3 or 4 per cent. per annum sufficient return for your money," was the reply. "Indeed, you are very much mistaken," rejoined Mr. Bell, "we consider 20 to 30 per cent. much nearer the thing."

LARGE PROFITS NECESSARY.

The measure of the profits which iron and steel manufacturers should in equity receive must of course vary according to circumstances, but concerning the general proposition that large profits are necessary it may be asked, how else can large manufacturing enterprises be built up and employment be given to large numbers of people? Large profits are needed to pay for extensions to enterprises originally small, and to provide improvements in methods of manufacture which the progressive spirit of the age and the fierceness of competition are constantly suggesting. In no other way could capital ever have been accumulated to equip and sustain the great manufacturing enterprises of the world. The large capital upon which millions of wheels and spindles, and all other productive machinery, now rest mainly represents profits. The company to which we have above referred, Bolckow, Vaughan & Co., was founded in 1841 with a small capital, one of the partners contributing absolutely nothing but his skill and experience as an iron worker, and for many years its operations were conducted on a small scale. In 1850 it entered upon a more prosperous career, and its present extensive works have been created chiefly with the profits of the last thirty years. The great steel works of Alfred Krupp, at Essen, in Germany, the largest in the world, were founded in 1810 by Friedrich Krupp, the father of the present proprietor, and as late as 1848 they employed only seventy-four workmen. At the present time they employ 17,000 persons. The commercial value of these works and their accessories is greater than that of the works of Bolckow, Vaughan & Co., and yet this immense value may be said to have been created wholly out of the profits derived by one family, in two generations, from an enterprise that was originally very small indeed.

It has frequently happened in the manufacture of iron and steel that in the course of a very few years it has been found necessary to almost entirely change the methods or machinery previously employed, thus entailing great and unexpected expense. In the manufacture of pig-iron the introduction of hot-blast stoves and powerful blowing engines in late years has required more money than the original cost of the furnaces to which they have been attached. In the manufacture of steel many changes in methods have occurred in recent years, each of which has been exceedingly expensive. Some of these changes, it is true, have

been of a radical character, as in the introduction of the Bessemer and open-hearth processes, which may be classed as new industries rather than as modifications of old processes; but even these new methods of producing steel have been modified and improved by experience, while the old crucible process has been almost completely transformed by the introduction, at great expense, of gas-furnaces. Years ago, in our own country, a large amount of capital was expended in the erection and equipment of mills for rolling iron rails. Many of these mills have since been abandoned or converted at considerable expense into mills for rolling iron in other forms, while others have been converted at still greater expense into establishments for the production of rails made by the Bessemer or the open-hearth process.

In the report of Bolekow, Vaughan & Co., already mentioned, the necessity for frequent changes of methods and machinery is thus referred to: "The rapid progress of invention connected with the steel and iron trade necessitates the greatest watchfulness on the part of your directors to keep the works and plant in such a state of efficiency as will enable them to obtain the largest production and work with the most economical results." Even in establishments in which new methods and modern machinery have not been introduced the annual cost of repairs to and renewals of such machinery as is in use is ordinarily sufficient to absorb no inconsiderable part of the profits. Probably no other business is so destructive to the machinery and other inanimate aids which it employs as the manufacture of iron and steel. And we may add, although the remark is not germane to our subject, that scarcely any other business taxes so severely as it does the strength and endurance of those who toil in it with their hands.

UNREASONABLE PROFITS.

We do not wish to be understood as justifying unreasonable profits. An illustration of the profits which we do not justify is furnished us by Mr. J. S. Jeans, the secretary of the British Iron Trade Association, in his history of the first company that was organized in England to work the Bessemer process. Mr. Bessemer was the projector of this company and a member of it, his associates being Messrs. Longsdon, Allen, and the Galloways of Manchester. The works were located at Sheffield. Mr. Jeans's statement is as follows: "On the expiration of the fourteen years' term of partnership of this firm, the works, which had been greatly increased from time to time, entirely out of revenues, were sold by private contract for exactly twenty-four times the amount of the whole subscribed capital, notwithstanding that the firm had divided in profits during the partnership a sum equal to fifty-seven times the gross capital, so that by the mere commercial working of the process, apart from the patent, each of the five partners retired, after fourteen years, from the Sheffield works with eighty-one times the amount of his subscribed capital, or an average of nearly cent. per cent. every two months—a result probably unprecedented in the annals of commerce."

But this statement does not exhibit all of the profits which Mr. Bessemer has derived from his invention. He charged others for the privilege of using that invention, and his profits from this source alone have been enormous. Mr. Jeans says that "from first to last Bessemer's patents have brought him royalties to the value of over £1,057,000," or over \$5,000,000. This statement was made in 1879.

American Bessemer steel manufacturers have been censured in the American Congress because, for their own protection, they have been compelled to purchase the patents under which their business is conducted, but we have not heard of any condemnation from the same source of Mr. Bessemer's enormous gains from the sale of his patents and from the use of his invention in his own works. He has realized an immense fortune from his invention, and his government honors him by conferring upon him a title of nobility; he is now Sir Henry Bessemer; but honorable gentlemen in the American Congress do not hesitate to stigmatize as public enemies those of their countrymen who, at great cost and with great risk, have given the benefits of this great invention to the American people. For Mr. Bessemer, the Englishman, they have no word of condemnation, but the American manufacturers who have bought his patents they would put in the penitentiary.

THE BESSEMER PATENTS.

This seems to be the proper place to state the cost to American Bessemer steel manufacturers of the patents under which their business has been established. They have cost their present owners, in addition to the royalties paid for their use before they purchased them, almost one and a half million dollars. We are authorized to make this statement by the president of the company that owns the patents. As some of these patents have already expired, and as the value in this country of those last purchased, and for which \$275,000 was paid, (covering the Thomas-Gilchrist process,) has yet to be tested, it must be conceded that the day cannot be very far off when the whole of this investment of nearly one and a half million dollars may be lost. A large part of it has already been lost.

But it is alleged that the owners of the Bessemer patents constitute a monopoly; that they will not permit others to use them. This is not the fact. The patents were bought as a business investment, and for protection against possible complications, but not to create a monopoly. Any person or persons who may wish to engage in the manufacture of Bessemer steel in this country can enjoy the use of all the patents that in any way affect the methods of that manufacture which are now employed here by paying a royalty of fifty cents a ton on the raw materials that go into the converter. There is no other charge for the use of these patents. As a ton of the raw materials mentioned produces very nearly a ton of Bessemer steel, it will be seen that the use of the patents costs but a trifle over fifty cents for each ton of steel produced. This is a very moderate charge for the use of patents which have cost their present owners (not counting the Thomas-Gilchrist patents) over a million dollars, and it is certainly a very great reduction upon the charge which the pioneer manufacturers of Bessemer steel in this country were compelled to pay for the use of Mr. Bessemer's patents. The Pennsylvania Steel Company was the first American company to engage in the manufacture of Bessemer steel as a commercial product. In 1867, when its works were started, it was required to pay \$5 per ton royalty on all ingots that were produced to be rolled into rails, and \$10 per ton royalty on all ingots that were produced to be rolled into other forms. The mere statement of these facts—that the royalty has been reduced from \$5 and \$10 to fifty cents—carries with it its own comment.

The use of the patents covering the Thomas-Gilchrist process in the manufacture of Bessemer steel has not yet been offered to the American public, for the reason that the American owners of the patents desire first to test by practical experiments the value of the process. We have never heard that any person or persons in this country, except the owners of these patents, have expressed any serious desire to engage in the manufacture of steel by this process.

But Bessemer steel can be made and is made in this country without regard to the patents which cover the old and tried methods of manufacture, and consequently without the payment of any royalty whatever. There are now fourteen Bessemer steel works in operation in this country. Of the whole number eleven are operated under the patents and three regardless of them. These three find no difficulty in making Bessemer steel by methods upon which the patents have expired. There exists, therefore, no hindrance to-day to the manufacture of Bessemer steel in this country without the expenditure of one dollar for the use of any patents. That eleven works use methods the patents upon which have not yet expired is due to the fact that their proprietors own the patents, and to the further fact that they believe the methods covered by them to be valuable.

LOSSES OF AMERICAN BESSEMER STEEL MANUFACTURERS.

Having very fully referred to the charges of excessive profits that have been made against the American manufacturers of Bessemer steel we will now be pardoned for briefly reciting some of their losses.

Each of the two experimental Bessemer steel works established in this country in 1864 and 1865, one at Wyandotte, Michigan, and the other at Troy, New York, lost money. The Wyandotte works were abandoned in 1869, and were almost a total loss. The Troy experimental works were succeeded in 1867 by permanent works, and these were burned in 1868. New works were completed in 1870, and it was not until after this event that any money was made in the manufacture of Bessemer steel at Troy.

The first works established in Pennsylvania expressly to manufacture Bessemer steel were those of the Pennsylvania Steel Company, near Harrisburgh, which were commenced in 1865. In 1867 steel was first manufactured at these works, since which time they have been steadily in operation. But it was not until 1873, eight years after the erection of the works had been undertaken, that a cash dividend was declared, and then it amounted to only 2 per cent. upon the capital stock. At this time the stock exceeded one and three-quarter million dollars. A short time prior to this dividend one of the stockholders sold his stock for one-half its original value.

The second Bessemer steel works in Pennsylvania were those of the Freedom Iron and Steel Company, near Lewistown. They were undertaken in 1866. In 1868 they commenced to make steel, and in 1869 the company failed, and the works were subsequently dismantled. Over one and a half million dollars in capital and bonded and unbonded debts was sunk in this abortive enterprise.

The Cambria Iron Company, at Johnstown, Pennsylvania, has manufactured Bessemer steel since 1871, but was originally organized in 1853 to manufacture iron rails. Its capital stock was \$1,000,000. In 1854 the company failed, and in 1855, fresh capital having been added, it failed again. The works were then leased. In 1861 the company was reorganized and placed upon a firm financial basis, the original stockholders, who had paid \$1,000,000, surrendering their stock and receiving in exchange \$100,000 of new stock, or \$100 for every \$1,000 they had invested. Thus the original promoters of this enterprise absolutely lost \$900,000.

The Bethlehem Iron Company, at Bethlehem, Pennsylvania, was organized in 1863 to manufacture iron rails, and in 1873 it commenced also to manufacture Bessemer steel. It has continued the manufacture Bessemer steel until the present time. From 1879 to 1873 only stock dividends were made, and from 1873 to 1879 neither stock nor cash dividends were declared. In these latter years the company's operations were conducted at an actual loss. In 1874 a bonded debt of \$1,000,000 was created, and in 1877 additional bonds were issued to the amount of \$278,000.

In the West the effort to establish the Bessemer steel industry has been attended with many discouraging vicissitudes. The works of the Joliet Iron and Steel Company, at Joliet, Illinois, were commenced in 1870, and in 1873 they first manufactured Bessemer steel. In 1874 the company failed, and the works were stopped. The company made another effort to achieve success, but after a long struggle again failed, but not until fresh debts had been created, the whole investment aggregating \$3,700,000. After passing through bankruptcy the works were sold in 1879 for a sum not sufficient to pay all the bondholders, and the original capital was lost. The works of the Vulcan Steel Company, at Saint Louis, Missouri, were built in 1872 to roll iron rails, but in 1875 the company commenced the erection of Bessemer steel works. In 1876 these works were completed, and steel was made by them in that year. Soon afterward the company failed to meet its obligations and the works were stopped, but, after many serious losses, it has been reorganized and the works are now in operation. Probably \$1,000,000 has been sunk in building up this enterprise, which has until very recently been exceedingly unprofitable.

It will be seen that our Bessemer steel industry has encountered serious obstructions, and that it has reached its present condition of prosperity through great tribulation. If those who, with undaunted courage but often with failing strength, faithfully nursed it for many years when it was a sickly child are now able to recover their losses through the general prosperity of the whole country, and if it can be shown, as it most certainly can be, that their enterprise and courage have resulted in giving to the country a vigorous industry that has cheapened the cost of our railroads and reduced the ramp who shallortation, say that theysoct of t are not worthy of their reward?

I am, sir, very respectfully, your obedient servant.

JAMES M. SWANK, Secretary.

ROB. WILLIAM D. KELLEY,
Chairman of the Ways and Means Committee, House of Representatives.

A DIVERSION.

Mr. Chairman, I must hasten to a conclusion; and it is my purpose to illustrate the effect thirty years of her present commercial system has had upon England by the testimony furnished by contributors to her leading journals. But before proceeding to lay the matter I have collected on this point before the committee, I desire to emphasize the fact stated by Sir Edward Sullivan in the Nineteenth Century for August last, that there were at that time 14,500,000 of her people with less than 10s. 6d. a week to live on; less than \$2.62 a week to each of 14,500,000 British laboring people, with whose work our producers ought to be made to compete, with a slight allowance for something or other.

Mr. HEWITT, of New York. For the difference in labor.

Mr. KELLEY. For the difference in labor? Who will ascertain and fix it? At what point at home and abroad shall it be fixed?

Mr. HEWITT, of New York. The Ways and Means Committee ought to be able to fix it. You have got tables of wages there, and you can find exactly the difference in making a ton of iron between Great Britain and the United States, and put the duty on it; that is enough.

Mr. KELLEY. I will put a question to the gentleman, and want a candid answer.

Mr. HEWITT, of New York. You shall have it.

Mr. KELLEY. Will the gentleman state the basis of the opinion he so persistently reiterates that a Republican Committee on Ways and Means can do what three successive Democratic committees failed to do?

Mr. HEWITT, of New York. Because the Republican committee has professed to have special knowledge of industry in this country and the basis upon which it is built, and have all the facts and knowledge about it; and they deny that the Democrats know anything about it at all. That is the reason why I pay the gentleman a compliment. He has written volumes and made speeches without number about it.

Mr. KELLEY. Here are speeches that I made upon two Democratic tariff bills. The first was in the Forty-fifth Congress, or the Forty-fourth—which was it?

Several MEMBERS. The Forty-fifth.

Mr. KELLEY. That tariff bill of 1876 was concocted in Democratic circles and brought here. And then in 1878 we had another Democratic tariff bill. And neither of them were ever brought to a vote.

Mr. HEWITT, of New York. Why, you struck out the enacting clause of one of them.

Mr. KELLEY. The enacting clause was stricken out.

Mr. HEWITT, of New York. By your vote.

Mr. KELLEY. Yes, by my vote; but not by it alone. One of the slight objections to what was called the Morrison tariff bill was that when an article had several commercial names it appeared in the bill under different rates of duty, according to the name.

Mr. MORRISON. Old man, you never told me that in the committee-room.

Mr. KELLEY. Oh, yes; I did. But here is what I said in my speech of May 29, 1876, when the members of the Democratic committee were on the floor and had an opportunity to correct me if I made a misstatement:

In many instances it puts the same article, under different names, on both the dutiable and free list; thus acetate of potash is to bear a duty of 12½ cents a pound, but potassa acetate, which is identically the same article, is on the free list.

[Laughter.]

Prussian blue, when so called, is to be judiciously protected, but when imported as Berlin blue, or fig-blue, or Chinese blue, it is to come in free.

[Laughter.] The same article identically, whether invoiced as Prussian blue or Berlin blue. Then there was a very learned resolution appended and made part of the bill. It read:

Provided, That alcohol, to be exclusively used for the manufacture of ethers, chloroforms, and the vegetable alkaloids, made free of duty by this act, may be withdrawn from bond free of the specific internal-revenue tax per gallon, in quantities not exceeding one thousand gallons at any one time, under such rules, regulations, and bonds as the Secretary of the Treasury shall prescribe.

I ask now, as I then asked, how many chloroforms had the Committee on Ways and Means discovered? For science has only discovered one. And I again ask what vegetable alkaloids needed the use of alcohol? I never found the practical chemist that could tell me how it was to be applied to any of them. And, after considering the bill as a whole, I said to the gentleman from Illinois confidentially, and in subdued tones, "This is all infernal nonsense." [Great laughter.]

Mr. MORRISON. You say that so often that I did not think you meant it.

Mr. KELLEY. But, my dear friend, for as such I always greet you, justice requires me to say that you are not personally responsible for much of this nonsense. In the course of my remarks on the occasion referred to I took occasion to say:

I have before me the bill presented by the chairman of the Committee on Ways and Means, and which, on his motion, was referred to the committee, and the one reported by the committee to the House, and am compelled to say that bad and dangerous as was the original bill it was better when presented and referred than it became in the hands of the committee. In its original form it had at least the merit of general consistency; but as reported by the committee it is a mesh-work of incongruities, which practical men who are familiar with the details of trade and the existing system of taxes and duties will, if they read it, regard as a travesty of American legislation. I am aware that these are strong phrases, but they involve no intentional discourtesy to the chairman or any member of the committee.

My old friend, Fernando Wood, who introduced and managed the next Democratic tariff bill, has gone hence, and I will say nothing about his bill, except in the way of a little story. General Banks, of Massachusetts, was a member of the committee at that time. Mr. Wood used sometimes to lose his temper, as does his successor. When the enacting clause had been stricken from his bill by an overwhelming vote he went into the committee-room. He was irate and gave expression to his feelings. General Banks, in his dignified but good-natured way, said: "What do you mean, Mr. Chairman?" "Why," said Mr. Wood, "everybody seemed to have an objection to some provision of my bill." "Oh no," said Banks, with even more than his usual affability, "I do not think, sir, that there was objection to the provisions of your bill; our hostility was to the enacting clause." [Laughter.] Whereat the venerable chairman of the committee laughed, and the Wood tariff bill had passed into history. In view of these reminiscences I am constrained to admit that even in conjunction with the gentleman from New York I could not frame a tariff bill in thirty days, and that I think we had better suffer the ills we are said to be enduring than fly to those that would spring from such a hotchpotch higgledy-piggledy business as we would make, or as the Democratic committees of late Congresses proposed to make of it.

Mr. HEWITT, of New York. Does the gentleman propose to pass away from the gentleman from Minnesota? The gentleman undertook to give me a chance to ask him a question.

Mr. KELLEY. Certainly you may. But I do not think the gentleman from Minnesota needs a guardian. He can take care of himself.

Mr. HEWITT, of New York. The gentleman took exception to the statement I made that an investment of twenty millions of dollars in steel works had produced very nearly or quite that profit in a single year. Then he took exception to a statement of the gentleman from Minnesota [Mr. DUNNELL] that dividends had been made of 67 per cent. per annum. Now, I beg to ask the gentleman

from Pennsylvania whether he knows that profits have not been made by steel companies at the rate or over the rate of 67 per cent.?

Mr. KELLEY. I do know it by information received from gentlemen connected with the largest and best of them. And I do know that three of them have failed.

Mr. HEWITT, of New York. I am referring to the year 1881. What were the profits of the year 1881?

Mr. KELLEY. Oh, no!

Mr. HEWITT, of New York. That was my allegation. And ask the gentleman now whether he says that in the year 1881 the steel works of Pennsylvania did not make an average of 67 per cent. and more of profit?

Mr. KELLEY. And I deny it.

Mr. HEWITT, of New York. Now then—

Mr. KELLEY. I do not yield any further; you can speak in the five-minute debate.

Mr. HEWITT, of New York. Oh, no; I yielded to the gentleman from Pennsylvania all the time he wanted during my speech, and now when I am prepared to give the evidence of the correctness of my assertion he declines to yield.

Mr. KELLEY. You yielded and then abruptly cut me off. I have not infinite strength, and I have quite enough material here to engage me.

Mr. HEWITT, of New York. Then I say to this House that I am prepared to prove that dividends greater in money value than 50 per cent. were made on the profits of 1881, and that the undivided profits exceeded 67 or even 100 per cent.

Mr. KELLEY. I say the gentleman is not prepared with any legitimate evidence to sustain his allegations; and I now resume the floor.

Mr. HEWITT, of New York. I hold the proof in my hands.

Several MEMBERS. Read it. Read it.

Mr. KELLEY. No! No! [Laughter.] I simply assert my right to the floor. There will be time in the five-minute debate for the gentleman to read it. I do not know what it is; I do not know from whom it comes; but I see it is a clipping from a newspaper.

Mr. McMILLIN. Read it.

Mr. KELLEY, (to Mr. McMILLIN.) Are you the chairman of the Committee of the Whole? [Laughter.]

Mr. McMILLIN. I am one of the members of this House, sitting here and allowing you to go on by consent; and as such I ask you to yield to others the privileges that you enjoy yourself. And now if you can go on after obtaining privilege yourself and refuse that to others, do so.

Mr. KELLEY. I say it can come in in the five-minute debate tomorrow; but I am not disposed to be bullied into yielding the floor.

Mr. HEWITT, of New York. This is a new doctrine. I have not seen much bullying done by this weak and humble side of the House during this session; but we will begin it if necessary.

Mr. KELLEY. Well, read it; let us see what it is.

Mr. HEWITT, (reading:)

Judge Ashman yesterday filed an adjudication in the estate of J. Edgar Thomson, formerly president of the Pennsylvania Railroad Company. The question was whether about fifty thousand dollars' worth of stock of the Pennsylvania Steel Company, which had recently been obtained by the estate, should be regarded as part of the capital of the estate or as a dividend and given to Mrs. Thomson absolutely. Judge Ashman took the latter view, and awarded the property to the widow.—*Philadelphia Times*, April 28.

The facts are that the dividends of 50 per cent.—

Mr. KELLEY. Oh, no, [laughter:] that is not proof.

Mr. HEWITT, of New York. I say I will give the authority, and I defy anybody to dispute it. The facts are that a dividend of stock was declared by the Pennsylvania Steel Company, and that stock is selling in the market to-day for more than 200; so that \$50,000 of stock was worth over \$100,000.

Mr. KELLEY. Among the books in my library, when I practiced law, was one entitled "Cases Doubtful, Denied, and Overruled," and I think this is a case that will be doubted, denied, and overruled if it means what the gentleman says it does. It has no relation to the dividends of a corporation. The orphans' court divides the estates of testators and decedents. That is an orphans' court decision.

Mr. HEWITT, of New York. The superintendent told me himself that he had \$3,000,000 of undivided profits.

Mr. KELLEY. I am ready for all proper questions, and for facts within your knowledge.

Mr. HEWITT, of New York. This is within my knowledge.

Mr. KELLEY. Knowledge derived from an irrelevant newspaper paragraph. I am closing a speech, and I do not want my argument further broken by the injected opinions of one who speaks of the American tariff as a war measure; says it produces \$150,000,000 annually more than is needed for the national expenditure; and that it was the chief cause in producing the world-wide financial convulsion that between 1873 and 1879 oppressed England, France, Germany, and all the states of Central and South America, and ruined many of the leading houses of India. Who attributed all this to our obstructive prohibitory tariff?

Mr. HEWITT, of New York. I said it was a powerful element.

Mr. KELLEY. What is that?

Mr. HEWITT, of New York. I said that it was a powerful element, and I repeat it.

Mr. KELLEY. Now that I have—

Mr. HEWITT, of New York. I said that that condition of depression was resultant from many causes, and I thought that that tariff was one of them.

Mr. KELLEY. You thought the Morey letter was genuine too. [Great laughter.] I refer to the speech of the gentleman, and read this colloquy:

Mr. KELLEY. Could England find a market for her products during the era to which the gentleman refers?

Mr. HEWITT, of New York. It could not.

Mr. KELLEY. Then it was not protective duties which shut the commodities out of other markets? But was it not the inability of the people to consume? And further, did that not come from a financial cause, namely, the suppression by Germany of the great part of her paper—of bank notes under \$25, or 25 sterling, the abrogation of the use of silver by Germany, the steady application of our surplus revenue to the contraction of our "greenbacks"? I am not going into a discussion—

Mr. HEWITT, of New York. But I am afraid the gentleman is.

Mr. KELLEY. They were then performing the service of money, but the demoralization of silver by this Government through the withdrawal of the medium of exchange from the world by these two governments, did it not paralyze industry and the consumptive capacity of the whole world. No tariff can control such contingencies. [Applause.]

Mr. HEWITT, of New York. I will answer the gentleman by saying that his long question is a conundrum proper to be addressed to the Republican party. They framed all this legislation.

Mr. KELLEY. Oh, no; they did not frame the German legislation.

Further on I read:

Mr. KELLEY. I should like the gentleman to answer whether I did not name the causes.

Mr. HEWITT, of New York. You named a great many causes, but I find the gentleman generally omits the right cause, which is in this case a high prohibitory and destructive and obstructive tariff. [Applause.]

Our tariff, according to the gentleman, was "the right cause."

Mr. HEWITT, of New York. I think it was the chief cause, and in the haste of debate I said "right cause;" but I then proceeded to explain by pointing out that national prosperity or adversity results from many causes.

Mr. KELLEY. The "haste of debate" involved in the reading of a printed speech by the gentleman, which appeared in the New York Tribune the next morning, though it had not been sent by wire. [Laughter.]

Mr. HEWITT, of New York. That portion did not appear in the New York Tribune.

Mr. KELLEY. Well, then, the speech had been sent before this colloquy—in the "haste of debate."

Mr. HEWITT, of New York. Of course it had. Has the gentleman never prepared a speech in advance? I read my speech from slips; why should I not? There was no concealment.

Mr. KELLEY. Mr. Chairman, throughout this debate gentlemen have dwelt on the period of depression and asked why a protective tariff did not defend us against prevailing depression. They could have mentioned another depression the incidents of which had a bearing on the question. It was local,—was confined to this country. The gentleman from Illinois [Mr. MORRISON] quoted yesterday from one of my speeches showing the effect produced by the retirement of our greenbacks under the law of 1866. That law authorized the Secretary of the Treasury to retire \$10,000,000 of Treasury notes in six months and \$4,000,000 monthly thereafter. The contraction of the currency this law produced suspended all our industries, and Congress hastened to repeal the law which authorized it. In April, 1866, the law was passed; in February, 1868, it was repealed by an almost unanimous vote. Then again, when we passed the law providing for resumption, we authorized the retirement of paper until the volume of greenbacks should be reduced to \$300,000,000. Germany retired her silver and her small notes, and so between us, we convulsed and paralyzed the trade of the world by our financial action. No tariff can defend trade against such contraction of the medium of exchange. With the consent of the committee, I will read an extract from the first chapter of Sir Archibald Alison's History of Europe, from 1815 to 1852, which illustrates the absurdity of the gentleman's theory that our tariff paralyzed the commerce of the world. Allison said:

Whoever has studied with attention the structure or tendencies of society, either as they are portrayed in the annals of ancient story, or exist in the complicated relations of men around us, must have become aware that the greatest evils which in the later stages of national progress come to afflict mankind arise from the undue influence and paramount importance of realized riches. That the rich in the later stages of national progress are constantly getting richer, and the poor poorer, is a common observation, which has been repeated in every age, from the days of Solon to those of Sir Robert Peel; and many of the greatest changes which have occurred in the world—in particular the fall of the Roman Empire—may be distinctly traced to the long-continued operation of this pernicious tendency. The greatest benefactors of their species have always been regarded as those who devised and carried into execution some remedy for this great and growing evil; but none of them have proved lasting in their operation, and the frequent renewal of fresh enactments sufficiently proves that those which had preceded them had proved nugatory. It is no wonder that it was so; for the evils complained of arose from the unavoidable result of a stationary currency, coexisting with a rapid increase in the numbers and transactions of mankind; and these were only aggravated by every addition made to the energies and productive powers of society.

To perceive how evils come about, we have only to reflect that money, whether in the form of gold, silver, or paper, is a commodity and an article of commerce, and that like all similar articles it varies in value and price with its plenty or cheapness in the market. As certainly and as inevitably as a plentiful harvest renders grain cheap and an abundant vintage wine low-priced, does an increased supply of the currency, whether in specie or paper, render money cheap as compared with the price of other commodities. But as money is itself the standard by

which the value of everything else is measured and in which its price is paid, this change in its price cannot be seen in any change in itself, because it is the standard. It appears in the price of everything else against which it is bartered. If a fixed measure is applied to the figure of a growing man, the change that takes place will appear not in the dimensions of the measure but the man. Thus an increase in the currency when the numbers and transactions are stationary or nearly so is immediately followed by a rise in the money price of all other commodities, and a contraction of it is as quickly succeeded by a fall in the money price of all articles of commerce and the money remuneration of every species of industry. The first change is favorable to the producing classes, whether in land or manufactures, and unfavorable to the holders of realized capital or fixed annuities. The last augments the real wealth of the moneyed and wealthy classes, and proportionally depresses the dealers in commodities and persons engaged in industrial occupations. But if an increase in the numbers and industry of men co-exists with a diminution in the circulating medium by which their transactions are carried on, the most serious evils await society, and the whole relations of its different classes to each other will be speedily changed; and it is in that state of things that the saying proves true that the rich are every day growing richer and the poor poorer.

The two greatest events which have occurred in the history of mankind have been directly brought about by a successive contraction and expansion of the circulating medium of society. The fall of the Roman Empire, so long ascribed, in ignorance, to slavery, heathenism, and moral corruption, was in reality brought about by a decline in the gold and silver mines of Spain and Greece, from which the precious metals for the circulation of the world were drawn, at the very time when the victories of the legions and the wisdom of the Antonines had given peace and security, and with it an increase in numbers and riches, to the Roman Empire. This growing disproportion, which all the efforts of man to obviate its effects only tended to aggravate, coupled with the simultaneous importation of grain from Europe and Lydia at prices below what it could be raised at in the Italian fields, produced that constant decay of agriculture and rural population and increase in the weight of debts and taxes to which all the contemporary annalists ascribe the ruin of the empire. And as if Providence had intended to reveal in the clearest manner the influence of this mighty agent on human affairs, the resurrection of mankind from the ruin which these causes had produced was owing to the directly opposite set of agencies being put in operation. Columbus led the way in the career of renovation; when he spread his sails across the Atlantic he bore mankind and its fortunes in his bark. The mines of Mexico and Peru were opened to European enterprise; the real riches of those regions were augmented by fabulous invention; and the fancied El Dorado of the New World attracted the enterprising and ambitious from every country to its shores. Vast numbers of the European as well as the Indian race perished in the perilous attempt, but the ends of nature were accomplished. The annual supply of the precious metals for the use of the globe was tripled; before a century had expired the prices of every species of produce were quadrupled. The weight of debt and taxes insensibly wore off under the influence of that prodigious increase in the renovation of industry; the relations of society were changed; the weight of feudalism cast off; the rights of man established. Among the many concurring causes which conspired to bring about this mighty consummation, the most important, though hitherto the least observed, was the discovery of the mines of Mexico and Peru.

EVENTS—WHAT THIRTY YEARS OF FREE TRADE HAVE DONE FOR ENGLAND AND TWENTY YEARS OF PROTECTION FOR AMERICA.

Mr. Chairman, it has been said that "events are written lessons glaring in huge hieroglyphic picture-writing that all may see and know them." Let me, therefore, turn from the unseemly wrangle into which I have been forced, and from the consideration of imperfect tables, which like cobwebs "will hold no conclusion," and contemplate our subject in the light of events—events not of mean but of magnificent proportions. The loss by England of the commanding position in commerce and manufactures she so long maintained, and the recognition of the United States as the foremost member of the family of nations, are events that all will read and know. By what terrible contest of arms has this reversal of the relations of these nations been wrought! What carnage and desolation marked its progress! Sir, this is the work of peace. It has been wrought by legislation and not by war; and it illustrates the importance of gravely considering every revenue measure which can influence the productive forces of a country.

About thirty years have elapsed since Great Britain entered fully upon its present commercial system, and, throwing down the barriers of defense which secured her home market to her laborers, challenged the nations of the world to competition in manufactured goods in all its markets. The period was well chosen for the success of the experiment. The change was coincident with the discovery of the gold fields of California and Australia, which, by opening to settlement Australasia and the Pacific coast of North America, created large demands for wares and fabrics of every variety in new and highly remunerative markets. The sudden and unprecedented augmentation of the world's stock of gold caused great movements of people, great increase of production, and a great enhancement of prices. Oblivious to the relation of the increase of the supply of gold to prices and the power of people to pay for and consume commodities, and of the effect of the settlement of the rich and remote states to which I have alluded, British statesmen ascribed the wonderfully increased demand for British goods and ships exclusively to their newly applied economic theories. They deceived themselves into the belief that England was invincible and would forever remain as she then was—the workshop of the world and the mistress of the sea.

We had then recently repealed the protective tariff of 1842, and were under the free-trade Walker tariff of 1846; and if free trade were a specific for the relief of depressed people, our share of prosperity should have been relatively commensurate with that of England. Indeed many circumstances favored our growth and prosperity in a higher measure than that of England. The gold fields of California were ours, and she could obtain the gold we mined but by purchasing it from us. Our mercantile marine was superior to hers, and London merchants paid a shilling more per chest for tea on an American clipper ship from Hong Kong to London than they would to a British ship. The potato rot devastated the fields of Britain and much of the Continent, and opened a large market for our cereals. During the decade from 1850 to 1860 we mined \$1,100,000,000 of gold;

but notwithstanding this, and that ocean freight charges were in our favor and not against us, as now, 1857 found the people and the Government bankrupt. Our banks were unable to redeem their notes; our Government unable to borrow money; our laborers idle, and our merchants and manufacturers in a condition almost as deplorable as they had been in 1840, when universal insolvency forced the adoption by Congress of a bankrupt law as the only means of redeeming from mortgage the future of a generation of business men.

If England's augmented prosperity was the result of her adoption of free trade, the history of that decade shows that it did not operate as favorably in this country as it did in that, and that it is therefore not a specific of universal application. Mr. Chairman, in contemplating the history of that decade I am forced to the conclusion that the Almighty, in pursuance of His beneficent purposes, had determined to compel the American people to develop and apply to the relief of suffering mankind the resources of the virgin continent, to which He had led them; and to demonstrate to them by a series of grand events that to accomplish this work they must defend and protect against all competitors by whatever means might be required a people's right to supply their own wants when this could be done by the use of their own raw materials.

The protective tariff of 1842 had lifted us from the prostration to which we had been brought by the compromise tariff of 1832. It was succeeded by Mr. Walker's revenue tariff of 1846; and now in 1857, having mined and squandered on perishable foreign commodities more than a thousand millions of gold, we were again in the condition that 1840, 1841, and 1842 had found us, and in which we remained till the protective tariff of 1861 went into effect.

Since then the provisions of that tariff have defended our industries, our right to develop our resources, and, so far as our insufficient stock of machinery would permit, to supply our own markets. These are events the world must take heed of. In contemplating them it will behold the gradual loss by England of many of her markets; it will see that, to borrow the words of M. Léon Say, her "capital account" is being closed, and that her industry has entered on its decadence; that her people of moderate means in all ranks of life are flocking from the best portions of her farming land to better their fortunes in the wilds of America; and that her manufacturers are not only deserting her, but are bringing their capital, their arts and mysteries, their machinery, and their skilled and trusted workmen to enlarge our "capital account" and add to the wealth and prospective power of our country.

I propose, sir, to draw from accepted British authorities proof of these facts and conclusions, and also of the fact that I spoke without exaggeration when I said that the protective system had exalted us into a beacon-light for the guidance of nations.

The August number of the Nineteenth Century contains two articles which are published under the title of "Isolated Free Trade." The first paper is by Sir Edward Sullivan, the other by his grace the Duke of Manchester. Let me present a brief extract from Sir Edward Sullivan's paper. He says:

I believe it is now generally allowed that every prophecy uttered by the apostles of free trade thirty years ago is unfulfilled, or has proved false; and to my mind ridicule attaches rather to those who continue to repeat these false prophecies than to those who expose their hollowness. In 1844 Mr. Cobden said: "You have no more right to doubt that the sun will rise in the heavens to-morrow than you have to doubt that in less than ten years from the time when England inaugurates the glorious era of commercial freedom, every civilized commercial community will be free-traders to the backbone." In 1852 he said that the time was at hand "when other nations would be compelled by self-interest and by the reality of our prosperity to follow our example and adopt free trade." About the same time Mr. Disraeli said in the House of Commons: "The time will come when the working classes of England will come to you on bended knees and pray you to undo your present legislation."

Which prophet, may I ask now in 1881, has proved himself most worthy of our trust? The cloud that threatens the industrial existence of England has been gathering and intensifying for six years. The extraordinary growth and development of agricultural and manufacturing prosperity in Europe and America have entirely changed her industrial position.

Thirty years ago England had almost a monopoly of the manufacturing industries of the world; she produced everything in excess of her consumption; other nations comparatively nothing. The world was obliged to buy from her, because it could not buy anywhere else. The discoveries of gold and steam immensely increased the demands and the purchasing power of the world, and consequently the demand for the products of England. Her wealth increased by leaps and bounds that were bewildering; she was intoxicated with success; with her immense accumulated wealth, her machinery, her coal, her iron, her insular position, she thought herself unassailable; she laughed at the possibility of foreign competition; she offered to fight the rest of the world with her right hand tied behind her back; she said to the world, "I will receive anything you can send me without duty," adding at the same time an expression of hope that they would in turn receive her goods. But they said, "No, we gladly avail ourselves of your kind offer of admitting our goods; certainly we will send you all we possibly can." At present, unfortunately, we have nothing to send; we cannot yet supply our own wants, but when we have more capital and your machinery and workmen, we hope to have a large surplus to send you." Well, that was thirty years ago. Now, France and America and Belgium have got our machinery and our workmen and ample capital, and they are sending us a yearly increasing surplus that is driving our own goods out of our own markets, and every year they are more completely closing their markets to our goods.

Now, whether the reaction against isolated free trade is reasonable, or whether it is merely the "revival of workmen's prejudices," as the leading journal tells us, it exists and it is growing with a rapidity and with an intensity that surprises many, even of those best acquainted with the operative class.

The organization of the working classes is very complete and very strong, and at this moment the whole of it is being concentrated on this point. Already a number of operatives, far more than is necessary to turn a general election, have, through their delegates, given in their adherence to the Fair Trade League.

The workmen are not working out the question by the abstract reasoning of

others, but by their own experience; they know nothing of political economy, but they know what were the promises of the apostles of free trade, and they know what are the results. Bankers and brokers and dealers in stocks and importers of foreign manufactures may tell them that they are fools and do not know when they are well off. That may be so, but they know when they are badly off, and they are badly off now.

The reports of their delegates state that a very large proportion of the operative population of Great Britain (they put it at one-third) is out of work; that the rest have not, on an average, more than four days' work a week; that for five or six years they have been consuming their savings and the funds of their trade societies. One rich trade society has paid no less than £200,000 in "work pay" during the last five years, and reduced its capital to less than £100,000.

Whatever the wealth of the country may be, it has not penetrated down to them. Every year this wealth is accumulating into fewer hands; every year the gulf between rich and poor becomes deeper and broader. It is calculated that there are at this moment 14,500,000 of the people with less than 10s. 6d. a week to live on. The operatives look abroad, and they see and hear from their mates what is the condition of national wealth in France and America, that there the fertilizing stream has descended to all classes, and they find the very reverse is the case; that wealth is daily becoming more generally distributed, that every year the gulf between rich and poor is getting narrower and shallower. They see and hear that the operatives in France and America have far steadier work, higher wages in proportion, and are increasing more rapidly in material prosperity than the work-people of Great Britain, and they are beginning to ask why. They know that they are, man for man, as good as their rivals, that in mechanical skill, in aptitude for hard work, in mineral wealth, in national capital, &c., they are their superiors. Why, then, are they not equally advancing in material prosperity?

The stock arguments of the big loaf, the natural antagonism between producers and consumers, between employers and employed, &c., have been disproved by the rate and reality of the American progress.

"I can hardly allow myself to believe," said Lord Derby, "that America will long maintain at the public expense a privileged class of manufacturers and producers." But the American people laugh at this; they know that every prosperous manufacturer means a hundred or two of prosperous workmen, and that every ruined manufacturer, one or two hundred ruined workmen; that if the employer is losing money the employed cannot be making it. More than this, they understand that manufacturing and agricultural industries are inseparably bound up together, that prosperous manufacturers mean prosperous agriculture, and vice versa; that each consumes what the other produces; that each is the best customer to the other.

"How long," re-echoes the Cobden Club, "will the farmers of America allow protection to add to the cost of what they consume?" "So long as protection adds to the value of what they produce," is the reply.

The Western and Southern farmers find that the protected manufacturers, instead of being their enemies, are their best customers; they are attracting them to their region by every means in their power; the more prosperous they are the more money they have to spend, the more good they do them. Chicago, the capital of agricultural America, is rapidly becoming one of the largest manufacturing cities in the Union.

Mr. Chairman, Sir Edward Sullivan is not alone in his revolt against free trade. The sufferings of the British people are so general, intense, and increasing that but a small majority can be found in Parliament to resist the demand for a parliamentary commission to inquire into the effects which the tariffs in force in foreign countries are having upon the principal branches of British trade and commerce. An intelligent and observing friend, in a letter dated London, April 8, 1882, wrote me as follows:

A little over a century ago the House of Parliament refused, by a large majority, the proposals for a census. Said one of the learned and liberal-minded members: "I did not believe that there was any individual of the human species so presumptuous or so abandoned as to make the proposal we have just heard." It was denounced as "a project totally subversive of the last remains of English liberty" and "the most effectual engine of rapacity and oppression that was ever used against an injured people." And then, as a great climax to his speech, the leader of the House of Commons said: "Moreover an annual register of our people will acquaint our enemies abroad with our weakness."

In listening to Mr. Gladstone's reply the other night to Mr. Ritchie's motion that a select committee be appointed to inquire into the effects which the tariffs in force in foreign countries have upon the principal branches of British trade and commerce, my mind reverted to the above-mentioned debate, especially when the prime minister of 1882 urged that to pass such a measure (regardless of the good or bad results of such a commission) "would at once become the strongest argument in favor of protection and in favor of hostile tariffs. To admit that FREE TRADE had become a subject of solemn inquiry would be a sign of weakness, or, possibly, would show their weakness to their enemies." Can it be that England is now playing a game of commercial bluff with the world, as a century ago it played at military bluff? But the vote shows that a respectable number of the members do believe that it will pay to open up this question again, even if it does expose the real condition of affairs:

For motion.....	149
Against.....	189

Majority only.....	49
--------------------	----

It came out in debate that in England itself pauperism is on the increase. In 1876 there were 18,000 indoor and 79,000 outdoor paupers; while in 1881 there were 26,000 indoor and 84,000 outdoor. In Ireland they had increased from 6,000 indoor and 31,000 outdoor in 1876, to 8,000 indoor and 53,000 outdoor in 1881, and emigration during the same period had increased from 109,000 in 1876, to 227,000 in 1881. The receipts of the railroad companies per mile has also decreased; and indeed, as one speaker said: "In everything that was generally taken as indicating the prosperity of the country, we have been going back instead of progressing, and there was a feeling in the country that their retrogression might be attributed to our commercial policy; but the government refused to inquire into it for the same reason that a century ago they refused to enumerate its inhabitants—because it might show its weakness to its enemies. I ask you, judge, in all candor, is it unfair for us to put this construction upon its attitude? For one, I should be glad to know the real facts, as I cannot see why free-trade advocates should seek darkness rather than light."

That the times are out of joint every intelligent Englishman sees. Her journals teem with propositions for the amelioration of her condition. Efforts are making to establish a British *zollverein*, with free trade between all parts of the British Empire and customs tariffs between them and other countries. Societies are forming throughout England and Scotland to promote emigration to Australia, to Canada, and to New Zealand; or, as cheaper than these, to England's leading rival, the United States of America. The doctrines of Mal-

thus reappear in her current literature, and protests are heard against the freedom with which laboring people intermarry and thus augment an already excessive population. In an article by the Marquis of Blandford, in the *Nineteenth Century* for February, 1882, entitled *Political Opportunism*, he says:

Probably one of the least considered, though at the same time one of the most vitally important, problems of the future in England is the question of population. Matters affecting trade and the laws regarding property are only correlate questions, which vary in their importance together with this other factor. England has practically doubled her population since the beginning of this century, besides having kept up an immense flow of emigration to other countries. Even in the last ten years the population has increased three millions. Every temporary increase in prosperity caused by trade or abundant harvest can be traced by noting the fluctuation of the birth and marriage rate among the population. Nothing synchronizes more completely in an inverse ratio than the price of bread and the birth-rate among the people. That such a fact should be true is an immense indication, if any were wanted, of the improvident character of the English working class. No sooner does a small increment of wages accrue to the people during prosperous times than it is at once absorbed by increased cost of living through early marriage among the more improvident; but the increase of population so caused again reacts on the condition of the laborer by creating more competition in the labor market, and therefore a lower rate of wage. The cost of production is no doubt kept down, but the profits derived from trade are absorbed by the manufacturers in the higher interest obtained on capital in consequence of the lower rate paid to labor. Capital thus rolls up with capital, and becomes more and more concentrated in the hands of the few, while the great mass of the people are only semi-maintained at what we may call a food-level. Where great competition for labor exists it can be readily shown that the ordinary scale of wages for unskilled labor will be exactly the amount which is required to clothe and feed the laborer, and no more.

In Table III of a pamphlet advocating fair trade, by Mr. Alfred Morris, called *England's Progress in Prosperity* examined by the *Light of National Statistics*, this eminent financier boldly calculates that in the distribution of national income among the people "14,375,537 persons divide between them £163,071,950, being at the rate of £11 6s. 10d. per head, and only 22s. 6d. more than the average cost of relieving a pauper in the year in question, not the cost of keeping the permanent inmate of a work-house, which, varying in different unions, is never less than one and a half times the average cost of relieving the general pauper population." We thus see that in an overpopulated country like England, which is perpetually relieving its state of congestion by emigration, the wage-level will in general never be high enough to permit the working classes to save to any considerable extent, especially when on the first symptom of a prospect of bettering his condition a young man considers himself justified in burdening himself with a wife and family.

Sir, *Blackwood's Magazine* for February contains a very remarkable article entitled "Finance West of the Atlantic." The writer, it appears, was in our country ten years ago. He is evidently a thoughtful man, with open eye and mind. He sees more clearly than do the free-traders and revenue-tariff men of this country what are the most cherished objects of the American people and how successfully the existing tariff is advancing those objects. He makes no suggestion that our high duties are established and maintained in the interest of a favored few or of corporate monopolies. He recognizes the fact that the American people having determined to live with such a measure of liberality as will secure a home to each family, and respect for wife and culture for children in each home, must hold America for Americans, native or naturalized; and that by their tariff they not only effect this but maintain a commercial Monroe doctrine which makes them invincible. In some minor details he is mistaken; but these comparatively slight errors do not affect the correctness of the views he presents or the philosophy that pervades his article. One of his mistakes is in assuming that we derive no income from the duty on wheat, and that the price of that article would not be lower in the United States were the crop of Canada, Winnipeg, and the Saskatchewan Valley admitted to our market free of duty. Another of his errors is even less important than this. When speaking of the certainty of the repeal of internal taxes which now restrict our export trade, he assumes that but \$75,000,000 are collected from these sources, while the truth is we can repeal taxes that yield that amount this year with the certainty that a larger sum than this will come to us from those sources in the next year. But let him speak for himself. He says:

The cardinal feature of American commercial policy is the control and, as far as possible, the monopoly of the home market. To secure and retain that market is their fixed idea, and their position in foreign markets is to them a matter of comparative indifference. To such a length have they carried this notion of self-defense that there is actually a heavy import duty imposed on wheat coming into the United States from abroad; though, of course, as a matter of fact, not a dollar of revenue is derived from this source. The operation of this particular item of the American tariff is a striking commentary on the assertions of some of our free-trade doctrinaires that the imposition of a duty on an article increases by so much the cost thereof. If the home market produces, as in the case of American grain, a supply equal to or in excess of the demand, the free-trader's argument is worthless. Wheat would not be a cent cheaper in the United States were the duty removed, because local competition and local produce render this and other items of their tariff dead letters so far as revenue purposes are concerned.

The Western farmer, then, is fairly content with the knowledge that the control of the home market for agricultural product is assured to him. His crops are purchased by the great wheat-buyers of Chicago and other Northwestern cities at an average price, be it remembered, frequently higher than that obtainable at Liverpool. When Englishmen complain of American farming competition many of them are unaware of the fact that of the total amount of wheat produced in the United States by far the largest proportion is consumed in the Eastern States, and that the wheat export business to England is only a matter of second-rate consequence to the farmer here. This circumstance, no doubt, aids him to bear with equanimity the threats of some English fair-traders to impose a duty on wheat. The view of such a proceeding commonly taken by Americans is that it would, by raising the price of food and labor in England, draw Englishmen to this side of the Atlantic, and thereby ultimately materially benefit, rather than injure, the United States.

That there will be modifications in the United States tariff before long is pretty certain. For instance, the duty on steel rails will be reduced as soon as, but not until, the power of the American manufacturer to supply rails enough to meet the average yearly demand has been firmly established. The present time is exceptional, and the demand for iron and steel for railway work unparalleled. Even

with the present prohibitive tariff, English steel and iron can hardly be kept out; and until the producing power of native manufacturers has overtaken the demand of the people, the latter, faithful to their motto, "America for the Americans," are content to foster growing manufactures to the fullest extent. No reduction on rails is probable till this commercial Monroe doctrine is thoroughly asserted. The American tariff is not solely a revenue tariff; it does not claim to be a mere revenue tariff; it is avowedly a protective tariff, deliberately adopted to make the United States independent of the Old World in every essential of existence. The immense surpluses which the Secretary of the Treasury annually disposes of are, so to speak, incidents of the financial policy of the country, and they will be applied hereafter to the reduction of internal taxation rather than to the lowering of the duties on goods entering United States ports from abroad. There is an ample margin for such reductions, as some \$75,000,000 of national revenue are collected from a very few articles subject to internal taxation.

It is not our purpose to criticize American financial policy favorably or unfavorably. We make no pretensions to be an authority on such a subject, but we think it may be of use and interest to our fellow-countrymen to know the actual position of facts here. There is, however, one single misconception prevalent in England to which attention should be directed. Mr. Gladstone tells us we must be chary of entering upon a war of tariffs with the United States; that if England taxes American imports they will retaliate, &c. No trace of any such idea is apparent in the speeches of men of all shades of opinion from every part of America. They have all said substantially the same thing: "Our tariff is deliberately framed to keep out or so handicap your goods that your manufacturers shall not be able to undersell our own; the tariff effects that object; if you choose to follow our example and protect your home market we cannot reasonably object."

In the progress of his article this writer offers consolation to those of our free-trade friends who believe that the country is degraded in the eyes of the world because it does not compete with England in the ocean-carrying trade; he sees what they do not, that our absence from the ocean results from the fact that America is the greatest free-trade country in the world, and that its gigantic internal carrying trade absorbs all its surplus capital and makes larger returns of profit than England without our competition derives from her ocean-carrying trade. Hear him:

We think we have said enough to show that there is no foundation whatever for the sanguine expectations liberal statesmen sometimes profess to entertain that America will see the error of her financial ways, and will one day open her ports freely to British produce. It is true in one sense that America is the greatest free-trade country in the world; but this arises from the fact that it is not a country but a continent. Within its gigantic limits entire free trade exists, and the development of its internal trade is a work of such immensity as to divert its commercial men's minds from foreign trade. That, and not its tariff, is the reason for the small share it makes in neutral markets side by side with England.

It is the comparatively small profit to be made out of shipbuilding that deters Americans from competing with England at present. They know we have the carrying trade of the world and facilities for defending our hold thereon. The profits to be derived by an attack on our monopoly would be but small, as they would be exposed to our severe competition; and they find they can employ their capital more profitably elsewhere. The steady but comparatively small profits derivable from the carrying trade are not of a nature to tempt the speculative American people so long as vast sums can be earned by the employment of their capital in the more brilliant, if more hazardous, enterprises of mining, railway-building, or manufacturing. And the broad fact remains that they are satisfied as they are. Their economic position differs widely from ours; and from their geographical position they can do many things which, however lawful, may not be expedient for ourselves. But should our present or any future government decide to rearrange any portion of our existing financial regulations it may be well for them to know exactly the line of action that is being steadily carried out west of the Atlantic.

Mr. Chairman, in the progress of my remarks I indulged in an expression or two which some gentlemen may have regarded as rhetorical and extreme, but which were well considered before they found expression. When describing England as a "vampire, suffering from inanition," because she had exhausted all the prey upon which her fangs could be fastened, I spoke of her appealing to us through our sympathies and begging to be admitted to a larger share of our markets. Let him who regards this as rhetorical exaggeration turn to the *Contemporary Review* for last October and read the elaborate article by its editor, entitled "England and America at the President's Grave." The writer of that article is in the presence of his country's humiliation a sycophant; in her power he would be a despot that to advance the interests of England would "blot out" America. He represents England as impelled by her affectionate sympathy, her ties of kinship, her common interests with those of the American people, to command the representatives of other nations to stand back from the grave of Garfield, that she, with America, may pour her sorrows upon the dead representative of our common civilization.

This style of sentimentalism pervades the article. The writer forgot that it was to neutralize the power of Britain that Russia's fleet was sent to the Pacific Ocean during the war for the suppression of the rebellion; he forgot the sympathy that that great nation, with Germany, Switzerland, and others, gave us throughout the war; and forgetting all this, he also forgot that but for the humane influence of that noblest of royal women, Victoria, and that of the prince-consort, her good husband, the British Government would have made an alliance with the perjured impostor, Louis Napoleon, by which England and France would have terminated the war by breaking our blockade and acknowledging the independence of the southern confederacy. He forgets all these things, and, looking only to British trade and the decline of British prosperity, he whines like a maudlin school-girl through an extended plea that an affectionate sympathy may be permitted to interfere with our national policy and trade in behalf of our dear kinsfolk, the English governing classes.

Yet, sir, it is this very editor of the *Contemporary Review*, in the article I have been describing, who gives me warrant for saying that the eyes of the world are turned upon and the hopes of oppressed nations centered in the United States of America. We it is who

by our example are emancipating not only the nations of Europe but the colonies of England from industrial thralldom. We it is who have taught Canada, Victoria, and South Africa the road to true financial independence and to ultimate political independence; and so vast is our influence and so potent are its effects as recognized by the British people themselves that this writer, forgetting his tender sympathy, arrives at the conclusion, legitimate for a British free-trader, that the world would at this hour be further advanced if America were blotted out. His closing words are these:

It is not the worst part of the case that England is left solitary by America to fight single-handed for that modern ideal of the world, which alone, as we believe, fits in with the use of steam and electricity and every other scientific aid to the general intercommunication of mankind; but in addition our small community, whenever trying its hardest in pushing on this mission of leading the common progress, increasingly finds itself hindered by America in ways she does not intend. It is she who is forever being flouted in our face as a decisive instance in favor of isolation and exclusiveness. France, in the present rather petty haggings she insists on over a new commercial treaty, quotes American protectionist prosperity to us with an air of controversial triumph. So again in Germany, Prince Bismarck, when urging protection in furtherance of social doctrines which Americans no more than Englishmen think progressive or pointing to real liberty, crosses the Atlantic for his great monopoly example. It is the same wherever England turns—in the case of her own colonies even—she finds America, and always America, obstructively in her path of argument. It is assumed that everything is finally settled when American prosperity is quoted to us; and the present writer can state from his own experience that the one infallible resource of the controversialist on the other side of the Atlantic is to unfold the brightly colored panorama of America's well-being. Some silly people among ourselves even, though luckily they are too few to need much dwelling on, have had their intellects obfuscated in the same way. Surveying the whole scene it may, in fact, be soberly and sadly said that the politico-economical doctrines of universal interrelation and co-operation among mankind, which our chief thinkers have made it the great talk of England to spread, would at this hour be further advanced throughout the world if America were blotted out.

The Tariff Commission.

SPEECH

OF

HON. J. D. C. ATKINS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. ATKINS said:

Mr. CHAIRMAN: As to this bill, I only wish to say that it is, in my opinion, unconstitutional. Article 1, section 8, of the Constitution declares that Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States. In another clause of the Constitution it is declared that the House of Representatives alone shall have power to originate revenue bills. The whole scope and intent of this bill is in conflict with both of these provisions; therefore, little more need be said about the bill. Besides, if it were not in conflict with the Constitution, it is obnoxious to the charge that it assumes that Congress is incapable of grappling with the duties which the Constitution has imposed upon it, and which, in my judgment, is a cowardly betrayal of its solemn trusts and duty by delegating away its functions to a partisan commission, all of whom are outsiders.

But no matter as to whom the persons may be who will compose the commission, they will all probably be chosen on account of their known subserviency to the mandates of protection. The only purpose which the commission can promote will be to cause delay and non-action. It is only intended to lull the mutterings of the oppressed tax-payers and paint their wishes with future expectations never to be realized. Thustime is occupied and action postponed, but the abominable injustices of the tariff laws remain unrepealed, and capital continues to appropriate the hard earnings of labor now so cunningly devised by the tariff as to effectuate that great and terrible wrong. The great issue now before this Congress and before the country is, that this abominable tariff be reformed.

On that issue the Democracy as a party take an affirmative stand, while the Republicans oppose. The Democracy plant themselves upon the fundamental corner of civil liberty, of equal and exact laws for all, and exclusive privileges for none. We deny the doctrine that the few were born to live upon the bounty of the many; that labor is the slave of capital; but, on the contrary, under wise and just laws its handmaid and coadjutor; that monopoly has no normal place in a free country; that government was made for the people, and not the people for the government; and lastly, that our office-holders are not the rulers but the public servants of the people. In accordance with these fundamental truths, we demand the repeal of a tariff that violates every principle of equality.

One of the great objections to class legislation of all kinds is that any protective law, or law peculiarly applicable to a given industry, no matter how fairly and justly it is intended to operate, almost invariably is amended or changed so as to destroy the weak and build up the strong. This is strongly illustrated in the operation of the internal-revenue laws applicable to the manufacture of whisky, by changes made as to the use of the meter and other appliances, seemingly necessary and right, yet the effect in the main is to drive out of the business all small manufacturers and leave the few large capitalists the monopoly of the trade. So it is in other branches of manufactures, perhaps not so much so; still the advantage rests with the large capitalists over the smaller ones.

But a greater evil still exists as a necessary sequence of class legislation. It is this: the beneficiaries of class legislation seem naturally enough to form a league with each other and make common battle against the outside world. For instance, the man who manufactures woollens and is protected over 50 per cent., in some instances nearly 100 per cent., as on coarse blankets, is not alarmed that the manufacturers of Bessemer steel should realize nearly 100 per cent. profit by reason of the immense protection afforded him under our tariff laws; and so on I might illustrate in hundreds of other instances.

Neither do the stockholders of certain railroad companies make any disturbance on account of this favoritism shown to the woolen and steel and hundreds of other protected manufacturers, because they are conscious of how good and beneficent Congress has been to them and their friends in giving them many millions of acres of public land, and in two instances an advance or loan of \$64,000,000 of United States bonds, the interest on which the companies for a time failed to pay, and it had to be paid by direct appropriation from the United States Treasury.

The national bankers, too, a favorite class, among whom the Treasurer of the United States distributes annually several millions of dollars—a few years back, when interest was higher than it is now, it amounted to about \$20,000,000—absolutely given to these bankers to enable them to furnish the people a currency, by which these bankers, by means of periodic contraction and expansion, absolutely enabled speculators to control the prices of productions in the hands of the farmers; given to them, thus enabling the bankers to draw interest at the same time both upon their bonds, which is their capital, and upon their currency, which is their debt! Truly a modern Republican invention! The iniquities of protection do not alarm the national banker. But banker and manufacturer and railroad king are all mutual admirers of each other, and would not disturb the present admirable system of class legislation or monopoly, of which they are the peculiarly favored and highly distinguished beneficiaries.

These immense combinations of capital, of various industries, and business constitute to my mind the most alarming anticipations for the future of our free institutions. Liberty and monopoly do not flourish side by side upon the same soil. They are not nurtured by the same elements. Liberty is the free-will offering of God to man, but to enjoy it he must dare maintain it; while monopoly is the exclusive work of man alone, and is designed to counteract liberty, fetter it, and destroy it.

With \$150,000,000 surplus in the Treasury, no wonder that there is a rivalry among certain interests to devote it to other objects than the payment of the public debt. Why this anxiety to find ways for getting rid of the surplus money? Ocean transportation and ship railways across the Isthmus are prominent schemes for unburdening the Treasury of its surplus cash. These and many other ways are being planned to reduce the surplus; any plan except the right one, which is to pay the public debt as far as it will go. I fear that the moneyed power of this country is here either through members in both ends of this Capitol or by hired agents, or both, no doubt, whose whole purpose in legislation is to so deplete the Treasury by every possible means as to hinder payment and the continuous funding of the bonds of the United States whenever they fall due, so as to preserve or maintain the basis of national banking for an indefinite period. The friends of the national banks do not want the public debt paid off. They think that a public debt is a public blessing—one of the hereditary heresies of federalism in the early days of the Republic and born of English descent.

The estimated revenue for the next fiscal year is \$400,000,000. Of that large sum \$215,000,000, it is estimated, will be derived from customs and \$155,000,000 from internal taxes, principally drawn from the tax on spirits and tobacco. The tax on spirits is estimated to be \$67,153,974.88, and on tobacco \$46,854,991.31. Now, I have always regarded the tax on tobacco as one, although paid by the consumer, also as one heavily felt by the producer, as it directly tends to lower the price of the raw material in the hands of the farmers; and as it is necessary to begin somewhere to so modify our system of taxation so as to reduce the unnecessary surplus in the Treasury, and to save interest and prevent extravagance and demoralization and waste of the public moneys, why not begin by relieving tobacco, both leaf and manufactured, of all taxes and thus give this industry a fair and even chance with other objects of agricultural industry? For while some few agricultural products are protected in a greater or less degree by our tariff laws here is one which not only is not protected but is made a pack-horse upon which to carry the special burdens of taxation.

Since I have had the honor of a seat upon this floor it has been my constant endeavor to remove these burdens. During this session I introduced a bill which is now before the Committee on Ways and Means repealing all taxes upon leaf and manufactured tobacco. The repeal of the tax on tobacco, both leaf and manufactured in all of its forms, and the repeal of the tax on spirits distilled from fruits would reduce the revenue about \$45,000,000.

This done there will be a surplus of \$110,000,000 for the fiscal year ending June 30, 1883; just about what will be derived from internal-revenue sources leaving out the tax on tobacco. With no public debt pressing for payment, in fact with none that can be paid before 1891, except the 3½ bonds recently substituted for the 5 and 6 per cent. bonds, amounting now to \$490,000,000, the question arises, What shall be done with our surplus? At the present rate of extinguishment they will all be paid by 1886. For one I am free to declare that I would use any surplus in the immediate extinction of the 3½ bonds as rapidly as it accumulates in the Treasury. I would, while we seem to float upon the tide of national prosperity, practice rigid economy, lessen every object of expenditure consistent with the public weal, so as to allow the surplus at the close of each fiscal year to be as large as possible, and thus rapidly extinguish the burden of the public debt. In the mean time if Congress can be induced to lessen the burdens of taxation upon the people, either by a modification of the internal-revenue laws or of imposts upon iron, cotton, woolen, and other goods of prime necessity of foreign importations, thereby making them cheaper for the people, it will only have performed to the public a patriotic but unexpected duty. He is blind indeed who believes that the Republican party will in any essential manner lessen the burdens of taxation upon the people. If perchance relief is afforded at one point, it will only be done the better to be enabled to maintain some other oppression which seemed to be growing weak and loosening its hold or to fasten still other new but even more onerous burdens upon the neck of a sleeping and therefore powerless people.

At various times the tariff laws have been amended since the enactment of the present highly protective tariff act of 1861, every time in the interest of the manufacturer except in 1872, when a reduction of 10 per cent. was made upon most of its leading items. In 1875 this law was repealed and the 10 per cent. restored, upon the hollow pretense that the integrity of the sinking fund demanded the restoration, when in fact the sinking fund instead of being in arrears was largely over two hundred millions in advance of the pledges of the Government for its preservation. In restoring the 10 per cent. duty the revenue fell off in consequence thereof \$20,000,000, a sum the Treasury of the Government lost, but how much the pockets of the manufacturers were enhanced by the additional duty of 10 per cent. no one will ever know. The record, too, will show that the Republican party in the main resisted the reduction of the tax from \$2 to 90 cents per gallon on spirits, and from 24 to 16 cents per pound on manufactured tobacco, although experience has shown that the reduction in each instance was productive of more revenue to the Government, as the reports of the Commissioner of Internal Revenue plainly attest.

There are, in this grand country of ours, as there are in every country, three great productive sources which lie at the foundation of national wealth and prosperity. Need I name them? Agriculture, manufactures, and commerce.

The effect of the present protective system has greatly increased, for a time, the profits of the manufacturer at the expense both of agriculture and of commerce; but it may well be doubted whether the permanent prosperity and success of the manufacturing interests have been as firmly established and built up by the protection afforded them as they would have attained to under the beneficent auspices of the revenue principle, which would have struck the shackles from the giant limbs of agriculture and commerce, and thus by their increased capacity and prosperity have reflected upon their economic sister a part of their own genial light and heat.

This leads me to inquire, is there really a positive antagonism between either of these three great economic branches? That there may be temporarily and in isolated instances it cannot be denied; but speaking in the broad generalization of the nation's prosperity, can it be that either of these three great branches of economic power will successfully survive the downfall or permanent injury of either or both of the others?

If we take manufactures, for instance, and by a system of protective and prohibitory duties cut off from the farmer all foreign markets for his produce, the home market supplying only a limited demand, until it falls in value below the cost of production and he is actually driven into bankruptcy, will not his impoverishment and incapacity to purchase lessen the demand for the wares or goods of the manufacturer until he, too, follows in the same path. It is the old story of killing the goose to get the golden egg. So with commerce. When by a prohibitory system of imposts foreign nations are driven from our markets and are compelled to seek other markets for their productions, of course they cease to purchase ours, and they naturally trade and barter with those nations whose tariff laws are liberal and admit of an interchange of products. In a word, commerce is reduced below the expense of carrying, and that interest along with agriculture wanes and dwindles. The number of people engaged in this country in agriculture is about one-half of the whole population; in manufactures and mining, about one-fifth, and in commercial pursuits about one-twelfth.

If we take individual instances and for limited periods of time, high protective duties have greatly enriched manufactures. Very large estates have been accumulated under the advantage of protection; but generally in the course of a few years competition, under the stimulus of protection, overcrowds the market and a consequent fall in prices is the result. This was illustrated a few years ago, when the duty on wool and woollens was placed at such a high rate as to amount to the absolute prohibition of the foreign products, and woolen manufacturers sprang up all over the country. Soon the home markets—and we had no others, because the duty was so high as to entirely prevent all exchange or trade in those goods with foreign nations—were glutted, and prices fell below the cost of production, and bankruptcy overtook woolen manufacturers everywhere, unless they were backed by enormous capital. Ruled down as they were to the home market by the restriction of a protective duty, with the doors of all other countries closed against them, for as the United States prohibited by high duties foreign woollens, thus refusing to buy of foreigners, they in turn would not buy our fabrics, and hence the stagnation in that business, ending in bankruptcy in thousands of instances of the weaker establishments. The strong only were able to stand the storm. Markets, world-wide markets, are necessary to the permanent prosperity of manufactures, and not protective duties, which enrich suddenly and unduly for a time but end in increased demands for protection until an unhealthy competition created by enormous duties gluts the home market, cuts off all foreign markets, and the whole lapse into a state of dry rot because of the need of the reciprocal benefits of a less-restricted foreign trade. When prices become so high that the people are unable to purchase, and consumption falls off, of course manufacturers as well as people are injured.

The highest degree of prosperity for a nation is attained when all restrictions upon international exchange are removed; when the citizens of one country can buy where they can do so cheapest, and sell when it can be done at the highest price. This is the perfection of the freedom of commerce, and its influence on the general interests of a nation leads to the highest degree of prosperity. Even the manufacturers, who constitute an important portion of the nation, do not fail to receive their share of the general benefits which unrestricted commerce bestows. Under the influence of the liberal terms of the treaty concluded by Mr. Cobden in 1861 between England and France the French manufacturers were greatly alarmed lest their business would be largely interfered with by English competition.

The result was, in 1863 the French exports to England and of England to France were largely increased. The effect of a protective tariff upon the foreign commerce of a nation is happily illustrated by a writer in one of the New York dailies of last December, in which the revenue-tariff principle is most favorably contrasted with that of the protective principle by a reference to the exports and imports of Great Britain and the United States during the two decades just passed. Says the writer:

The United States, under a protective tariff, had a total trade, exports and imports, of \$687,192,176, which expanded to \$1,613,770,633 * * * when England still had a general tariff. She had a commerce of \$1,732,110,000, while twenty years later, and under a free-trade policy, the commerce of England expanded to \$3,171,445,000, an increase of \$1,439,335,000.

The writer then proceeds further to say that the English exports, if reckoned per capita, have nearly doubled in percentage with those compared with the United States. The figures show that, taking the exports of the United States for the years 1860 and 1880, the increase per capita was only 35 per cent., while in England, under bad harvests and climatic disadvantages, for the same years the percentage of exports increased in 1880 65 per cent. over those of 1860. So much for the revenue principle.

A great deal is said in American protection circles about cost of production and the pauper labor of Europe coming in competition with American labor. Protection is a burden upon agriculture especially. The large mass of the American people are engaged in the great and enduring work of agriculture. Granting that every man connected with manufactures from the millionaire owner down to the humblest child that sweeps the floor of a factory is in a greater or less degree a partaker of the profits which accrue by reason of the duty laid upon foreign goods, and which, of course, raises the price of the American article that much; say, too, if you please, that there are seven millions of persons engaged in this country in manufacturing of all sorts; will any one pretend that the other forty-four millions of people in this country should be taxed 50 or 100 per cent. in order to swell the profits of that individual or corporation, as the case may be? Where is the justice in taxing six men that additional wealth or power or privileges should be showered upon the seventh man? Oh, but the protectionists say at once that the farmer is enabled to sell his farm or garden or dairy products at a larger price to manufacturers' operatives. In a limited sense that may be so. Just around the given locality of a manufacturing center that may be true. But the farmer is exposed to the open and active competition of the whole country and all of the world; for generally under our present tariff the farmer is protected in a very few things that he raises, and even on those articles on which a duty is levied it is worthless to him in some instances.

Of what value is 20 cents per bushel on wheat to the American farmer? No wheat is brought to this country of any consequence, and the price of wheat would remain the same whether the duty was 20

cents or 100 cents. No, the argument of a home market is a delusion and a snare, hatched up by the protectionists to cover up the foul iniquity which he is enabled to practice upon the consumers of the country. If the production and consumption of wheat is a fair gauge of the production and consumption of other articles of food by a given community or State or any number of States, then we can form some estimate of how far the protectionist is warranted in upholding his pet theory, that protection is justified because it furnishes a home market to American farmers. The States of New York, Pennsylvania, Ohio, and the six New England States in 1881 raised 80,192,904 bushels of wheat. At the ratio of five bushels per head of population per annum, these nine States lacked not over 10,000,000 bushels of wheat of supplying themselves.

Now, the entire crop of wheat in the United States in 1881 amounted to 459,591,093 bushels. Deducting the 80,192,904 bushels produced in the nine States named, and adding the 10,000,000 bought for consumption from other States of the Union, and we have about 360,000,000 bushels of wheat. Suppose the people of the remaining States consume 160,000,000, then there are 200,000,000 bushels that must seek a market abroad or rot in our barns. It is hoped that the United States will raise this year from 250,000,000 to 300,000,000 bushels surplus for export. If England, Germany, and France were to shut off our wheat from their ports by a high prohibitory protective tariff, wheat would not bring half its present price per bushel in this country, and every department of business activity would feel the crushing blow. Now, what becomes of the vaunted theory that a protective tariff affords a home market and thereby increases prices? With the wonderful facilities for transportation to the markets of the whole world in this the most auspicious era of the world's known history, the prices everywhere are much the same minus the cost of transportation. In this light protection, instead of healing, would bring ruin upon its leaden wings.

Under the authority of that clause of the Constitution already quoted, and nowhere else, Congress finds the power to pass a tariff law. To raise revenue alone is the avowed object of that power given in the Constitution to Congress. It is strange beyond the power of reasonable conception that any one could so strain and misconstrue the language as to derive the power to levy taxes for the avowed purpose of protecting any particular interests. The position of the extreme advocates of this theory, that of protection for protection's sake, such as the distinguished Senator from Maine and the gentleman from Rhode Island [Mr. CHACE] and others of that school now announce, had it been insisted upon in the convention of 1787 as a *sine qua non* to the constitutional compact, would no doubt have proved fatal to that instrument.

But this school of political theorists in this country is as old as the Government itself, if not older. Privileged classes have ever had their advocates in all governments, and ours constitutes no exception, I am sorry to admit. That laws should be enacted to oppress one portion of the people for the benefit and protection of another class has always been maintained by one party and opposed by another. That difference of opinion as to the nature and duty of government constitutes the dividing line between the Democratic party and the Republican party to-day.

Look at the question for a moment. All of us, both Democrats and Republicans, want to maintain the Government that order and law may be maintained and life and property protected against violence. That Government must be upheld by a system of taxation. What, now, shall that system be? Shall it be a system of equal and just laws bearing alike upon all, or shall it be so framed as to work inequality and hardship upon a portion of the people and of benefaction and protection to another class? Now, if the doctrine that the greatest good for the greatest number be sound in politics, and, as I believe, is the test of a democrat in any republic, of course to oppose that doctrine is to declare that the greatest good for the least number is the true and right position, and he who advocates it must necessarily be an anti-democrat.

Does anybody pretend to deny that the present tariff operates oppressively upon the great mass of the people, and at the same time affords protection and creates wealth for the minority class? If this be true, how is it that any one who claims to be a democrat, preferring the interests of the many to those of the few, but being just even to the few, can favor a tariff for protection for protection's sake? A democrat must prefer a revenue tariff to a protective tariff. If in the adjustment of the details of a revenue tariff incidental protection is afforded certain interests, it is only the incident, and not the object, and therefore does not affect the principle.

There is, I undertake to say, and the history of political parties in this country and in England shows it, no stronger or fuller or more definite mark of distinction between those parties than is furnished by their divergent views and principles concerning the laws which should govern in levying and collecting taxes for the support of government.

The truth is, that very difference of opinion has been the leading and immediate cause of all the strife and civil commotion which has at different times convulsed this country. Why it was taxation that fired the first gun of the American Revolution, that has been repeated until it is trite; it was taxation that brought on the whisky insurrection in Pennsylvania, so eloquently referred to by the able chairman of the Committee on Ways and Means in a recent speech. He

might have gone further, and truthfully interpreted the opposition of the Federal party to the acquisition of Louisiana in 1801 by Mr. Jefferson to this same desire upon their part to foster and build up the doctrine of the protection of the few at the expense of the many, as the acquisition of that vast territory so admirably adapted to agricultural pursuits, and out of which several splendid States have been organized and admitted into the Union, would thereby create and establish for all time a powerful advocate of equal and just taxation laws. Federalism foresaw this result and at once denounced Mr. Jefferson for this splendid stroke of his far-seeing diplomacy and wise and patriotic statesmanship.

A little later on, in 1821, the opposition to the admission of Missouri was really owing to this principle, fearing her influence against the principle of protection. True, the slavery issue was thrust in, but the true cause of opposition was the jealousy of protection against the revenue policy.

Again, in 1832-'33, the shock then felt to the Union was caused immediately by the difference that existed as to the manner and extent of levying and collecting taxes. In this instance the friends of free trade in South Carolina were driven into a false position of nullification and were forced to retreat by a revenue-tariff Democrat—the illustrious Jackson.

Again the great center of opposition to the annexation of Texas to the Union as a State was the hot-bed of protection. Texas, with her vast agricultural wealth and resources, with territory sufficient, if carved into States, to equal five such as the great State of New York, was bitterly opposed. Could it have been for any other reason except that her interests must be classed with those of the great West and South in the matter of arranging tariff duties? With the admission, too, of Texas came the introduction of the lowest revenue tariff ever existing in this country, the Walker tariff of 1846, under which our revenues went up in a brief space of time from a little over \$30,000,000 to \$54,000,000 per annum.

Protection for protection's sake is abhorrent to the genius of free institutions and to the constitutional equality of American citizenship, and derives its paternity from the rankest Federalism. And, now that sectional prejudices are fast disappearing, it cannot be long before the people of the great agricultural West and of the Mississippi Valley will demand, equality of taxation, even though it should cause the overthrow of the Republican party.

Such a construction of the Constitution has been overruled and scouted by the highest judicial tribunals of this country time and again. Indeed, in the face of these judicial decisions, to say nothing of the gross inconsistency and incongruity of such a doctrine with the very genius of American organic law, it is inconceivably strange that any American statesman can conscientiously maintain it.

What are its objects? To pay the debts and provide for the general welfare of the Republic. To execute those patriotic objects it becomes necessary that every American citizen should surrender a part of his property. Patriotism demands that sacrifice at the hands of every citizen. To meet this demand we have upon the statute-books a tariff act, placed there and kept there by the votes of Republican Senators and Representatives and a Republican Executive. Does that act conform its provisions and operations to the purposes defined in the Constitution? Does it lay equal stress upon all of the citizens of this country, and treat all alike in collecting from them this stipend by which the public Treasury is supplied and the Government maintained?

Who, in view of the gross inequalities and monstrous spoliations of the present tariff, will dare answer this question affirmatively? Not even the author of the present tariff act, and its present chief advocate, would dare answer that question affirmatively. Not its godfather in the second degree, the able champion of protection, [Mr. KELLEY,] would dare answer it affirmatively. If all of the money drawn by the cunning devices of this tariff from the pockets of the people could be applied for one or two years to the liquidation of the public debt and the public expenditures, it would be a very different question; but when it is safely calculated by the ablest statisticians of this country that not more than one dollar out of five collected from the people ever reaches the public Treasury, the remaining four going into the pockets of the owners of protected industries, the wrong to the great mass of American consumers becomes a flagrant crime against the liberty of the citizen, and a monstrous iniquity in the sight of justice and equal rights.

There is much ignorance but still greater perversion of the truth and the facts concerning the operations of the tariff and the relation which political parties in this country hold to it.

No party in this country has ever advocated the abolition of all imposts upon imports, or absolute free trade. A certain amount of revenue is required to be annually collected, and it must be done either by direct taxation or by a system of imposts. All parties prefer the latter mode. The point of difference lies in the degree or extent to which the mode shall be applied. The Republican party having placed the present highly protective tariff upon the statute-book and steadily and successfully kept it there for twenty years, thereby declare, not by words only but by the most solemn of acts, their preference for the principles and policies of the present tariff; while the Democratic party, recognizing the necessity for a tariff, advocate a rate of duties much lower, even as low as will enable the government to derive the largest amount of revenue therefrom, rev-

enue and not protection being the constitutional purpose for which tariff duties are collected.

The Democracy freely admit, too, that in adjusting the details of any tariff law that it must perforce afford incidental protection to many industries, but the purposes of the tariff laws are to obtain revenue, while as they incidentally must afford protection to some industries these details should be so adjusted if practicable as to apply to those industries which obviously most equitably require it. Not that they have a right to demand it, but because it is the best policy to grant it, it being an incidental effect. Protection is the very opposite of revenue in theory. A purely revenue tariff, one affording no protection whatever, must be laid upon articles entirely of foreign growth or manufacture. Such, in a large measure, is the tariff of Great Britain to-day. Our immediate necessities for revenue are so great that we feel warned not to undertake by one act to start all the reforms that are needed; but from the present plan of revenue a grand step toward reform may be now taken, and followed up as time and events would justify. Any standard we can now adopt must afford incidental protection to some industries. Owing to the inability of law-makers to be exact and perfect in their calculations, it oftentimes happens that a given rate of duty upon an article will afford more or greater incidental protection to the manufacturer or grower of that article than was supposed at the time the law was passed, and frequently in the lapse of time circumstances change, which increases or diminishes the revenue or the incidental protection which the duty afforded upon it.

To undertake to recite before the American people the schedule of tariff abominations now disgracing the statute-books would extend these remarks to too great length. Look at them for a moment:

The duty on steel rails is \$28 per ton. They are now selling for \$60 or \$65 per ton. No foreign rails are brought here; hence, there is no revenue, or scarcely none, derived by the Government from the duty on steel rails; and yet the manufacturers of steel rails in this country not only realize a profit at \$32 per ton as would the foreign importer if he was allowed to bring them here and sell them for \$32 per ton, but the home manufacturer pockets in addition to that profit \$28 besides upon every ton of steel rails he can turn out from his factory. Here is a tax levied by the act of Congress upon the whole American people, all of which goes to the pockets of the home manufacturer and none of it to the Treasury for the general use.

Oh, but the protectionists say it is only levied upon the railroad directors and stockholders. Is any one so ignorant as not to know that this \$28 per ton is distributed out in the increased freights and fares, and the people who send their produce or travel on those roads have every cent of this \$28 per ton to pay? It is a tax upon the women and children who send a pound of butter or a bushel of potatoes or any other produce to market. Everybody pays it. The best possible excuse which the advocates of protection can plead is that some industries are unprofitable and that it is the duty of the Government to take them under its protective wing and tax all of the people for their benefit. In other words, hand around the hat and take up a general collection for these sickly wards.

The present tariff discriminates against necessities and in favor of luxuries. Only 9 per cent. of the entire list of dutiable articles are classed as luxuries, while textile fabrics, comforts, and necessities comprise the bulk of the articles upon which a very high rate of tariff duties are laid, and from which the bulk of the customs revenue is collected.

Run through the present Morrill high-protective war-tariff and examine the rate of duties its articles bear, and it will be found that I have correctly stated that only 9 per cent. of the duty collected comes off of luxuries, which the rich alone consume; the balance comes from necessities, comforts, &c.

The following table is official:

Rates of duties collected in 1880 in ad valorem, taken from official returns	
Articles of luxury:	Per cent.
Laces, cords, gimps, and braids.....	35
Diamonds.....	10
Embroideries.....	35
Fancy articles.....	35
Richest kinds of cut-glass.....	40
Jewelry.....	25
Musical instruments.....	30
Champagne, in pints.....	47½
Champagne, in quarts, \$6 per dozen.....	50
Still wines, in bottles.....	32½
Duties paid in 1880, calculated in ad valorem, taken from official returns.	
Articles of necessity:	Per cent.
Cleaned rice.....	95½
Epsom salts.....	78½
Chicory.....	102½
Spool-thread.....	76½
Window-glass, common.....	from 58½ to 73
Band and hoop iron.....	75
Boiler-plates.....	69
Horseshoe nails.....	98
Locomotive tires.....	79½
Steel rails.....	99
Castor-oil.....	148
Croton-oil.....	136
Paris white.....	240
Balmoral alpaca.....	91
Blankets, valued at 36½ cents per pound.....	89½
Woolen hosiery, valued at 60 cents per pound.....	100½
Bunting, valued at 23 cents per pound.....	121

It will thus be plainly seen that care was taken by the Republican framers of the present tariff to so arrange its details that the burdens of taxation should bear heaviest upon the shoulders of labor and industry, while wealth and capital are shielded from the weight of these burdens.

Do the toiling masses wear laces, jewelry, and diamonds? But their consumption of coarse clothing, coarse blankets, woollens, iron in all shapes, leather, cotton goods, medicines, common window-glass, rice, &c., is enormously large.

Plate-glass, used for fronts to stores by our merchants and tradesmen in our towns and villages, pays 111.91 per cent., while cut-glass, used only by the rich, pays 40 per cent. Castor-oil pays a duty of 149 per cent. In 1880 the Government got a revenue of only \$488.50, while the American consumption amounted to a very large sum.

Bunting, used by the people for making the American flag, pays a duty of 121 per cent.; it is manufactured by but three or four factories in the United States, I understand. It used to be manufactured but by one factory. But it is useless to pursue this discrimination against the necessities consumed by the masses of the people; it would require too much both of time and space to treat the subject fully. In a word, the history of protection is the history of this invidious, unpatriotic, and inhuman discrimination. Injustice is illustrated upon every page of its annals, and the skeleton of its wanton inhumanity is found in every humble household.

Next to the fallacy of the home-market argument, which on examination is apparent, as it is clear that only a limited demand for supplies can be made, leaving the vast fields of production to waste or seek foreign markets, I next refer to the pauper labor of foreign countries for which protectionists seem to have such an unholy dread. And the first remark I want to offer is that the cost of production is not the only measure of the profits of exchange. As we are informed, for instance, in England cotton manufactures can be produced so much cheaper relatively than silks can that the English factors can afford to give the French silk manufacturer \$100 worth of cotton for \$90 worth of silk, because the silk which costs \$90 in France cannot be made in England for less than \$110 or \$120; hence there is a clear profit to the English of 20 or 30 per cent. in making the exchange at these rates. The French, too, can better afford to give \$90 in silk for \$100 worth of cotton, than to manufacture the cotton even at \$95, because it is easier to purchase cotton at \$100 from the English with \$90 worth of silk than it is to make the cotton in France at \$95.

So the cost of production was by no means the chief factor in the profit of the exchange of the cottons and silks between the English and French manufacturers.

The value of an article does not necessarily depend upon the cost of production alone; the great law of supply and demand has much to do in fixing the value of an article. These great principles of political economy, if left to work out their own natural results, would be in harmony, producing no evil effects in society. The element of labor would readily command and realize its just proportion of the cost of production, while the fundamental law of supply and demand would regulate the value after deducting the cost of labor in producing the article. But when the channels of trade are disturbed by statutory restrictions, which necessarily narrow the area for the operation of these great laws, there follow oftentimes abnormal and paradoxical results, such, for instance, in the protection which is afforded to the Bessemer Steel Company, producing a profit of nearly 100 per cent. to that highly favored company, (the wards of the Republican party,) which is not at all proportioned to the cost of the labor used for the manufacture of steel rails, for labor gets no more now than it did when their profits were only half what they are now, no doubt. So, too, the supply and demand which the world's open markets afford may, when crippled by statutory restrictions, have no effect upon the market of any given nation where such statute exists. As, for instance, in the open markets of Great Britain Bessemer steel rails are only worth from \$32 to \$35 per ton, while here they are worth that sum plus the duty, which is \$28 per ton, if no more, making from \$60 to \$65 per ton. The world's supply is not allowed to affect the demand in the United States, hence the American people, all of us, are taxed about 100 per cent. to swell the profits of this company, which made \$20,000,000 profit last year. Can these things be in a free country?

The profits of the capital invested in large manufactories is out of all proportion to the prices paid for the labor. Cotton factories earn about 20 per cent., woolen factories about 25 per cent., and iron establishments average 33½ per cent. Manufacturing stocks in many instances range from par to \$1,000 per share of \$100. Notwithstanding these enormous profits, even a few days ago in a Northern factory a reduction of wages was made, producing a strike of the operatives, and their places were filled by cheaper foreign labor just arrived. And can it be that the true inwardness of the opposition in the manufacturing States of the North, and of New England especially, to the late anti-Chinese act passed by Congress by such an overwhelming majority lies in the fact that these manufacturing capitalists want cheap cooly labor to compete with native American labor? That is, they want permission to obtain their labor in the cheapest market, but want a protective tariff to sell their goods to those same laborers and others at protective prices. Remove the restrictions upon trade. Let all of our manufacturers trade freely with the twelve hundred millions of people of the whole world, and not be confined to the fifty

millions within our own borders, so far as may be consistent with the demands for revenue. Markets, and not protection, is what this country needs.

But the tempting bait of protection is now being artfully and diligently held out to Southern capital embarking in manufactures by the manufacturing capitalists of the North and East; and no doubt it is very pleasing to Southern manufacturers. Each cotton and woolen and iron and leather factory in the South, although able to make fair profits if there were no restrictions upon the commerce of the civilized world and every nation and everybody were allowed to buy and sell where they pleased, no doubt does not object to 50 or 100 or 200 per cent. being added by the tariff to their profits. The natural advantages for the manufacture of cotton and iron goods in the South are superlatively superior to any other section of the Union or quarter of the earth, and nothing but the drawback of the existence of a large colored population in her midst, which keeps the Northern people in a state of political fermentation, drives capital away from us, and thus prevents her at a single bound from springing to the front of all states or countries in these and other manufactures. When the Northern people learn that their capital can be safely invested in the South and that it will be no more liable to be disturbed by political revolutions or disturbances in the Southern States than it is in the Northern States, then may we look for capital, ever wide awake to its own interests and security, to seek our inviting fields for investment. Capital now there could not be tempted to leave.

Northern and Eastern capital now has its ravishing eyes fixed upon the golden prize which the natural advantages and opportunities of the South hold out to it. Partisan prejudice in the North and the willful slanders of certain Republican politicians retard the South, and prevent capital from investing very largely in that section. Foreigners, too, stay away on account of race prejudice. They are gradually going there any way. Remove the race trouble and the prejudice in consequence of it in the Northern mind and in the minds of intelligent and industrious and skilled European emigrants, and remove the tariff restrictions or protection which now upholds Northern capital in their factories so long established, and in which so much capital and labor is invested—remove these and the influx of capital to the rich fields of the South would in a very few years transform the natural and virgin wilds of the South into citadels of industrial wealth and elegance.

Seemingly great sympathy is expressed by the friends of protection for American labor. I want to protect American labor, for it at last is the corner-stone of the Republic's prosperity and freedom, but I would protect it by making it free, allowing all citizens to work out their own destiny, without subjecting them to odious discriminations and burdens of unequal taxation while some are shielded and protected from those burdens. The protectionists want American labor protected; that is, if laws can be passed so as to afford protection to the laborers in their factories so that their own interests are likewise protected. They seem to think that the labor employed in the factories is the only labor in this country that deserves the benefactions of the Government. There is a vast deal of labor in this country besides the labor in factories, and all should be treated alike; that is, protect none, but oppress none by unjust laws. Neither should capital be protected, but give to every man the reward of his own labor and capital, unabridged by unjust discriminations.

If there is really any solid ground for this pauper-labor argument, and there is so much sympathy for American laborers, why is it that these same protectionists are such strenuous advocates of the most unobstructed, freest, and largest immigration to our shores of foreigners from every land, China not even excepted? Why is it that when any number of workmen or artisans strike for higher wages, that the capitalists proceed to substitute in their place labor at cheaper prices? Protectionists clamor for tariffs to increase their profits, and would, by legislative restrictions, force their merchandise and wares upon consumers at much greater prices than the same articles of foreign manufacture can be had if the tariff was removed; and yet when these same gentlemen come to supply their factories with labor they demand the freest and fullest liberty to employ the cheapest labor, no matter whether it is native or foreign, American or Chinese.

If ours is the boasted country we claim for it, with natural advantages of every kind, unequaled by any nation on the face of the globe; with superior agricultural, manufacturing, and mineral possessions, and with a population of over fifty million and increasing millions every year; with intelligence and enterprise unsurpassed by any other people; standing foremost in inventive genius and the skill which subdues nature and makes it subservient to art, how is it that we need laws to protect the trade of our artisans and manufacturers against the competition of foreign trade, and must tax the balance of our people—our farmers and all other classes—a heavy per cent. simply to sustain one class of our citizens? With all these natural advantages of which we speak, with proximity and transportation in our favor, why not successfully compete with foreign labor? If our manufacturers do not become rich by this protective policy it is because they have so long imposed the burdens of high prices upon the people, who are the consumers, until the masses have become unable to purchase, and the manufacturers are overcrowded

with their unsold wares—one class starving and the other surcharged with plethora, until the whole becomes infected with dry rot.

But is it true that European labor in factories is cheaper than it is in the United States? I am indebted to a well-known writer for these statistical facts and deductions.

The census of 1880 shows that \$47,115,614 worth of labor produced \$265,684,796 worth of manufactured woolsens, which is 18 per cent. upon the cost or value of the manufactured product. The price of wages in woolen factories in the United States is about 50 per cent. greater than the price of labor in Europe, therefore only 9 per cent. of protection is needed to place the American laborer in woolen factories on an equal footing against the European pauper labor; and yet the protection amounts to from 50 to 140 per cent.; that is, the manufacturer gets from 52 to 122 per cent. of the whole value of protection. This is the discrimination that our tariff makes in favor of protected capital and against protected labor.

In the manufacture of iron and steel in the United States the labor required to produce \$100 worth of manufactured goods is \$18.75. In the 1,005 establishments in the United States the value of production is \$296,557,685; value of wages, \$55,476,785. Twenty-four per cent. will more than pay for the whole labor.

Take now the difference in the cost of clothing, furniture, and housekeeping generally in this country and England for instance, and strike the balance, and the English laborer has been as well fed, as well clothed, as well housed, and at the end of the year has as much actual money in his pocket as the American laborer has. The American laborer has received larger wages than the Englishman, but he has also worked a longer time or more hours in the day. The American has received larger wages, but he has paid more for his family supplies of provisions and clothing and higher for house rent and fuel, so that at the end of the year he is really not so well off as the English laborer. Now, if these things be true, what does it prove? Only this: that while protection adds enormously to the profits of the capitalist engaged in manufacturing, it bears oppressively upon the poor laborer and his family, without whose watchful eye and brawny arm this wealth would not have been created.

The fair comparison of the effect of protection and free trade upon labor may be better shown, as it has already been ably done by others in this debate, by contrasting the price of wage labor in the manufactures in England on the one side and in Germany and France on the other side. Actual facts and figures go to show that in free-trade England the prices of wages are higher than they are in Germany and France, where they have, as we have in this country, a protective tariff, as the following tables, prepared by Mr. Young, of the Bureau of Statistics, conclusively establish, and which were used by the able gentleman [Mr. MULBROW] a few days since in his speech on this bill:

England.

Blacksmiths, per day.....	\$1 30	Tailors, per day.....	\$1 20
Bricklayers and masons, per day.....	1 44	Tinsmiths, per day.....	1 20
Cabinet-makers, per day.....	1 32	Wheelwrights, per day.....	1 32
Carpenters, per day.....	1 32	Farm labor:	
Coopers, per day.....	1 10	Experienced summer hands, per	
Miners, per day.....	1 46	day.....	84
Machinists, per day.....	1 36	Experienced winter hands, per	
Painters, per day.....	1 32	day.....	64
Plasterers, per day.....	1 42	Ordinary summer hands, per day.....	64
Shoemakers, per day.....	90	Ordinary winter hands, per day.....	40
Stone-cutters, per day.....	1 44	Female servants, per month.....	4 86

France.

Bricklayers, per day.....	\$0 80	Cotton-weavers, (principally wo-	
House-painters, per day.....	90	men,) per day.....	\$0 58
Ordinary laborers, per day.....	60	Engine-drivers, per day.....	1 47
Cotton-spinners, per day.....	1 60		

Germany.

Blacksmiths, per day.....	\$0 72	Tailors, per day.....	\$0 66
Carpenters, per day.....	1 20	Machinists, (ordinary,) per day.....	96
Cigar-makers, (male,) per day.....	72	Engineers, per day.....	96
Cigar-makers, (female,) per day.....	42	Farm labor:	
Factory hands, (men,) per day.....	72	Experienced hands, (summer,) per	
Factory hands, (women,) per day.....	60	day.....	65
Factory hands, (children,) per day.....	36	Experienced hands, (winter,) per	
Masons, per day.....	1 20	day.....	64
Piano-makers, per day.....	90	Female servants, (with board,).....	36c. 33m.
Salesmen and clerks, per day.....	72	per day.....	

It is not now denied that manufacturing in this country of almost any kind makes a profit of from 20 to 30 and even 40 per cent., and sometimes even more than that. But while that is admitted, who ever heard of a laborer in one of these factories becoming rich? Upon the contrary, are they not often driven to form trades unions, and even resort to strikes in order that they may realize for their labor a sufficient amount to enable them to support their families, leaving out the high duty of educating and fitting their children for the battle of life?

But the laborers in the manufactories of this country constitute only about one-fifth of the labor that is otherwise employed. And if a protective tariff really protected and benefited these factory people or laborers, which I have shown does not in any degree of proportion to the benefit received by capitalists so engaged, even then protection would be very unjust; for why tax the farmers and

mechanics and everybody else to protect the small percentage of our American laborers engaged in working in manufactories of different kinds? But this cry of protection to American labor is delusive, illogical, and intended to deceive. It has for twenty years deceived the people. The truth is, the people since the war have had their attention adroitly drawn off from their economic interests to vague sentimentality about the fate of the colored man, and their patriotism has been periodically aroused to the danger of the rebels and Southern brigadiers, lest they should break up the Union, without a gun or a soldier or a flag. But the intelligent people all over our common country are rapidly understanding the tricks that have been played upon them to divert their minds from the study of the real issue.

Protection, then, does not stop to spoliage upon the farmer, the mechanic, the merchant, the lawyer, the physician, the tradesman, and all of those persons in our country outside of the manufacturers, but in its selfish and unnatural greed it invades the households of those dependent creatures who toil in their factories from twelve to fourteen hours per day. And then if these half-starved pale-faced toilers should complain that their wages are too low, they are told that they can go, and that their places can be filled by freshly arrived foreigners, even Chinese. Protection thus requires its labor to compete in an open market where it can be hired cheapest, but at the same time demands of this Government to throw its fostering arms around capital invested in manufacturing and protect it from competition with foreign markets. Protection means, then, that capital shall have the advantage of selling its products in markets where competition is not allowed, but at the same time requires labor to rely upon itself in an open market, where all other labor may have full opportunity to compete.

Is that fair, is it honest, is it American? Twenty cents per bushel is the duty on wheat; that is the tub which is thrown to the whale. The friend of protection soothes the American farmer by pointing to this duty of twenty cents per bushel. But what farmer is so ignorant as not to know that this twenty cents duty does not add one cent to the price per bushel of his wheat? Why? Because there is no wheat brought from foreign countries of any consequence to this country. The surplus of farm productions exported and their price in foreign markets regulate the price of the whole crop in the United States. The farmer sells in foreign markets at the lowest prices and buys in America at the highest protective prices; sells in the lowest or cheapest, and buys in the highest or dearest market, thanks to the operations of our tariff laws. For twenty years the whole struggle has been to protect the manufacturer and capitalist and to oppress the laborer and farmer and other consumers. No matter that our national wealth is mainly derived from agriculture; no matter that in 1881 less than \$100,000,000 of our exports were manufactured articles, while our other exports, exclusive of bullion and specie, amounted to \$784,755,413, still the main effort by the dominant party has for twenty long years been directed to oppress labor in all forms, and protect and foster capital at its expense.

It is estimated by a competent statistician that there are not less than fifty men in the United States whose annual average income is \$1,000,000. There are 2,000 persons whose income is \$100,000 per annum; about 100,000 whose average income per annum is \$10,000; 1,000,000 whose average income per annum is \$1,000; and 14,000,000 whose average net income does not exceed \$400 per annum.

The present tariff is based upon the principle of taxing men upon their expenses instead of upon their incomes or property, which may make the poor man, with a family, worth \$1,000, pay more for the support of Government than a man who owns a million of dollars.

There are many rich people, be it said to their credit, who struggle to change this system, but the influence of party and outside issues control the votes of the poor men themselves and keep this system in vogue and them everlastingly downtrodden and poor. The poor pay in proportion to their property one hundred times more than the rich to support the Government.

The immense wealth which aggregates into the hands of a comparatively small number of persons, in many instances consisting of United States bonds, which pay no taxes, but which are securely protected by the labor and taxes of the people, seems to justify the proposition that this large wealth should in some way or other bear a portion of the great burdens of taxation. The owner of ten millions or one hundred millions in bonds pays perhaps less taxes to support the General Government or the State government than the owner of a small farm, or shop, or store. These last-named citizens and their families, in some instances, consume even more dutiable goods, upon which they pay a customs tax, called revenue, to the Government, than the millionaire with his millions or tens or hundreds of millions.

Why, then, should there not be an income tax that would subject all alike to pay taxes to the Government according to their income above a certain exemption? This mode of taxation is not new; it has been successfully tried in England during the reign of George III, and is the law in that country to-day, and it was the law of this country for two years, but it bore too heavily upon capital to suit the dominant party, and hence it was repealed and the taxes were laid upon labor and industry. The objects of taxation should be luxuries, not necessities—wealth, not industry.

Tariff and Tax Commission.

SPEECH

OF

HON. JONATHAN CHACE,

OF RHODE ISLAND.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 2, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. CHACE said:

Mr. CHAIRMAN: I shall support this bill in the hope that it may tend toward some settled policy, which, after protection to American industries, is more necessary for the welfare and prosperity of the country than any other one thing. A review of the legislation of Congress in regard to this matter shows us that previous to the year 1846 it was one continued series of changes—first a protective policy, under which the industries of the country would begin to expand and take on shape, and then a reversal of that policy, resulting in depression and generally in disaster. I believe also this measure is wise, for the reason that it will give an opportunity for individuals and for interests to make themselves heard and felt, which opportunity they do not have before the Committee on Ways and Means during the brief period that it is enabled to give attention to the subject. The interests involved are so vast and so varied, the questions assume such Protean shape, that it seems to me necessary that more time should be given to the consideration of the subject than it is possible for any Committee on Ways and Means to devote to it.

It seems hardly necessary to argue the necessity for this bill; for really no serious objection seems to have been made to it. But if it were necessary we have before us abundant example. Congress has appointed no less than six different commissions similar to this to consider and report upon a great variety of subjects. The Parliament of Great Britain, the most successful legislative body in the world, has approached this very subject by the appointment of a commission. The Governments of France, Italy, and Germany have also appointed commissions on this subject.

I do not consider the matter of delay which has been urged as seriously pressed. Perhaps I ought to make an exception in the case of my friend from New York, [Mr. HEWITT,] who seems to have based his whole argument upon the necessity which appeared to him to exist for hasty action in regard to this matter.

I consider it honor enough for one man to have been the author of the Morrill tariff; and I believe it will be shown that it has brought infinite blessings to this country. At the same time, it is admitted on all hands and on both sides that the changes which have been wrought in twenty years have brought about a necessity for a readjustment. New combinations, new processes, new nomenclatures, new tests have arisen in a great variety if not nearly all the industries. Things have grown out of relation to each other. The tariff being partly specific and partly ad valorem, having been adjusted to a scale of prices existing twenty years ago, should be readjusted to-day on account of the change of values.

If we needed any other argument, however, in favor of this commission I submit that the tariff bill presented to the last House by the Committee on Ways and Means is an ample and sufficient one; for of all the legislative monstrosities ever presented to a legislative body that was one of the most conspicuous—based upon no principle, intended to accomplish no specific end; neither a tariff for revenue only, nor for protection; raising duties on raw materials, reducing them on manufactures in some instances, and doing the reverse in others.

But I pass from the consideration of this question, as this debate has taken the shape of a discussion of the tariff itself, or of the question whether the policy of this Government shall be the protection of the industries of the country or not.

I am in favor of protection; protection for the sake of protection; protection with revenue—protection first. A distinguished Democratic member of this House, one who has been highly honored by his party, said to me the other day in discussing this question that "that legislation was best which brought the greatest good to the greatest number."

I suppose no one will dissent from that proposition; and upon that basis I propose to proceed in my examination of the subject. But it is said, "You have no right to administer the Government so as to protect the mechanical and manufacturing industries of the country; you have no right to frame your laws with such a wise and beneficent purpose in view; you are remanded and remitted simply and solely to the object of raising revenue." An examination of the eighth section of the first article of the Constitution shows plainly—so plainly that even a layman may see—that one of the objects provided for by that section in the levying of duties upon imports was to "provide" for "the general welfare." I need not read the section.

I suppose every member is familiar with it. The language is plain and specific that "duties" may be levied for the purpose of promoting the "general welfare." No nation can be prosperous or independent without diversified industries. No purely agricultural nation has been in modern times nor can be truly prosperous, and the people of the United States cannot maintain their various industries in competition with the cheap labor of Europe without protection.

You build forts and maintain armies to defend against a foe which may never come, and yet you say we may not protect the great material interests of the country against an adversary whose attacks are incessant. You maintain light-houses upon the ground that it is for the general welfare, that it is necessary for commerce. You carry on your post-offices at a profit in one State and at a loss in another, upon the ground of the general welfare. You take from the postal operations in Rhode Island \$129,000 per annum, and spend it in the State of Kentucky, on the ground of the promotion of the general welfare.

The Government made in the year 1881 the following profit on its postal operations:

In Maine	\$54,642 71
In New Hampshire	60,030 71
In Massachusetts	909,091 56
In Rhode Island	129,345 62
In Connecticut	164,577 54
In New York	2,011,475 43
In New Jersey	108,234 06
In Pennsylvania	653,403 85
In Michigan	192,371 21
In Illinois	294,448 81
In Wisconsin	48,701 82
Total	4,626,323 33

Which, together with \$2,481,129.35 it spent in postal operations in other States, largely free-trade States.

It is proposed to spend \$5,000,000 next year—and you, gentlemen, advocate it—for the improvement of the Mississippi River in order to promote the general welfare.

You levy a tax on certain articles and not on others because you believe the public weal is best benefited thereby. But the opponents to the American system say it is unfair to sections, that it is unfair of classes, that it is unfair to individuals. If such be the fact, if it can be shown that such is the fact, then for one I shall claim the privilege, as other gentlemen have done, of changing my mind; but until I am satisfied of that fact, and while I believe as I do this system is the best for the whole country, for all classes, for all industries, for all sections, I propose to maintain the system so far as I am individually concerned.

I propose to print with my speech a few excerpts from sayings of the fathers on this subject of protection, which I will not take the time of the House to read to-day:

Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts in every way which shall appear eligible.—*President Washington's last annual address*, December 7, 1796.

The revision of our commercial laws, proper to adapt them to the arrangement which has taken place in Great Britain, will doubtless engage the early attention of Congress. It will be worthy at the same time of their just and provident care to make such further alterations in the laws as will more especially protect and foster the several branches of manufacture which have been recently instituted or extended by the laudable exertion of our citizens.—*President Madison's special message*, May 23, 1809.

We have experienced what we did not then believe: that there exist both proficacy and power enough to exclude us from the field of exchanges with other nations; that to be independent for the comforts of life we must fabricate them ourselves. We must now place our manufactures by the side of the agriculturist. The former question is now suppressed, or rather assumes a new form. The grand inquiry now is, Shall we make our own comforts, or go without them at the will of a foreign nation? He, therefore, who is now against domestic manufactures must be for reducing us either to a dependence upon that nation, or to be clothed in skins and live like beasts in dens and caverns. I am proud to say that I am not one of these. Experience has taught me that manufactures are now as necessary to our independence as to our comfort.—*Thomas Jefferson, letter to Benjamin Austin*, Boston, 1816.

"Neither agriculture, manufactures, nor commerce, taken separately, are the cause of wealth; it flows from them combined, and cannot exist without each." "When our manufactures are grown to a certain perfection, as soon they will, under the fostering care of Government, we will no longer experience these evils, [resulting from a drain of specie under a free-trade system.] The farmer will find a ready market for his surplus produce, and what is almost of equal consequence, a certain and cheap supply of all his wants." "To this distressing state of things there are two remedies, and only two; one in our power immediately, the other requiring much time and exertion; but both constituting, in my opinion, the essential policy of this country. I mean the Navy and domestic manufactures. By the former we could open the way to our markets; by the latter we bring them from beyond the ocean, and naturalize them in our own soil." "But it will no doubt be said, if they are so far established, and if the situation of the country is favorable to their growth, where is the necessity of affording them protection? It is to put them beyond the reach of contingency."—*John C. Calhoun, remarks on the tariff of 1816, in the House of Representatives*.

Our manufactures will likewise require the systematic and fostering care of the Government. Possessing, as we do, all the raw materials, the fruit of our own soil and industry, we ought not to depend, in the degree we have done, on supplies from other countries. While we are thus dependent, the sudden event of war, unsought and unexpected, cannot fail to plunge us into the most serious difficulties. It is important, too, that the capital which nourishes our manufactures should be domestic, as its influence in that case, instead of exhausting, as it must do in foreign hands, would be felt advantageously on agriculture and on every branch of industry. Equally important is it to provide at home a market for our raw materials; as, by extending the competition, it will enhance the price, and protect the cultivator against the casualties incident to foreign markets.—*President Monroe's first inaugural address*, March 5, 1817.

Jackson never was indistinct, hesitant, or double-dealing in the declaration of his views, and here is what he said on the subject in his second annual message, December 7, 1830:

The power to impose duties on imports originally belonged to the several States. The right to adjust these duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole authority over imports to the Federal Government without limitation or restriction, saving the very inconsiderable restriction relating to their inspection laws. This authority having thus entirely passed from the States, the right to exercise it for the purpose of protection does not exist in them; and consequently if it be not possessed by the General Government it must be extinct. Our political system would thus present the anomaly of a people stripped of the right to foster their own industry and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely cannot be the case; this indispensable power thus surrendered by the States must be within the scope of the authority on the subject expressly delegated to Congress.

In this conclusion I am confirmed as well by the opinions of Presidents Washington, Jefferson, Madison, and Monroe, who have each repeatedly recommended the exercise of this right under the Constitution, as by the uniform practice of Congress, the continued acquiescence of the States, and the general understanding of the people.

As United States Senator from Tennessee he voted for the protective tariff in 1824. In his celebrated letter to Dr. L. H. Coleman, of North Carolina, August 26, 1824, he wrote what follows:

Heaven smiled upon and gave us liberty and independence. The same Providence has blessed us with the means of national independence and national defense. If we omit or refuse to use the gifts which he has extended to us, we deserve not the continuance of his blessing. He has filled our mountains and our plains with minerals—with lead, iron, and copper—and given us a climate and soil for the growing of hemp and wool. These being the great materials for our national defense, they ought to have extended to them adequate and fair protection, that our manufacturers and laborers may be placed in a fair competition with those of Europe, and that we may have within our country a supply of these leading and important articles so essential to war.

Thus, as we are told, in his threefold capacity, as Chief Magistrate, as legislator, and as private citizen, Jackson planted himself solidly and unmistakably upon the ground of protection to home industry by means of duties on imports.

James Buchanan, in a speech in the House on the tariff bill of 1824, said:

A few years ago the traveler going into the mountainous districts of Pennsylvania would have found a great number of furnaces and forges in active operation. Their owners were not only prosperous themselves, but they spread prosperity around them. These manufactories presented the best and surest market to the neighboring country for the products of agriculture. Thus they diffused wealth among the people, money circulated freely, and the manufacturer and the farmer were equally benefited. The present aspects of these districts present a melancholy contrast to that which I have just described. It is a just comment upon the policy of that country which will not afford a reasonable protection to its own domestic industry, and thereby gives to foreigners a decided preference in its markets. Although that portion of Pennsylvania abounds with ore, with wood, and with water-power, yet its manufactories generally have sunk into ruin, and exist only as standing monuments of the false policy of the Government. The manufacturers and their laborers have both been thrown out of employment, and the neighboring farmer is without a market.

Is it the policy of this nation to suffer the manufacture of iron to be destroyed? No nation can be perfectly independent which depends upon foreign countries for its supply of iron. It is an article equally necessary in peace and war. Without a plentiful supply of it we cannot provide for the common defense. Can we soon have forgotten the lesson which experience taught us during the late war with Great Britain? Our foreign supply was then cut off, and we could not manufacture in sufficient quantities for the increased domestic demand; the price of the article became extravagant, and both the Government and the agriculturists were compelled to pay double the sum for which they might have purchased it had its manufacture before that period been encouraged by proper protecting duties.

Daniel Webster, addressing a mass-meeting at Albany, August 27, 1844, said:

The term was well understood in our colonial history, and if we go back to the history of the Constitution, and of the convention which adopted it, we shall find that everywhere, when masses of men were assembled and the wants of the people were brought forth into prominence, the idea was held up that domestic industry could not prosper, manufactures and the mechanic arts could not advance, the condition of the common country could not be carried up to any considerable elevation, unless there should be one government to lay one rate of duty upon imports throughout the Union, from New Hampshire to Georgia, regard to be had in laying this duty to the protection of American labor and industry. I defy the man in any degree conversant with history, in any degree acquainted with the annals of this country from 1787 to the adoption of the Constitution in 1789, to say that this was not a leading, I may almost say the leading, motive, South as well as North, for the formation of the new government. Without that provision in the Constitution it never could have been adopted.

Ex-President J. Q. Adams, in an address to his constituents, October, 1844, said:

The tariff of 1842 has wrought wonders for the purposes for which it was enacted—the procurement of an adequate revenue and of protection for the native industry and free labor of the land. It has fully performed its promise in the production of revenue. It has restored the palsied credit of the nation, filled the coffers of the Treasury, provided ample means for defraying the current expenses of the years 1842, 1843, 1844, and 1845, and already paid off a large proportion of the heavy debt contracted by the preceding administration.

Nor will I recite here the articles produced in different States and the interests existing in the different States at present protected by our tariff. Suffice to say the list embraces every State in this Union, that it embraces every great interest, and I believe, before I am done, I will show every interest has been fostered, encouraged, and strengthened by this tariff.

Further, I maintain that no civilized nation on the face of the earth but shapes its legislation for this purpose. Even Great Britain herself, the mother of free trade and its great advocate, not only protected her industries by specific legislation, but she has herself, all along, protected them by customs duties on imports, and does to-

day. To be sure, her tariff is very brief. The number of articles upon which she collects duties is twenty, some say nineteen; nevertheless you will find by an examination of that tariff, taking tobacco for instance, she puts one rate on raw tobacco and another and higher rate of duty on manufactured tobacco.

Mr. KELLEY. I wish to say, while the gentleman enumerates the articles of the British tariff, that the official tariff itself shows fifty-three articles.

Mr. SPRINGER. The English system?

Mr. KELLEY. Yes; that is in the English system.

Mr. CHACE. I am aware of that. Great Britain assumes to lecture other countries on free trade, she claims trade should be free, untrammelled, that industries should be allowed to develop themselves naturally, normally, as they say. But does she follow that principle herself? She collects by duties on imports \$3 per capita per annum. We collect under our present tariff \$3.80. She collects on raw materials one rate, and on the same materials manufactured another rate. Is that protection, or is it not? I submit that it is.

She collected, in the year 1880, about \$95,000,000 with 32,000,000 of people, while we collected with 50,000,000 of people, \$193,000,000. Not such a very great difference. She collects \$62,000,000 per annum on articles which we export, while we collect \$43,000,000 on articles which she exports.

It is said that the levying of duties on imports is unjust to the consumer because the amount of the duties is added to the foreign price of the article and the consumer has to pay it. On the other hand, the original advocates of the American system claimed if you would protect American industries, that in time home competition would bring down prices to a point as low, or nearly as low, as they are in foreign countries.

I said in the opening the policy of this Government has not been uniform until 1846. Since that time it has been comparatively fixed for two periods of considerable length. From the year 1846 to the year 1861 we lived under a revenue system, sometimes called the free-trade system; from the year 1861 to the present time, under the protective system.

Let us see whether under free trade or under protection the consumer has been best off. I begin by taking the article of ordinary print-cloth, 64-square print-cloth. It is as well known and the prices are as easily obtained as the price of a barrel of flour in the market. It is a standard article. The duty on that is 5 cents a square yard, or 3½ cents a running yard. Now, the price of that article on the middle of last month was 3½ cents a yard, the duty being 3½ cents a yard. How, in that case, does the consumer have to pay the foreign price with the duties added?

Mr. KASSON. What is the name of the cloth you just mentioned?

Mr. CHACE. The ordinary standard print-cloth. The duty on the ordinary calico print is 5½ cents a yard; that on a running yard is 4½ cents. It is bought in the New York market to-day for 6½ cents, with 5 per cent. off.

Mr. CARLISLE. Is there any of that imported?

Mr. CHACE. No, none.

Mr. CARLISLE. If it will not interrupt the gentleman—

Mr. CHACE. Certainly not.

Mr. CARLISLE. What I claim, speaking for myself only, is this, that wherever you see the foreign goods in our market, duty paid, competing with the same grade and class of American goods, it certainly follows that the American goods have the duty added to them, for otherwise the foreign goods could not come here and compete.

Mr. KASSON. Except by sacrificing them, which is often done.

Mr. CARLISLE. Except by sacrificing them.

Mr. CHACE. Not by any means. I shall approach that branch of my subject shortly, and then I will be able to convince the gentleman from Kentucky that he is mistaken. My friend on my left, [Mr. HASKELL,] in the course of his remarks on this subject, brought a case before the House recently which verifies this point, in reference to the cost of cast-steel imported. He has satisfied the House, and I think gentlemen will be unable to controvert the position which he took, that the English manufacturer of cast-steel sells that article in our market at 2½ cents per pound less than he does in his own market. Why is this done? Why, to get rid of the surplus and to break down our manufacturers.

Mr. HEWITT, of New York. Will the gentleman now permit me to interrupt him for a moment?

Mr. CHACE. Certainly.

Mr. HEWITT, of New York. Does the gentleman from Rhode Island not know that the Treasury Department sent a commission abroad for the express purpose of investigating the very case that he speaks of; and that commission reported to the Treasury Department that the facts were not as alleged; and that the English manufacturers of cast-steel sold their products exactly at the same rates in Sheffield and on the Continent as they were invoiced to this country—

Mr. CHACE. When was that commission sent?

Mr. HEWITT, of New York. Some years ago.

Mr. HASKELL. Will the gentleman from Rhode Island permit me now to say a word in support of the position which I advocated here on the floor some days ago?

Mr. CHACE. Yes, of course.

Mr. HASKELL. The statement I then made I had from the De-

partment, and it was accompanied by papers and letters showing the price of the best cast-steel in ordinary lots in Great Britain to be 12½ cents per pound; and for a twelve-hundred-ton contract taken in the United States the same combination of manufacturers offered to sell the steel here and pay the duty at 9.3 cents.

Mr. HEWITT, of New York. I have no doubt of that, for they could afford to sell at that price and make money at it.

Mr. HASKELL. Exactly; but the true basis to determine as to whether or not a tariff increases the cost of a commodity is to compare the American market with the English market, and this steel is bought cheaper by the American sub-manufacturer to-day than the English sub-manufacturer can buy it in Great Britain. And we have a tariff while they have free trade, and we pay them 2 cents per pound less for the steel under our high tariff than they can get for it at home.

Mr. HEWITT, of New York. I think the gentleman from Rhode Island would perhaps prefer not to be interrupted further, or I should be glad to answer the gentleman on that point.

Mr. CHACE. I am very glad to hear gentlemen on this point. It is a very interesting discussion. It is going on admirably.

Mr. HEWITT, of New York. Without desiring to interrupt the gentleman from Rhode Island, I can show the gentleman from Kansas that English cast-steel is imported here to-day and sold, after paying the duty, in competition with American cast-steel; and therefore the duty, as stated by the gentleman from Kentucky, must be added to the price or the trade could not go on.

Mr. HASKELL. In reply to that I will say to the gentleman from New York that in France as well as in Great Britain the French and the English manufacturers, too, are selling cast-steel in a free-trade and protected country at higher rates than they are selling it here. Now, the test is not the theory that somebody pays the tax on the goods, but the plan to arrive at a conclusion is to go where free trade reigns and see who pays the most for his goods. In free-trade Great Britain you pay two cents more a pound on this steel than you pay in the protected markets of the continent of Europe and in America.

Mr. HEWITT, of New York. I deny the proposition absolutely, as to the same grades of steel.

Mr. HASKELL. And I assert the proposition absolutely.

Mr. HEWITT, of New York. Very well; the matter will have to rest there for the present.

Mr. KELLEY. Since other gentlemen have interrupted the gentleman from Rhode Island I hope he will permit me to say, as a member of the Committee on Ways and Means, that it is within my own recollection to have received from the Treasury Department for consideration by that committee the report of commissioners sent to England and to the Continent to investigate the market rates of steel in order to test the honesty of invoices sent to this country, when it was found that steel was sent here and sold at lower prices to the United States than it was sold in London, Liverpool, or Sheffield, or upon the continent of Europe. And Mr. Firth, the senior partner of the great house of Firth & Co., or Firth & Son—

Mr. HEWITT, of New York. Thomas Firth & Sons.

Mr. KELLEY. Mr. Firth made a communication in which he begs that the tariff might be so modified as to allow honest men to enter our market without perjury in preparing their invoices. I have read the letters in my official capacity.

Mr. HEWITT, of New York. If the gentleman from Rhode Island will allow me to make a statement, I will be very brief about it. I sat as the merchant appraiser in 1872 upon these very steel cases. I was the merchant appraiser who decided the fifty-seven steel cases, as they were called. I investigated every particle of the evidence, and had access to the books of the importers. And I say here, and it was confirmed by the Government commission which was sent out in consequence of that decision, that there was no single case of fraud shown, but on the contrary the invoice prices furnished to me as merchant appraiser were the identical prices at which they furnished steel to France, Germany, and the entire world.

Mr. CHACE. That does not prove anything.

Mr. HEWITT, of New York. It proves the matter in issue between the gentleman from Pennsylvania [Mr. KELLEY] and myself. I passed upon these cases to which he has referred, and I can tell the House and the country what the facts are.

Mr. KELLEY. I do not believe Thomas Firth plead guilty to such a state of facts unless the facts required it.

Mr. HEWITT, of New York. He was not guilty. He was an honorable gentleman, who invoiced his steel at true and honest prices.

Mr. KELLEY. I read his letter. It was opened in the Committee on Ways and Means.

Mr. HEWITT, of New York. The gentleman from Pennsylvania told me the other day that David Thomas told him there was no anthracite coal in Wales; and I have produced the letter of Mr. Thomas showing he had never made any such statement.

Mr. KELLEY. I will answer the gentleman on the coal question at the proper time.

Mr. KASSON. This discussion having now run off to coal, I think the gentleman from Rhode Island should be permitted to resume his speech.

The CHAIRMAN. The Chair understood that the gentleman from Rhode Island yielded for these explanations to be made.

Mr. CHACE. The gentleman from New York, [Mr. HEWITT,] I have no doubt, intends to be fair, but he does not meet the issue. It is well known that the policy of the British manufacturer supplemented by the British Government is to break down foreign industries, to get possession of and control the foreign markets, and it is no uncommon thing, no unusual thing. I presume the gentleman from New York himself may have pursued the same policy in his own line of business—

Mr. HEWITT, of New York. I never have.

Mr. CHACE. Well, then, he is a rare exception. As a merchant of many years' standing I must say it is no uncommon thing, it is the commonest thing for a man to sell goods out of his regular market at prices below the standard price. Lord Brougham, representing the English Government in Parliament, advised it and set it up as the policy of the government. It is practiced everywhere; and a little further along I will give gentlemen something to the point from English authorities as to this phase of the case.

But I wanted to call attention to a few articles, to see whether the fathers of this American system have been justified by experience or not, to see whether the prognostications they made have been borne out in the light of experience, when they said "protect these industries until they accumulate capital, acquire skill, learn the ways of trade, and seek out markets, and home competition will bring the price down so that the consumer shall not be the sufferer." If that position can be established, the principal argument, in fact the only real argument that has ever been made against this system falls to the ground.

I have cited one or two of these articles. My friend from Kansas [Mr. HASKELL] has helped me by introducing the steel question. I now want to call attention to a few others.

Clocks: who buys anything but an American clock, unless it be some fancy clock from abroad? American watches: they are protected by the Morrill tariff, and an industry in them has grown up in different parts of this land that is a matter for every American citizen to be proud of. No foreigner can sell a watch in competition with the American manufacturer.

Mr. HEWITT, of New York. Why, the Avenue is full of them.

Mr. CHACE. Full of foreign watches?

Mr. HEWITT, of New York. Certainly; Swiss watches. I bought one of them the other day myself.

Mr. CHACE. For one foreign watch that is sold there are one hundred American watches sold.

Mr. HEWITT, of New York. There is a large importation of foreign watches.

Mr. CHACE. And so of French clocks.

Mr. HEWITT, of New York. Then what becomes of them?

Mr. CHACE. There is not a large importation of watches. There is but a very small importation of them.

Mr. HEWITT, of New York. The gentleman is mistaken.

Mr. CHACE. I have not the statistics before me, but I take issue with the gentleman on that and will refer to the figures.

Sewing-machines, agricultural implements: the gentleman from Tennessee the other day made a piteous appeal to us on behalf of the agriculturist. He said his implements are taxed. I would like to see the farmer that buys foreign agricultural implements. My friend from New York [Mr. W. A. WOOD] told me the other day that he had exported as many as 10,000 mowing-machines in one year.

Mr. HAMMOND, of Georgia. You will not let any one get foreign machines. You tax them away.

Mr. CHACE. Does my friend from Georgia know what he is talking about?

Mr. HAMMOND, of Georgia. I think I do.

Mr. CHACE. Can the gentleman quote the prices? I assert here—I know assertion is not argument, but I challenge the gentleman to show the prices of foreign agricultural implements that can compete with the American article.

Mr. MORRISON. Then, why do you want a tariff?

Mr. CHACE. I expected some one would ask me that question, and was in hopes that he would. I will answer it directly; do not let me forget it. [Laughter.]

The list of articles is exceedingly long, and I will name the price of a few of them, some of the minor ones and some of the more important ones. There is a long list of cotton goods. There is jaconet, which sold at 16 cents a yard when the tariff bill was enacted, and sells to-day for 6½ cents a yard. You cannot buy it in Manchester at less than 6½ cents a yard. I take it that the consumer does not have to pay the duty added to the foreign price of that article. Cod-liver oil: the price abroad is \$1.30 a gallon; the duty upon it is 40 per cent., and the price here is 80 cents a gallon. Tartaric acid; the price abroad is .46; the duty is 60 per cent., and the price here is .46. Refined borax, an industry that is growing rapidly in the West: the price abroad is 14 cents a pound, duty 75 per cent., and the price here 14 cents a pound. Copperas: the price abroad ½ cent per pound; duty 80 per cent.; price here ½ cent per pound. Epsom salts: price abroad 13 cents a pound, duty 70 per cent.; price here 12½ cents per pound. And so with a long list of articles.

Now, these articles could not be manufactured in this country until the industries grew up under the fostering care of the Morrill tariff. So with brown sheetings, bleached sheetings, prints, sewing-

machines, and almost every kind of carpenter tools you can name. Great quantities of them are exported, some of them exported to Great Britain. So with augers and bits.

The gentleman from Kentucky [Mr. TURNER] the other day alluded to the poor carpenter who earns his bread by the sweat of his face shoving his saw, and said that he had to pay a duty on that saw. Indeed, has he not heard about Disston, of Philadelphia, who sends saws to Europe—quantities of them—sends them all over the world. As I said before, all farmers' tools, clocks, watches, cutlery, silverware, boots and shoes, and a long list of other articles which I will not tax the House to listen to.

As to this other question which my friend from New York [Mr. HEWITT]—I believe it was the gentleman from Illinois [W. R. MORRISON] that raised it—why do you want a tariff? I would like to read to the House on that subject some good first-rate free-trade authority. I will read in the first place a quotation from one David Syme, for which I wish to say I am indebted to the gentleman from Pennsylvania, [Mr. KELLEY.] I find it in his admirable paper on "a science based on assumptions." I like that term; I think it is very apropos, for if there ever was a science of assumptions it is British free trade.

David Syme, a British free-trader, went to Australia where he had an opportunity to get on the other side of the question and saw how it operated. Then he began to tell tales out of school. He said:

The manner in which English capital is used to maintain England's manufacturing supremacy is well understood abroad. In any quarter of the globe where a competitor shows himself who is likely to interfere with her monopoly, immediately the capital of her manufacturers is massed in that particular quarter, and goods are exported in large quantities, and sold at such prices that outside competition is effectually crushed out.

That is one reason why we want a tariff on these articles.

English manufacturers have been known to export goods to a distant market and sell them under cost price for years, with a view to getting the market into their own hands again.

This is an Englishman who says this.

The *modus operandi* is incidentally explained with *naïveté* in a report published some years ago by the House of Commons: "The laboring classes generally," writes Mr. Tremonheere, "in the manufacturing districts of this country, and especially in the iron and coal districts, are very little aware of the extent to which they are often indebted for their being employed at all to the immense losses which their employers voluntarily incur in bad times, in order to destroy foreign competition and to gain and to keep possession of foreign markets. Authentic instances are well known of employers having in such times carried on their works at a loss, amounting in the aggregate to £300,000 or £400,000 in the course of three or four years."

Losing more money than my friend from New York [Mr. HEWITT] said he lost.

Mr. HEWITT, of New York. Could there not have been a higher motive than to gain a foreign market? Might they not have had a conscience and desired to give employment to their working people? [Laughter.]

Mr. CHACE. Talk to us about the conscience of British free trade! Conscience! Where does the conscience of British capital lay? Locate it; describe it, if you can. British free trade with a conscience! British free trade, that opened the market of China for her opium with the guns of her fleet; which shot sepoys from her cannon in order to make them submit to British rule and to use British manufactures; which trod upon the Boers and the Zulus two years ago with a cruelty unparalleled, and for what? To get possession of their markets. British free trade, which has set her iron heel upon Ireland, which has destroyed Ireland in order that she might supply her with manufactured goods.

Mr. MORRISON. She did that when she was protecting like you.

Mr. CHACE. Protecting whom? She was protecting Ireland very much as she was protecting the colonies of this country a hundred years ago.

Mr. FORD. She destroyed all the Irish manufactures.

Mr. CHACE. Of course she did; she will destroy all our manufactures if we will take off our tariff; she will do it at whatever cost. I continue reading from Syme:

If the efforts of those who encourage the combinations to restrict the amount of labor and to produce strikes were to be successful for any length of time, the great accumulations of capital could not then be made which enable a few of the most wealthy capitalists to overwhelm all foreign competition in times of great depression, and thus to clear the way for the whole trade to step in when prices revive, and to carry on a great business before foreign capital can again accumulate to such an extent as to be able to establish a competition in prices with any chance of success. The large capitals of this country are the great instruments of warfare (if the expression may be allowed) against the competing capital of foreign countries, and are the most essential instruments now remaining by which our manufacturing supremacy can be maintained.

I wish to read also in this connection an article from the London Spectator. This is good free-trade authority also. That journal in an editorial discussion of the Indian budget of Major Baring, after saying that he had terminated the long controversy between the free-traders of Lancashire and the protectionists of Bombay by one splendid stroke, by abolishing import duties altogether, goes on to say:

The only real argument against the abolition of the import duties is that advanced by the higher natives of India, and entitled, if only because it is their argument, to serious attention. They say, and say truly, that one drawback to British rule has been the extinction of variety in native industry. The country may be richer as a whole, but large classes, such as the muslin-weavers, the carpet-makers, and

the metal-workers, have been ruined by the competition of Europe, and the whole people reduced to such a dependence on agriculture that a drought of two years is like a sentence of death passed upon whole populations. This evil, which is an evil, though it may be exaggerated and may also be compensated by great gains, can, they say, be partially obviated by protective duties, which give native manufacturers, especially of cotton goods, time to organize their factories, to instruct and discipline their hands, and to establish their connection with the retail distributors.

That is a very important element in this question—the matter of establishing connections with trade.

They cannot, the natives say, be independent at first, because they cannot work upon the scale indispensable if they are to compete with the vast and highly organized manufacturing system of Great Britain. Ultimately, they maintain, they will be able to compete with Manchester on equal terms, but they cannot do it yet. There is such force in this argument that we hardly wonder it should carry away every native trader.

There is force in it. Its force was exemplified when you took off the duty from salt. My friend from Michigan [Hr. HOKK] has told you how that operated. Salt industries all over the country went out of existence; and had not the duty been restored, we would have made no salt in this country.

Another and a staple argument of our friends on the other side—an argument that they love to use, which they roll under their tongues like a sweet morsel, which they hold up in every imaginable light, indulging themselves in all sorts of repetition of it as a splendid argument on the stump—is what is called "the farmer argument." In their appeals to the farmer they say that protection is a great injury to him. I am afraid sometimes that they take a little latitude and try to make the farmer believe that by reason of protection he has to pay more for his implements than he otherwise would, which I submit is not exactly true.

Now, what are the facts? How are we to establish the facts? A variety of tests may be adopted. First, let us look at prices of agricultural articles and of articles that the agriculturist has to buy. I wish to say that in examining this matter I found very great difficulty in determining the proper method of making the comparison. To take the figures of a single year would not of course be fair; and I find on an examination of the case that it would not be fair to take a decade, because there has been no decade under the present tariff—the Morrill tariff—when the industries of this country have not been subjected to very peculiar influences growing out of the war, the disturbances of labor caused by the war, the peculiar currency legislation necessitated by the war, and the disturbances of prices resulting therefrom. So, also, as to any particular decade previous to the war. The decade from 1850 to 1860 was subject to peculiar influences. During that decade there was poured into the lap of the people of this country \$1,100,000,000 of precious metals. I believe I am right.

Mr. KELLEY and others. Yes.

Mr. CHACE. So I have been obliged to take a period of five years—a lustrum; and I have selected with a view to a fair and reasonable examination of this subject the five years after the enactment of the tariff of 1846—the years 1846, 1847, 1848, 1849, and 1850, and the years 1876, 1877, 1878, 1879, and 1880. I have selected seven great agricultural articles, and seven great protected articles, including among them anthracite coal, which I do not like to mention in the presence of my friend from New York, [Mr. HEWITT.]

Mr. HEWITT, of New York. It is not protected.

Mr. CHACE. It is not protected directly, but as we know in New England it is protected indirectly very materially—

Mr. HEWITT, of New York. It is absolutely free.

Mr. CHACE. Because by putting a duty on the bituminous coal of Nova Scotia you prevent us from buying that at so low a price as we could otherwise do; and were not the duty imposed we would buy that bituminous coal instead of anthracite.

Mr. HEWITT, of New York. I want to help you by taking off the duty on bituminous coal.

Mr. CHACE. I understand the gentleman's "help," and I will discuss that directly.

Mr. MORRISON. Then, the duty on coal goes into the price.

Mr. CHACE. Certainly. I have selected anthracite coal because it is necessary in making a comparison as to the effect upon labor. I have selected seven great agricultural articles as representing agricultural products in general—wheat, corn, oats, butter, Kentucky tobacco, wool, and cheese. Then, in the other class, I have selected anthracite coal, salt, bleached sheetings, prints, No. 1 pig-iron, refined bar-iron, and railroad iron. So far as these articles appear in Burchard's report I have taken the gold prices as there given. But they are not all found in that publication.

I think that the prices as given by Burchard apply to wheat, corn, oats, coal, butter, Kentucky tobacco, wool, cheese, and salt. For the dry goods—bleached sheetings and prints—I have taken the market reports of the New York Journal of Commerce, which I suppose my friend from New York will admit to be pretty good free-trade authority, these reports being compiled by Reese, the commercial editor.

Mr. HEWITT, of New York. Very good authority.

Mr. CHACE. It is standard authority all over the country. The prices of iron I take from the Philadelphia market reports. In regard to railroad-iron I will say that I was unable to get any authoritative report with which I was satisfied for the year 1846. There are

plenty of reports to be had, but I desired such authorities as were fair and trustworthy. Hence for railroad iron the prices given are only for four years.

The price of iron, of prints, and of sheeting is the price in currency. I attempted to reduce it to gold, but the fluctuations were such that an attempt to make an average might lead to the common error of statisticians when they attempt to make averages. It is a dangerous thing for a statistician to attempt, and I admit it so far as it applies in this case; but it is the best we can do.

Let us see what the farmer's articles would buy when they went to market:

Table No. 1.

Articles.	1846.	1847.	1848.	1849.	1850.	Average.
Wheat.....bush.	\$1 08.5	\$1 36.5	\$1 17.5	\$1 24	\$1 27.5	\$1 22.8
Corn.....bush.	68	85.5	63.5	62.7	62.5	64.4
Oats.....bush.	39.5	49	41.4	38.7	43	42.3
Butter.....lb.	13	16	16	15	15.1	15
K'y tobacco.....lb.	4.7	4.8	5.3	6.1	8.2	5.82
Wool.....lb.	32.3	35.2	34.3	36.1	40	35.68
Cheese.....lb.	6.8	6.9	6.7	5	6.2	6.3
Coal.....ton.	5 72.5	5 70.5	5 39	5 59	5 73	5 63
Liverpool salt sack.	1 34	1 35.5	1 39	1 29	1 36.5	1 34.8
Bleach'd sheet'g yd.	14.95	14.2	14.25	15	14.75	14.43
Prints.....yd.	10.91	10.17	9.17	10	10	10.05
No. 1 pig-iron.....ton.	27 87	30 25	26 50	22 75	20 87	25 65
Ref'd bar-iron.....ton.	91 66	86 04	79 33	67 50	59 54	76 82
Railroad iron.....ton.	69 08	62 25	53 87	47 87	58 27	58 27

Articles.	1876.	1877.	1878.	1879.	1880.	Average.
Wheat.....bush.	\$1 18.5	\$1 60.7	\$1 24.2	\$1 22.3	\$1 25.3	\$1 30.2
Corn.....bush.	51.2	58.3	51.3	49	54.7	52.9
Oats.....bush.	36.1	42.4	32.8	38.5	43.8	38.72
Butter.....lb.	20.4	24	23.3	32.7	23	24.68
K'y tobacco.....lb.	9.8	9.8	7.1	8	7.7	8.48
Wool.....lb.	39.9	48.8	41.6	52	41.4	44.74
Cheese.....lb.	9.4	11.6	9.9	11.2	7.6	9.94
Coal.....ton.	4 19	3 38.7	3 54.9	2 89.8	4 08.9	3 62.3
Liverpool salt sack.	80.1	73.2	65	73.8	69	72.22
Bleach'd sheet'g yd.	12.25	11.72	10.87	11.43	12.66	11.78
Prints.....yd.	7.18	6.67	6.1	6.31	7.5	7.05
No. 1 pig-iron.....ton.	22 25	18 87	17 62	21 50	28 50	21 75
Ref'd bar-iron.....ton.	52 08	45 55	44 24	51 85	60 38	50 82
Railroad iron.....ton.	41 25	35 25	33 75	41 25	49 25	40 15

Agricultural articles are 6 per cent. higher; manufactures and fuel are 30 per cent. lower; making 50 per cent. in favor of the farmer. Labor is 25 per cent. higher; what the laborer buys is 25 per cent. lower; making 60 per cent. in favor of the laborer.

Table No. 2.

Articles.	Salt.	Coal.	Bleach'd sheeting.	Prints.	Pig-iron.	Bar-iron.	Railroad iron.
One bushel of wheat would buy—							
Under free trade.....	.91	422	8.51	12.21	107.3	35.8	47.23
Under protection.....	1.80	719	11.04	16.27	134.00	57.35	72.6
One bushel of corn would buy—							
Under free trade.....	.47	25.65	4.46	6.4	56.24	18.78	24.76
Under protection.....	.73	32.85	4.49	6.65	54.49	23.32	29.55
One bushel of oats would buy—							
Under free trade.....	.31	16.85	2.93	4.20	36.94	12.33	16.26
Under protection.....	.536	24.04	3.27	4.89	39.87	17.07	21.63
Ten pounds of butter would buy—							
Under free trade.....	1.112	50.75	10.39	14.92	131	43.74	57.69
Under protection.....	3.417	153.2	20.95	31.04	254	108.82	137.87
Ten pounds of cheese would buy—							
Under free trade.....	.474	25.09	4.36	6.28	55.02	18.37	24.23
Under protection.....	1.376	61.93	8.43	12.52	102.36	43.82	50.53
One pound of wool would buy—							
Under free trade.....	.264	14.17	2.46	3.54	31.06	10.37	13.68
Under protection.....	.661	29.65	4.05	6.99	49.16	21.64	21.68
Ten pounds of Kentucky tobacco would buy—							
Under free trade.....	.431	23.18	4.03	5.79	50.82	16.97	22.34
Under protection.....	1.117	52.69	7.19	10.66	87.33	37.38	47.37

Corn has been depressed in price on account of the tremendous increase of production. While the price of corn is comparatively lower than that of any agricultural product, still the farmer can produce it relatively cheaper, as all know who know anything about it, and he can land it cheaper at tide-water market.

But let me proceed with the table: under free trade the farmer could buy with one bushel of wheat .91 of a sack of Liverpool salt; under protection it would buy 1.8 sacks. Under free trade the bushel of wheat would buy 8.51 yards of bleached sheeting; under protection 11.04 yards. Under free trade it would buy 422 pounds of coal; and under protection, 719 pounds. Under free trade it would buy

12.21 yards of prints; under protection 16.27 yards. Under free trade it would buy 107.3 pounds of pig-iron; under protection 134 pounds. Under free trade, 35.8 pounds of bar-iron; and under protection 57.35. Under free trade it would buy 47.23 pounds of railroad iron; under protection 72.6 pounds.

Take Kentucky tobacco, which will appeal to my friend over the way. Kentucky tobacco makes the best showing of any of the enumerated articles. Ten pounds of it under his tariff for revenue would buy .43 of a sack of salt, but under protection it would buy three times as much, and so on, as will appear by the table printed above.

Mr. CARLISLE. Is the gentleman taking it in the leaf?

Mr. CHACE. I am taking Burchard's report on tobacco. I admit it is not the most trustworthy, but the gentleman himself quoted from it.

Mr. HEWITT, of New York. Was the tax paid or unpaid?

Mr. CARLISLE. The tax of 16 cents on the manufactured article?

Mr. CHACE. I quoted it at 8.46 cents, and there is no 16 cents in that.

Mr. HEWITT, of New York. It must be leaf tobacco.

The CHAIRMAN. The gentleman's time has expired.

Mr. KASSON. As much of the time was taken up in a quadrilateral controversy I hope he may be allowed the requisite additional time.

The CHAIRMAN. How much time does the gentleman want?

Mr. KASSON. I move that the gentleman be permitted to go on as long as he desires.

Mr. CHACE. My throat admonishes me not to take much more time.

Mr. KASSON. The gentleman does not want much more time, and I move he be allowed to proceed indefinitely.

The CHAIRMAN. The Chair hears no objection, and it is ordered accordingly.

Mr. CHACE. I have some interesting free-trade literature here which I should like to read to the House. I will not read any more tables. The fact is, agricultural products are 6 per cent. higher under protection than under a tariff for revenue. Gentlemen may traverse these figures. Here they are; I submit them; they will be printed.

There is no authoritative table in regard to the price of labor; but, after a great deal of inquiry of all sorts and from many sources, I have had no reply where labor was quoted less than 25 per cent. higher under the latter tariff than under the tariff for revenue. Some state it at 35 and some at 45 and some at 50. It is arbitrary, because there are no statistics. We have no means of fixing it, but every candid man will admit labor is 25 per cent. higher than at the former period. I find by examining a great many articles the laborer has to buy, including the fact that his rent is higher, that he buys his supplies for his living 25 per cent. lower under protection than under the tariff for revenue.

I assume that his labor brings 25 per cent. more, which is an advantage in his favor of 66 per cent.

To come back to agriculture: people do not go into business largely if it does not pay. Business that is depressed and oppressed by the legislation of a country is not likely to attract many persons to it. The gentleman from Kentucky, in his able speech a few days ago—it was an able presentation of the case from his stand-point, and I congratulate him upon the evident tone of fairness in which he treated the subject, and while I must differ with him materially on some of his premises, and facts also, I by no means assert that he has intentionally misstated facts—took occasion to compare the decade between 1850 and 1860 with that between the years 1860 and 1870.

The decade from 1850 to 1860 under the tariff of 1846 found the nation prospering in every department, new industries springing up, old ones in a flourishing condition, everything prosperous and promising, wages well paid and labor advancing, the Government in a sound condition financially, and left not only the Government but the people themselves almost bankrupt, the Government unable to borrow money at less than 12 per cent. although its expenses were a mere bagatelle compared with what they are now. The Government at that time was in such a condition that it had to ask the States to indorse its notes in order to secure a loan of the paltry sum of \$20,000,000. And further, had it not been for the fact that gold was discovered in California, and poured into the lap of this people \$1,100,000,000 in precious metals, the country would have been bankrupt and swamped absolutely.

Mr. MORRISON. That was one of the results of Democratic free-trade policy.

Mr. CHACE. On that point, too, I will take issue with the gentleman.

Mr. CARLISLE. Does not the gentleman from Rhode Island know that in 1858 and 1859 the Government sold its 6 per cent. bonds at a premium of 1½ per cent. in gold, and its 3 per cent. bonds in 1857 at par for gold?

Mr. CHACE. But did I not quote the facts aright when I stated that the Government had paid 12 per cent.? And the gentleman knows that the then Democratic President asked Congress at that time to propose to the States to indorse its notes in order to make the loan at all.

Mr. CARLISLE. That was under the act of December 17, 1860, just preceding the beginning of the war, and the paper of the Gov-

ernment was negotiated in 1861, when the country was trembling upon the verge of civil war.

Mr. CHACE. I think I can show the gentleman he is mistaken in that.

Mr. CARLISLE. And this transaction of the sales of the Government securities at less than par in gold became so common immediately after that that I have been somewhat surprised that this small transaction, which the gentleman now mentions, should have been referred to by gentlemen upon the other side of the House.

Mr. CHACE. But my point is, that the gentleman is comparing that decade with the decade between 1860 and 1870, a decade during which eleven States of this Union were absolutely shut out from the markets of the world, all industries of every kind suppressed, and labor of every kind otherwise engaged than in productive energy—

Mr. CARLISLE. But will the gentleman not do me the justice to say that I took the single year 1870 and the single year 1860? The gentleman is now referring to another point.

Mr. CHACE. I now refer to the gentleman's speech, which will show for itself.

Mr. CARLISLE. And you will find that I referred alone to the year 1870, five years after the war, and to the single year 1860, before the war had begun.

Mr. CHACE. The gentleman alludes to the decade from 1850 to 1860, and then compares it with the decade between 1860 and 1870, giving us the effect of ten years under the protective system.

Mr. CARLISLE. But still the gentleman will do me the justice to say that my figures for the purpose of making comparison related alone to the single years 1860 and 1870, one year before the war had begun and five years after the war had ended.

Mr. CHACE. And ten years of what? During four years of that time 2,600,000 of the bread-winners of this country had been taken from the walks of producers and made consumers. The Government had pledged its faith for an expenditure of over \$6,000,000,000 in carrying on the war. A large amount of it had been paid in cash and a large amount issued in the form of bonds, while eleven States, as I have said, were absolutely shut out from the whole world and every industry suppressed. The currency was inflated, the nation was readjusting itself to its abnormal condition of things, and yet the gentleman takes that year as a basis for comparison. I submit that it is not a fair comparison. It would have been fairer to take the year 1880.

But I return to my agricultural friends. From the year 1850 to 1860 the increase of the number of persons engaged in agricultural pursuits is set down as 938,000. Between the years 1870 and 1880—this is not absolutely correct, but I get it approximately from the Census Office—the estimated increase is 1,900,000 people engaged in that business, or more than double the preceding decade.

I have said that people do not go into a business that does not pay, or if it is much depressed or hampered by adverse legislation. Not only that, we find that the increase in the number of acres under cultivation in the first ten years was 50,000,000, and in the last ten years 99,000,000 or nearly 100,000,000. The increase in the production of Indian corn in the first ten years was 346,000,000 bushels, and in the last ten years 1,000,000,000. Increase in production of wheat 73,000,000 bushels in the first ten years, and in the last ten years 171,000,000 bushels. Increase in number of horses first ten years 1,900,000; last ten years 2,200,000.

Statement of the acres of improved land, bushels of cereals, number of horses, and value of farm productions, as returned at the censuses of 1880, 1870, 1860, and 1850.

While it grew richer during ten years of protection..... 1,173,315,154
In 1856 American ships carried 75 per cent. of all our water-borne freight.
In 1860 it had declined to 59 per cent.
Between 1860 and 1870 the free-trade cruisers, the Alabama, the Shenandoah, &c., nearly swept it from the seas.

We have grown to be the greatest wheat producing nation in the world. France is the greatest wheat producing nation after us, and we produce 50 per cent. more wheat than she does. We produce double the quantity that Russia does, and three times as much as any other nation.

Now, if the farmer gets more for his products and buys his protected articles for less; if he is doubling his production, and if double the number of people enter into the business, I ask is the business oppressed? I submit the case is made out.

I want now to call the attention of the gentleman from Kentucky [Mr. CARLISLE] to some figures that he submitted to the House in the matter of bar-iron. He says in his speech:

Our protectionist friends sometimes complain that we confine our statements to the cost of the labor necessary to convert the material from its last preceding form into the finished product, and that we omit the cost of the labor necessary to convert it into the various other forms through which it has passed.

Then he says:

In order that there may be no possible ground for complaint, I will include the cost of all the labor from the very beginning and compare it only with the duty imposed upon the finished article.

The gentleman then goes on to say—I will not go through all his figures upon that question; gentlemen can read them for themselves—but he goes on to say it takes two tons of ore to make one ton of pig-iron and that the cost of labor in mining ore in one ton of pig-iron is \$2.70. Then he says the total cost of labor in the pig necessary to produce one ton of bar-iron is \$4.35. My friend from New York [Mr. HEWITT] keeps his face straight. But it is hard for one to do so who knows what it really costs.

Mr. HEWITT, of New York. Does the gentleman from Rhode Island mean to assert that the cost of labor in one ton of pig-iron exceeds \$4.35? It does not cost so much as \$4.35 to make a ton of pig-iron. I do not confirm the figures of my friend from Kentucky. I have already told him I thought he was wrong.

Mr. CARLISLE. Not on that point.

Mr. CHACE. The cost of labor in one ton of bar-iron, the gentleman from Kentucky says, is \$13. The whole cost of the labor in getting the ore, the fuel, &c., in producing one ton of merchant bar-iron the gentleman makes out to be \$20.05. That is the whole cost of everything there is in it.

Then the gentleman quotes from the census report on iron and steel which he finds on page 11. There they tell us that in the manufacture of iron there were consumed 7,700,000 tons of ore. But he did not allude to the limestone, of which there were 3,169,000 tons. He does not put in anything for the cost of that. He said he was going to give us the cost of the labor on that material, but he said nothing about the limestone or fuel. He says:

But passing over this important consideration, let us see what is the rate of duty necessary to equalize the cost of production so far as the wages of labor constitute a part of that cost; and in making this inquiry I shall include the cost of all the labor employed in the production of the finished article, beginning with the material in its crudest form. Our protectionist friends sometimes complain that we confine our statements to the cost of the labor necessary to convert the material from its last preceding form into the finished product, and that we omit the cost of the labor necessary to convert it into the various other forms through which it has passed. I think it can be clearly shown that in all cases where a separate and distinct duty is imposed upon the article at its various stages of manufacture, as for instance a duty upon iron ore, another upon the pig, another upon the bar, and so on to the last stages of manufacture, it is entirely correct when considering the last duty to consider only the cost of labor entering into the last manufacturing process, because the duty upon the previous forms or stages fully protects the labor represented by them; but in order that there may be no possible ground for complaint, I will include the cost of all the labor from the very beginning and compare it only with the duty imposed upon the finished article. Let us take for illustration a familiar article, merchant bar-iron, an article in relation to which we have the most authentic evidence showing the cost of labor in its production.

According to the statistics of the production of iron ore, as given us by the census of 1880, the amount paid for labor of all kinds was \$1.35 for each ton produced.

It requires two tons of ore to make one ton of pig-iron, so that the cost of labor in the quantity of ore necessary to make one ton of pig-iron is \$2.70. According to the same authority, the blast-furnaces in the United States produced during the last census year 3,781,021 tons of pig-iron, and paid for services of all kinds the sum of \$12,680,703, or \$3.35 for each ton. It takes 1.3 tons of pig to make one ton of bar-iron, so that the total cost of labor in the pig necessary to produce one ton of bar is \$4.35. The various products of the rolling-mills are so intermingled in the census reports that it is impossible to ascertain from the tables what it costs for labor to produce a ton of merchant bar-iron by itself, but during the present session of Congress, when the committee appointed by the New York tariff convention came before the Committee on Ways and Means, they were accompanied by a gentleman who stated that he was the president of the Amalgamated Iron and Steel Workers Association of the United States, a labor organization; and, in response to a question put by me, he said that the amount paid to labor for making one ton of merchant bar iron was \$13. Accepting that as a correct statement, we have the following figures:

Cost of labor in two tons iron ore.....	\$2 70
Cost of labor in one ton pig-iron.....	4 35
Cost of labor in one ton bar-iron.....	13 00

Total cost of labor..... 20 05

Mr. CARLISLE. I said distinctly in response to a question by the gentleman from Pennsylvania [Mr. KELLEY] that I had not been able to ascertain the precise cost of the labor in that material; but if furnished to me I would cheerfully include it. In other words, I admitted distinctly that my calculation did not include anything for the cost of the coal and the limestone and the cost of transportation.

Mr. CHACE. Then the gentleman gives away his whole case and admits his figures are absolutely valueless. He has given us as good and able an argument for free trade as probably can be made. His bar-iron illustration, which is as good as any that can be made, has no soundness in it. I say the same of the speech of my friend from New York, [Mr. HEWITT,] for I look upon his argument as the most unsound of all the unsound ones that have been addressed on this subject to the House. Below I insert the correct figures, as taken from the Bulletin:

THE COST OF THE LABOR EMPLOYED IN MAKING A TON OF BAR-IRON.

In the tariff debate now going on in the House of Representatives many references have been made to the cost of the labor employed in the manufacture of iron and steel. We have obtained as exact information as possible concerning the cost of the labor employed in making a gross ton of bar-iron, embracing everybody employed in the digging of the ore, coal, and limestone, the transportation of these materials to the furnace, the work about the furnace, the transportation of materials to the mill, and the work about the mill. This information we now lay before our readers, so that they may be thoroughly posted upon this important point.

Mr. CARLISLE, of Kentucky, states that \$20.05 represents the cost of the labor employed in the production from the ore of a ton of bar-iron. The statement which we have prepared shows the actual earnings of labor on each gross ton of bar-iron which is now produced by a very favorably located rolling-mill in Eastern Pennsylvania.

It is advisable, however, to say that this mill is more favorably located than the majority of our bar-mills are in several important particulars: first, it has a good supply of workmen to draw from, being situated in a manufacturing locality; second, while it pays its workmen fair wages it does not pay the highest wages in the American iron trade; third, it owns ore mines not far from its works, from which is obtained the greater part of the iron ore used, thus effecting an important saving in freight on that bulky material; fourth, it owns blast-furnaces which produce the pig-iron it needs, thus requiring no outlay for freight in that respect in securing pig-iron for the bar-mill; fifth, although it is obliged to pay considerable sums for the transportation of its purchased ore and coal, its location is such that the distance these materials are hauled by rail is under the average. With this introduction it will be understood that the figures we give are really very low—too low, in fact, to take as an average for the United States.

The following statement refers solely to the actual earnings of labor employed in the production of a gross ton of rolled merchant bar-iron, beginning with the production of pig-iron, then taking the intermediate stage of making puddled iron or muck-bar, and concluding with the finishing mill. Labor alone is here represented—not materials, royalties, leases, or actual amounts paid for freight. The blast-furnaces use a mixture of anthracite coal and coke.

1. PIG-IRON.

Wages earned in mining enough ore for one ton pig-iron.....	\$5 18
Wages earned in mining enough limestone for one ton pig-iron.....	33
Wages earned in mining enough anthracite for one ton pig-iron.....	1 71
Wages earned in making enough coke for one ton pig-iron.....	28
Wages earned in transporting above ore.....	56
Wages earned in transporting above limestone.....	96
Wages earned in transporting above anthracite.....	45
Wages earned in transporting above coke.....	22
Wages earned by furnace hands in making one ton pig-iron.....	2 75

Total wages earned in making one gross ton pig-iron..... 11 54

2. MUCK BAR.

It requires 1.13 gross tons of pig-iron to make one gross ton of muck bar. If there are \$11.54 labor earnings in one ton of pig-iron, in 1.13 tons of pig-iron, or one ton of muck bar, there are \$13.04. The whole labor earnings in one gross ton of muck bar are as follows:

Wages earned in making 1.13 tons pig-iron.....	\$13 04
Wages earned in mining coal used in puddling one ton of muck bar.....	1 71
Wages earned in mining ore used in fettling one ton of muck bar.....	90
Wages earned in transporting the above coal.....	56
Wages earned in transporting the above ore.....	20
Wages earned by muck bar mill hands in making one ton of muck bar.....	7 44

Total wages earned in making one gross ton muck bar..... 23 85

3. FINISHED BAR.

It requires 1.20 gross tons of muck bar to make one gross ton of finished bar, ready for the market. If there are \$23.85 labor earnings in one ton of muck bar, in 1.20 tons of muck bar, or one ton of finished bar, there are \$28.62. The whole labor earnings in one gross ton of finished bar are as follows:

Wages earned in making 1.20 tons muck bar.....	\$28 62
Wages earned in mining coal used in heating one ton of finished bar.....	89
Wages earned in mining sand used to one ton of finished bar.....	20
Wages earned in transporting above coal.....	25
Wages earned by finishing mill hands in making one ton of finished bar.....	6 31

Total wages earned in making one gross ton of finished bar-iron ready for market..... 36 27

4. SUMMARY.

The three preceding statements are not independent ones, to be added together. They represent the successive steps in the transformation of iron ore, limestone, and fuel into bar-iron, set forth as simply as possible. The following statement summarizes the whole operation, giving the quantities of raw materials used in making a ton of bar-iron and the total earnings of the labor employed:

Wages earned in preparing 3.53 gross tons iron ore.....	\$8 10
Wages earned in preparing .88 gross ton limestone.....	45
Wages earned in preparing 4.84 gross tons coal and coke.....	5 64
Wages earned in preparing .10 gross ton sand.....	2 20
Wages earned in transporting above materials.....	2 91
Wages earned at blast furnaces and in mill.....	18 97

Total wages earned in making one gross ton of finished bar-iron ready for market..... 36 27

It should be understood that this is not the cost of making a gross ton of bar-iron, but only that part of the cost which actually goes to the labor employed. The actual cost of making bar-iron includes a number of other elements—cost of materials, royalties, leases, actual amount paid for freight, insurance, taxes, commissions, allowance for depreciation of machinery, interest, &c.

All of the foregoing calculations have been very carefully made. All of the figures are taken from the books of the rolling-mill, except the figures for the mining of coal, the production of coke, and the amount of wages earned in the transportation of the materials. But we have obtained the wages earned in coal-mining and coke-making from actual miners of coal; and the figures for wages earned in the transportation of materials have been given us by a very competent officer of a railroad company which carries freight very cheaply.

A mill less favorably situated than the one herein referred to could not make bar-iron for a less outlay for labor than \$40 a ton.

My friend from South Carolina [Mr. AIKEN] charges that this legislation is sectional. "To be sure," he says, "I want a duty on my rice; I want rice to have a couple of cents a pound protection; but manufacturers of quinine up in Pennsylvania do not deserve any protection." Just look at it. The gentleman says, after we took off the duties quinine was much cheaper; well, by parity of reasoning, if you take off the duties on rice, people will buy it so much cheaper.

Mr. AIKEN. I hope you will take off the duty on rice.

Mr. CHACE. I will not do so.

Mr. AIKEN. It is the gentleman from Rhode Island who wishes to protect rice, and not the gentleman from South Carolina.

Mr. CHACE. The gentleman said in his speech on the agricultural bill—I quote from RECORD No. 59, page 35:

In my mind it is apparent that no protection should be given any article beyond that which would place the producer upon an equal footing with the foreign producer in the home market. For instance, 100 pounds of East India rice can be delivered in our custom-houses for \$2.90. It costs our home producers of rice \$4.33 to place a like quantity in our home market. The difference is \$1.43. To that extent I would protect the rice planter of my State and no more. This present tariff on rice is \$2.50 per hundred pounds. This is \$1.07 more than the difference in the cost of production here and production abroad, and just that much more than it ought to be, because it is taking by law from the consumer of 100 pounds of rice \$1.07, for which no earthly equivalent is given in return. And the same rule would hold good, Mr. Chairman, with all other protected articles; and, sir, I am sanguine that with this reduction our manufacturers would not shrink from competition with all other nations, nor with the "Ishmaelite of nations."

I am patriotic enough to want to protect every industry in this country. And there is where my friend from New York [Mr. HEWITT] falls into error. What does he do? If we take his advice I submit we would be amenable to your strictures when you tell us this legislation is partial; that we are legislating for one interest and against another. Why will you legislate for a man who has iron-works in New Jersey and not one who raises wool in Ohio? Will you legislate for a man who produces rice in South Carolina and not for one who refines quinine in Pennsylvania or New York? No; that would be unfair; it would be dishonorable; that would be amenable to the charges, rash as they have been, made against us on the other side. But we seek to protect every industry. What would the gentleman from New York do? Why should everything that has not been submitted to any "process of manufacture" be free of duty? That covers all agricultural products; it covers the tobacco from Kentucky, and yet the gentleman from Kentucky does not rise in his place and object.

Mr. HEWITT, of New York. The gentleman from Kentucky does not want any protection on his tobacco.

Mr. CHACE. Does he not? Have I not heard something about a convention out there demanding protection on hemp?

Mr. MORRISON. That was a convention of your folks.

Mr. CHACE. That will not do. They want it and mean to have it, and I more than half suspect that the gentleman himself is not really afraid that his plan will be adopted.

Mr. SPRINGER. Not by this Congress, perhaps; but by some other.

Mr. CHACE. I have already taken too much of the time of the House, and will not trespass much further. I wanted to read some more English free-trade literature; to call the attention of the House to the way the English treat this subject and treat us. It is excellent literature, and I hope gentlemen will read it carefully. I will print some excerpts from Farley's Resources of the Turkish Empire. They were published for English readers, not for us; they are eloquent. You will there see what would be the result upon our industries were we to adopt the policy which you desire us to.

Mr. MORRISON. That is the kind of trade we forced on Hawaii.

Mr. CHACE. Yes, and I do not approve the Hawaiian treaty.

Having seen the good effects of protection upon the industries of

this country, let us see the operation of British free trade in Turkey. I read from Farley's Resources of Turkey, a book written for Englishmen and not for us. He begins by describing the resources of that empire. At the time this book was written Turkey contained a population of 35,000,000 souls, and an area twice that of France. He says:

Few countries in the world possess to the same extent those natural advantages enjoyed by Turkey. Throughout the greater part of the empire the soil and climate permit of the almost inexhaustible production, in excess of the wants of the inhabitants, of those ordinary raw materials which form everywhere the great staples of food and manufacture. Grain, wool, cotton, hemp, hides, tallow, timber, are everywhere produced in abundance; while, in addition to these ordinary products, Turkey yields in profusion those rarer articles of merchandise, such as drugs, dyes, gums, fruit, vegetable oils, silk, sugar, and tobacco, which can only be abundantly and profitably produced under conditions of special advantage of climate and geographical position.

From the earliest times the fertility of the soil has been remarkable.

Of the various natural resources of Turkey which remain comparatively undeveloped, the most important, perhaps, are her mines and forests. Of the former it would be quite impossible to calculate the value, for the soil teems with mineral wealth ready to enrich those who have the energy to seek for it. Some of the ores of Galena, in the mountain, are very rich, yielding as much as 83 per cent. of metal. The mineral veins vary in breadth from two to ten feet, and, on an average, yield about 35 per cent. of mixed metal, consisting of lead, silver, and gold. The gold and silver are refined at the works to such a high degree that not more than two parts in a thousand of any foreign matter can be detected, and the lead is admitted to be of the softest and best quality.

The numerous and varied manufactures which formerly sufficed not only for the consumption of the empire, but which also stocked the markets of the Levant, as well as those of several countries in Europe, have, in some instances, rapidly declined, and in others become altogether extinct. The soap manufactures in Crete have, it is true, considerably increased; the manufactures of light silks and gold and silk embroidery from Cyprus are highly esteemed; the manufactures in steel for which Damascus was so long famous no longer exist; the muslin-loom of Scutari and Tirnova, which in 1812 numbered 2,000, were reduced in 1841 to 200; the silk-loom of Salonica, numbering from 25 to 28 in 1847, have now fallen to 18; while Broussa and Diarbekir, which were so renowned for their velvets, satins, and silk stuffs, do not now produce a tenth part of what they yielded thirty or forty years ago.

Bagdad was once the center of very flourishing trades, especially those of calico-printing, tanning and preparing leather, pottery, jewelry, &c. Aleppo was still more famous; for its manufactures of gold thread, of cotton tissues, cotton and silk, silk and gold, and pure cotton, called nankeens, gave occupation to more than 40,000 looms, of which in the year 1856 there remained only 5,500. Formerly there was no person who did not wear some article of silk; the embroidery of men's and women's dresses, the belts of the peasantry, the inner garments and the shirtings of the whole population above the condition of a laborer were of that material. But now taste has changed. Sheffield steel supplies the place of that of Damascus; cloths and every variety of cottons have supplanted silk; English muslins are preferred to those of India, and cashmere shawls have given place to the zebraws of Glasgow and Manchester. In the year 1827 the exports of cotton manufactured goods from Great Britain to Turkey amounted only to \$246,873; in the year 1857 they had increased to the sum of \$2,847,386, and during the year 1860 to \$4,225,395.

In Turkey every object exchanged is admitted, and circulates without encountering any other obstacle than the payment of an infinitely small part of its value in passing the custom-house. Accordingly, the Turkish markets, supplied by all countries, do not reject any of the produce that commercial spirit may send into circulation; they do not impose any tax on the ships that bring this produce; they are seldom, or rather never, the theater of those disordered movements occasioned by the unforeseen rarity of certain articles, which sometimes cause the prices to rise to an exorbitant extent and convert commerce into a system of perpetual alarm and danger. In fact, as I have said, liberty of commerce reigns without limit and free trade exists in its most extended form.

Now, the secret of all this is explained. In 1838 the Government of Great Britain entered into a commercial treaty with the Government of Turkey, or the Divan, who was called the Sultan when he was established at Constantinople. At that time, as we have seen, the people were practicing the arts in the highest degree of perfection. They were polished, cultivated, law-abiding, and intelligent; even the peasantry dressed in silk. The credit of the government at that time stood high. Soon after trade began to languish, the people to dress in poorer clothing, commerce dwindled, exports were reduced. In 1855 the Government of Turkey contracted a loan, which sold at a premium.

The following table, showing the dates, amounts, and rate of interest on loans contracted by the Turkish Government, shows the effect of free trade upon her credit:

Debt of Turkey.

Year issued.	Amount.	Interest.	Price, per cent.
1855.....	£5,000,000	4	102½
1858.....	5,000,000	6	105
1860.....	2,000,000	6	102½
1862.....	8,000,000	6	102
1863.....	8,000,000	6	100
1865.....	36,000,000	5	107½
1865.....	6,000,000	6	105
1867.....	2,500,000	6	103
1869.....	22,200,000	6	104
1871.....	5,700,000	6	73
1872.....	11,000,000	9	98½
1873.....	28,000,000	6	58½
1874.....	40,000,000	5	60½

Here her credit was extinguished.

As a contrast I print the following from the speech of my friend from Massachusetts [Mr. RUSSELL] in regard to Canada:

Sir Leonard Tilley, in moving the house into committee of ways and means, said:

"Mr. Speaker in moving that you leave the chair, and that the house resolve itself into committee of ways and means, I desire to make the usual financial statement. I may be permitted, sir, to say that at no period in the history of Canada has a government met Parliament with the financial condition of the country in the position it is to-day; at no period in the history of Canada has its credit stood so high as it stands to-day; at no period in the history of Canada, possibly, was the country, generally speaking, as prosperous as or more prosperous than it is to-day; and I propose, sir, in the statements that I am about to submit to the house, to establish that that prosperity is in a great measure dependent upon the policy of the government adopted by Parliament.

"I know, sir, that in the estimation of some of my friends opposite I have undertaken a herculean task; whether it would give the protection to the industries of the country which was demanded by the people, as evidenced by the elections of 1878; and necessarily we, who had given careful consideration to this matter, had to speculate to a certain extent with respect to its effect. But, sir, in 1880 the opinions that we had entertained in 1879 were being confirmed by the experience of the nine months. In 1881 they were still stronger, because evidence had accumulated to show that our position was the correct one; and to-day we stand in an impregnable position with respect to the results of the tariff both for protection and revenue purposes.

"Men were without employment, knocking at the doors of Parliament, knocking at the doors of the department of public works, asking for employment, and none could be got. It could not be expected under these circumstances that men could respond to the requirements of the honorable gentleman's tariff; for if they had not the means they could not buy either the products of Canada or the imports from other countries. The result was that, instead of obtaining an increase to the revenue, the revenue fell to what it was in 1874, before the increases were made, and the people refused to bear the burden that was imposed upon them.

How was it in 1879? We asked Parliament to give us such changes in the tariff as would not only protect the industries of the country but give us an increased revenue. Was there a response? I stated at the outset that the response was ample, provided the money had been paid in for the year 1879 that belonged to that year. And in the year that followed, what was the response? They gave us a surplus of \$4,000,000 and upward, because we found employment for the people; because, by obtaining for them employment and higher wages, they were able to buy more than formerly. Men who owned bank stock had greater value in it than in 1878 and 1879; men who had tenements unoccupied in 1878 and 1879 had tenants for their houses, and the additional revenue thus received on all hands enabled them to buy more than in previous years. Men who were formerly working at half time and on low wages received higher wages, and were working over time. Farmers who had low prices and found sales difficult, received high prices and prompt cash sales.

The following extract from a letter received by me from a citizen of Canada on the 27th of last month is to the point:

Sir Leonard Tilley certainly has not overstated the benefits which our protective tariff has conferred on Canadian industry. Under our old tariff, a "revenue tariff," so called, many of our industries were being gradually destroyed and some of them were driven from the country. One of your most successful industries, the Farr Alpaca Company, of Holyoke, Massachusetts, was so driven out of Canada, and I have Mr. Farr's statement that if the present tariff had been in force he would have staid here. In a word, I may say that in no country in the world are the manufacturing and industrial classes more prosperous than in Canada, while in no other country were they worse off than in ours before the adoption of our national policy. The British system of free trade is nothing more than organized selfishness calculated and intended to make Great Britain the world's work-shop.

If it had been universally adopted at the time Peel declared for it the world would now be fifty years farther back in all that tends to civilize and bless mankind. But for the wisdom and patriotism of the fathers of protection in your country the merchants and manufacturers of Great Britain would have by free trade undone the work of Washington and Jefferson. I feel strongly on this question, for I know the soulless selfishness of these self-styled philanthropists, the Cobden Club. Had they their way Canada would never be more than a sparsely settled colony, producing a raw material for British manufacturers. Our wonderful and almost inexhaustible natural resources would remain undeveloped and we would be forced into committing what seems to me to be nothing short of a heinous national sin—neglecting to use the resources which a bountiful Creator has so bountifully showered upon our country.

Canadians, however, are wiser than they were and our national policy is a fixity. Manchester may fret and fume but we intend to build up a country which will be a worthy neighbor to your glorious Republic.

So much for the testimony of a citizen of Canada, one of Great Britain's colonies. Again:

More than a hundred and forty years ago the treaty of Methuen, which was one of the principal causes of the beggary and want of Portugal, reduced her to the condition of a dependency of England, struck down her national spirit, and enslaved her people. By that treaty she abandoned all right to protect her own industry, and agreed to admit British woolen goods of all kinds without duty or restriction.

Turkey, India, Portugal, and Ireland all stand as a warning to us to beware of the wiles of British free-traders. But this battle has been fought and won. The question is settled. With the example of other nations before us; with the bitter fruits of our own free-trade spasms contrasted with the happy influence of our protective tariffs, our people are satisfied.

The laborer of this country is intelligent; he knows his interest and will vote to promote it. The farmer sees his smiling fields and bursting granaries and is more than contented with protection. You will not succeed in winning him.

Under the stability of a uniform policy for twenty years, enterprise is growing, spreading, and extending on every hand. Over a hundred cities in the West rest by day a cloud of smoke, and from a thousand chimney-stacks by night rises a pillar of fire which the laboring-man sees and recognizes as the ambient symbols of his own prosperity. The American Congress will legislate for Americans, not for foreigners; for the whole Union, and not for a section only; for every interest, for every class. [Applause.]

Department of Agriculture.

SPEECH

OF

HON. HENRY W. LORD,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882.

On the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture.

Mr. LORD said:

Mr. SPEAKER: It goes far to persuade and convince me of the propriety of the bill before us when I contemplate the extent and commanding power of the source from which it emanates.

It may be regarded as an axiom in politics that those who own a country will govern it. The agriculturists of the United States are so largely the owners of the soil that if they shall with substantial agreement demand in their interests an officer of the Cabinet, I feel bound as a legislator to accept the demand as an instruction, and in answer thereto proceed only to assure myself that in the preparation of the act the wisest arrangement as to details shall be adopted to carry into effect the measure proposed.

It is the constitutionally imposed duty of the President to recommend from time to time to the two Houses of Congress such measures as he shall judge necessary and expedient.

Members of the Cabinet are recognized by the Constitution as advisers of the President whenever he shall desire to consult them, and in public estimation they are held to be in close consultation with the Executive on all matters of serious concern. The meaning of the word cabinet, in this sense, implies such conference between the parties to it as is had in the closet.

The members of the Cabinet are, therefore, advisers of the President as to what measures he shall recommend to Congress, Representatives to which come here to so large an extent from the agricultural districts under instructions emphasized at the ballot-box, where, as stated by my colleague from Michigan, [Mr. RICH,] the voice of the farmer is mainly heard on questions of government, he being as a rule averse to lobby and associated ring instrumentalities to aid in his political purposes.

Owning so large a part of the country as the farmer does; producing, as he does, more than three-fourths of all the property that is moved for commercial purposes on our rail and water ways; polling votes in number immensely in excess of those of any other class of citizens that can be indicated by industrial classification, and of course with an interest in the country proportioned to numbers and products and ownership, it appears not only exactly just but eminently appropriate that he should desire a counselor especially near the person of the President in cabinet and closet consultation.

If, for instance, the President is about to recommend to Congress the consideration of a new treaty with some foreign power, it will evidently involve questions of commerce in which the farmer will not only have a general interest as a citizen, but a special interest proportioned to the extent to which his particular proprietorship and industry may be involved.

If it shall be some new scheme of finance having to do with banking and currency, and the medium of exchange that shall be the measure of and afford means to market the farmer's crops and other products, he certainly wants an advocate in the closet. Any question of general policy concerning the public lands will profoundly interest him in behalf of his children and otherwise.

If the President were to contemplate war, as in an extreme case may be supposable, the farming class, which contributes so largely to form armies and to feed them would be no more than fairly treated if it through an especial representative should have its interests considered in original Cabinet deliberations.

Mr. Speaker, I was glad to see proposed and adopted an amendment to the bill before us providing that the secretary of agriculture should be an experienced and practical agriculturist.

It is not easy, perhaps, to define precisely what should be the limit of legislation in this direction. It might not be well to insist that a secretary of war should in all cases be a soldier, or a secretary of the navy necessarily be a seaman; yet a provision like that in this bill is of value as suggesting at least some idea of the general fitness of things in this respect, which has been frequently lost sight of by this Government in making appointments to important offices.

It may be assumed that an experienced and practical farmer is not therefore, that is in consequence of such qualifications, a suitable man to appoint to the Supreme bench; and it may be assumed that a learned and accomplished lawyer might not in consequence of such qualities be a suitable man for secretary of agriculture; because the attainments in the one service are not especially adapted to the required service in the other, yet we have seen within a few years ministers representing this country in three or four principal courts

in Europe at the same time who had simply attained to eminence and had acquired reputation in literature as poets or historians—persons who were not in any sense what we call men of affairs, yet sent out to negotiate in regard to the great business interests of the nation as they might be affected, and always are affected, by its relations to foreign powers; men who had no more training approximately fitting them for diplomatic duties than either the farmer in the case supposed had for the Supreme Court or the lawyer in the case supposed for secretary of agriculture.

Tariff and Tax Commission.

There are three points to be considered in the construction of all remedial statutes—the old law, the mischief, and the remedy.—*Blackstone*.

SPEECH

OF

HON. ROBERT J. C. WALKER.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. WALKER said:

Mr. CHAIRMAN: After the long and exhaustive discussion which the consideration of this bill has provoked it may justly be assumed to be the deliberate opinion of a large majority, if not, indeed, the entire membership of this House, that the statutes now in force, and by which Congress, under the Constitution, has the power "to lay and collect taxes, duties, imposts, and excises," are not suited to the present condition of the country, not in conformity with existing circumstances, whether considered in relation to the advancement and progress of our manufacturing, commercial, and agricultural industries, or viewed in connection with the condition and requirements of our Treasury.

The statement of the public debt of the United States, just issued by the Secretary of the Treasury, is probably the most extraordinary financial exhibit ever presented in the history of any nation. From it we learn that the total debt of the country, less cash in the Treasury, on the 1st day of April, 1882, was in exact figures \$1,726,266,422.35. The reduction of this debt for the month of April was \$14,415,823.74, and for the last ten months \$128,750,000, which, on the termination of the fiscal year will, it is estimated, reach in round numbers the sum of \$150,000,000. These figures, gratifying as they may seem, develop features which, although apparently remote, I believe are directly pertinent to the subject-matter presented in the bill under consideration. Mr. Chairman, it may be well for us to examine and compare the revenues, expenditures, and surplus for the past nine months of the present fiscal year with that of last year, to demonstrate upon what substantial foundation is based the demand not only of business men but of the great producing classes for a readjustment and reduction of both duties and internal taxes. The figures presented are as follows:

Receipts and expenditures.	1882.	1881.
Customs.....	\$166,511,698	\$147,383,196
Internal revenue.....	105,533,976	97,212,311
Miscellaneous.....	27,511,610	22,162,646
Aggregate.....	299,557,284	266,758,153
Expenditures—ordinary.....	138,014,577	137,783,572
Interest charged.....	56,862,310	66,490,832
	194,876,877	204,274,404
Net surplus.....	104,681,227	62,483,749
	299,557,284	266,758,153

Showing an increase of surplus of over forty-two millions of dollars, a reduction of interest charged of ten millions, with scarcely a perceptible increase of expenditure! Are not these figures most significant? Is not the condition shown and the time most propitious for the enactment of such legislation as is contemplated by this bill? While statistics demonstrate the fact that the experience of this country for the last two decades under protection has been that of unexampled prosperity, yet manufacturers and importers, protectionists and free-traders alike agree that the present rates of duties were devised and levied to conform to a different condition of affairs from those which exist to-day. Many of them were adjusted with reference to internal taxes which have since been either entirely re-

pealed or greatly modified. The exigencies and necessities incident to the war of the rebellion required others to be fixed at high rates to produce revenue to meet the enormous expenditure required to equip and sustain armies.

They were established at a time when taxes were imposed upon almost every occupation, upon incomes, upon many articles of domestic manufacture, and when every form of capital, labor, and production cheerfully paid tribute to maintain the national credit in order to sustain the nation's honor.

Under the changed conditions which are now presented the tariff should be simplified; impost taxes reduced where they are needlessly high and not in conformity with duties and taxes on raw materials; the laws made so clear and explicit that the obscurity which now constantly calls for explanations and decisions from the customs division of the Treasury Department to assist importers and custom-house officers in reaching a correct interpretation may be nearly, if not quite, avoided.

Sir, not a single gentleman on either side of the House during this protracted investigation has raised his voice in defense of the present system with its incongruities. All are agreed that revision is necessary, and to this extent at least, in my judgment, they voice the wish and will of the people. The essential question to be determined is, How can this be most advantageously done, so that justice and fairness may be equitably adjusted upon all the varied interests and industries of the people of the whole country?

The bill now before the House, reported from the Committee on Ways and Means, is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a commission is hereby created, to be called the tariff commission, to consist of nine members.

SEC. 2. That the President of the United States shall, by and with the advice and consent of the Senate, appoint nine commissioners from civil life, one of whom, the first named, shall be the president of the commission. The commissioners shall receive as compensation for their services each at the rate of \$10 per day when engaged in active duty, and actual traveling and other necessary expenses. The commissioners shall have power to employ a stenographer and a messenger; and the foregoing compensation and expenses to be audited and paid by the Secretary of the Treasury out of any moneys in the Treasury not otherwise appropriated.

SEC. 3. That it shall be the duty of said commission to take into consideration and to thoroughly investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff and the existing system of internal-revenue laws, upon a scale of justice to all interests; and for the purpose of fully examining the matters which may come before it, said commission in the prosecution of its inquiries is empowered to visit such different portions and sections of the country as it may deem advisable.

SEC. 4. That the commission shall report to Congress the results of their investigation, and the testimony taken in the course of the same from time to time, and make their final report not later than the first Monday in January, 1883.

The amendments reported from the committee, however, propose to eliminate from the bill all consideration of the existing system of internal-revenue laws and confine the investigation solely to the question of the tariff. While, in my judgment, the two systems should be considered together, the committee have seen proper to divorce them, giving the House the assurance, however, that such measures governing internal taxation as will afford the desired relief will be presented and pressed for consideration. The bill as thus amended is not a new measure, and although reported from a committee the majority of the members of which are Republicans, yet it was prepared and introduced in the Senate during the first session of the Forty-sixth Congress by Mr. Eaton, a prominent member of the Democratic party, and while suspicion was excited that the measure was not offered in good faith, because of the source of its authorship, and that it was intended as a covert attack upon the existing system, it passed the Senate by a vote of 35 to 15, the affirmative votes consisting of 19 Republicans and 16 Democrats. Happily it would thus seem to have lost the elements of partisanship, and its intrinsic merits, backed as they were by the most powerful demonstrations and expressions of public approval, from the united voice of the industries of the country secured its passage by a vote of two to one.

Notwithstanding the large majority thus recorded in the Senate as expressive of the wisdom of this measure, it has met with the most strenuous opposition and denunciation upon this floor. Mr. Chairman, I shall give the bill most earnest and hearty support, and this conclusion has been confirmed by the developments of this debate. The creation of a commission is in no respect a reflection upon the intelligence and ability of either the Committee on Ways and Means or the members of this House; it is the means of obtaining information, facts upon which to base wise legislation, the enactment of laws which will be just, wise, fair, and permanent; information which will enable us to avoid radical violations of all the established rules of political economy, the taxing of crude materials and the admission of finished products free when made from taxed raw material as formulated under Democratic supremacy in the monstrosities known as the "Wood and Morrison bills."

Mr. Chairman, I deny that by the passage of this bill, which looks only to preliminary investigation, Congress seeks to either evade its constitutional responsibility or in any wise surrender its power. The work of this commission must be subjected to its severest scrutiny, its searching discussion and investigation, its final judgment.

Precedents are found among the most enlightened nations of Europe—the French Chambers, the British Parliament; in both legislation

is almost invariably preceded by inquiries through preliminary commissions.

It has been the almost uniform practice of the Parliament of England, when questions of great moment touching important subjects of a national character, either social or economic, and upon which legislation is proposed, to create a commission for the purpose of obtaining all possible information. Experts in the particular subject upon which light is asked, men of especial fitness, character, and intelligence, are selected, who give patient and deliberate consideration to the same, and upon the facts and suggestions thus carefully collected and digested the legislator is enabled to form and formulate an intelligent and comprehensive opinion. In France, the most prosperous industrial nation of Europe, the most laborious and thorough investigation precedes any change of tariff or commercial treaties.

As an illustration of this wise caution, so pertinent in application to the pending measure, I take the liberty, Mr. Chairman, of presenting it at length. On the 7th of April, 1875, the French minister of agriculture and commerce addressed a circular to the various chambers of commerce throughout the country, reminding them of the approaching termination of different treaties, briefly recapitulating the economic progress accomplished during the previous years and inviting them to give their views upon various questions to be considered, notably the reductions or additions of taxes, specific and ad valorem duties, the increase of treasury receipts, the treaty system, and a new general tariff.

Fifty-four chambers of commerce and twenty-four consulting chambers of arts and manufactures were consulted, embracing all the great centers of industry, commerce, and agriculture. To a call for the information thus obtained the minister replies:

Your government, Mr. President, and the three departments of foreign affairs, finance, and commerce, have not waited until now to solve the problem of protecting labor and assuring the development of the national wealth. Commerce, industry, and agriculture were questioned. I have solicited from the chambers of commerce, from the consulting chambers of agriculture and of arts and manufactures, their views on our tariffs, as well as on the manner in which for the future they should be established—by law strictly internal or by international treaties. The replies which it was our duty to await before fixing our line of conduct have been obtained by me. It is my duty to make you acquainted with these replies and to submit for your approval this line of conduct.

We do not intend in fact to dispose of the great interests of the country without consulting at every stage those who represent these interests and speak in their name. We have commenced our work by questioning the chambers of commerce; we must follow this by questioning the superior council.

These deliberations and these negotiations, Mr. President, your government sees approach with patriotic confidence; because they will attest once more, after our reverses and our trials the resources that our country expects from its industries and the hopes that it rests upon the maintenance of order and peace.

Mr. Chairman, one cannot but be impressed with the cautious wisdom with which the French Government thus deals with great questions like those embraced in the bill under present consideration, and as a result thereof the testimony extorted from her ancient foe and bitterest rival is no less interesting than instructive.

Said the British Trade Journal, (July 1, 1875, pages 691, 692:)

There is something in the commercial prosperity of France which by and by may convert skeptics to Victor Hugo's poetic doctrine that she is the "Mother of Nations" and the "Crown of the Universe."

It was a cruel taunt to throw at the victor of Sedan that the milliards of her war indemnity had made her no richer, while France had paid them and felt herself no poorer. In a retrospect of the four years which have elapsed since the treaty of Frankfurt, Germany appears as the commercial victim of the war. Her internal trade has been paralyzed, her industry has stagnated under the influence of enormously increased prices, and the poverty of her laboring classes has been intensified by higher cost of living. The milliards were appropriated to military purposes, and had no opportunity of assisting the country to recoup its own war losses.

France during the same period has been prosperous beyond comparison with her plodding, hard-fisted rivals. She is the one country in Europe that suffers no commercial reaction; she wears a charmed life among the perils and vicissitudes of foreign trade. When all else retrogrades or remains stationary, she progresses.

Mr. Chairman, the lateness of the session must admonish us of the utter impossibility of devising and passing any bill the incongruities of which would not be greater than those sought to be remedied in existing laws. I believe those who advocate and support this measure to be earnestly and honestly in favor of correcting existing abuses, of adjusting and revising our present system of taxation, external and internal, so that it may conform to a changed condition of national wants and finances. Those who insinuate or boldly charge the present bill as having for its real object only delay or as but a pretext for a continuance of high duties, should not lose sight of the experience of the past six years under Democratic supremacy, when the Ways and Means Committee, first under the chairmanship of the gentleman from Illinois, [Mr. MORRISON,] and later of the gentleman from New York, [the late Mr. Wood,] reported bills to the House, one of which was never considered in detail and the other perished in the house of its friends by the striking out of the enacting clause.

During this period a system of guerrilla warfare was instituted by the free-traders, with a view of breaking down the leading industries of the country by attacking them in detail. Under a suspension of the rules, amid almost the expiring hours of the session, a bill was passed without consideration, without debate, which removed the duty from a manufactured article largely produced in this country and of great value and importance, while no corresponding

changes were made in the crude materials employed. Such hasty and ill-considered action was unjust, at variance with all accepted and recognized rules of political economy, in direct opposition to the course invariably pursued by manufacturing nations, and in utter disregard of the policy adopted by this country toward all other classes of manufacturers. The result has been to leave the article referred to a foot-ball of speculative cliques, subject to the caprice of the foreign importer and manufacturer, while the Government has derived no benefit, laborers have lost employment, a valuable industry is shrinking, and the cost of the pure article to the consumer has not been appreciably decreased.

Mr. Chairman, changes so violent and radical cannot but be the result of a lack of that proper and necessary information which I believe the bill under consideration will furnish, and in connection therewith I beg leave to quote the ringing words of Chaptal, a senator and for five years minister of the interior of France:

Legislation of duties to be founded on correct principles should be stable, and, so to speak, immutable. Nothing more dangerous fortune, nothing more shakes confidence than alterations being permissible in this respect. A changeable legislation disconcerts the best planned enterprises, and baffles all business ventures.

When a species of industry is established upon a known legislation, the one who undertakes the enterprise has engaged his means and his labor upon the guarantee given by that legislation, which cannot be charged to the prejudice of the manufacturer without violating contract faith and abusing right with might.

Where a government grants privileges in order to create or bring in from abroad a new kind of industry, it can only withdraw them to the extent that the requirements of that industry do not call for their continuation. It is bound to the manufacturer by a solemn contract. It has itself determined, so to speak, the use of his capital, his time, his labor; and it cannot consummate his ruin without being wanting in all the laws of justice and humanity.

Mr. Chairman, this discussion has taken the widest possible range. The whole system of tax and tariff has been dilated upon from the time when the First Congress assembled in Philadelphia, on the 4th of March, 1789, and to which petitions were presented suggesting that our "national independence was but half obtained" while we remained dependent on Great Britain for our supplies of the necessities of life, and praying that Congress would take the proper steps to render the people "independent in fact as well as in name by adopting measures for the encouragement of American manufactures," down to the last public debt statement issued by Secretary Folger. I shall but very briefly and imperfectly attempt to imitate those who have preceded me. In reading some of the debates in the Twenty-seventh Congress, second session, I found the following extract quoted from a speech delivered in the House of Commons by a then leading member of that body, [Mr. Robenson,] in which he said:

It was idle for us to endeavor to persuade other nations to join with us in adopting the principles of what we call free trade. Other nations knew as well as the noble lord opposite and those who acted with him that what we meant by free trade was nothing more nor less than by means of the great advantages we enjoyed to get a monopoly of their markets for our manufactures and to prevent them, one and all, from ever becoming manufacturing nations.

Mr. Chairman, this candid utterance of forty years ago is as true to-day as it was the hour it was spoken; it is exactly the policy of the Free-Trade League and Cobden Club, and the Democratic Congressional campaign committee are now flooding the country with free-trade speeches advocating this very policy made on the bill now under consideration. Mr. Chairman, I am fixedly opposed to legislating for the benefit of Great Britain or any other country. We are sent here to legislate for the people of the United States. No doctrine, speculative philosophy, beautiful in theory but utterly unattainable in practice, based upon "the wild conceit of the perfect ability of man," and the "greatest good to the greatest number" of all mankind; but that practical legislation which protects our own people from pauper labor, pauper wages, a pauper's life, and a pauper's grave. Listen now, sir, to the words and policy of one of the greatest statesmen of his time, whose name to-day is reverentially uttered by his countrymen. M. Thiers, in his address to the French Chambers in December, 1871, said:

We propose, while leaving to foreign trade all the freedom compatible with the public welfare, to insure to our manufacturers, to those who during three-quarters of a century have made the fortune of France, the protection of adequate tariffs in order that they might not perish under the unlimited competition of foreigners.

At the annual dinner of the Silk Association of America, 1875, in response to the toast "Manufactures, at once a growth and an evidence of civilization," the late Hon. Henry C. Carey said:

It is, however, Mr. President, to France that we must look if we would find the most thorough exemplification of the idea embodied in the sentiment now before us. Perpetually at war abroad and at home, brought repeatedly by political and religious dissensions to the verge of ruin, governed by priests and prostitutes in the name of worthless kings, France, on the day of the assembling of the States General in 1789, had made so little progress in the industrial arts that her markets were crowded with British wares; that her factories were closed; that her workmen were perishing for want of food, and that the French School of Art had almost entirely disappeared. The few were magnificent; more so perhaps than any others in Europe. Of the many a large majority were in a state closely akin to serfage and ignorant almost beyond conception.

The revolution, however, now coming, the people did for themselves what their masters had refused to do, re-establishing the system of Colbert, the greatest statesman the world has yet seen, and making protection the law of the land. Since then consuls and kings, emperors and presidents, have flitted across the stage; constitutions almost by the dozen have been adopted; the country has been thrice occupied by foreign armies, and thrice has it been compelled to pay the cost of invasion and occupation; but throughout all these changes it has held to protection as the sheet-anchor of the ship of state. With what result? With that of placing France in the lead of the world in reference to all that is beautiful in industrial and pictorial art. With that of making her more independent, commercially, than any other country of the world.

Mr. Chairman, during this protracted discussion no portion of our country has received more attention, both commendatory and condemnatory, than the great Commonwealth, one of whose Representatives on this floor I have the honor to be. Sir, Pennsylvania needs neither apology nor eulogy. As one "native here and to the manor born," I say, without the fear of successful contradiction, that no territory of the same extent on the face of the earth possesses so many of the elements which contribute to the wealth and happiness of mankind. Her soil is adapted to the successful cultivation of almost every vegetable production known to our country; buried beneath lie those two great staples, coal and iron, in quantities beyond computation; while from the cavernous depths of her generous bosom there flows a product in itself the wealth of an empire.

We hear much of the immense yield of precious metals in California, Colorado, Nevada, and Arizona. Why, sir, a single one of the six counties which constitute the Congressional district I have the honor to represent produces and distributes to the four corners of the earth a product which, when refined into the petroleum of commerce, exceeds in value the combined silver production of the entire country.

With these vast natural bounties which a beneficent Providence has endowed her Pennsylvania has progressed onward in the course of commercial, manufacturing, and mechanical prosperity—a prosperity largely created by and dependent upon a wise system of protection to American industry and American labor.

Department of Agriculture.

SPEECH

OF

HON. PETER V. DEUSTER,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882,

On the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture.

Mr. DEUSTER said:

Mr. SPEAKER: I desire to offer the following substitute for the bill:

Substitute for House bill No. 4429, to enlarge the powers and duties of the Department of Agriculture.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That for the purpose of creating hereafter a new executive department, to be known as the department of agriculture and science, the President be, and he is hereby, requested to ascertain, and inform Congress of the result at its next regular session, what bureaus heretofore parts of the various Executive Departments may with advantage to the service be incorporated in said new department, and what additional bureaus in his opinion may be required to be hereafter created in order to organize said department effectively for the better promotion of agriculture, mining, forestry, and other industrial interests of the United States, and the best methods to be introduced for its efficient management.

Mr. Speaker, being in favor of the creation of a department of agriculture, or one intended to foster our agrarian interests, whatever its name might have been, I did not expect to find myself among the opponents of the pending bill. The substitute which I have just now respectfully submitted to the thoughtful consideration of this House indicates to some extent one of the principal objections I have to urge against this measure. From the debate upon the bill it seems clear to me that even among its warmest advocates, or among those willing to support a similar bill, there exists an alarming diversity of opinion as to the nature of the "powers and duties" to be conferred upon the new executive department. I am sorry to find that its friends seem unable to unite upon a clearly defined plan which could have commended itself to the favor of this House and to which I could have given my vote. I had expected to find in the report of the committee before being called upon to vote for it a well-matured, intelligible proposition, defining and specifying the advantages hoped for by the various changes proposed, not merely the suggestions of transfer of a few bureaus now said to be crowding the work of other Departments.

Mr. Speaker, frankness is sometimes difficult to combine with parliamentary courtesy, and I find myself in giving expression to my views upon the subject under consideration confronted by the disagreeable prospect of being unable to harmonize them as much as I should wish to do.

To be frank, then, above all permit me to say that, in the first place, the measure lacks the elements of strength which mature deliberation outside of Congress by the press and the people ought to have given it before the responsibility of the adoption of such a measure can be assumed by Congress. If we pass this measure we thereby place upon the country the burden of supporting an additional Executive Department of the Government without having given it ample opportunity to express its approval or disapproval to such an extent that every conscientious member of this body may determine for himself whether to cast his affirmative or dissenting vote when called upon to bring once more the dangerous privilege of Congress

to levy new obligations upon the taxpayers into play. I for one prefer respectful consideration for the wishes of my constituents to the exercise of discretionary power, whenever I am enabled to choose between them.

It is a source of congratulation to the country that in the discussion of a measure designed to add to the powers of one of the branches of our political system of government, and with an important political contest fast approaching, no partisan considerations have been permitted to enter into the spirit of the debate upon the subject. It augurs well for the future, and speaks volumes for the good sense prevailing in this House. Looking upon this fact with pleasure and satisfaction, I trust my expressions of dissatisfaction with the present condition and past experiences of that Department will be ascribed to better motives than mere partisanship. I have no quarrel with any person or official, but the system only in which they are compelled to conduct public business.

That system, Mr. Speaker, I have no words strong enough to condemn, no matter where the blame may rest, and no matter, sir, what party happens to control the administration of our Government. I will not ask the indulgence or tax the patience of this House in entering upon an extended "tour of investigation" through that Department which, small as it is now, seems to be in a fair way to copy faithfully all the detestable methods and obnoxious features of the most complicated and extensive department of the Government. I repeat that I have to lay no blame upon any official in particular, but I maintain, sir, that there must be something wrong, radically wrong, somewhere when three months before the close of a fiscal year the necessity arises to discharge the few poor people employed at starvation wages upon the so-called "temporary roll." The estimates for that small Department can be neither so voluminous nor so intricate that provision could not be made to keep these people from the beginning of one fiscal year to the other, and no Congress will ever be found so intensely partisan as to refuse to make provision for a few hard-working people needing work when much work needs to be done. On the other hand large appropriations are always asked for sometimes more ornamental than useful purposes.

Again, there must be something wrong in a system which allows this Department to allot to me, the Representative of a district whose northern latitude and climate is known to every school-boy, for distribution among those desirous of experimenting cotton-seed for that purpose. Why, if any one of my constituents were foolishly enough to try and raise cotton up there he would have to place a steam-heating apparatus under each cotton-seed and house it over carefully on top, and he would still find not even a Pennsylvania grave-yard insurance company sufficiently venturesome to take a risk on that crop for nine months in the year.

Again, the usefulness of that department must in the opinion of every unprejudiced observer be greatly impaired if its reports, constituting almost the only return made to the public for the burden of its support, reaches the generous but somewhat overbusy hands of their distributors, the members of Congress, nearly two years behind their date. The report of 1880 is an illustration in point.

But I agreed beforehand not to overtax the patience of this House, and will therefore only add that before I would vote to perpetuate such a system, which is a mockery and a satire upon the demands of the country for reforms in the civil service, I would sooner move to abolish it altogether.

I have intimated that the original bill bore strong evidences of a hastily conceived measure, and I will ask but a moment's further indulgence to offer at least one case in point. While an entire section drawn up with admirable punctuality prescribes the amount of salary to be paid each chief officer, not a word, no, not mere mention is made of one of the vital interests of the whole country, one which indeed is worthy of most serious consideration at the hands of every well-meaning and patriotic citizen—our forestry. Is it possible to think of any other reason in charity than undue haste alone, that a bill for which the approval of Congress is asked, and which is intended to create a new Executive Department of this Government, can be so ominously silent in regard to the forest-culture of the United States while professing to place all the important agrarian interests under the fostering care of that department?

I am fully aware of the fact that, in the minds of many, there is something attractive in the idea of elevating the Department of Agriculture to the dignity and magnitude of a Cabinet department, and of making the Commissioner a member of the Cabinet. Nay, more, there are many even of the members of this House who are impressed with the idea that such a step will be pleasing to the farmers and horticulturists of our country, and will be looked upon by them as an evidence of a proper consideration, on our part, of our great agricultural interests.

This, Mr. Speaker, I am satisfied from my intercourse with some of our leading farmers, is a mistaken notion. I am convinced by what I know of the feeling on this subject that could the various State agricultural societies and boards be heard in calm and quiet counsel, with no other influence than their own experience and good judgment, the majority, yes, a large majority, would express a decided doubt as to the propriety of such a change. The first question they would ask, the question which hundreds of the leading agriculturists of the country have already asked, is, How is this change to advance and benefit the great producing interests of our nation? Will

making the Commissioner a Cabinet officer raise the price of wheat or corn? Will it increase the yield of our crops? Will the Commissioner be more efficient as a Cabinet officer than with his present title and duties; or will adding to his duties and responsibilities enable him to do more to advance the farming interests of the country?

These, Mr. Speaker, are some of the practical questions asked by our agriculturists in reference to this proposed change. They wish to know how it is to benefit them. Truly a pertinent inquiry, and one which, it seems to me, we should be able to answer by good and sound reasons before taking such an important step.

Sir, this smacks too much of "throwing a sop to Cerberus," and what is well for us to know is, that they for whose benefit the step is ostensibly to be taken look upon it in the same light.

I am a friend, yes, sir, a strong and, as I trust and believe, a true and earnest friend of the Agricultural Department, and am willing to go as far as any one to render it efficient in aiding and advancing the great and fundamental industry of our land. But I can see nothing in this proposed change that offers anything promising in this direction; on the contrary, sir, I see strong reasons for believing that it will have a tendency in the opposite direction.

I have not a word to say in disparagement of the present Commissioner. He is a most excellent and accomplished gentleman, and, so far as I am aware, has shown commendable zeal and energy in the duties of his office, and would doubtless acquit himself with honor as a member of the Cabinet. I therefore regret, so far as he is concerned, that I feel myself constrained by a sense of duty as a member of the House to oppose this measure.

Let us see, judging by experience, what would be the result if the bill now before the House should become a law. Without stopping to consider in detail its several provisions, with which every member is doubtless familiar, or, in behalf of the welfare of his constituents, ought to be, I call attention to the following points, which I should think ought to be patent to every reasoning mind: add to the department the several bureaus merely as proposed by this bill, and the first injurious effect, as shown on the very face of the law, is to reduce the Department of Agriculture, in fact, to a mere bureau. The attempted sugar-coating by retaining the old name for the new creation does not hide the fact from our farmers, and every attempt to do so will ultimately be looked upon by them and all others as an insult to their intelligence.

If the intention, as appears from this bill when closely examined, is to reduce the Department to a mere bureau, why not say so plainly instead of trying to hide the real object from those for whose benefit the measure is ostensibly proposed? Changing terms will not change facts; that which is properly included under the term "agriculture" will be just the same under any other cognomen, nor will the attempt to expand the meaning of the word change the realities. It follows, therefore, beyond controversy that if this change is made what is now the Department of Agriculture will be nothing more than a bureau in a Department; and, so far as the farmers and their interests are concerned, might as well be a part of the Interior or War Department. In truth, Mr. Speaker, were it not for consuming the time of the House I would present valid reasons for believing it would be productive of more good under either of these Departments than in the place this bill proposes to put it.

A second injurious effect will be that the increased and diversified duties of the secretary, as he will then be, will give him much less time to devote to the study and care of our great industry. Nor will the evil effect stop here. All who have studied this question with any special care are well aware of the fact that it is one of the most difficult to handle that comes before a legislature. There is no real unwillingness on the part of Congress or the State Legislatures to enact laws to aid our agricultural interests, but the difficulty is to know how to do it.

Agricultural colleges have generally failed to accomplish the fondly hoped for results on this account, and when combined with other branches the latter have usually absorbed the former because the method of teaching them was better understood. The combination is certain, if carried into effect, to produce the same results in this case. The bureaus which can furnish most that is new and interesting to the scientific world will receive the greatest attention, and that which should be the chief one will ultimately dwindle into insignificance.

Mr. Speaker, this bill is itself an evidence of the truth of these statements. Was it not framed with the idea that by combining other bureaus with this Department it might be made of increased usefulness? Are the other bureaus seeking this combination with the hope of rendering them more efficient? By no means. Precisely the reverse is true. They have an instinctive fear that by such an arrangement their energies will be cramped and their usefulness lessened. Those who have long been connected with these bureaus and offices understand thoroughly their inside workings, and know wherein their strength and utility lie. They are fully aware of the fact that force, vigor, and usefulness are not given to a Department by additions or accretions, but that it grows into importance and value by internal development, spreading and reaching out its arms along the lines of usefulness.

Therefore the change contemplated by this bill is not a wise one, and will not only fail in benefiting the Agricultural Department,

but will smother and destroy the feeble life it has so far exhibited and prove injurious to most of the additions made to it. Although satisfied that this is true, and radically opposed to the bill in any form, yet for one reason I am gratified that it has been brought forward. It is an evidence that the wants and needs of this great vital industry are being felt by Congress and that the members are beginning to see that the time has come when some action must be taken, when the demands of the farmers must be met in some way. I am glad, Mr. Speaker, to see any evidence that Congress is ready to act in this direction. But such a make-shift as this bill is like pouring water over a fire to make it burn, or putting a light under a bushel that it may be seen.

If Congress wishes to do something for this Department let it go at it in the right way, not by hitching on to it the organizations that will suck the life out of it and finally swallow it up, but by infusing life into it, giving it more to do in its own legitimate field.

I am aware that just here lies the difficulty, and that I may be met by the inquiry, "What better have you to propose?" Although my object at present is only to give some reasons why this bill ought not to become a law, I will venture to suggest, without absolutely committing myself thereto, one or two ways in which the operations of this Department might be usefully enlarged. But I trust that our worthy Commissioner will not think that in so doing I am dictating to him, nor that I am offering a bid for the position.

In the first place, there might and should be a plan of more intimate co-operation between the Department and the various State organizations. It should be the business of the former to foster and build up the latter and to make them in a great degree the medium of communication with the farmers.

In the second place, instead of collecting facts and statistics in reference to crops by the present method of local correspondence alone, the country might be divided into large districts into which employes of the Department could be sent to supervise the collecting of these statistics and make periodic reports. In this way these reports and statistics would be rendered much more reliable and satisfactory.

Forestry is another direction in which an indefinite and almost boundless expanse can be made useful and profitable to our people. In a few generations the timber supply will be an all-absorbing question. It will be wise, therefore, for the Government to take it in hand in time; not simply by making investigations, appointing commissions, offering land premiums, &c., but by something practical. The time required for return is too far in the future for individual enterprise, consequently this is a work that the Government must undertake. The uncultivated districts that are denuded of their forests must be re clothed, and will in the end repay all that is expended therefor.

The redemption of the vast dry plains of the West is still to a great extent an unsolved problem. Here the Commissioner has a wide field for the display of ability, and an excellent opportunity of performing a useful work. We have as yet no real national farm; we have but one or two experimental stations.

But, Mr. Speaker, to set forth what I consider the legitimate work of this Department, I only suggest these points as showing in what direction it might be usefully expanded to an almost unlimited extent. These are but a few of the many which might be mentioned, for I have not even alluded to the meat-supply problem and others of similar magnitude.

I am aware that to expand in this direction will entail expense, but the interest to be fostered is a vast one, and almost any outlay, be it ever so large, which will advance it, will pay in the end.

If there is, therefore, a real desire on the part of Congress to do something that will increase the usefulness of this department, let it make liberal appropriations for it, and increase in its own legitimate line the work it shall be required to do.

The Bureaus of Forestry and Statistics might each be well and profitably made to equal in extent the entire department as at present constituted. There is work enough for it to do, and if liberally aided and allowed to expand it may grow into importance that will entitle its head to a seat in the Cabinet.

But if the desire of the members of this House is to smother it out of existence, no bill could have been more ingeniously framed than the one now before us. While apparently holding out the arms of friendship it is really but an invitation to a fatal embrace.

If the desire is to cajole the farmers, then leave the department its name and separate existence and raise its head to a Cabinet position. Certainly this will be more flattering to the agriculturists of the country than burying their department out of sight.

But let me say in conclusion that all such devices will fail to deceive the farmers. What they ask at your hands is something practical, something tangible, not simply resolutions nor that only which is put in a book, but works, that which can be seen and understood. They will approve whatever appropriations you may make in this direction. My substitute refers the whole subject back to the Executive, and will thereby not only make public discussion of it to fullest extent possible until our next regular session, but will also give the various heads of the present Executive Departments an opportunity to consider a matter carefully in which their assistance and advice can be of great service and value. I hope the substitute will receive the approval of the House.

Tariff and Tax Commission.

SPEECH

OF

HON. ARCHIBALD M. BLISS,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. BLISS said:

Mr. CHAIRMAN: I have listened for the past three weeks with great interest to the discussion of the tariff-commission bill. I have been greatly interested in the presentation of the different arguments in favor of protection and of a tariff for revenue only. What relation the debate upon the merits of those issues has upon the bill under consideration I confess I do not know, but the discussion has assuredly secured the publication of many charming theories, and not a little valuable statistical matter. Facts and figures have been adduced to show that the salvation of the Republic lies in a continuance of the protective system, and more facts and more figures have been presented to prove that from a continuance of that system will spring the blight of business prostration and universal ruin. It is said that nothing will lie more than a few facts, except a great many figures, and if this be true I tremble for the sins that honorable gentlemen who have subscribed for thousands of copies of most eloquent arguments upon the tariff will be compelled to answer for.

For weeks past this House has been confronted with one question, namely, whether the tariff laws shall be revised with the assistance of a commission or not. Protectionists and free-traders are alike agreed that the tariff should be revised. The apostles of protection and the disciples of free trade are of one mind on this subject. The Saint Paul of high tariff [Mr. KELLEY] and the Saint Peter of free trade [Mr. CARLISLE] are in sweetest accord in this respect. Straightway, however, the advocates of the two systems of trade plunge into a discussion of the merits of their respective plans, seemingly regardless of the fact that this discussion has no bearing on the point at issue. There will undoubtedly be a time, whether the bill now under discussion becomes a law or not, when the House will be called upon to revise the tariff. Then, it would seem, the discussion of a protective tariff vs. a tariff for revenue only would properly be in place, and, indeed, could not be avoided.

Mr. Chairman, I shall vote for the passage of this bill, and before doing so I wish to call the attention of the committee to a few facts that now seem to be buried under the clouds of rhetoric which have formed over and about this subject. It is now nearly the middle of May. Before the 30th of June the regular appropriation bills for the support of the Government must be passed. A majority of these bills have been reported from the committee and have passed the House. Several of the most important appropriation bills, however, remain to be acted upon. The bill to extend the charters of the national banks must, if possible, be considered before the session expires. The friends and foes of national banks are, in my opinion, each anxious to spare the business interests of this country from distraction and panic. Those gentlemen who deny the wisdom of extending the bank charters must wish to present some other and, as they doubtless imagine, better system to take the place of those institutions. Surely they do not wish to refuse the extension of the bank charters, at the same time denying the House the privilege of passing upon the merits of the plans they propose. I do not believe this House will ever adjourn without taking action upon the bill reported from the Committee on Banking and Currency. Supposing that the tariff-commission bill is defeated and the members of the Ways and Means Committee immediately begin the preparation of a bill revising the tariff.

Great bodies move slowly, and the Ways and Means Committee has made a very poor time record this session. I doubt if the honorable gentlemen from Kentucky, [Mr. CARLISLE,] from Virginia, [Mr. TUCKER,] and from Illinois [Mr. MORRISON] would consent to be outvoted by the honorable gentlemen composing the majority of that committee in the preparation of a tariff bill without protesting for at least thirty days. I doubt if the representatives of the great manufacturing interests of this country would quietly remain at home with the knowledge that the Ways and Means Committee was preparing a measure for adoption by this House that might revolutionize their business. No, sir. These men would demand a hearing and their demands could not be refused. Sixty days is the least possible time in which the Ways and Means Committee could frame a bill for the revision of the tariff. On the 1st of July, then, the House would be ready to begin tariff legislation. How long it would take to pass the bill, (conceding that in the evenly-balanced condition of the parties in the House a bill could be passed,) I will not attempt to predict. We have occupied six weeks in talking about a bill relating to the method of proceeding to revise the

tariff. At this rate a revision might possibly be effected in twelve months. I fancy there are few gentlemen here, however, so sanguine of the ability of the House as to affirm that a tariff bill could be passed within sixty days. Granting that the work could be accomplished in this time, on the 1st of September we would have concluded a huge task. But this bill would not become a law until after the Senate had agreed to it. In that distinguished body the sections of the measure would be carefully scrutinized and doubtless amended to a very considerable extent.

It is seldom, indeed, this House passes a bill that the Senate cannot find therein some sentence to be changed. The tariff bill would be amended, returned to the House, the amendments rejected, committees of conference appointed, disagreements, new conferences, deadlocks, the Lord knows what else, but it is within the scope of imagination to conceive that by the 15th of October our tariff bill might become a law.

The Congressional elections, which take place early next fall, will naturally prevent Representatives from remaining in Washington any such length of time as is necessary for the passage of a tariff bill.

The gentlemen from Pennsylvania, on the other side of the House, are taking a most unusual interest even now in the political situation in the Keystone State. The recent local elections in Ohio indicate that an early and remarkably vigorous campaign will be prosecuted in that State, and a similar condition of affairs exists in Indiana and other States.

I have great faith in the staying qualities of this House, and that faith has been strengthened since the debate on this bill began; but I do not believe that a regiment of infantry and fifty Gatling guns could keep it in session after August 1.

I should prefer that the tariff might be revised at this session of Congress if it were practicable. The ability of the Ways and Means Committee and the House to deal with the subject cannot be denied. That committee was organized to reform the tariff; it was constituted with a high protection majority calculated to crush out any effort on the part of the minority of the committee to bring the tariff to a revenue basis. Had that committee done what was expected at the beginning of this session the House would now be engaged in the preparation of a new scale of duties. The commission bill only remains; and to vote against it would, in my judgment, deprive the House of what may prove of great advantage to Congress and the country at the next session.

I have already said, Mr. Chairman, that there is a universal desire on the part of members of this House for a revision of the tariff. No gentleman on this floor has a more earnest wish to see the gross irregularities and absurd inconsistencies of the present tariff remedied than I. The tariff of 1864 was created to meet the exigencies of war. It must now be changed to suit the demands of prosperous peace. No man, however great may be his faith in the advantages of free trade over protection, or *vice versa*, can approach the vast subject of a revision of the tariff hastily or without solemn hesitation. The multiplicity of industries interdependent upon each other that are directly or remotely affected by the tariff can hardly be estimated. In every department of trade, moreover, the effect of a change in customs duties is felt by labor. The most delicate balance of the electrician is not more sensitive to a disturbance on the wires than is labor, well paid and remunerative, to hostile legislation. I believe that American labor can be greatly benefited by a wise and statesmanlike consideration of this subject.

My distinguished colleague from New York [Mr. HEWITT] delivered a speech in this House a few days ago on the bill now under discussion that for profound thought, depth of reasoning, and logical analysis cannot be surpassed. The gentleman drew a graphic picture of what he believed would happen if tariff reform was delayed. He said:

If good harvests should be secured abroad we will have a great surplus of food upon our hands and the price will fall; wages will go down with the fall in price; the reduction of wages will be resisted by strikes and lockouts; the conflicts between capital and labor will be reopened, and, indeed, have already begun; the prosperity of the country will be arrested; railroad transportation will fall off; new railroads will cease to be constructed; our shops will lack work; there will be a dearth of employment all over the country; the volume of immigration will fall off, and the career of expansion and general development will be brought to a disastrous conclusion. The sad experience of 1873-79 will be repeated, until through the gate of suffering, poverty, and want we shall establish a lower rate of wages, and the products of the country, weighted as they are with obstructive taxes, which must be deducted from the wages of labor, will force their way into the open markets of the world in spite of the tariff. We shall then reach the era of free trade, but on conditions which will deprive this generation of workmen of all the benefits which they would have derived from it if the way had been properly prepared for its final triumph.

Should the prophecies of the gentleman from New York be true, I would hesitate to vote for the passage of this bill; but I am inclined to take a much more hopeful view of the future of this country. I concur in the views of my colleague that a measure should be passed which will avert the dangers that he apprehends. Could it be demonstrated that the evils he seems to anticipate are within the range of immediate probabilities, I do not believe the House would adjourn until after a revision of the tariff had been accomplished. There is no gentleman on this floor who would not crowd legislation to its limits to avert a reduction of wages, prevent strikes and lockouts, put an end to conflicts between capital and labor, continue the prosperity of the country, maintain the development of home industries,

and encourage immigration. It is evident that the commission bill will become a law, and I have endeavored to point out some of the practical objections, that every man familiar with Congressional legislation can appreciate, to the feasibility of a revision of the tariff at the present session.

Surely it cannot be denied that the results my colleague and myself would each wish to be accomplished must come from the careful exercise of the most profound knowledge the wisest economists of America can bestow. No scrap of information bearing upon the great problems with which this Congress is confronted is of too little value to be treasured. If this bill is passed we will have the benefit when Congress meets next December of the information which a commission, after six months of labor, with every facility for operation, has been able to collate. This information will be printed. Senators and Representatives alike may peruse the testimony of manufacturers, agriculturists, and laborers. The work of the Ways and Means Committee will be lightened; the work of the House will be lightened, and the country may understand better than ever before a subject that is of vital importance to every man and woman.

Some gentlemen have laid great stress upon the fact that the two great political parties are divided on this question. A careful examination of the history of this bill from its introduction in the Senate two years ago down to the present time will show that it was neither conceived nor matured as the *protégé* of any party. The late Democratic Senator from Connecticut [Mr. Eaton] was the original author of the bill. It passed the Senate in 1880 by a vote of 35 to 15. Of the Senators voting in the affirmative 16 were Democratic and 19 Republican. The parties were divided when the bill passed the Senate at the present session, and there is a wide diversity of opinion among gentlemen on both sides of this Chamber as to the real merits of the measure, although in every case the actual opinions entertained may not be expressed. In my judgment, this question should be divested of political significance so far as possible, for the subject relates solely to the welfare of the people and not to the gratification of partisan ambition.

By the adoption of the bill no one is bound to accept the result of the commission's finding. In no manner is the House committed to the support of its recommendation. The land-owner invites plans from a dozen architects for the construction of a dwelling. He pays for the drawings. All may be cast aside if they do not suit. One may be selected and the others dropped, or, seeing good points in all, but not liking any single plan, the master may direct still another draughtsman to frame from the variety of designs a new model that will prove entirely acceptable. So it is with this House. We are the persons to decide how a substantial system of tariff laws shall be framed from the plans, suggestions, and information collected by this commission; and its members are only the accredited special agents employed to assist us in the preliminary labor incident to tariff revision.

Mr. Chairman, it has been my desire to call the attention of this committee to the practical side of this question. It matters little in discussing the commission bill whether gentlemen believe in protection or free trade. We are to determine how certain business shall be done, not whether one theory is right or another theory wrong. That is not always best done which is quickest done. In legislating for fifty millions of people the representatives must be sure they are right before going ahead. Heartily desirous of reforming the revenue, I desire that reform to be stable, unchangeable, and permanent. It cannot come, save by a miracle, at this session. At the next session it should come, and I want the changes in the tariff to be made with all the information that experience, wisdom, and sagacity can contribute to the elucidation of this vast problem.

Tariff and Tax Commission.

SPEECH

OF

HON. DANIEL ERMENROUT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. ERMENROUT said:

Mr. CHAIRMAN: The pending bill has provoked much discussion. Drifted about on a boundless sea of abstractions, tossed on an ocean of tabulated statements and statistics, the mind has been sometimes lost in the dense fogs of high protection, at others in the equally dense fogs of free trade. I shall trust my bark in neither direction, preferring to direct my remarks to the bill itself; the more so because I have an abiding conviction that for years to come the revenues required for the expenditures of the Government will demand

that scale of customs duties that will go to the point of adequately protecting and fostering American industries without creating monopoly; that will continue to build up the manufacturing industries which depend for their raw material upon our great staple products against a ruinous foreign competition, and this without forcing into existence by tariff subsidies manufacturing industries which have no natural home here. I therefore consider the terms free-trader and protectionist as artificial terms, so far as the legislation of to-day is concerned. I predict, too, that when this commission has reported there will be but little difference of opinion as to what should be the true American policy. That policy will be found in a middle course between the two extremes. *Die Mittlemasse ist die beste Strasse.*

Attempts have been made on both sides of this House to make tariff measures a party question. I say to gentlemen that this is impossible. The day has gone by when the great business interests of the Union can be chained to the car of partisanship, or be made the sport of a game of political battledoor and shuttlecock. Those interests demand, and will demand in the future, with increasing emphasis, legislation established upon the surest foundations; they will demand to be let alone and to be permitted, under just and equitable laws, to work out their own salvation, free from the vicissitudes and necessities of party contests.

On the other hand, the determination is not less manifest against permitting the manufacturing interest or any other interest to consummate unjust and improper legislation either by the exercise of duress upon elections or upon legislatures. Under the friction of so full and exhaustive a discussion as has marked and will continue to mark the discussion of this subject inside and out of Congress, the fire of truth will burn itself into the thought of the people, it will burn itself into the thought of the commission, and, they failing, it will still burn itself into the legislative thought and ultimately crystallize on the statute-book.

I approve of the appointment of a tariff commission because I believe that the public mind is in such a state at present that no legislation emanating from this Congress on this vexed subject without the instrumentality of a commission will be satisfactory. As the case now stands no tariff revision that is accomplished without all the scientific investigation and expert knowledge of the best minds of the country will be accepted as a finality.

But when the work of the commission shall have been done and it shall have been subjected to the criticism of the National Legislature, my belief is that the tariff question will disappear from the politics of the country for a decade at least.

There are those who have induced themselves to look upon this measure as not being what it expresses on its face, as being a measure which, instead of seeking to establish customs duties on a just basis, with an eye to the entire interests of the whole country, regard it as being solely in the interests of those who are in favor of what they are pleased to call a high protective tariff, and as being in fact a sort of Trojan horse. This is not a just view of the measure nor is it fair to the original authors of the proposition. This measure originated in the Forty-sixth Congress. It is records tell me that the only two bills introduced on this subject were introduced by Mr. Eaton, of Connecticut, and Mr. GARLAND, of Arkansas. Both bills called for a commission only differing in their *personnel*. Gentlemen say that to delegate the work of tariff revision to a commission is to abdicate our own duties in this behalf, that this Congress is competent to deal with this question.

All this may be true, yet so distinguished and able a statesman as Mr. GARLAND, of Arkansas, alleged as his reason for the institution of a commission the great confusion in his mind and the minds of others on this subject. Yet he is nevertheless a revenue reformer and so declared himself. Mr. Eaton, whose bill is substantially the one before us, said in the course of the debate:

I began a revenue-tariff man early, and I am a revenue-tariff man to-day. The object of all duties, the object of all imposts should be revenue. The principle of protection is incidental entirely. Therefore I am in favor of a revenue tariff.

Mr. DAWES, of Massachusetts, announced himself as a revision and reform tariff man in this language:

I am in favor of the bill reported, because I am in favor of a revision and reform of the tariff. Great inconveniences and incongruities exist in the tariff. A great many excessive duties remain on the statute-book. Many dutiable articles should be on the free list, and many of the provisions of the tariff have become obsolete and inoperative.

Mr. MORRILL said:

It is a remarkable proposition that our taxation, external and internal, should all be revised and adjusted to the change of circumstances.

He, however, did profess great indifference about the success of the measure, on the ground that the Democratic majority were the party then responsible for legislation.

The other gentlemen who supported the measure then, among them Mr. MAXEY, of Texas; Mr. BAYARD, of Delaware; Mr. HILL, of Georgia; Mr. KERNAN, of New York, all declared themselves revenue and reform tariff men. The debate was not an extended one, and the then bill was passed by a majority about equally divided between the two political parties. This statement of the case would seem to indicate that if it were a Trojan horse at all it was one in the protection camp. I am surprised to find here upon this floor that the bulk of the apparent opposition to this measure has come from the

Democratic side of the House. My friend from Alabama [Mr. HEWITT] yesterday showed that Democrats like Jefferson and Madison did not utterly sympathize with the views thus far expressed by the majority of those who have spoken on this side. The statement I have made shows that the majority of the revenue-tariff reformers of the last Congress, led by Democrats, did not sympathize with them. Nor did the rank and file of the party, with which they and I have the honor of voting, sympathize with them in the campaign of 1880. For we all remember well that after the nomination at Cincinnati, when the Republican press and the Republican rostrum throughout the country rang with denunciations of "the free-trade Democracy," and the hearts of the Northern manufacturer and artisan were fired, the Democratic national committee came to the front, holding up in their hands, as the great anodyne to calm the excitement and breast the rising flood, the Eaton tariff-commission bill. In good faith we told our people that the bill was lying on the table of the Speaker of the House, ready to be called up for action and adoption as soon as the Forty-sixth Congress should reassemble. It was not called up by that Congress, from what motives I do not know. If it was from a political motive its propriety was, to say the least, questionable. With all deference to that Congress, many of whose members have seats in this body, in my judgment it was either a failure of duty or the breaking of a promise which the Democracy of my section at least were instructed to make through the agency of the national Democratic committee.

But it is not too late to make good our pledge. The seed then sown has produced its legitimate fruit. Our political antagonists, seeing the wisdom of this measure, have adopted it. The agency through which it is proposed does not detract from its merit.

But gentlemen say that the country desires immediate relief; that there can be no sort of excuse for delay in an immediate reduction of taxation; that with a surplus in the Treasury, destined to reach at the end of the current year \$150,000,000, not to reduce revenues will encourage extravagance in expenditures; that it will be the signal for the lobbyist and the jobber to assault the public Treasury. It is a good argument.

We must, however, undertake that which is feasible. In my judgment, were it even possible for the entire minority of this House to combine as a unit in opposition to this measure, we could not wring out of the majority any revision of the tariff that would be measurably satisfactory. It would result in nothing but further delay. That would be a delay for which the minority would be responsible; for whatever is censurable in the present delay the majority is and should be rightfully responsible. As the speediest and most satisfactory measure of revision of customs duties and tariff I accept the present measure. The action of the Senate on a bill similar to this gives us warning that no other course is open to us, and that this measure affords the only prospect of the adjustment of this controversy in the near future.

In connection with tariff revision and as one of the anomalies of present tariff legislation, I will insert as a part of my remarks a letter from a gentleman in my district, representing the wool-hat manufacturers of that and the neighboring district of Lancaster, represented by my colleague, [Mr. A. HERR SMITH.] I wish to say that the great body of the gentlemen whom the writer represents are not of my political household. This letter, it seems to me, affords a good deal of food for thought. I refer to the commission which is to be instituted with the request that they take good care of my constituents. They are worthy men, and it is an important interest. The commission will, I hope, at the same time not harm the agricultural interests I represent.

READING, PENNSYLVANIA, April 17, 1882.

DEAR SIR. We have 10 wool-hat factories in Reading, employing 830 hands; producing 860 dozens of hats daily. Also 11 factories in Berks County, all within a few miles of Reading, employing 480 hands and producing 480 dozen hats daily. Also, 6 factories in Lancaster County, within 10 miles from Reading, employing 315 hands, and producing 340 dozen, making in all 27 factories, employing 1,625 hands, and producing 1,680 dozen hats daily. At present time these factories, say two-thirds, are closed up, and the other one-third are running only a few days weekly. We attribute the limited demand for our goods in part to the following: duty on wool for batting is 10 per cent. specific and 11 per cent. ad valorem. This wool comes in the grease and requires 3 pounds to make one pound of scoured wool; of this scoured pound of wool, 12 ounces goes into the hats, which makes the duty on each pound of wool which goes into the hats cost 50 cents. At present this class of wool is 90 cents per pound scoured. Hats made from this wool are worth \$4 to \$8 per dozen.

The duty on fur is 20 per cent. ad valorem. This is clean stock, and all except about a half ounce goes into the hat and costs, with duty added, about \$1 per pound, the duty being 15 cents per pound, and these fur hats bring \$8 to \$15 per dozen. Thus, while wool pays 50 cents per pound, fur pays 15 cents a pound, making the duty on wool more than three times as high as it is on fur; while the hat will bring double the price of wool hats.

Our trade is also threatened from Canada, where they have free wool and labor and trimmings each 30 per cent. less than we must pay, and with only a protective tariff of 25 per cent. on finished hats they will be enabled to undersell us in our own market.

Our Congress should give us free wool and dyestuff with a reasonable duty on trimmings, say one-half of present rate, and our factories could compete with Canada or any other country.

Yours, very truly, &c.,

HON. DANIEL EMMETT TROUT,
Washington City, District of Columbia.

W. H. REINOEHL.

But the question still recurs, What of the surplus revenues? I answer that we are not limited to the one expedient of revision of the tariff to diminish the revenues of the Government. Though if we are to put implicit faith in the theory that low tariff will increase

the revenues, the effect of a sweeping revision would necessarily be to produce still more revenue than we have from that source. We will never see the time when the Government will cease receiving revenue from the customs. So long as the Republic endures, yes, when another form of Government shall take its place if it cease to endure, the custom-house and the revenue-cutter shall endure and the collector of customs sit at the gate. From the beginning of the Government to the present time it has been the favorite method of collecting revenue, as against either direct or internal taxation.

If my recollection is not at fault, internal taxation for the support of the Government was never resorted to except in time of war or some pressing emergency. Indirect taxation by customs duties has been the rule, direct and internal taxation the exception. Therefore through every change of the tariff the custom-house collector remains but the collector of internal revenue passes away. It was the war time that brought you the income tax—the stamp tax on agreements, bonds, and the like; on the bank deposit, the match-box, the medicine package, on beverages and tobacco. It was and is a system most obnoxious of all systems of taxation, a tax most dangerous to the peace and good order of the community, dangerous to the personal safety and corrupting to the morals of officials and people. Its history during the last eighteen years has been written in oppression, blood, violence, murder, theft, corruption, and perjury. It has been a system which at one time or other in its course has poisoned and disgraced every department of this Government.

It was the first of the great means of raising revenue that suffered the repealing hand of the law. The income tax fell, the stamp act fell, and to-day the subjects of internal-revenue taxation are very few indeed. There is not a man living who does not know and feel that its entire repeal is at hand. The breath of life is kept in it by the extreme remedy of the party caucus under the pressure of the 5,000 or more officials, the creatures of Presidential patronage, who now collect \$5,000,000 of money derived from that source to put into their own pockets. I may, too, add, it is kept alive by the innumerable throng of expectants who wish to collect it in the future. Its total abolition is desired by the people, but resisted by the office-holders and politicians. And why should it not be repealed? Some of the opponents of repeal say no; it is a covert proposition to prevent reduction of customs duties. I deny it; but if it is following in the footsteps of the founders of the Government, I say it is better far to collect taxes from the people by customs than by this system. Another says it is a covert measure of the national banks to perpetuate that system by retarding payment of the national debt. I do not fear that repeal of this system will prevent a proper reduction of the debt. Frugality in expenditures will go far to accomplish that, and in a manner more beneficial to the people.

Let the door be closed on extravagance and held tightly shut. A further answer is that human wit has never yet devised a government so utopian as to combine in working order with mathematical accuracy only and nothing else but all human good. Every necessary reform cannot be accomplished at once. But have a care. A too rapid reduction of the national debt may work greater evil than even temporarily not reducing it at all with the continued existence of the national banks for a limited period thrown in. If my recollection be correct, among the causes alleged, and truthfully in my opinion, for the hard times of no very recent date, was the too rapid reduction of the national debt. The legislation and the administration, responsible for that, received the public condemnation, and we must not in our zeal to enforce one method of reform repudiate all others. In my judgment the policy demanded from us by the people in lightening the burdens of taxation is the total abolition of the internal-revenue system. It is the easiest and quickest way of doing it, as well as most beneficial. Consider the results gained by it. You not only relieve the people from taxation but you start the Government on a new career of reform in the civil service. You destroy at one blow five thousand offices and relegate to productive industry their incumbents.

It will be a blessed day when you announce to the people from these Halls that henceforth the diminution and destruction of offices, and not their increase and creation, is the business occupying the legislative mind. Let us abolish this system. The humble farmer can then plant his little crop of tobacco, and when it shall have ripened, he can pluck from the plant the poor unmerchable leaf and take it to his neighbor's tobacco-mill, have it cut for his own use, and smoke his pipe in peace by his hearthstone over his mug of untaxed beer, or if he prefers it, over the juice of his own home-made rye or apple, distilled by himself or his neighbor, without fear of being dragged, as I have known them to be, into a United States court, for violation of the revenue laws. Abolish it, and you will bring nearer and more cheaply to labor the medicine that heals. Abolish it, and you bring relief not to one class but all, from the wealthy capitalist who counts his dollars by the millions, to the little match-girl whose human factory, now stifled by the hand of the monopolist, will again be employed, and whose voice, now hushed by the revenue collector, will be heard in the land. Abolish it, and you will be obeying the dictates of statesmanship and humanity. I do not propose to bewilder the House with details. I simply desire to reflect what I believe to be the views of my constituency. Upon a proper occasion, should I deem any further expression from me necessary to enforce these views in legislation, I shall consider it my duty to engage in further discussion.

Tariff and Tax Commission.

SPEECH

OF

HON. THERON M. RICE,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. RICE, of Missouri, said:

Mr. CHAIRMAN: For many reasons I favor the bill under consideration, but mainly on the ground that it is apparent this House is not, and likely will not be, prepared for intelligent action without the educational aid which may be afforded us by the proposed tariff commission. If there has been any one fact more clearly established in this discussion than any other, it is that this House is not now ready to intelligently make a general revision of the law in relation to customs duties upon importations, the internal-revenue tax, and kindred economic questions which must necessarily be to a greater or less extent affected thereby. Too high an estimate cannot be placed upon the magnitude and the intricacies of the tariff question. The purpose of the tariff commission is to furnish the facts and the statistics upon which those facts are based relating to all the interests of the country which may intimately or remotely be affected by such revision. It concerns and affects vast and varied interests of fifty millions of people. It concerns industries of small importance and others of vast and untold magnitude. It affects interests and industries in their relations concurrent and others conflicting. It affects commerce and commercial relations at home and abroad. It concerns all our vast manufacturing interests. It concerns all classes of citizens and all classes of labor; it pertains in its far-reaching effect to all classes of our people and their welfare.

It has been well said that the question of tariff is as old as the earliest organizations of men into communities, and has commanded in its consideration and discussion in all ages of civilization the ablest talent of the world. The modes of obtaining revenue and levying of import duties is no new question in American politics; the views of the fathers of the Republic, and in later days of Webster, Clay, Calhoun, Benton, Seward, and Everett, are to us matters of history. Generally this question has been considered non-political. In the old Whig party, surnamed "high protectionists," there were many who advocated the doctrine of free trade. The Democratic party, nominally bearing the banner of free trade, had within its fold many strong advocates for protection, while to-day the policy of the Democratic party seems to be "protection only where protection is needed, and a tariff for revenue only." The Republican party on this question is divided. From the character of debate during this session on this floor, with their working and voting majority, there has been a manifest want of unanimity and concord. The State of Pennsylvania has, for the last forty years, been clamorous for a protective tariff, and thus, remarkable as it may seem, to the extent of her iron interests alone, while the West and South have always to a greater or less extent favored the doctrine of free trade.

Mr. Chairman, with all this conflicting history of opinion before me, which seems in all the past to have been controlled to a greater or less extent by selfish interest or a want of proper education, I confess that I approach the consideration of this subject with some apprehension of doubt that I am as well advised and my convictions as well grounded as they should be, to either suggest, or by my vote at this time sustain, any distinctive changes so far-reaching in their consequences and so complicated in their vast collateral bearings. I, sir, am free to admit that I look with suspicion upon the men of to-day who are bold enough to assert to the country and the world that they have fathomed the depths and mastered the subject in all its intricacies, when it is apparent from pronouncements of their own argument that their conclusions are drawn and deductions made from a selfish standpoint; that their ambition is local and exclusive.

Representing as I do a constituency of diversified industries, but chiefly agricultural, living the greater portion of my life in agricultural communities, I have been inclined to accept as true the doctrines advocated by the disciples of free trade; and in years of financial disaster, produced by reckless improvidence, speculation, and extravagance, or by speculation, financial revolutionary legislation, I have perhaps favored what I am now pleased to call a delusion—that free trade might be at least one of the prominent agencies in the list of grand panaceas for all ills of the national body-politic; but the attention which I have been enabled to give this question in the last two years, with a view to just conclusions and correct action, has forced upon me the conviction that a protective tariff—and to the extent of needed protection only, a tariff for revenue—is not only necessary but proper for our prosperity as a nation and people.

Instances may arise when, for the sake of proper encouragement to

home industry, a tariff should be levied for the protection of not only manufactures but the crude productions of American labor. Again, the time may come when our manufactured fabrics or the crude material may need no protection to enable them to compete in the markets with products of foreign labor. Then they should have no protection. Then of course all necessity for a tariff protection will cease. Gentlemen talk of tariff for revenue; others of tariff for protection. I infer from the argument of the one that protection is the primary object and revenue only incidental; from the reasoning of the other that revenue is primary and protection incidental. In my judgment both are in error and their arguments untenable.

The demands of the Government for revenue are such that resources for raising it must be devised and provided for. There is no way of avoiding the fact that the Government must have revenue.

The report of the Secretary of the Treasury for the year 1881 shows the expenditures for the fiscal year ending June 30, 1881, to be \$260,712,857.59. Of this sum there was paid for pensions \$50,059,279.02; for Army, river and harbor improvements, \$40,466,460.55; for naval establishments, &c., \$15,686,671.66; for building light-houses and collecting the revenue, \$41,837,280.57; interest on the public debt, \$82,508,741.18, and for sundry civil expenses, \$17,941,177.19. These are the principal items of expenditure.

It is not my purpose at this time to criticize the management of the finances of the Government, or to charge waste and prodigality, but to deal with existing facts as we find them.

Now, it is not proposed to lessen the appropriations for 1882. We shall still have to pay interest on the public debt, and provide a proper sinking fund looking to an extinction of the principal of the public debt. We still expect to pay a large sum this year for pensions, at least from seventy-five to one hundred millions. We expect to appropriate a large sum for improvement of rivers and harbors, and for the Army and Navy. Thus the expenditures of the Government for this year will amount to not much less than \$350,000,000. Having this debt to pay, the question arises how are the means of payment to be obtained. The revenue for 1881 from all sources except customs and internal revenue amounted to \$17,358,130.98, and from customs \$198,159,676.02; and internal revenue \$135,264,385.51. Now, if we abolish the tariff and adopt free trade, we must add this \$200,000,000 derived from customs to the internal-revenue list or it must be raised by a direct tax. Against both these propositions the people would most certainly rebel.

Some may favor a graduated income tax, which I would most heartily indorse, but as Congress is now organized it will be impossible to pass such a law. The question then again recurs, what are we to do? I know for the present no better method than to resort to customs duties to the extent of a just protection. I then conclude that the obtaining of revenue is one primary object, and, I may say, under the Constitution a legitimate object of the tariff, and am unable to see any reasonable way, under existing management of our financial policy, to escape the conclusion. I have thus far proceeded in my argument upon the theory that protection by levying customs duties is a necessity; that such levies are an actual necessary means for the protection of American industry and American manufactures. As to the fact whether the products of American labor placed upon the market in a crude or artificial form need protection to enable the producers to compete in the same market with imported products, I am not advised. And any such articles needing protection, to what extent, I am also unadvised.

It is not my purpose to designate any articles that need protection or to enumerate articles which should be imported duty free. Nor shall I attempt to fix or even suggest any duty rates. I will not do this; first, for the reason that I am not sufficiently advised of the facts upon which a proper adjustment of rates should be based, and second, for the reason that such argument would not be germane to the bill now under consideration. It is not now proposed by this House to fix rates. The present consideration does not contemplate that, but merely to prescribe a mode and obtain the data by which proper rates may be ascertained.

I have stated that thus far in my argument I have assumed that the levy of duties and import taxes may be in some instances a necessity for the protection of our national industries. The right and the constitutional power to levy such taxes for revenue is not questioned in all cases where the need for thus raising revenue exists. But it is denied by the champions of free trade and import duties for revenue only—theorists—that Congress has any power to levy import duties for protection merely. The gentleman from Kentucky [Mr. BLACKBURN] characterizes such tax as "pillage and robbery," and proceeds to say:

There is no judicial dicta emanating from any court upon the continent that warrants the levying of a tariff tax for the purpose of protection. A tax is described and declared and defined to be the imposition of an exaction laid upon the property of the citizen for the support of the state. Taxation is an attribute of sovereignty; it is the grandest of all sovereign powers. * * * I deny that under this Federal Constitution Congress holds any power to levy any tax for individual gain or private advantage. Protection was never dreamed of by the pioneers of the Constitution, unless it was that incidental protection which follows inevitably from the laying of a tax for the purpose of a revenue.

I am aware that in my attempt to criticize the foregoing declaration of the honorable gentleman from Kentucky I am meeting a statesman of ability, learned in all the departments of constitutional law, familiar with the decisions of the courts, and an acknowledged leader

of his party. If the declaration of the gentleman means anything at all, it is a bold assertion that Congress has no constitutional power to levy an import duty for protection alone. Now, is this proposition true? As I understand the issue joined in this debate it involves two distinct and well-defined propositions; the one is a constitutional right to levy import duties for protection, the other is the constitutional power to levy import duties for revenue. The honorable gentleman from Kentucky denies the former and affirms the latter, and asserts "that a tariff for protection is pillage and robbery."

This is his assertion, his argument: that "there is no judicial dicta to be found emanating from any court upon this continent that warrants the levying of a tariff tax for the purpose of protection." I submit it is without merit; and further submit for his consideration: has the constitutional right or the power of Congress to levy a tariff tax for protection ever by any court in America been questioned or denied? The gentleman from Kentucky further says:

I confess that under the eighth section of the first article of the Federal Constitution Congress is empowered to lay taxes by way of import duties for the raising of revenue.

Certainly, Mr. Chairman, the honorable gentleman is again in error, for he not only misquotes the language of the Constitution, but by his language perverts its apparent sense and meaning. I fear, sir, inadvertently, he has substituted for the Constitution of the United States his reading of the third section of his party's national platform of 1880.

Article I, section 8, of the Constitution reads as follows:

The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States.

There is here enumerated several distinct powers conferred upon Congress: the power to levy and collect taxes; the power to levy and collect duties, imposts, and excises; the power to pay debts and provide for the common defense and general welfare of the people of the United States. The specific power is conferred upon Congress "to levy and collect duties, imposts and excises." This section, as is the Constitution, is silent as to the time, the purpose, and the necessity for such levy and collection. The people and the States have clearly delegated the power to do each of the above enumerated acts—the power to levy and collect duties, imposts, and excises—not for revenue or because revenue is needed; but Congress may do this for any reason in its discretion just and necessary to promote the general welfare of the people.

Congress may in its discretion exercise this power for the just protection of American commerce, and for the protection of any one or the many of the various American industries.

Again, the gentleman from Kentucky says: "But I assert that a tariff for revenue is a tax." If I have studied the lexicographers aright, the words "tariff" and "tax" are not correlative terms, but are incongruous in their meaning and use.

Mr. Chairman, as I have before stated, I am in favor of this bill. I favor it because I believe it will result in a production of such information as may enable us to more intelligently act upon, arrange, and adjust the whole tariff question. We want and must have all the facts, the data, and the material estimates essential to a correct and fair schedule of rates. If protection be needed for any fabric or article of American labor production, I want to know how much protection is required and the detailed estimates upon which the rate is fixed. I wish to be enabled to act intelligently, as should every member of this House. And, when I can, I shall favor protection to the full extent that I may be advised protection is needed, but no further.

I am frank to admit that I cannot say to-day whether or not a single article or a single American industry needs protection, and I further frankly admit that I am unwilling to permit parties who represent the various manufacturing industries to dictate the tariff rates they would have imposed.

Having said this much, I may now be permitted to present my views as to the principle which should govern all duty and impost exactions to be paid upon importations. The tariff schedule and rates of excises should in all cases be predicated upon relative cost of production and cost of transportation to our American market. So that all fabrics and raw materials produced by American labor, or the product of foreign industry, capital, and skill, shall be placed squarely upon an equal footing, and from thence have equal competition in an open and free market.

To illustrate, take the article of hoop-iron, bar-iron, or steel rails; ascertain the cost of all the raw material that it takes to make a ton of the manufactured article, the actual cost at fair and just prices of all labor, the reasonable cost of interest account on capital, a reasonable charge for wear and tear and repairs of machinery; now suppose that on steel rails, at the American mills, these items of cost all added together amount to \$45 per ton; then make the like estimate of the cost of steel rails manufactured in England, and add the reasonable cost of transportation to our seaboard, which we find to be \$30 per ton. Now, I find upon this basis of calculation—which I only use for illustration—that steel rails produced in England, by her cheap labor and low rates of interest on money capital invested, can be laid down in our market at a cost of \$15 per ton less than the same article of the same quality can be produced by our American mills. To make the

two products equal in our market; to reasonably protect American industry, and at the same time encourage a fair and open competing market, I would place such ad valorem duty rate upon the English product as shall still encourage importations, and yet place the two articles in fair competition with each other in our markets.

In estimating the cost of American steel rails it is just to assume that all American manufacturers are manufacturing in districts, each possessing equal facilities to compete with each other, upon a basis of no protection; that each possesses equal natural advantages to enable him to produce at about the same cost, otherwise the direct agency of a tariff would be to build up an overwhelming monopoly in a single business in favor of one locality, and the people of one section of our own country against another. It can be plainly seen that to do otherwise would result in offering to those who manufacture in districts favored with great natural advantages an opportunity for exorbitant aggregations of wealth, which would be manifestly unjust to the interests of the whole country and the people. In other words, capital and capitalists in our own country for investment seek natural advantages, and operate where there is surrounding natural adaptation. Otherwise the protection those might ask who seek to manufacture at points where there exist great natural disadvantages would result inevitably, on account of home competition with those who manufacture under more favorable circumstances, and consequently at less cost, in no protection to them. But it would do more; it would under the ban of protection afford the opportunity to the latter to crush the former, and at the same time drive from seaports all importations, and thereby cut off all receipts of impost and excise revenue.

What I have said by way of illustration as to iron I apply to every other American industry, to every other product of American labor, whether of the farm, the forest, the mine, or the mills. Upon this point I need not say more. To what extent a revision of the present tariff system will produce revenue is the question to be ascertained, by the aid of this commission, in the future action of Congress. If under the new system an adequate revenue be obtained for all necessary current Government expenditures, then we need look no further for annual income; but should this duty on income still be ascertained to be inadequate, then it will be the duty of Congress to make further revision of our income laws. But since it is conceded by all that the present tariff, denominated by some as the "war tariff," is inequitable and unjust, that it imposes onerous burdens and makes ruinous discriminations, that it fosters into monopolistic power some branches of American industries to the ruin of others, let our first step be to revise the tariff upon the basis of protection and consequent revenue. This work done and results ascertained, Congress may then consider and adjust our internal excise system, or repeal the same, as ultimate facts may show practical warrant.

The ultimate object of tariff revision is, as I understand all the advocates of this bill, to establish a table of rates more equitable and just. Upon the point of revenue all have fixed the basis upon the Government's current annual expenses, which includes interest on the public debt and surplus sinking fund. The report of the Secretary of the Treasury estimates the ordinary receipts for 1882 at \$400,000,000, and the total expenditures at \$340,462,507.65. This estimate of expenditures includes for sinking fund \$45,611,714.22 and leaves a surplus of \$59,537,492.35, or in other words, as the real sum to be applied to payment of public debt \$105,149,206.57. The Secretary also includes in his report the estimated interest on the debt for 1882, amounting to \$65,000,000. So that deducting from estimated expenditures the sinking fund and interest on the public debt we have as the net estimated expenses of the Government for 1882 only the sum of \$229,850,793.43.

The Secretary's table of expenditures, from which I quote, is as follows:

Legislative.....	\$2,993,455 92	
Executive.....	16,291,367 73	
Judicial.....	403,200 00	
Foreign intercourse.....	1,315,655 04	
Military establishment.....	22,509,534 17	
Naval establishment.....	17,249,148 46	
Indian affairs.....	5,841,713 91	
Pensions.....	100,000,000 00	
Public works:		
Treasury Department.....	\$3,282,000 00	
War Department.....	11,479,506 03	
Navy Department.....	2,829,938 00	
Interior Department.....	386,900 00	
Post-Office Department.....	8,000 00	
Department of Agriculture.....	43,730 00	
Department of Justice.....	1,500 00	
Postal service.....		18,031,574 03
Miscellaneous.....		920,077 86
District of Columbia.....		18,141,851 95
Permanent annual appropriations:		3,562,599 31
Interest on the public debt.....	\$65,000,000 00	
Sinking fund.....	45,611,714 22	
Refunding—customs, internal revenue, lands, &c.....	7,514,100 00	
Collecting revenues from customs.....	5,500,000 00	
Miscellaneous.....	2,577,125 00	
		126,202,939 22
Total estimated expenditures, including sinking fund.....		340,462,507 65
Or, an estimated surplus of.....		59,537,492 35

Now, I submit that the question as to the amount of revenue necessary to be annually levied upon the people and their industries is not only important but I may say of paramount magnitude in the consideration which this Congress must give to the bill now under debate.

It is equally as important, economic, and just, alike to the creditors of the Government and the people, that the public debt be paid, and promptly paid, both principal and interest, as it is that we provide for current expenditures; and while we are providing ways and means for meeting the latter we must not overlook our duty in providing for the payment of the former. In all the volumes of argument which in the last four weeks have been presented to this House but little allusion has been made to our fifteen hundred millions of bonded debt, four hundred and ninety millions of which is now due, and scarcely a suggestion made of any plan or means of payment commensurate with the real situation.

Neither the advocates of "tariff for protection" nor of "tariff for revenue, with incidental protection," seem to contemplate in the proposed revision anything more than a revenue to meet annual contingent expenses, with perhaps a small sinking fund. On the other hand, it is the manifest disposition of a large majority of the members of this House to procrastinate the period for payment of the public debt. Methods for the payment of the public debt, and thereby decreasing the demands for annual revenue income and in the same ratio tax burdens upon the people, are proper questions for our consideration and germane to this debate. And if it can be shown that as to the \$490,697,050 $3\frac{1}{2}$ per cent. bonded debt we have at hand honest and legitimate means of immediate payment, and make it, then we lessen the current demands for revenue about \$122,323,603.32.

Mr. Chairman, I propose to this House a plan for the immediate payment of all matured bonded debt, to which I invite consideration and criticism.

The recent report of the Comptroller of the Currency shows the number of national banks now organized and doing business to be 2,132, with an aggregate capital of \$463,821,985. They hold bonds for circulation to the amount of \$363,335,500, upon which they have a note circulation of \$320,199,969. Of these United States bonds for circulation \$245,601,050 are the overdue $3\frac{1}{2}$ percents.

Under existing law national banks may at any time, upon a deposit of legal-tender notes or coin with the Treasurer of the United States, withdraw the bonds held as security therefor and leave the Treasurer to redeem an equal amount of their notes.

Now, Congress should at once repeal the act permitting national banks to redeem their circulating notes with legal-tender notes, and also repeal the national banking act and pass a law for the retirement of all national-bank circulation, as fast at least as existing bank-charter limitations of twenty years may expire, and authorize the Secretary to issue full legal-tender Treasury notes in amount equal to the $3\frac{1}{2}$ per cent. bonded debt, provide by law for the retirement from circulation and redemption of the \$346,681,016 of the greenback circulation under the act of 1862 and supply its place by an issue of an equal amount of Treasury notes of like character as above, and by law direct the Secretary of the Treasury to call in all of the $3\frac{1}{2}$ per cent. overdue bonds for payment, and by law order that the same be paid, at the option of the holder, in coin or Treasury notes.

The natural result will be that the circulating notes of national banks secured by the \$245,601,050 of the $3\frac{1}{2}$ per cent. bonds, or at least about 90 per cent. thereof, will be immediately canceled as the notes are returned to the Treasury. And the remaining \$245,096,000 will be immediately paid, mostly in Treasury notes. I am aware that banks and coin theorists will bitterly oppose this proposition, and, as in the past, offer threats for reason, and attempt to force upon the people and country a financial panic for argument; but, for my part, I say to this House and the country, let the issue be joined, and let us settle now and forever the question whether or not the people shall rule in the interest of economy and general welfare, or the few in the interest of selfish greed and criminal monopoly. In my humble judgment, there are many reasons why national-bank circulation should be discontinued, and, upon the plan proposed, payment of the \$490,000,000 of bonded debt.

Mr. Chairman, the limit allowed me in this debate does not afford me opportunity to enter upon the discussion of the money question, or to show to this House what I conceive to be the wrongs of the national banking system. I may, however, say I know of no good reason or necessity for their continuance, either in the interest of the Government or the people.

From the stand-point of the banker, the case I admit to be different; but their ambition is purely selfish, and based solely upon profits. Professedly the office of national banks and the purpose of the law is to furnish the people and the country with a circulating medium, and to give it a fair distribution among the States.

Professedly the law is philanthropic in its aims and was created for the public good, when the fact is its execution is intrusted to a class of persons who engage in it for none other than speculative purposes. They flood the country with currency when it pays them to do so, and then at will they contract the circulation, no matter how great the consequent distress and commercial disaster. They give the people no guarantee of stability and no guarantee of credit

beyond a pledge they give to Government, which of itself is to them a source of revenue. No matter how great the needs of the people for money, they only furnish it when it will pay, and only bank when and where in their judgment it will be profitable. In offering their notes to the people their motto is to charge the highest price the market will bear. There is no limit to the power of their inflation, no limit to their contraction. Professedly they give the people money, when in fact they only issue promises to pay. Its money character they themselves in theory despise and condemn. They issue to the people in their own name negotiable promises to pay money, not upon their own credit, but upon the credit of the Government, and upon the faith that the Government will receive them in payment of any debt the people may owe it except customs duties.

National banks may at all times absolutely control and regulate the volume of currency, and doing this may to a greater or less extent control the prices of labor, production, and commerce. Masters of the people's money, they become masters of the people's and the nation's destiny.

In my judgment it is unsafe, as it is unwise, to continue the national banking system as banks of issue. Certainly to the Government or to the people there is no reason or necessity for their continuance.

The people need, and to insure prosperity must have, a sound, safe, and reliable currency; a convertible currency at par, a currency which needs no redemption and non-redeemable except for payment of debts. A currency, whether it be metal, coin, or Treasury notes, shall be alike money to all our people. There should be no special money for the rich and another kind of money for the poor; whether in the hamlet or palace, a dollar should be a dollar with absolute money powers all over our great and growing country.

Mr. Chairman, I say, then, in the interest of the people, in the interest of economy and good government, let the national banking act be repealed. I urge immediate payment of the \$490,000,000 of the $3\frac{1}{2}$ per cent. overdue bonded debt and the consequent \$122,323,603 reduction in the Government's annual contingent expenditures, and for such regulation and adjustment of our tariff and internal-revenue system as shall afford uniform, just, and equal protection to all American industries and labor, imposing no unjust burdens or discriminations upon any one.

Tariff and Tax Commission.

Salt: the universality of its supply; mystery and indispensability of its use; tyranny and impiety of its taxation.—*Benton*.

SPEECH

OF

HON. WILLIAM H. HATCH,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 4, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

MR. HATCH said:

MR. CHAIRMAN: I do not propose to enter into any general discussion of tariff issues. I did not expect to be reached to-day on the chairman's list of those who desired to speak on the pending bill. I have been informed that members of the Ways and Means Committee propose to take up all of the time to-morrow in the discussion of the bill. I am at a loss to understand why the majority of that committee should desire to express their views upon the tariff, or to discuss this question at all. I think it will be generally understood by the country, if not by this House, that in proposing to relegate the duties properly belonging to that committee to a commission of nine civilians they virtually confess either their inability to perform the duties assigned to them, or that they have no formulated or fixed views upon the tariff question, at least none worthy of consideration by the House.

There was a time, Mr. Chairman, when the Congress of the United States and the people of the country supposed that the members of the Ways and Means Committee were selected because of their experience and their information upon this great subject. I remember very well the comments of the press at the time the committees of the Forty-seventh Congress were appointed and the distinguished gentleman from Pennsylvania was selected as chairman of that committee. These comments were generally to the effect that "the man and the occasion had met," and that no gentleman with greater experience, more general and special information, and longer service in Congress could have been selected for this responsible and honorable position, a gentleman whose reputation was not merely national,

but whose fame in connection with this subject was world-wide. It was also asserted that not only in the choice of the chairman of that committee but in the selection of its individual members the Speaker of the House was equally fortunate in having chosen members qualified by information and their eminent services in the past to prepare and to present to the House for its consideration wise and judicious measures relating to this important subject. I assert in the presence of the distinguished gentleman, the chairman of the Committee on Ways and Means, that I can scarcely restrain myself to the use of language which will express my humiliation and shame, and yet come within the rules of parliamentary debate, in the face of the fact that the Ways and Means Committee of the Forty-seventh Congress have come before this House and the country with the virtual admission that they are incompetent or unwilling to discharge the duties they have been selected to perform. Why these gentlemen, after making this humiliating confession, should desire the last day allotted to this discussion to debate not so much the pending bill as the general tariff question appears to me, to say the least of it, to be something strange and grotesque.

I should think that any member of the Ways and Means Committee who supports the commission scheme could say in few words all that it is necessary for him to say to define his position, which is simply a confession of his inability to discharge the duties assigned to him under the rules of the House, the performance of which is expected of him by the country, and that therefore he votes for a measure which relieves him of the labor and responsibility properly devolving on him, and relegates the performance of this duty to a commission of nine civilians to be appointed by the President.

Mr. Chairman, the gentlemen of the Ways and Means Committee may take a different view of this subject, and treat it as a matter of little consequence; but for myself, while representing on this floor an intelligent and honorable constituency, I could not be induced to vote for such a measure.

To confess an inability to perform the duties of a position to which I had been assigned by the Speaker of the House, and to turn those duties over to a commission outside of Congress, is something I would not do without immediately resigning my position to some one more competent to discharge its duties. I do not share the opinion expressed by some of the advocates of this bill, and which breaks out every now and then in the comments of certain newspaper correspondents prone to extravagant and sensational descriptions, in the low estimate they place on the intelligence and ability of the Representatives on the floor of this Chamber. I believe that to-day a committee can be selected from the membership of this House as eminent for experience, ability, and knowledge on this subject, and as competent to frame a tariff law and present it for our consideration, as any commission of civilians that the President can select. The debate on the pending bill I think bears me out in this assertion. Gentlemen representing the various industries, and the various interests of the country, from all sections of it, have shown themselves

familiar with the facts, the figures, the history, the rights, and the obligations of all of these industries, and different conditions that attach to them, and the relations they bear one to the other and to the Government, and the customs duties which ought to be imposed to raise the amount of revenue "necessary for the wants of the Government economically administered."

As the debate has taken a wide range, I propose to reply briefly to the remarks made by the gentleman from Michigan, [Mr. HORN,] on the 9th day of March, in regard to the salt industry, and the effect of the present tariff upon that industry in the United States. Mr. Chairman, I believe in a constitutional tariff—a tariff for revenue, and a tariff for revenue only; and I know of no single manufactured article in the United States that shows more clearly and distinctly the oppressive operation of the existing tariff than does the article salt. I will print extracts from a preliminary report upon the salt manufacture of the United States, issued by the Superintendent of the Census, and exhibiting the total manufacture of salt in the United States for the census years 1860, 1870, and 1880. I desire to call the attention of the committee to a few prominent facts in connection with these statistics:

Salt manufacture of United States for census years 1860, 1870, and 1880.

* Not enumerated. † These figures are evidently incorrect, as the New York State salt inspector reported 8,662,237 bushels in 1860, and 8,746,115 bushels in 1870.

From these tables it appears that the number of establishments manufacturing salt in the United States in 1880 was 264; in 1870, ten years before, there were 282; in 1860, twenty years before, there were 399. But mark the increase in the product. In 1860 there were produced 12,717,198 bushels; in 1870 there were produced 17,606,105 bushels, and in 1880 there were produced 29,800,293 bushels. I call the attention of the committee to these facts, because they show that while the number of establishments has decreased by reason of the monopoly and the close corporations that control the manufacture of salt, the product itself has increased in twenty years nearly 100 per cent. The average number of hands employed in the entire industry in these 264 establishments is, males, 3,920; females, 15; children, 140; total, 4,075. And yet to protect the owners of 264 salt establishments in the United States, employing about 4,100 laborers, all the industries of the United States using salt in large quantities are taxed about 100 per cent. on the value of the amount used, or 12 cents on every 100 pounds imported in packages.

It is a remarkable fact that gentlemen upon the other side never refer to, and never look at, and will not see (and there are none so blind as those who will not see) the fact that while they claim that this duty of 100 per cent. upon the cost protects these four thousand laborers, four hundred times four thousand laborers are paying their proportion of this tax. I will publish in this connection a statement furnished me by the Superintendent of the Census, showing the number of beef and pork packing establishments in the United States, and the number of hands employed by them, and the quantity and the value of salt used every year:

Statistics of meat-packing, census of 1880; totals for the United States.

Value of all other products.....	\$16,926,091
Value of all products.....	\$303,562,413

*This average is based upon the omission in computation of 84,118 beeves bought dressed, the average weight of which is 534 pounds, and 134,179 calves, the average gross weight of which is 140 pounds.

NOTE.—The above statement does not include the statistics of retail slaughtering establishments.

While you are attempting to protect 4,000 laborers in the manufacture of salt, you are robbing six times that number of hard laboring-men engaged in the work of packing beef and pork in the United States, to say nothing of the multitude of farmers who pay this tax. Every human being in the United States, every head of live stock in the United States, as it licks its little daily quota of salt to sustain life, pays tribute to these two hundred and sixty-four monopolies. But said the gentleman from New York, [Mr. HISCOCK,] in a few remarks that I heard him make before the Ways and Means Committee during the last Congress, this tax falls so gently on each inhabitant of the United States when you divide it among fifty millions of people it is a very small tax upon each person.

Does that make the principle any less villainous? Who ever heard that robbing a man by piecemeal was less criminal than taking all his purse and portables at once? You rob fifty millions of people of a small amount of money, and because you do not take it all from a small class, you say it is not robbery; it is protection to 264 corporate establishments in the United States. There is another strange fact relating to this subject, and I give it as a nut for my distinguished friend from Pennsylvania [Mr. KELLEY] to crack. He favors the protection of American industry. If I understand his position, he is the most earnest defender of protection to American industry. Do you propose to protect an industry that does exist in America by imposing a duty upon a manufactured article that is not produced or manufactured in the United States except in a very limited and insufficient quantity?

Mr. KELLEY. I have done more to put upon the free list raw material that can be produced in this country than any man I have ever known in the American Congress.

Mr. HATCH. I honor the gentleman for it.

Mr. KELLEY. But I am in favor of putting a duty upon manufactures all the materials of which lie undeveloped and unused about us. I give the gentleman, as he has invited me, an illustration—soda-ash. In 1870 I urged a duty of a cent and a quarter per pound, and if that duty had been put on soda-ash would be selling at that rate now of our own manufacture. But we import our soda-ash when our material lies in West Virginia, in the gentleman's own State, and in half a dozen other States of the Union.

Mr. HATCH. The gentleman's reply is more ingenious than frank.

Mr. KELLEY. Oh, no.

Mr. HATCH. Then the gentleman did not understand my proposition. [Mr. KELLEY rose.] Wait till I state it a little more broadly. Every pork-packing establishment and every beef-packing establishment in the United States to-day pays tribute to this salt monopoly because they are compelled to buy a taxed article that is not produced or manufactured in the United States, except in limited quantities, and upon which you place a hundred per cent. duty.

Mr. KELLEY. I reply to that by the analogy from the printed cloth referred to by the gentleman from New York [Mr. COX] yesterday. I see that gentleman now in his seat. He said we paid 5½ cents duty. That is the duty named in the tariff law. But the article sells in the market for 5½ cents. I do not know where the duty comes in. You calculate upon the duty named in the law. I take the price and can show you from the tables of the gentleman from Michigan, [Mr. HERR,] whose speech you are reviewing, that you buy the article cheaper than you could before.

Mr. COX, of New York. I quoted from the law, and it is a bad law.

Mr. HATCH. The gentleman from Pennsylvania still does not answer my question. The gentleman from Michigan [Mr. HERR] prints a table in his speech showing the amount of the product of Michigan salt. These tables refer to commercial salt in barrels, which cannot be used in the packing of beef and pork, either for export or domestic use. The pork-packer and the beef-packer are compelled to buy Turk's Island and other coarse salt, which is not produced or manufactured in the United States except in very limited quantities. You can make pickle out of this quality of salt, but cannot use it exclusively in packing either pork or beef. The gentleman talks about the price of it. For the purposes I have stated it is of inferior quality and dear at any price.

Mr. KELLEY. How about the Louisiana salt, which is said to be the purest the world has ever seen, being 99 per cent. of pure chloride of sodium?

Mr. HATCH. And still the Louisiana salt is not used by the packers of beef and pork.

Mr. KELLEY. Because Louisiana has not the capital, or will not apply it to the development of the most remarkable salt mine in the world.

Mr. HATCH. That is certainly not the fault of the remainder of the fifty millions of people of the United States who do not live in Louisiana. If they in Louisiana prefer to raise cotton and sugar to making salt, that is their business; and it is not the business of the gentleman from Pennsylvania to force upon the balance of the people of this country a tax upon salt in order to protect the sugar and cotton interests in Louisiana.

Mr. KELLEY. If you please, I said this, that if you will properly protect the industry, capital will develop that great Southern salt field and give you cheaper and better salt than you have ever yet had.

Mr. ROBERTSON. That is very true, so far as the purity of the Louisiana salt is concerned. The gentleman has admitted that the salt mine, and we have only one there, is the purest salt in the world.

Mr. KELLEY. It is unparalleled in the world.

Mr. ROBERTSON. And but one family owns it, and that one family did not have the capital to work that salt mine until of late. They are now working it, and it is being rapidly developed, under your high protective tariff, for the benefit of one family in the State of Louisiana.

Mr. HATCH. I will print in this connection a table kindly furnished me by the eminent statistician of the Agricultural Department, showing the importation of Turk's Island salt, ground alum salt, and foreign salt, that the packer of beef and pork is compelled to use. Not only that but all the fisheries of New England are compelled to use the same kind of salt. Every gentleman who knows anything about the fish business of the United States knows that every kit of mackerel is packed with this coarse salt, and they cannot use anything else if they would save their fish. But the ingenuity and the ability of former Representatives from New England upon this floor, long years ago, got the fishing interest of New England absolved from the tribute of this salt tax, so that they now get their salt with which to pack their fish duty free, and they have enjoyed this privilege for ten years, under existing law. But the great Mississippi Valley, that produces the cattle and hogs and a large part of the wealth of the country, is still obliged to pay that tribute to the 264 salt manufacturers.

Imports and exports of salt from 1870 to 1881, inclusive, (compiled from records of commerce and navigation.)

Years.	Imports.		Domestic exports.	
	Quantity.	Value.	Quantity.	Value.

Other countries sending less than the value of \$1,000 each are Denmark, French West Indies, Ireland, Gibraltar, British Columbia, British Guiana, Hong-Kong, and Cuba.

J. R. DODGE, Statistician.

STATISTICAL DIVISION, DEPARTMENT OF AGRICULTURE.

March 31, 1882.

And there is another industry which you burden by this tax, the great agricultural and stock-raising interests. The gentleman from Michigan, [Mr. HERR], in the tables which he prints in his speech showing the comparative cheapness of Michigan salt, forgets that it is a bulky article, a weighty article, and that the cost of transportation by rail from the salt-works in Michigan and West Virginia and New York is very great. He talks about the price of salt at the salt-works. I will print tables from Chicago and Saint Louis and Hannibal and Keokuk and Saint Paul showing the average price of salt for the last two or three years at the distributing points of the Mississippi Valley. It is the cost of transportation that makes it dear to the farmer and stock raiser. If you will remove this odious restriction from salt we will have, as we had years ago when salt was free, piles of it in New Orleans, and every steamer that plies the Mississippi River will carry more or less of it at low and very cheap rates.

But the iniquity of this salt tax lies in the fact that these two hundred and sixty-four manufacturers of salt are really represented by three or four, perhaps not to exceed six pools, syndicates, or monopolies in the United States; two in Michigan, one in New York, one in West Virginia, and probably one in Ohio. I will show that the price of salt is fixed not by the manufacturers, not by the amount produced, not by the supply and demand; but it is fixed by the pools or syndicates representing every single one of these salt-works.

In this way they are freezing out a great many of these smaller manufacturers. They manufacture so much a month, and when they find the amount of stock they have on hand they place on it a price to suit themselves. And even the manufacturers, except

through these syndicates, have nothing to do with the price fixed upon salt from month to month.

In support of this statement I will read an extract from the testimony of Duncan Stewart, esq., of Detroit, president of a salt manufacturing company at Saginaw, Michigan, taken October 15, 1867, and published in the report of Hon. David A. Wells, special commissioner of the revenue, Executive Documents No. 6 to No. 49, third session, Fortieth Congress, page 43:

Question. Will you please state the present condition of the business of producing salt in the Saginaw salt district?

Answer. For the first few years that the business of manufacturing salt in Saginaw was carried on, there were very few people engaged in it who knew anything at all about the business, as to how it ought to be managed.

This left the salt interest laboring under a very great disadvantage. I should say that at least one-half of all the money that has been invested in the salt business there has been squandered uselessly and extravagantly, and that the business up to last year has paid little or no profit. This has not been owing to any disadvantage or defect in the business itself, but is mainly owing to the competition which has existed among the manufacturers. There being a large number of manufacturers, and each of them competing in the same market with all the others, nineteen-twentieths, perhaps, of all those engaged in the business not having the requisite capital to carry it on, have to throw their salt into the market as soon as it is produced. This has, however, been remedied to some extent. About 75 per cent. of those engaged in the business now are associated into companies, called the Saginaw Bay Company and the Saginaw Valley Salt Company. I think there is but about one-quarter of the whole interest outside of these associations now. The result has been better management, greater unity of action, less competition, and better prices.

In this connection I will also read extracts from a letter written by a prominent merchant of Bangor, Maine, addressed to Hon. GEORGE W. LADD, dated February 8, 1882, in which he says:

At Saginaw 12,000,000 bushels salt were made in 1881. One party told me recently that he made 15,000 barrels per month, at a cost not exceeding 38 cents per barrel, including the cost of the barrel, all of which was sold by the pool-master at 90 cents per barrel—over 50 cents per barrel clear profit, or \$7,500 per month clear profit. Now every farmer and every packer in the West paid 6 cents per bushel or 24 cents per barrel of that profit because of the duty on imported salt. Even with salt duty free the Saginaw profit would be 25 cents per barrel, and their industry would not suffer.

My said friend told me that all the sales made at Saginaw were "pooled," no producer sells his salt; all report monthly their production; the pool-master takes an account and draws *pro rata* from each producer, and thereby maintains the price at 90 cents per barrel. Every packer of provisions in the West, as well as the East, paid about 100 per cent. duty on the salt used to pack provisions for export. This reduced the price obtained by the producer just so much.

Mr. Chairman, the gentleman from Michigan complained very much in that celebrated salt speech of his that nothing new could be said upon this subject. Well, it is very hard to say anything new upon it. For thirty years the State of Missouri had a representative in the Senate of the United States who fought this salt question every session of Congress while he was in the Senate, and the gentleman from Michigan may rest assured, and these two hundred and sixty-four manufacturers of salt in the United States to-day may rest assured, that just so long as Missouri is represented in the Senate of the United States or on the floor of this House some one of her representatives will make war upon this unjust and unholy tax.

I propose now, Mr. Chairman, to read an extract from one of the many speeches made by Mr. Benton on the floor of the Senate. In 1840 he made a speech on this subject, and in summing up he said:

Mr. Benton said that a salt tax was not only politically but morally wrong; it was a species of impiety. Salt stood alone amidst the productions of nature, without a rival or substitute, and the preserver and purifier of all things. Most nations had regarded it as a mystic and sacred substance. Among the heathen nations of antiquity, and with the Jews, it was used in the religious ceremony of the sacrifices—the head of the victim being sprinkled with salt and water before it was offered. Among the primitive Christians it was the subject of divine allusions and the symbol of purity, of incorruptibility, and of perpetuity. The disciples of Christ were called "the salt of the earth;" and no language or metaphor could have been more expressive of their character and mission; pure in themselves, and an antidote to moral, as salt was to material corruption. Among the nations of the East salt always has been and still is the symbol of friendship, and the pledge of inviolable fidelity. He that has eaten another's salt has contracted toward his benefactor a sacred obligation, and cannot betray or injure him thereafter without drawing upon himself (according to his religious belief) the certain effects of the divine displeasure. While many nations have religiously regarded this substance, all have abhorred its taxation; and this sentiment, so universal, so profound, so inextinguishable in the human heart, is not to be overlooked by the legislator.

Mr. Benton concluded his speech with declaring implacable war against this tax, with all its appurtenant abuses of monopoly in one quarter of the Union and of undue advantages in another. He denounced it as a tax upon the entire economy of nature and of art, a tax upon man and upon beast, upon life and upon health, upon comfort and luxury, upon want and superfluity, upon food and upon raiment, upon washing and on cleanliness. He called it a heartless and tyrant tax, as inexorable as it was omnipotent and omnipresent; a tax which no economy could avoid, no poverty could shun, no privation escape, no cunning elude, no force resist, no dexterity avert, no curses repulse, no prayers could deprecate. It was a tax which invaded the entire dominion of human operations, falling with its greatest weight upon the most helpless and the most meritorious; and depriving the nation of benefits infinitely transcending in value the amount of its own product. I devote myself, said Mr. Benton, to the extirpation of this odious tax and its still more odious progeny, the salt monopoly of the West. I war against them while they exist and while I remain on this floor. Twelve years have passed away, two years more than the siege of Troy lasted, since I began this contest. Nothing disheartened by so many defeats, in so long a time, I prosecute the war with unabated vigor; and, relying upon the goodness of the cause, firmly calculate upon ultimate and final success.

In conclusion, I desire to say that I do not envy the position of some of my political brethren on this side of the House who are deluding themselves with the idea that this tariff-commission scheme is going to facilitate a revision of the tariff. I believe it to be a party measure emanating from the other side of this Chamber, in the

interest of monopolists, in the interest of high protectionists; and I declare to-day my belief that every Democrat who votes for this iniquity will before the close of the Forty-seventh Congress repent that act in "sackcloth and ashes."

I call it an iniquity, and I wish I could speak of it as I feel about it. It is a measure iniquitous in its effects, iniquitous in its influence upon this House, iniquitous in its influence upon the country, and the most cowardly measure, in my judgment, ever introduced in the Halls of Congress.

Mr. Chairman, when I first came to Washington, as a member of the Forty-sixth Congress, I was moved to admiration when made acquainted with the successful accomplishment of one of the most magnificent feats of engineering and mechanical ingenuity of the nineteenth century, one that will stand as an enduring record of the biality and skill of the distinguished engineer who executed it. Colonel Thomas L. Casey, finding that the Washington Monument was out of plumb, its foundation insecure, tunneled beneath it, and strengthened it, and straightened the superstructure so that he will be able to complete the great shaft in accordance with the plans of the original designer. But I venture to say that that distinguished engineer, with all his skill and ability, could not place under the majority of the Ways and Means Committee of this House the foundation of confidence and esteem upon which it formerly rested, nor could he plumb it into that perpendicular position necessary to command the respect of the House and the country.

Department of Agriculture.

SPEECH

OF

HON. MARTIN L. CLARDY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882,

On the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture.

Mr. CLARDY said:

Mr. SPEAKER: When a bill similar to or, it may be, identical with the one now pending before the House was considered by the Forty-sixth Congress, I was prone to regard it with some disfavor. It seemed to me that the Commissioner of Agriculture did already practically discharge the duties which were to be vested by that bill in a secretary. I did not believe then, nor do I believe now, that the enactment of a law creating an Executive Department to be known as the department of agriculture could in any wise dignify the occupation of farming. That useful calling requires no special legislation to confirm its title to respectability. Homage to agriculture as the most useful of the human arts was the characteristic feature of the social life of the heathen nations of classical antiquity, as it has been of all historic peoples, and as it will continue to be throughout all time.

If, then, the proposed legislation be desired by the farmers of the country it is not for a reason so unsubstantial as that. They complain not of want of respect for their occupation; they know the strength of their numbers, and they are aware of the respect which these very numbers inspire. Their argument in favor of this legislation is in no manner a sentimental one. Accustomed as they are to plain reasoning, they demand it on a plain, practical ground, that of utility. When we reflect that, grand as the agricultural interests of this country are, they are practically unrepresented in the council of the Executive; that the Treasury, the Army, and the Navy have a voice in the Cabinet with regard to all matters which more or less closely affect their sphere and welfare; that other branches of the Administration have a like privilege, and that it may be, and sometimes is, used by them in a manner hostile to the best interests of the largest class of our producers, we can appreciate the reasonableness of the demand made for the passage of this bill.

The gravity of the transportation question is well known to the country, but nevertheless it is a fact, although an incongruous one, that the farmers and merchants, the two classes of our population who are principally exposed to the exactions of monopolists, are powerless to convey on a question of such momentous import even one word of advice or protest directly to the Executive through an accredited representative. Neither the agriculturist nor the merchant can make himself heard in the Cabinet of the nation through a representative especially versed with his wants and aims. True it is that he may now and then find a willing ear; that promises for the amelioration of his condition may readily be held out to him; that efforts even may be made toward the protection of his interests; but all such promises and efforts may prove fruitless in the end for the want of a voice possessed of the authority and the ability to

enunciate distinctly, intelligently, and pointedly his reasonable demands and expectations.

Therefore, then, the necessity for the creation of an eighth department of the Government; and it might be appropriate if this department were known not alone as the department of agriculture but as that of agriculture and commerce, or, to adopt the suggestion contained in the substitute of the gentleman from West Virginia, [Mr. KENNA,] the department of industries. Recognizing fully the importance of commerce, the second factor in our national prosperity, I deem it but right to link its interests with those of agriculture, its natural ally. As regards all essential points, there can be but a thorough harmony between agriculture and commerce. The prosperity of the one is dependent on that of the other. Why should they then not be represented in the Cabinet conjointly? A secretary of industries would alike be hailed with joy by the farmer as by the merchant, for in his appointment the one as well as the other would see a guarantee that henceforth the Government meant to bestow more attention upon purely economical problems.

The solution of the transportation problem and the regulation of the tariff are questions paramount to all the hollow clamor which has for years been raised before the country by false issues, and if Congress will now pass the pending bill, or, what would still be better, in my opinion, the substitute of the gentleman from West Virginia, it seems to me that an important step would be made in the direction of a lasting eradication of some of the worst sores which are now incrusting upon our body-politic. Give to the country a secretary of industries, and you will at once give an impetus to and provide the means for a more comprehensive study of our economical situation, and thereby exercise a far-reaching and beneficent influence upon our future legislation.

In conclusion, Mr. Speaker, let me say that if I had any doubts as to the propriety of the proposed legislation I should nevertheless defer to the judgment of the twenty-five million farmers who are urging its enactment, and give it my cordial support.

Department of Agriculture.

SPEECH

OF

HON. ALFRED M. SCALES,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1882.

The House having under consideration the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture—

Mr. SCALES said:

Mr. SPEAKER: I have listened attentively to this debate, in the hope that I would hear some valid reason assigned by some one of the many who have spoken why this bill should become a law. I represent in a great degree an agricultural people. What estate I have consists mainly in lands and the capital employed in their cultivation, and I stand ready at all times to advocate and support to the extent of my ability any and all propositions which promise to promote this great interest. But after the most patient hearing the only reason given so far by any one is that by making it a department and placing it under a Cabinet officer you dignify agriculture and those engaged in it. It does not give the farmer any additional advantages. It will not increase the supply, the variety, or the value of the seed distributed. It will not give him any fuller or more accurate information. It will not increase the number of agricultural reports sent out.

But it will increase largely the expenses of the Government. It will multiply the number of officers, increasing the salaries of some, and making new places for others. It will substitute for a bureau, now comparatively free from the influence of politics, a department whose head is to become the political adviser of the President. You dignify him, not the farmer; and the danger is that while the Agricultural Bureau will not be the gainer the new dignity and power conferred will be prostituted to political and partisan purposes.

What the farmers most need are a reduction of their taxes, cheap transportation for their products, a stable currency within their reach upon proper security, and just and equal laws. They ask no more and they will be satisfied with no less. Now, what has been done, or likely to be done, to meet their wants? I call the attention of the House and the country to the fact that out of a number of bills having for their object the accomplishment of these very purposes only one within the last six years has become a law, and that was the reduction of the tobacco tax, passed in May, 1880, and mainly by Democratic votes. In December, 1878, the gentleman from Texas [Mr. REAGAN] reported from the Committee on Commerce a bill which regulated freights and cheapened transportation on railroads. This bill passed a Democratic House by a vote of 139 to 104, was sent to a Republican Senate,

and was there smothered in committee. That bill has been introduced again at this session, discussed in committee, but I fear will never be allowed to get out of it. Time and again have bills been introduced and amendments offered to reduce the taxes on tobacco and spirits, and time and again have they failed, although it has been practically demonstrated that a reasonable reduction would add to rather than diminish the revenue. At this session several bills have been introduced abolishing the whole revenue system, with all its taxes and abominations.

I believed that the whole could be dispensed with, and yet there would be revenue enough raised from customs duties, judiciously laid, to provide for all the expenses of the Government, including the sinking fund. Others, out of great caution, preferred that the tax on tobacco should be reduced to 8 cents per pound, and spirits to 50 cents per gallon, aggregating on all the different subjects of taxation a reduction equal to about seventy millions of dollars. This reduction was recommended by the Committee on Ways and Means, indorsed by its chairman, and would, beyond all controversy, have passed the House as the best compromise that could be made. This just and reasonable measure was defeated. How? By the House, after debate? No, sir; it never got into the House, but by the action of a Republican caucus, not because there was any fear of a deficiency in the public Treasury to meet all its engagements, for we are assured by the distinguished chairman of Ways and Means that after all the engagements are met there will still be a surplus this year of \$150,000,000. To this caucus, the Republican chairman, and those on his side who acted with him, surrendered their judgments, and the people, without good cause, must suffer on and bear yet a while longer these heavy burdens. Let us examine and see what these burdens are. From and including the year 1863, the aggregate amount of the internal revenue collected out of the people of this country is \$2,807,357,366.28, and for the year 1881, \$135,264,385.51.

Thus in nineteen years the amount of revenue paid to the General Government was more than one-sixth of the whole assessed taxable value in 1881 of all the real and personal property of the thirty-eight States of this Union; and the amount paid in the year 1881 is more than twice as much as the taxes paid by all the States in the same year for State purposes. I call special attention to amounts paid by the following States during the last year, as showing still more clearly the weight of these taxes:

California.....	\$3,613,391
Illinois.....	25,784,682
Indiana.....	7,281,254
Kentucky.....	8,719,162
Maryland.....	2,453,463
Massachusetts.....	2,699,681
Michigan.....	1,767,275
Missouri.....	6,470,349
New Jersey.....	4,376,676
New York.....	17,233,268
North Carolina.....	2,476,440
Ohio.....	19,295,686
Pennsylvania.....	7,669,214
Tennessee.....	7,146,764
Virginia.....	6,063,106

This tax amounts for North Carolina to a tax of more than \$1.50 for every man, woman, and child, white and black, in North Carolina. More than half of the population are women. That would make over \$3 per head for every man in the State; and then, if you estimate those under age and the insolvents among the males who pay no tax, you will find that the tax paid by the State of North Carolina is about \$6 per head to every tax-payer. This gives us some idea of the immense drain upon the people of this country.

Mr. Speaker, there is no justification for this tax; it should be abolished or greatly reduced. The farmers feel it deeply. All classes feel it to be oppressive. It is impossible to take that much money every year from the business interests and industries of the country without seriously crippling them. Not only is this tax onerous, but the whole system is odious; it grew up in the necessities of war, and with the return of peace it should be swept away. Let us abolish this whole system. Let us strike these shackles from the limbs of the farmer. Let him make and manufacture his own tobacco. Let him make his grain and fruit and convert them as he pleases under the same protection from the General Government that is extended to other industries. Call off your spies, your overseers, and detectives. Make the farmer a free man and let him alone; he asks no more; and his sturdy patriotism, his love of liberty, his political virtue, his independence of spirit, and his strong arm and honest heart will still preserve and bless our Union.

Again, at this session of Congress we were called upon to revise the tariff now so oppressive and unjust. Every man in Congress admits that it should be revised and modified; and yet instead of doing that ourselves, as required by the Constitution, we remit it to an independent, irresponsible outside commission, and pay them to do what we ourselves are paid for and expected to do. In this way, in my judgment, revision is postponed for years. By this revision we could have reduced the duty on blankets, hats, shoes, the steel and iron in the trace-chains, hoes, axes, carts, wagons, and all the implements of farming, so as greatly to reduce their cost, but the majority has said it must go to a commission, and to a commission it will go in spite of the protest of the farmer. He must wait.

Again, it is proposed to recharter the national banks, and I have no

doubt it will be done, and as usual the interest of the farmer will be disregarded. He was among the first to go to war in defense of his section and the last to surrender. When it was over he returned to his home to find it almost in ruins. His home no longer afforded shelter; his fences were laid waste, his tools scattered, and his stock disabled. He is without money and his neighbors cannot help him. He applies to the banks. He has nothing but land, and he offers that, and is told that however good the security may be, and however much they might be disposed to accommodate him, the law of Congress forbids any accommodation upon landed security. There is no relief for him here, and if he finds it he must seek elsewhere. The same prohibition exists to-day as it did then, and the banks are still shut to the farmer.

All these things and more the farmers have submitted to without a murmur for eighteen years, and when it is proposed to remedy these evils and redress these wrongs, the reply is that it does not suit the Republican party just now, but in lieu of this we will elevate the Agricultural Bureau into a department, we will elevate the Commissioner into a Cabinet officer, we will dignify the farmer.

Concede the dignity and then place that in one scale and the cost in the other. The dignity and respect consist alone in making the bureau a department and the Commissioner, who is now confined to the business of his bureau, to a Cabinet officer who is to become one of the political advisers of the President. His humbler duties will too often be lost sight of in his absorption of weightier matters. He must consider and decide upon the respective claims of stalwarts and half-breeds to the patronage of the party. He must decide how the Garfield men, as they fall one by one to make place for stalwarts, can best be reconciled so as to make the party harmonious. He must dignify and make respectable Mahoneism and repudiation in Virginia, and harmonize if possible with professed honesty elsewhere. He must encourage prohibition in some of the States and frown upon it in others. He must look after the frauds committed by high officials in the Post-Office Department, the irregularities in the Treasury Department, and so manage it that the Republican party is not injured. He must insist upon a free vote and a fair count in elections, and see that it is practiced only when the Republican party is benefited. When he does all this and more of a similar character he will be admirably qualified to look with an impartial and non-partisan eye upon the wants of the great agricultural interest of the country. In less than five years the expenses of such a department will not be less than \$15,000,000, and this must be paid mainly by the farmers. These are some of the disadvantages. What are the gains? Nothing but dignity. Can the people be thus deceived? Will dignity discharge their debts, pay their taxes, or feed their hungry children? No, sir; they will not be deceived, they want practical relief. They ask for bread and you give them a stone; for fish, and you give them a serpent.

Department of Agriculture.

SPEECH

OF

HON. WILLIAM CULLEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882.

The House having under consideration the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture—

Mr. CULLEN said:

Mr. SPEAKER: The purpose of this bill is clearly expressed in the title. It is to enlarge and elevate the present Department of Agriculture, making it an Executive Department of the Government, giving it a broader field and better facilities for developing the agricultural resources of the country. The importance of this great interest cannot well be overrated, whether viewed in the light of the numbers engaged in agricultural pursuits, the vastness of the capital employed, or the value of the products of its varied industries. Any large class of citizens engaged in industrial pursuits and whose labor is constantly adding to the national wealth is justly entitled to the consideration of Congress, and its business to the fostering care of the Government to an extent not incompatible with the general good. It is believed that this end can best be attained by making the department an executive one, thus giving the agriculturists of the country a representative in the executive council. There seems to be great unanimity of sentiment in regard to the proposed measure. From all parts of the country, especially from the more strictly agricultural sections, the people demand it. Societies, State and national, have asked for it with the belief that their request is a reasonable one and in the interest of the great body of producers.

It is conceded that agriculture is the foundation of national wealth. The numbers engaged in its various branches are greatly in excess

of those engaged in any other calling. In 1870, of the twelve and a-half millions of people having any calling or employment, nearly 6,000,000 were set down as farmers or farm laborers. On the same basis of calculation there are now more than 8,000,000 of this class. Including the families of these farmers there are more than 25,000,000 people directly dependent on agriculture. Besides these there are estimated to be 5,000,000 persons interested or engaged in gardening or small culture, or a total of 30,000,000 directly engaged in agriculture—three-fifths of the whole population.

The productiveness of our soil, the genial climate of our country as a whole, and the great variety of products cause some to think agriculture needs but little help from science or Government. The more considerate, who have practical knowledge of the subject, have long since given up that idea as a fallacy. It is true that we excel other nations in productive capacity per capita, but it is also true that this is largely due to the new areas of virgin soil brought under cultivation from year to year. Europe, for several years, has had a production of scarcely 16 bushels to each unit of population, while the United States has produced more than three times that proportion. But without the aid of science applied to agriculture it is not to be presumed that such difference can be perpetuated. More than 50 bushels to each inhabitant is a supply unequalled in cereal production. Even the crop of 1881, cut short nearly 25 per cent. by drought, afforded nearly 40 bushels per capita.

The aggregate value of the cereal crops of last year is greater than usual and is estimated for 1881 as follows:

Cereals.	Price per bushel.	Value.
	Cents.	
Corn.....	63.6	\$750,482,170
Wheat.....	119.0	453,790,427
Oats.....	48.4	193,189,970
Barley.....	82.3	33,862,513
Rye.....	93.3	19,327,415
Buckwheat.....	86.5	8,205,705
Total.....		1,467,858,200

Other crops and secondary products, like butter, meat, &c., will swell the aggregate value of farm products to something like \$3,500,000,000. But when we add the value of the cotton, sugar, tobacco, rice, and other crops, and domestic animals, we reach the stupendous total of \$9,000,000,000, a sum far above the comprehension of the human mind.

The value of agricultural products exported has increased from \$21,000,000 in 1820 to \$729,000,000 in 1881, and while they constituted four-fifths of all exports sixty years ago, to-day they constitute five-sixths of all exports of merchandise. Cotton then constituted six-tenths of all agricultural products; now breadstuffs and food products have assumed the leading position, and together make about six-tenths of the immense exportation of the present era. In 1881 their values were as follows:

Breadstuffs.....	\$270,332,519
Provisions.....	151,528,216
Cotton.....	247,695,746

The direct products of agriculture constitute about two-thirds of the value of all of our national industries. But there is a close alliance between many of our manufacturing industries and agriculture. Since 1830 the amount of cotton used in our home manufactures has increased from 77,759,316 pounds to 793,240,500 pounds in 1880. In 1840 the wool used was 50,808,524, while in 1880 187,616,605 pounds were converted into goods, worth \$234,587,671. The silk production of 1870 was valued at \$12,210,662, while that of 1880 was worth \$34,410,463, and the industry is growing rapidly, as is also the production of leather, boots and shoes, and kindred branches.

I give these figures to show in what large proportion agriculture appears in comparison with any national industry, being double in value of products of all other industries combined. We might add that in times of depression agriculture is the asylum for the unfortunate of all other classes. But it may be argued that agriculture is well cared for in the department as it now exists, and that there is no necessity for the passage of this bill; and yet it will hardly be disputed that the interest is of sufficient magnitude to justify it in ranking as the equal of any other department. My opinion is that the Land Office should be in this department, although this bill does not include it. The business of the Department of the Interior is too large and too varied to be managed with ease by one head. The Indian Bureau, with all its perplexities, the Patent Office, with its intricacies, the Pension Office, in which is centered the hopes for sustenance of hundreds of thousands of the nation's defenders, would seem to be enough for one department.

It does not follow that because agriculture has fared tolerably well in an inferior department the present arrangement will prove adequate for future needs. It will not be disputed that since the organization of the present department, some fifteen years ago, greater progress has been made in agriculture than for any similar period previous to such organization. This has been due largely, if not wholly, to more concentrated effort, more reliable data, and more scientific knowledge

disseminated by the department. Its elevation would prove a further stimulus to renewed exertion in the line of practical and scientific research from which great benefits would be derived.

While our population has increased rapidly and other industries have been multiplied, agriculture has more than kept pace with the general advancement. New methods, new and ever-improving farm machinery, have greatly broadened the area of cultivation. The movement of the crops is now one of the most important questions with the American producer and consumer alike. Cheap transportation is therefore very properly one of the questions intrusted to the Agricultural Department by this bill. It is a question in which no large class of citizens is so much interested as are the farmers.

It is charged that this bill is crude and ill-digested. It is not pretended that it is perfect, but it is believed that its provisions are clear and comprehensive, and cover the whole ground. It has the indorsement of many of the best agricultural journals of the country. It provides for four bureaus in the department, and these divisions seem to be natural and proper. The bureau of agricultural products contemplates the investigation of the crops most profitable in the respective localities, soils, &c., and the dissemination of such practical and scientific information as shall be thus collected, together with seeds and plants. The bureau of animal industry, including the protection, growth, and use of all domestic animals, and the best means of preventing or exterminating all contagious and infectious diseases, is of the first importance. Millions of dollars annually are lost to American farmers through the loss of cattle, swine, and other animals, for which science and persevering investigation may reasonably be expected to discover remedies.

The bureau of lands, which includes forestry, is a growing necessity. There is much of the remainder of the public domain about which there are many doubts as to its adaptability to farming or grazing purposes, which doubts should be settled by competent authority before the emigrant is made to experience disappointment and loss in consequence of erroneous views as to the capabilities of the section. It is conceded that our timber lands are being decimated at a too rapid rate, and that tree planting must ere long be resorted to for actual use as well as to modify the rigors of climate. The bureau of statistics is, perhaps, the most important feature of the bill. It covers an extensive field, including education, labor, and wages, markets and prices, the transportation of crops and live stock, sources of raw material for manufactures, &c. In fact, it contemplates the collection of information on all subjects and matters having relation, directly or indirectly, to agriculture and animal industry. I think the purposes sought can best be attained through a department distinctively agricultural, and that such department should rank as the equal in dignity with any other department of the Government.

I think this bill should pass, because I am satisfied the intelligent agriculturists of the country desire it. It will not be questioned that the farmers of the country as a class are the best citizens of the Republic. For industry, morality, and intelligence, in regard to their business and current events, no very large class of people can fairly be compared with them. Their numbers, intelligence, wealth, and productive energy should, and I have no doubt will, command the respect of Congress. The measure asked by them will not materially increase expenses, while the creation of a Cabinet officer representing that great interest would be a merited tribute to the class of citizens which, more than all others, contribute to the national wealth and industrial prosperity. For these and many other reasons I am in favor of the passage of this bill.

National-bank Charters.

SPEECH

OF

HON. LEWIS BEACH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882.

The House having under consideration the bill to enable national banking associations to extend their corporate existence—

Mr. BEACH said:

Mr. SPEAKER: It seems to me that the discussion upon this bill, like that on the tariff commission and other bills to which I might refer, has traveled wide of the issue.

The proposition before the House is a simple one. It certainly does not require the elaborate display of figures and the extended argument to which we have been treated. The spinning of fine theories and discussion of abstract points are quite unnecessary. The question is, above all others, a practical one; and a very brief examination of the facts is required to direct a safe and intelligent vote.

Within the next ten months the charters of three hundred and ninety-three of the national banks will lapse by limitation of time. In the absence of the legislation proposed by this bill each of these banks must die. Death means dissolution; and dissolution means liquidation; and liquidation means settlement. In other words, each bank must close its doors, collect in its assets, and pay its liabilities.

Such a dissolution of the banks at this time will, in my opinion, work wide-spread injury and distress. The country to-day is in a critical condition. I was about to say, we are on the verge of another crisis. The poor crops of last year in conjunction with overtrading have thrown the balance of trade against us and the result is now manifest. Europe is draining us of our gold. The great speculation for the last two years in railroad building—unequaled in the history of any country—has contributed its weight to the present condition of things. The new railroads, unable to float their securities, have been forced to countermand their orders for rolling-stock. As a natural consequence, the mills and locomotive works are resorting to "short time," reducing wages, and discharging their operatives in large numbers. Hence dissatisfaction among the workmen leading to "strikes" and "lock-outs" which prevail to a greater or less extent in many of the prominent manufacturing districts. Industries are coming to a stand-still. Projected enterprises have been abandoned; capital is beginning to be hoarded; merchants and business men are imitating the example of the mariner who reefs his sails in anticipation of the coming storm.

I am no alarmist, Mr. Speaker, but as I read the signs of the times the country is in a state that deserves at our hands the most careful consideration. Any man or combination of men or any party that would tamper or experiment with the finances of the country or obstruct their facile operation at such a time as this will assume a grave responsibility.

The national-bank system, notwithstanding all that has been said against it, has in the past bridged us over serious difficulties, and has given general satisfaction to the people. It possesses the main attributes of a sound system. It has uniformity, stability, and responsibility. It is, however, by no means perfect and complete. There are features connected with it which antagonize views I have always maintained, and still adhere to, on the question of the currency. But, Mr. Speaker, whether it is a good system or a bad one is not to the purpose. The question is, in the absence of a better, should it be continued?

I have given the discussion that has taken place on this floor fair attention, and I am free to say I have failed to find any system suggested which would be an improvement upon the old. As matter of fact, I believe it is conceded on all sides that during the existence of the national debt the adoption of any other system is out of the question. If the banks, then, are to continue, why oppose the pending bill? The bill bestows no new privileges upon the banks; it gives them no rights which they do not already possess. It simply clothes them with power to prolong their existence. It permits them to take out a new lease on the same old terms and conditions. It is purely an "enabling" act, and its sole purpose is to guard against the disturbance which the business interests of the country might otherwise suffer.

I repeat, Mr. Speaker, why oppose the bill? *Cui bono?* What good will come of it? I have watched the debate with great care for an answer to this query, and about the only one that has been given by the opponents has been that they are opposed upon principle to the national banks, and are not going to help them along. But the gentlemen fail to understand that it is the people who are to be benefited by the passage of the bill, not the banks. I do not believe that the banks care much for the bill. If they do they have not shown it. It has been observed by the gentleman from Missouri [Mr. BLAND] that we find in the box no petitions or memorials from the banks favoring the bill; nor are they represented here by agents or lobbyists. So far as my experience goes, and I have no doubt my own is that of the other members of this House, the banks are supremely indifferent to the fate of this bill. They may possibly entertain a feeling of pride for their old institutions, or the officers and directors may have a personal interest in the event of a reorganization becoming necessary. None of the banks, however, in the district which I have the honor to represent, have intimated even this much to me, by letter or otherwise.

In view of these facts, which are significant, it is quite possible that many of the banks will refuse the privileges of this bill. It may be they prefer to go into liquidation. It is claimed that they can now sell their bonds at a high premium, divide their surplus among the stockholders, reorganize under the State laws, and make as much if not more money than they do under the present system. If any considerable number of them should do this it will result in a serious contraction of the currency, and we all know what that means.

In the district which I represent there are fifteen national banks, with a capital of \$2,775,500 and a surplus of \$485,593. Their loans and discounts, according to the last authentic statement I have at hand, amounted to \$4,501,681.02.

If this bill fails to pass, these banks would, upon the objection of a single shareholder, have to go into liquidation. It is undoubtedly true that new banks to take their place would be organized at once, and in many instances by the same shareholders. But the banks

starting afresh would have no surplus. It would take years to accumulate it, and during this time the people would have a diminished security for their deposits. The old national banks, with a surplus of nearly a half million of dollars, would certainly be stronger and safer than the new banks with no surplus at all.

But, Mr. Speaker, I have a still more important reason to urge in behalf of this bill. From the statement I have made it appears that the banks in the district I represent have in loans and discounts over four and a half millions of dollars. These loans have been made in a large measure to farmers who are frequently forced by bad crops to renew their discounts from quarter to quarter, extending sometimes over years before finally paid. The banks are carrying them along. Let the banks be forced into liquidation by a failure to pass this bill and every farmer in the district who has been relying upon the banks for accommodations will be sorely distressed. The full extent of the injury done to this class can hardly be appreciated by those unacquainted with their peculiar circumstances. I am satisfied from my own knowledge that it would bring disaster and ruin on a very large number.

I have thus far, Mr. Speaker, addressed myself to the bill as it came from the hands of the committee. Various amendments have been offered, some of them worthy of support, while others are visionary and open to serious objection. The fate of these amendments is a foregone conclusion, and I can see no propriety in discussing them. I must, however, express my regret that a bill so harmless as the pending one, and so urgently demanded by the business interests of the country, and which, standing by itself, would doubtless receive the almost unanimous vote of this House, should be ridden with amendments which open the door to a wide discussion and lead to a waste of the public time. The relief sought for by these amendments could be more properly obtained by independent legislation or by amendment to the general bank law. I consider its introduction in this debate as ill-timed and unnecessary.

Tariff and Revenue Laws.

SPEECH

OF

HON. LOWNDES H. DAVIS,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 4, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. DAVIS, of Missouri, said:

Mr. CHAIRMAN: I oppose this bill simply because I favor a revision of the tariff, and I am satisfied its whole purpose is to delay such revision.

The consideration passing between the people and the government of a nation is the yielding up by the governed of a part of their natural rights in return for a guarantee on the part of the government that they shall enjoy immunity from oppression and injustice.

The reciprocal duties and obligations of the parties to a national compact being thus generally defined, it becomes manifest that the primal and paramount duty of all free governments resides in a proper protection of all their citizens from every form of injustice and inequity, whether arising from combinations of capitalists, threatening their pecuniary interests, or from conspirators engaged in attempts to subvert their political liberties.

So we reach the conclusion that all free government rests on delegated power, and all good government consists in the proper distribution and exercise of this power.

Let us consider for a moment the conditions essential to the proper distribution and exercise of this power.

To insure a wise and just administration of governmental powers every department, legislative, judicial, and executive, must be absolutely untrammelled by class or personal interests. They must be entirely beyond the control of cliques or combinations of men formed for the purposes of personal aggrandizement, because the functions of government extend to the welfare of the whole people, which invariably conflicts with the interests of classes.

It becomes, then, a matter of primary importance to eradicate from among a free people everything that partakes of class interests, in order that all public measures may be taken in the interests of the whole country; for while powerful class interests exist it is certain the general interests will proportionately suffer. And it is also certain no nation can profitably exist whose aims fall short of securing to the majority of its people the highest attainable benefits consistent with the rights of all. The Old World is populous with the misery and ruin wrought by ages of conflict between class and popular interests.

Is there no danger menacing our own country from this source? If there be, let us profit by the experience of older nations. But where shall we seek for the source of this danger? Surely not in the direction of a landed aristocracy, such as dominates other nations. No; but there are aristocracies as inimical to the interests of a people as any that claim the soil. Commercial monopolists are as much to be dreaded as landed monopolists. There is no difference in principle between a man who controls the soil of a nation and him who controls its wealth and commercial enterprises. In either case it is a monopoly; in either case a class interest is created alike oppressive and injurious to the people at large.

Center two-thirds of the wealth of the country in the hands of a few men, and the balance of the population is entirely at their mercy. Are we not rapidly drifting into this fatal vortex? How otherwise happens it that there should be a powerful clique of monopolists in our midst seeking to perpetuate the high protective tariff heresy, which is practically nothing more than an impudent piece of class legislation intended to protect a few manufacturers in a monopoly of their products; an unjust, oppressive system whereby the poor are made poorer and the rich richer?

The principle of a protective tariff is simply the taxing of one man to keep up the business of another. It is a process of extortion practiced by the favored manufacturer, whereby the public is compelled to pay him a higher price for his goods than they can be purchased for in the open markets of the world. And be it remembered that the difference between their value in the open market and the price the consumer is compelled to pay for them at home goes not always into the national Treasury to benefit the whole people, but into the private purse of the manufacturer to swell his hoard, and, if necessary, to enable him to purchase the continuance of the prerogative to extort from the public.

Can it for a moment be contended that the enactment of a prohibitive tariff law, such as that with which we are burdened, and which keeps dutiable articles from our markets, and consequently excludes revenue from our Treasury, for the benefit of a class, is a wise and just exercise of its powers by the nation that sanctions it? Is it not a gross infringement of the rights of the whole people that one portion of them should be taxed to protect the interests of any other portion? For, I repeat, this protective tariff scheme is nothing but a system of indirect taxation, levied on the consumer by the manufacturer for his own personal benefit. It is the tribute which the people pay to the manufacturer, and a tribute, too, which, if continued for the next quarter of a century, will concentrate the wealth of the country in the hands of a few capitalists.

Taxes for "revenue only" should be a fundamental principle of popular government. What is "more than this cometh of evil," and the avaricious monopolist cannot too soon take counsel of wisdom and profit by its profound admonitions. This protective-tariff doctrine can be vindicated by no clause in the Constitution and by no principle of justice; indeed it is diametrically opposed to the spirit and teachings of both, and can be defended by nothing save an inordinate spirit of greed. Every citizen should stand equal before the law, and the burdens of the Government should be distributed according to the ability to pay them. The farmer should be taxed only for the support of the Government, and so with the manufacturer, and not one class for the benefit of another. Is this the case under our present tariff system? That we may understand whether this is so or not we give a list of a few articles and the tax or tariff imposed on the same, as follows:

Cotton, plain bleached, valued 20c. per square yard.....	45.51 per cent.
Cotton, not bleached, valued 16c.....	48.89 per cent.
Cotton, printed, over 100 threads to square inch.....	58.09 per cent.
Cotton, printed, over 200 threads to square inch.....	55.64 per cent.
Cotton, muslin shirts and lappets.....	53.62 per cent.
Spool thread, 100 yards per spool.....	73.34 per cent.
Spool thread, 200 yards per spool.....	76.08 per cent.
Thread yarn, 44c. or less per pound.....	47.84 per cent.
Thread yarn, not exceeding 60c. per pound.....	59.36 per cent.
Thread yarn, not exceeding 80c. per pound.....	62.88 per cent.
Thread yarn, over 80c. per pound.....	53.95 per cent.
Plate-glass:	
24x30 and not above 24x60 inches.....	58.43 per cent.
Above 24x60.....	103.18 per cent.
Rough or fluted, above 24x30 inches.....	45.08 per cent.
Window-glass, common, unpolished:	
10x15.....	59.47 per cent.
16x24.....	71.88 per cent.
24x30.....	78.92 per cent.
Above 24x30.....	78.73 per cent.
Silver-leaf, in packages of 500 leaves.....	92.67 per cent.
Gunpowder, common.....	58.26 per cent.
Hair-cloth seatings, 18 inches wide.....	59.02 per cent.
Hair-cloth, over 18 inches wide.....	66.50 per cent.
Band and hoop iron.....	52.06 per cent.
Band, under $\frac{1}{4}$ inch.....	65.27 per cent.
Bar-iron, common.....	58.71 per cent.
Bar-iron.....	46.72 per cent.
Boiler-plates.....	43.88 per cent.
Cables and cable-chains.....	52.78 per cent.
Cut-nails and spikes.....	43.68 per cent.
Cast-iron pipes.....	51.80 per cent.
Chains, halter and trace.....	57.13 per cent.
Chains, less than $\frac{1}{4}$ inch.....	55.55 per cent.
Hair-pins.....	50.00 per cent.
Hollowware.....	42.68 per cent.
Mosaic iron.....	41.18 per cent.
Iron, rolled and hammered, not otherwise provided.....	49.82 per cent.

Scrap-iron, cast.....	42.52 per cent.
Scrap-iron, wrought.....	63.03 per cent.
Wood-screws, 2 inches.....	52.94 per cent.
Wood-screws, less than 2 inches.....	62.88 per cent.
Squares, marked on one side.....	60.00 per cent.
Squares, all other.....	90.00 per cent.
Iron wire, not less than No. 16.....	65.36 per cent.
Iron wire, No. 25.....	62.78 per cent.
Wire rope.....	58.90 per cent.
Wrought steam and gas tubes.....	73.28 per cent.
Cutlery.....	50.00 per cent.
Files, exceeding 10 inches.....	56.23 per cent.
Steel, in ingots, not exceeding 7 cents per pound.....	43.55 per cent.
Needles for knitting or sewing machines.....	47.05 per cent.
Steel rails.....	104.90 per cent.
Steel rails made in part of steel.....	45.00 per cent.
Steel wire, No. 16.....	42.78 per cent.
Steel wire less than No. 16.....	42.53 per cent.
Manufactures of steel.....	45.00 per cent.
Lead, in pigs and bars.....	56.60 per cent.
Lead, old scrap.....	55.01 per cent.
Marble, not exceeding 2 inches thick.....	80.20 per cent.
Marble, veined.....	66.74 per cent.
Marble, white statuary brocatella.....	56.14 per cent.
Marble, manufactures, not otherwise provided for.....	50.00 per cent.
Mats, screens, hassocks, and rugs.....	45.00 per cent.
Mineral or medicinal water.....	61.27 per cent.
Oil-cloths, valued at over 50 cents per square yard.....	45.00 per cent.
All other oil-cloths and water-proofs, not otherwise provided for.....	45.00 per cent.
Oil:	
Vegetable, fixed or expressed, bay or laurel.....	114.52 per cent.
Castor.....	98.10 per cent.
Croton.....	141.24 per cent.
Olive salad, in bottles or flasks.....	52.77 per cent.
Vegetable, volatile or essential, bay leaves.....	305.88 per cent.
Clove.....	95.58 per cent.
Fruit, ethers, essences, or oils of apples, pears, &c.....	140.46 per cent.
Nitro-benzole or oil of mirbane.....	48.16 per cent.
Other essential oil, not otherwise provided for.....	50.00 per cent.
Rum, bay rum, essences or oil.....	181.21 per cent.
Paints, &c.:	
Lead, dry or ground in oil, red.....	59.38 per cent.
Lead, dry or ground in oil, white.....	50.25 per cent.
Litharge.....	69.28 per cent.
Other dry not otherwise specified.....	44.56 per cent.
Ultramarine.....	46.45 per cent.
Umber.....	70.85 per cent.

Concentrated molasses sirups.....	62.48 per cent.
Raw sugar, not above No. 7.....	53.20 per cent.
Raw sugar, above No. 7 and not above No. 10.....	60.79 per cent.
Raw sugar, above No. 10 and not above No. 13.....	60.65 per cent.
Raw sugar, above No. 13 and not above No. 16.....	64.80 per cent.
Raw sugar, above No. 16 and not above No. 20.....	70.82 per cent.
Raw, loaf and crushed.....	64.01 per cent.
Sugar candy and confectionery.....	126.74 per cent.
Vinegar.....	81.60 per cent.
Varnish.....	63.08 per cent.
Wool:	
Class No. 1, cloaking wool, valued 32c. or less per pound.....	58.41 per cent.
Class No. 1, valued over 32c. per pound.....	40.38 per cent.
Class No. 1, scoured.....	74.38 per cent.
Class No. 1, washed, valued 32c. or less.....	58.58 per cent.
Class No. 1, washed, valued over 32c.....	62.86 per cent.
Class No. 2, combing wools, valued 32c. or less per pound.....	53.80 per cent.
Class No. 2, valued over 32c. per pound.....	40.91 per cent.
Class No. 2, scoured.....	90.24 per cent.
Carpets:	
Aubusson.....	50.00 per cent.
Brussels.....	68.52 per cent.
Brussels tapestry.....	65.00 per cent.
Druggets.....	103.99 per cent.
Patent velvet tapestry.....	63.99 per cent.
Saxony and Wilton.....	71.69 per cent.
Screens, rugs, and covers.....	45.00 per cent.
Treble ingrain.....	50.83 per cent.
Yarn, Venetian or two-ply.....	51.96 per cent.
Dress goods and Italian cloaks:	
Value not exceeding 20c. per square yard.....	70.09 per cent.
Value over 20c. per square yard.....	66.20 per cent.
Weighing 4 oz. and over per square yard.....	65.85 per cent.
Balmorals, alpaca, and like goods:	
Value above 80c. per square yard.....	49.42 per cent.
Value above 80c. per square yard, and weighing 4 oz. and over.....	70.00 per cent.
Blankets, valued 40c. per pound.....	104.14 per cent.
Blankets, valued over 40c. and not over 60c.....	85.84 per cent.
Blankets, valued over 60c. and not over 80c.....	96.03 per cent.
Blankets, valued over 80c. per pound.....	69.00 per cent.
Flannels:	
Valued 40c. per pound.....	65.00 per cent.
Valued over 40c. and not over 60c.....	94.36 per cent.
Valued over 60c. and not over 80c.....	88.69 per cent.
Valued over 80c. per pound.....	64.87 per cent.
Hosiery:	
Valued at 40c. per pound.....	85.81 per cent.
Valued over 40c. and not over 60c.....	97.46 per cent.
Valued over 60c. and not over 80c.....	89.66 per cent.
Valued over 80c. per pound.....	55.31 per cent.
Manufactures of wool, not specified:	
Valued at 40c. per pound.....	94.76 per cent.
Valued over 40c. and not over 60c.....	90.09 per cent.
Valued over 60c. and not over 80c.....	87.58 per cent.

Manufactures of wool, not specified—Continued.

Valued over 80c. per pound.....	70.31 per cent.
Shirts and drawers not over 60c. per pound.....	86.06 per cent.
Shirts and drawers valued above 80c.....	60.13 per cent.
Bunting.....	117.63 per cent.
Cloths.....	71.04 per cent.
Clothing made of wool.....	56.12 per cent.
Endless belts or felts.....	57.74 per cent.
Hats made of wool:	
Valued above 80c. per pound.....	66.32 per cent.
Manufactures wholly or in part of wool not otherwise provided for.....	64.78 per cent.
Rags, waste, and shoddy.....	52.06 per cent.
Woolen shawls.....	57.88 per cent.
Worsted goods not otherwise provided for.....	58.04 per cent.
Webbings, beltings, galloons, &c.....	69.25 per cent.
Woolen or worsted yarns:	
Valued not exceeding 40c. per pound.....	99.55 per cent.
Valued over 40c. and not over 60c.....	96.53 per cent.
Valued over 60c. and not over 80c.....	90.33 per cent.
Valued above 80c. per pound.....	78.02 per cent.
Zinc sheets.....	47.13 per cent.

Senator COKE, of Texas, in commenting upon a list of which the above is a part, presents the iniquity of our tariff in the following forcible language:

I could go on and fill pages with quotations from the tariff list of articles of daily use among the people with duties so excessive as virtually to exclude importation and thereby destroy revenue, but on which the consumers pay the duty to the manufacturer in the price of the domestic article.

A tariff framed like this, which taxes the people from head to foot as this does in behalf of full-grown, fully-developed manufacturing industries as ours are, able to compete with the world in open market, is subversive of every principle of justice between men as it is destructive of the revenues of the Government. This is protection, so called. I call it robbery under the forms of law.

A most remarkable and most odious feature about this tariff is that instead of the tax being laid upon luxuries, so that those most able to bear its burdens should do so, the commonest articles of universal consumption and absolute necessity for the poorest people are taxed the highest. Discarding fractions, wool hats are taxed 66 per cent. and silks 60 per cent.; salt is taxed 65 per cent. and diamonds 10 per cent.; trace-chains are taxed 57 per cent. and treble ingrain carpets 50 per cent.; Brussels carpets are taxed 68 per cent. and coarse blankets 104 per cent.; fine woolen rugs for the lady's parlor and covers to keep the dust and moisture from her piano are taxed 45 per cent., while flannels, to keep the baby warm, to protect the shivering invalid, the strong workingman and his wife, and the aged people alike from the freezing blasts of winter, are taxed 95 per cent.; plain unbleached cotton cloth for shirts and other garments of honest working people is taxed 49 per cent., and the window-glass in their houses 60 per cent., while fine porcelain ware for the rich man's table is taxed only 45 per cent., and artificial flowers and feathers for the adornment of his wife and daughters pay only 50 per cent. Such instances could be multiplied into the hundreds. Medicines and their ingredients are taxed all the way from 30 to 220 per cent.

I appeal to the tariff list in proof of the assertion that the poor people, the working people of the country, who are least able to bear it, pay more than double the amount of taxes under the tariff, in proportion to their consumption, than any other class.

In order to illustrate the operations of the tariff on individuals, I read an extract from a speech of Hon. Fernando Wood, delivered in the House in April, 1878, as follows:

"The influence of the tariff on the commonest kind of mixed woolen dress goods, such as are worn by the poorest classes in the country, is of a nature that requires the most serious consideration.

Fancy alpaca, costing in England 7½ cents per yard, is subject to a duty of 5 cents per yard, and sold in this market at 20 cents per yard. Now, as it takes twenty yards of this stuff to make a dress, the poorest woman of our working classes pays a direct tax of \$1 for a dress. Black alpaca, costing in England 5½ pence or 11½ cents of our money, is subject to a duty of 8½ cents per yard. This article is sold for 27½ cents per yard and worn by the millions of our population. Surely an article costing in England 5½ pence cannot be considered a luxury; yet we find that the pernicious working of our tariff is of that kind which oppresses the poorer classes in all their necessities of life. Black cashmere is worn as a Sunday dress by millions of our industrial classes. The cost of these goods in Europe is 26 cents, the duty thereon amounts to 18½ cents per yard, and is consequently sold at 55 cents a yard wholesale in the United States.

Now, do our people generally understand what such a duty really means? A workman in Europe buying a dress of this kind for his wife and using only ten yards of it would get it at \$2.60, whereas his brother workman in the United States, if he wishes to treat his wife with a dress of this class, would have to pay \$5.50 for the same dress, or more than double.

The question therefore arises whether it is absolutely necessary to charge a tax of \$1.85 on a dress of this kind, coming as it does out of the pocket of the hard working man for the benefit of sustaining the Government and the industries of this country. Surely it must be admitted that there is no country in the world where an equal taxation is laid upon the labor and industry of the hardest working man of the population."

The same may be said with greater force as to blankets and flannels and woolen hats and clothing generally, as the duty is higher, and with equal truthfulness of cotton goods, calicoes, &c.

I read again from the same speech of the same distinguished gentleman:

"THE FARMER AND THE TARIFF.

"The farmer, whose whole mind is bent on his agricultural pursuits, has neither the time nor opportunity to investigate the influence of the tariff tax on his household expenses; it is a fact, however, that every article he uses is either directly subject to a tariff tax or enhanced by the tariff. Let us enumerate these burdens: the farmer's house in the West, where lumber is scarce, pays either a direct or enhanced tax of 20 per cent. on the lumber his house is built of; a tax of 35 per cent. on the paint it is painted with; of 90 per cent. on his window-glass; of 35 per cent. on the nails; of 53 per cent. on the screws; of 30 per cent. on the door-locks; of from 35 to 40 per cent. on the hinges; of 35 per cent. on the wall-paper; of from 60 to 70 per cent. on his carpet; of 40 per cent. on his crockery; of 38 per cent. on his iron hollow-ware; of 35 per cent. on his cutlery; 40 per cent. on his glassware; of from 35 per cent. to 40 per cent. on the linen he uses in the household; of 51 per cent. on the common castile soap he uses; 48 per cent. on the starch. When he goes into his stable, barn, or workshop he will find that he pays 35 per cent. on the iron he uses; 53 per cent. on the halter-chains; 45 per cent. on the files and rasps he may use; 47 per cent. on the backsaw; 49 per cent. on cross-cut saw; 38 per cent. on the hand-saw, and 35 per cent. on any sheet-iron he may require. On his medicines he pays 20 per cent.; on the quinine pills he swallows, 20 per cent.; on blue pills, 40 per cent., and 40 per cent. on any medicinal preparations. The female portion of his house cannot even go into hysteria without paying a tax of 20 per cent. on asafetida that may be required to quiet their excited nerves. On

his sugar he pays a tax of at least 60 per cent. As for the clothing he and his family uses, let me enumerate the tax separately: on his wool hat he pays from 60 to 80 per cent.; on his fur hat, from 45 to 60 per cent.; on his suit of woolen clothes, some 55 per cent.; on the leather for his boots and shoes, 25 per cent.; on his hosiery, 35 per cent.; on his wife's and daughter's common alpaca dress he pays 65 to 70 per cent.; on spool-thread, 70 per cent., and on needles, 35 per cent. If I were inclined to pursue these topics further it would take up too much time; suffice it to say that the furnishing of his child's cradle and the coffin in which he is finally buried pay a direct tax or are enhanced in price by our tariff system."

This is certainly a startling array of facts, and enough to cause the farmers and laborers of this country to stop and reflect as to whether this system shall be perpetuated. But who is to blame for this? I answer, the farmers themselves. They are in the majority, and yet year after year they vote for men who are in favor of the continuance of this system.

The Democratic party in 1880 declared in their platform for a tariff for revenue only. The Republicans took issue with them, and declared for a tax to protect our manufacturers, and boasted they won the fight on that issue.

A sufficient number of farmers voted the Republican ticket to elect a House of Representatives and a President pledged to this oppressive taxation, of which the above list is a sample. And this House now proposes by this tariff-commission bill to postpone the revision and reduction of our tariff, and thereby continue this unjust and onerous system of taxation. But if there were no other objection to a "protective tariff" than the fact that it is a breeder of monopolies, that in itself would be sufficient reason for consigning it to everlasting oblivion.

All monopolies constitute aristocracy, whether they originate in the consolidation of vast railroad interests, in a system of national banks, or in schemes for extending and perpetuating a protective tariff. The iniquity and national peril involved in these aristocracies assume the most alarming proportions when we consider the power they are calculated to exercise over the various departments of a government to the prejudice of a large portion of the public. With the vast resources at their command these enormous moneyed interests hold the commercial life of the nation by the throat, and establish over it a dominion fatal to its prosperity.

The object of all monopolies is to destroy healthful competition, in order to promote the growth of excessive profits, resulting in the accumulation of fabulous private fortunes at the expense of the people, by which they acquire extraordinary political power over them. Think for a moment of the vast army of employes and other dependents under the dominion of any one of the monopolies which to-day sway the rod of empire over some particular branch of trade or commerce, and you may gain some idea of the far-reaching influence which they exercise.

It cannot be too often or too forcibly urged that the interests of the people and the perpetuity of popular government rest on a vigilant and ceaseless resistance by the masses to the accumulation of enormous wealth in the hands of a few. Let us not forget the worst enemies of a nation often spring from the ranks of its own citizens. And this danger is most to be apprehended when capital seeks to control legislative action to compass its own selfish purposes.

There are no despoilers of free government more to be dreaded than "greed of gain and thirst for power," and these are the essential attributes of all monopolists, and while these are permitted to thrive and expand through the indifference of the people or the connivance of demagogues there can be no such thing as a wise and just administration of the Government. We have an illustration in the instance of the national banks. Here are a number of wealthy corporations banded together, possessing both the power and the will to dictate the policy of the Government on vital questions of finance. Only a short time ago we beheld the humiliating spectacle of these banks menacing the Government, and through it the entire business interests of the country, because certain acts of the National Legislature did not receive their approval. And the potency of their influence may be faintly comprehended when we reflect that the acts of which they complained were not suffered to become the law of the land. The world has seldom witnessed a more startling instance of the insolence of corporate power. Yet the great masses of the people slumber on almost unconscious of the affront and the peril. These institutions are proved thus manifestly what in fact all similar ones are known to be—important factors in national politics, shaping legislation in their own interests, regardless of the highest welfare of the nation. It becomes, then, of vital importance to the public weal that all powers and influences that are calculated to divert the course of legislation from its legitimate and natural channels, or which in any way impede or arrest the laws of trade, should be as far as possible promptly eradicated.

Again, this system of indirect taxation is, in the methods of its operation, so subtle and insidious that its impositions do not make themselves manifest to the observation of their victims, how keenly soever their effects make themselves felt in the hard condition of their daily lives. For instance, how few there are among the toiling masses who realize that extortionate tariffs, by which colossal fortunes are yearly amassed, hold any relation whatever to the dwarfed and meager pittance which they receive for their labor. Yet the price of every article of their raiment is increased by the excessive tariff tax imposed for the protection of the manufacturer. Because the merchant pays the tax to the manufacturer the consumer loses sight of the

fact that he bears the burden at last in the increased price of the goods he buys, and that the dealer or merchant is only the agent through whom the consumer pays the toll to the manufacturer.

Again, then, we are led to ask can that government be wisely and justly administered which permits the existence within its borders of the abuses briefly enumerated? Is it not unfaithful to its sacred trusts? If the experience of ages of human misery and disaster are impotent to awaken the people to the perils which menace their prosperity, let them listen to the ominous words of the nation's most illustrious son. "The freest government," says Webster, "cannot long endure where the tendency of the law is to create a rapid accumulation of property in the hands of a few and to render the masses of the people poor and dependent."

It is yearly becoming more manifest that under the present system of high tariff and corporate monopoly the condition of three-fourths of our population is continually gravitating toward social servitude and impecuniosity. It is impossible to conceive that this state of things can long continue without producing some serious political complication, the result of which no human discernment can foresee. Let us not forget that while in civilized communities nothing is slower to start up than a spirit of resistance to legalized oppression, yet when once started nothing moves swifter or more mercilessly, and nothing is with greater difficulty arrested in its terrible march. But let us also bear in mind that by a wise and just administration of the Government all such crises may be averted.

The wisdom and justice demanded by the exigencies of the hour lie clearly in the direction of reduced taxation and reform in the method of apportioning taxes.

To reduce taxation we must have greater economy in the administration of the Government; we must revise the tariff to a revenue basis; use the revenues to extinguish the national debt, and thereby remove a heavy interest charge and the necessity for extortionate taxation. We must place the burdens of taxation where they can best be borne and remove all unjust discrimination in favor of one class of our citizens at the expense of another. Not until these things are accomplished can we felicitate ourselves in that wise and just exercise of governmental powers on which the welfare of a people and the repose and security of a nation depend.

National-Bank Charters.

SPEECH

OF

HON. NICHOLAS FORD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882,

On the bill to enable national banking associations to extend their corporate existence.

Mr. FORD said:

Mr. SPEAKER: In any thoughts I may submit upon the subject of national banking I wish to be understood as referring to a system, and not to men who may be identified with it.

The system I am opposed to; am convinced its success must prove detrimental to the general prosperity, is dangerous and threatens every industry by its pretensions; yet I concede that so far as safety to the note-holder and the uniform value of national-bank money are concerned the national banks afford us a protection never vouchsafed by State banks; therefore is much more desirable, inasmuch as the money of this country must be national rather than State or provincial. The old *régime* must not be revived. We do not want State banks. The money of the future will be national money, and the people desire that this money emanate directly from the Government. I might offer many reasons in support of this theory, why this Congress should not perpetrate anew the folly of the past and again invest moneyed corporations with special privileges. Experience is a sensitive touchstone; its admonitions should not be trifled with or disregarded.

The Constitution of the United States confers upon Congress the power to coin, to make money, and to regulate its value; but I do not believe the Constitution confers upon Congress the power to vest or delegate this right in or to individuals or corporations, a bank or banks.

If Congress transfer this prerogative for twenty or any number of years and abdicate its constitutional power, the people are subjugated, and, in the terse language of President Jackson, "the Constitution is for the time being a dead letter, and the act of Congress establishes a dangerous money monopoly above the people, above the law, and above Congress." Congress, sir, then proves unfaithful to the people; its weakness, if not treason, is a violation of the Constitution, and dangerous to republican government. It cannot de-

fend an ignominious surrender of power confided by the charter of the national Government to either an individual or corporation.

I submit this is the issue presented, and the attitude of the national banks, at no time uncertain when the people attempt to assert their rights when their prosperity and happiness are involved, stamps with the highest degree of certainty a purpose to subordinate all other interests to that of sordid, selfish gain. I do not hesitate to say we have reason to distrust the national banking system. It may be the medium through which the few are enabled to monopolize not only the luxuries but even the mere vulgar bread and butter, the absolute means of support for which the thousands toil unending. Luxury for the few is privation for the many. I may be permitted to quote the language of a great man of national reputation, whose utterances the proudest and most intellectual concede worthy of serious consideration. Missouri, Missourians admire his integrity, and from his teachings extract truths that I trust may be accepted by a majority of this House in determining the vital question to be disposed of by this Congress. Thomas H. Benton uttered the following words in the Senate of the United States in 1838:

The Government ought not to delegate this power if it could. It was too great a power to be trusted to any banking company whatever, or to any authority but the highest and most responsible which was known to our form of government. The Government itself ceases to be independent; it ceases to be safe when the national currency is at the will of a company. The Government can undertake no great enterprise, neither of war nor peace, without the consent and co-operation of that company; it cannot count its revenues for six months ahead without referring to the action of that company—its friendship or its enmity, its concurrence or opposition—to see how far that company will permit money to be scarce or to be plentiful; how far it will let the money system go on regularly or throw it into disorder; how far it will suit the interests or policy of that company to create a tempest or suffer a calm in the moneyed ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices; to make and break fortunes; to bring the whole community upon its knees to the Neptunes who preside over the flux and reflux of paper. All property is at their mercy. The price of real estate, of every growing crop, of every staple article in the market, is at their command. Stocks are their playthings—their gambling theater, on which they gamble daily with as little secrecy, and as little morality, and far more mischief to fortunes than common gamblers carry on their operations.

Every sentiment uttered by the great statesman applies with undiminished force and power, intensified in consequence of the vast patronage extended to our present national banking system. I might collate the opinions of Jefferson, Jackson, and many other profound thinkers in support of the views of Mr. Benton and in opposition to the modern theory that the Government must resort to methods wholly inexpedient and dangerous in furnishing to the people a money medium for the transaction of the business of the country. These men proclaimed themselves, without reservation, in favor of the people as against monopolies, and they well knew that the superstructure upon which all the other evils rested was monopoly in money. Can we afford to trifle with their opinions? Had they not convictions unflinching, unswerving, commanding, demanding our most sincere admiration, and shall we not hear these revered voices of the past now and endeavor to realize the extraordinary feat to which we are invited, a banquet at which labor is refused recognition, prepared specially for the favored few, the champions of special privilege.

All these distinguished men have borne testimony to the dangers that environ the people, and now, when a proposition is being seriously considered by which national banks can be re-chartered, is it not proper that the popular will should be respected and popular interests consulted and protected by the people's representatives? The National party objects to national banks because in the laws creating them we see the first effort ever made by Congress under the Constitution to create a perpetuity in banking monopoly, contrary to its letter and spirit, and at variance with past legislation and the decisions of our courts. Nor are these the only objections. Congress, apparently oblivious to the evil results that may be accomplished through a united concerted action of the banks, heroically shifts the responsibility by investing the Comptroller of the Currency with plenary power to create banking corporations *ad infinitum*, to "go on and on forever," wholly beyond the reach and control of the people, who are supposed to be the source of all power in this Republic.

The act of June 3, 1864, (13 Statutes at Large, 99,) under which these banks exist, provides that all banking associations formed under it shall enjoy corporate powers and banking privileges for twenty years, not from June 3, 1864, the date of the passage of the act, but from the time the banks receive the charters from the Comptroller. Here we have a general banking act, a departure from the traditions of the past. It does not create any banks as did the laws of 1791 and 1816 which created the banks of the United States; it makes the way easy, removes every obstacle, and proclaims that any five men and the Comptroller of the Currency may organize one of these beneficent institutions and put it into operation immediately. This is simply the initial step in the inauguration of a questionable system, and is not the only bad feature that alarms the man who will investigate; for at the expiration of the twenty years of their corporate existence they are not compelled to apply to Congress for a renewal of their charters. The whole subject rests with the stockholders; their option is the highest law. The people may feel intensely upon the subject, Congress even may think we have too many banks, but the people and the Congress of the United States

are powerless under the law where the articles of association are properly prepared and the Comptroller sees proper to authorize another syndicate to deposit non-taxable bonds for safe-keeping in the Treasury vaults. Thus we have in prospective a permanent system of banking, for it is well known that many of our distinguished thinkers are opposed to the liquidation of our national indebtedness; thus perpetuating interest-bearing bonds to serve as a basis upon which shall rest for all time the unjust, oppressive national banking system. To my mind this is a remarkable concession. The banks are above the law, above Congress, superior to the people, and really responsible only to the Comptroller, who I suppose has the power to recharter old banks as effectively as to charter new ones. Such power invested in the stockholders of a bank and any one officer of the Government was unknown to our fathers. It was not dreamed of by the States when they surrendered their right to coin money and emit bills of credit and to make them legal tender to the General Government. Had they ever imagined that Congress would yield up to corporations virtually all that they surrendered to Congress, the Constitution would never have been adopted.

The power to charter a bank was four times exercised by Congress previous to the creation of the present national banking system: in 1791, 1816, 1832, 1841; but not one of these institutions was permitted to continue its corporate existence after the term of the charter expired. Those banks were the creatures of Congress, and wanting the enacting clause there was no power that could be exercised by this Government by which the monopoly could be perpetuated. Gentlemen will recollect the history of two of these attempts to foist upon the people by act of Congress this incubus. President Jackson strangled the monster of monopoly in 1832, and President Tyler as effectually thwarted the plans of the aristocracy in 1841. No advocate of paper money then ever dared commit his party to the theory of special privileges in perpetuity for the banks. No party, no statesman or politician, could have safely enunciated such doctrine.

It is popular now, and at the money centers Republican and Democrat are heard shouting for honest money and a national banking currency. Circumstances control the action if not the motives of men. To-day we tolerate this unjust anti-republican system because during the dark and disconsolate days of war every consideration save the life of the nation was ignored by the million toilers who carried the flag to victory. Vampires, gloating over carnage, defeat, suffering, speculated in the blood and credit of the Republic, and the measure of their patriotism is indelibly written in Wall street gold quotations, in those perilous moments when doubt and uncertainty reigned supreme. Then this iniquity was conceived and tolerated, and under different conditions I think I am justified in asserting the pernicious system would have been spurned by nine-tenths of the people. Yes, sir, in that supreme moment finance and all kindred matters were left to Congress, and the people have been bound hand and foot by bankers and bondocrats who have been and are now crushing them to the earth.

The developments in Congress since the commencement of this session, in which the national banking system seems to be fortified behind the fears that another panic, financial stringency, is imminent, are interesting and furnish food for thought—serious, earnest thought. It is no doubt true a large majority of the people of the United States are opposed to national banks, but they are powerless just now and shall so remain until they exhibit courage to proclaim their convictions at the ballot-box. I find no fault with the action of the committee in reporting this bill. Impressed with the great necessity of taking care of "these little ones," whose mere caprice is more potent than any political party, whose domination it is difficult to resist, the committee feels that the monster must be placated. Hence this bill and report, in which we find all that the banks specially care about—the indorsement of the Committee on Banking and Currency.

I say, sir, this indorsement of the committee is all the banks need; and for this reason I understand the Attorney-General has promulgated an opinion that good lawyers assure me is correct, an opinion of vast importance to these "wards of the Government," that the national banks need no legislation to enable them to continue their corporate existence. They and the Comptroller of the Currency can do this without the consent of Congress—will do it; and may I ask what are you going to do about it? The banks will adopt this policy, and when we meet again next December the Comptroller will be able to report to Congress the gratifying fact that hundreds of banks have been rechartered, and that we have happily passed through the ordeal, escaping a financial crisis by extraordinary philanthropy on the part of the banks. Such statement, freighted with consolation, must produce the most magical effect upon Congress, and doubtless we shall all assume we have saved the country.

What of the men at home, Mr. Speaker? Think you they will be satisfied with a dress-parade when they commissioned this House to do some earnest fighting? They will not. The power of perpetuation should be taken from the banks. The national banking law should be so amended that the banks in the future should apply directly to Congress for a charter, thus holding the people's representatives to a strict responsibility. This is the people's affair; they will not be satisfied with any species of legislative jugglery that places monopoly beyond the reach of their assault; they will have, must have, a voice in the matter and determine whether they do or

do not want such institutions. The authors of the banking law must have anticipated that the time would come when a cry would go up against the national banking system; hence the legal protection afforded it. Unassailable by the people, its representative men indulge in dire threats should Congress recklessly undertake to limit its power to contract the volume of currency at will and guard general interests by rendering the purposes of financial wreckers impossible.

Perpetuities are dangerous to liberty, and must, if tolerated, menace individual effort and prosperity, American traditions, and love of equality. American law is inimical to them, and legislators must know the sentiment of the nation cannot be safely trifled with. Define this issue in the next Congressional campaign, separate it from all entangling alliances in party platforms, avow yourselves as the champions of this system, state boldly you favor money monopoly, and I hazard little in saying you will be repudiated by the vast majority of intelligent voters throughout the country.

This experiment would be a fair test, and if I be correct in my assumption I ask if it be not the province of a wise statesmanship to recognize the unmistakable opposition to this dangerous system, and provide legislation leading to the retirement of banking currency and the substitution thereof of Government paper money based upon the authority and wealth of the nation, and not upon its outstanding bonds, an evidence of our weakness, because they proclaim our indebtedness. Mr. Speaker, I say the law, its genius and spirit, are arrayed in opposition to this doctrine of perpetuity. I think I am justified in this assertion, and merely refer gentlemen to the celebrated case of John McDonough. Mr. McDonough had bequeathed his vast estate to the cities of Baltimore and New Orleans for charitable purposes, and provided in his will that none of the property should ever be sold, but that the income, after paying certain legacies, should be invested in other real estate, all of which should be improved and rented, and the rents in excess of the charities reinvested in real estate, and so on perpetually.

Had the provisions of the will been carried out in this one particular, the property of the State of Louisiana might all have been absorbed in the process of time, and, while beneficent in its purposes of charity, its ramifications and vast proportions alarmed the people. The Supreme Court decided against the perpetuity clause, confirming the general provisions of the will. This estate, I am informed, was valued at about five million dollars. If a perpetuity involving this amount of money was considered dangerous to the rights and liberties of citizens, how much more grave and threatening is the national-bank perpetuity, which, if the greenbacks be removed, and the purpose to wage a continued war upon them is apparent, will place within the control of these ever-existing corporations, at a very moderate estimate, \$1,000,000,000; in a word, all of the circulation, most of the capital, and deposits of the whole United States?

Through these institutions established in the States and Territories will be concentrated such power and influence as no dictator ever wielded before; and, judging the future by the past, there is not much rashness in the assumption that they will band together and encompass the defeat of those whom they would have reason to fear in the National Legislature. But a short time since we saw an exhibition of their power and heard their threats. They hold panics and financial disaster in the hollow of their hands; and the moment we attempt to restrain their pretensions, regulate their powers, so that the people may have assurances of some measure of protection, again we are gravely assured our safety must be purchased by extending to these anew the very concessions through which they have become masters of the situation. This uncertainty is harassing. Unlimited power must be taken from the banks. Congress should not delegate to the Comptroller of the Currency nor to any other official of the Government a prerogative of such vast importance.

The banks and the Comptroller can be brought to a halt in this work of very doubtful propriety by an act of Congress, and I think the sooner we adopt such legislation the better. I object to this banking system based upon our national indebtedness and committed to its perpetuation, which favors a large surplus in the Treasury that should be applied to the extinguishment of the debt in accordance with the provisions of the sinking-fund act. I never expect to be able to appreciate the wisdom of a policy that locks up two or three hundred millions in the Treasury vaults instead of applying it as it should be applied—to the redemption of interest-bearing bonds. There is a school of political thinkers in this country who are rather favorably impressed with the stability inseparable, it is argued, from national debt, and therefore they favor its continuance.

It will be found very difficult to educate the American people to accept this modern philosophy. They cannot believe it. As individuals they want to pay as they go, and their logic is as applicable to the nation as the individual. Interest is all-devouring; it impoverishes the great wealth-producing classes and as a rule they throw off the deadly incubus as rapidly as possible. I assert you do violence to them by the imposition of burdens their souls abhor, and I honestly believe they demand, exact at your hands in this Congress legislation tending to provide for the payment of our national debt as rapidly as practicable. I am not proclaiming a new doctrine. Washington, Adams, Madison, Jefferson, Monroe, J. Q. Adams, Jackson, Polk, Clay, and Lincoln, with many other eminent patriots and statesmen, were averse to and warned the people against the European system, by which the money-changers controlled governments,

enslaved the people, and rendered progress almost impossible. Can we afford to ignore the teachings of these wise, good men that the national banks and bondholders may flourish here and prove as detrimental to prosperity and progress as they have in other countries?

In 1834 as a nation we were out of debt, notwithstanding we had twice been forced to accept the issue of war; the first to win our independence, the second to defend ourselves by its maintenance. And even after the third war, the war with Mexico, which cost one hundred million, including sums for territorial acquisition, our debt was less than sixty million at the close of the year 1860. I simply refer to these facts as proof of my statement that the American people do not want a permanent national debt; they do not believe it a blessing, and they are in favor of paying every dollar of it within the shortest period possible.

The cost of our last war is estimated at about two billion five hundred million. It was bonded, and it is a matter of history; the transaction was unfavorable to the tax-payer and correspondingly favorable to the bondocrat. We have entered upon the task of liquidating it, and wish to pay the balance as fast as the bonds become due.

The people intend to stop the drain of interest, and are determined, notwithstanding the purpose so manifest of perpetuating the debt, to dispense with a bank circulation that is used to oppose and confront them in their efforts to destroy the enemy of their liberty, prosperity, and happiness. The bonds must and shall be paid off; this is the edict of the people; they have, without murmuring, paid into the Treasury millions of internal-revenue tax, cheerfully yielded to taxation in the shape of duties on imports, and they now ask that the hoarding policy be abandoned that the money they so cheerfully contribute may be promptly applied to the reduction of the debt. They will continue to meet these demands uncomplainingly, but they ask that Congress remove such obstructions as they have just reason to complain of, and the most feasible way of accomplishing this is by the repeal of the national banking law.

I object to these banks because there is no necessity for them. The object we are told was to secure a uniform currency. We had such a currency on the 28th of February, 1863, when the first national-bank act was passed. There never has been a time when these notes were more valuable than the Government notes. During the panic of 1873 the notes of the Government were worth 1 to 1½ per cent. premium over bank notes. Government paper money is the lawful money, and the bankers use it for the redemption of their own currency. The banks need not redeem their notes in coin, and when they are found doing so it is because Government paper money can be used more profitably in the performance of other functions of money. Government paper money commands a premium on the Pacific coast, in Canada, and even in Europe, and solely for the reason it is receivable in the payment of duties on imports. The money of the Government is in every way superior to the bankers' money. The law of 1874, I am informed, provides that the national bankers can deposit greenbacks in the Treasury to the amount of their circulation and withdraw their bonds—a new phase of circumlocution not dreamed of by Dickens.

Drive out Government paper money and the banks are supreme; this is their sole desire. The interest on one billion of bonds at 3 per cent., thirty million per annum; in fifty years one billion and one-half simple interest; hence the desire to popularize the national-debt theory. The cost of preparing for circulation one billion of Government paper money, and at all times be prepared to exchange new paper for torn or mutilated, I am assured would not exceed \$100,000 per annum; in fifty years the sum of five millions. This vast saving would add greatly to the prosperity of the people in the equal distribution of economic benefits among them. The national banking law repealed, capitalists would seek investments in great enterprises, thereby benefiting because employing labor; the fears to which the people are now subjected would be banished; a well-defined national policy affording guarantees to be looked for in vain while at the mercy of the few who now hold the money of the country within their grasp.

Repeal the national banking law, substitute the money of the nation for the money of corporations, let all money for the country be issued by the Government of the country, all a full legal tender—and equal before the law—for all debts public and private. This, sir, I believe to be the solution of the financial problem, so far as Congress under the Constitution has the power to interfere and regulate the value and volume of money. Sir, there has been introduced at this session of Congress a bill providing for the reissuing of fractional currency, a meritorious measure, and one that should be passed before the close of this session. From all sections of the country may be heard demands for this legislation, and the very least we can do is to try to make reparation for the blunder, the iniquity of retiring the fractional currency. All classes, save the capitalistic few, are in favor of restoration of that most useful, convenient medium, and I hold we shall prove in every way derelict unless we retrace our steps and afford the people the facilities they so much desire in this particular.

The fractional currency went down, was retired to please "specie-basis, honest-money" advocates; it was a wretched and, all things considered, an expensive mistake, and furnishes indubitable evidence of the incapacity of men whose views are fashioned by the exigen-

cies of any one vocation to see in a comprehensive way the necessities of all and properly provide for them. Should this Congress wisely and deliberately attempt the herculean work of correcting the errors of the past in financial legislation, it will make no mistake. A subject of such import ought not to be neglected, and I frankly state here it should have precedence over tariff-commission bills and much general legislation now occupying the attention of the House.

Mr. Speaker, the commercial metropolis of the district I have the honor to represent, a city with a population of nearly forty thousand people, transacting a business of about eighty millions annually, whose banking institutions have a stability and worth recognized in all the great money centers of the nation, finds no difficulty in meeting every exigency and demand of business through the medium of its solid, excellent private banking houses. There is not one national bank in the city of Saint Joseph, and let me add few cities in the country present such evidences of present and prospective prosperity.

Why, sir, cannot other communities, the whole country, dispense with these institutions and march along the highway of progress unobstructed and undeterred by a financial system whose power for evil if exercised in the interest of corporations and against the people might at any time prove most disastrous. I believe, sir, the people are opposed to this system, and for their own protection demand national money, issued by the National Government, stamped a full legal tender in payment of all debts, public and private, not a national banking currency wanting the essential attribute of money, a full legal-tender capacity.

Tariff and Tax Commission.

Free trade is, like universal peace, an ideal end toward which we must tend, but it is not the starting-point of industrial progress.—*Martin's History of France.*

SPEECH

OF

HON. EDWARD L. MARTIN,

OF DELAWARE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 4, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. MARTIN said:

Mr. CHAIRMAN: The bill under consideration proposes to appoint a commission to consist of experts, so called, to take into consideration all the varied industries of our country, and to ascertain by an examination of those industries in what manner our system of taxation can be revised. That there seems to be some necessity for such revision is apparent not only by the demands which reach us through the various channels of information but by the presence of this measure itself in the Congress of the United States.

I shall not, in the few remarks which I propose to submit on this question, enter into any elaborate discussion of the two systems of raising revenue by a tax upon goods of foreign manufacture imported into the United States, commonly called the tariff, one miscalled, in my judgment, the American system, or a tariff for protection, and the other a tariff for revenue, which has been denominated by some most unjustly as free trade.

The question of how the revenues for the support of the Government should be raised was one which early gave trouble in the convention which framed the Constitution. It was claimed on the one side that taxation, by whatever means, should be left to the States, while on the other hand it was deemed absolutely necessary that power should be conferred upon the Federal Government in order that it should not be subject to the vicissitudes and disappointments which rendered the Confederation incapable of commanding the necessary means to carry on the Government. But on neither side was it ever maintained, or even hinted at, that the States, in the various clauses referring to the raising of revenue, conferred any power upon Congress to tax the people in any way for any other purpose than to raise the revenue necessary to carry on the Government.

The idea of a tariff for protection solely has been advocated in this discussion by some gentlemen on the floor of this House, and in the other end of the Capitol, which has not been done in former discussions even by the most advanced advocates of the protective system. "Protection for the sake of protection" is class-legislation in its most obnoxious form. Nowhere has any government the right to oppress one interest or industry to enrich another. Much less has it the right to tax all for the benefit of one. It is contrary to the spirit of this free Republic, the corner-stone of which is justice. And to demonstrate that I am correct in saying that not until these lat-

ter days has "protection for the sake of protection" been advocated by pampered interests, grown arrogant by long indulgence, I quote from Bancroft's History of the Constitution of the United States, volume 2, pages 337-8, a work just published by the acknowledged historian of this country, the following reference to Hamilton, the alleged father of the protective doctrine:

Himself a friend to the protection of manufactures, he condemned "exorbitant duties on imported articles," because they "beget smuggling," are "always prejudicial to the fair trader and eventually to the revenue itself," tend to render "other classes of the community tributary in an improper degree to the manufacturing classes," to give them a premature monopoly of the market; to "force industry out of its most natural channels," and to "oppress the merchant."

There is a universal demand for revision and reform of our tariff system. Even the favored few who have been accumulating colossal fortunes by taxing the industrious many have been compelled, in view of the general desire, to express themselves by the voice of their powerful organization, called the Industrial League, as follows:

They consider such revision desirable for the interests both of the industries affected and those of consumers, partly on account of some original imperfections in the present tariff and partly on account of the modifications which are demanded by the changes which have occurred in conditions of production and commerce.

And yet, while admitting these defects, instead of providing remedies at once and revising and reforming the tariff by correcting its incongruities and repealing duties which do not pay for the expense of their collection, they pursue the subtle policy of delay by proposing to leave every one of the many thousands of duties on imports just as they are, and to create a commission, to be appointed by President Arthur, who was elected to office mainly by their enormous money contributions to Republican election expenses, to inquire into the subject and make a report to Congress at its next session when its term is about to expire, and it could not do anything even if it would. It is merely throwing the tub to the whale, and whomsoever else it may deceive it will not deceive the people. For, with almost insane ostentation, monopolists flaunt their great wealth in the eyes of the hard-worked laboring classes, and the latter cannot be blind even if they would to the injustice of the present policy of the Republican majority.

Nor do I believe it was ever contemplated we should relegate to any other body than that designated by the Constitution itself the power or propriety of suggesting in what manner or to what extent the people of this country should be taxed, for the Constitution distinctly provides that all bills for raising revenue shall originate in the House of Representatives. And why? Because, sir, the matter of taxation has been in all governments, in all ages, in all stages of civilization, one of the most troublesome which has engaged the attention of the legislator. How to raise the largest amount of revenue and at the same time to impose the lightest burden upon the people, whether real or apparent, has been the touchstone of successful statesmanship.

The principle of taxation unaccompanied by representation was one of the chief causes which led to the separation of the colonies from the mother country. And we thought when we had achieved our independence that in America at least that principle had been settled forever. And it was therefore incorporated into the Constitution that the representatives of the people directly should alone originate bills for raising revenue, because it was believed that they would be more sensitive not only to the interests of the people themselves but more sensitive to the complaints, if any injustice was ever attempted. The Representatives being compelled to return to their constituents every two years to give an account of their stewardship were supposed to be more directly under the control and influence of popular sentiment than the other branch of Congress, whose tenure of office is longer and whose constituency is much further removed from the body itself.

I do not think it can be truly said, Mr. Chairman, that the Congress of the United States to-day is possessed of less ability, or less experience, or less capacity for legislation than previous Congresses which have legislated on this subject of the tariff. Certainly the means of information are not less abundant now than in former years, or the means of ascertaining the wishes and will of the people, whom we are elected to represent here in the formation of tax bills as well as of other necessary measures of legislation. Nor has the Government itself been at all niggardly or parsimonious in providing means for the collection of accurate information in regard to every branch of industry and of development not only throughout our own wide domain but throughout the world.

And the same agencies which are claimed by some gentlemen in this discussion to have wrought such wonderful revolutions in the arts and sciences have wrought equally wonderful revolutions in the sources of information and the means of disseminating it among the people. And therefore I see no reason operating upon this Congress more than upon any of its predecessors why we should not bear the responsibility imposed upon us by the Constitution itself, not less than by the expressed wishes of a majority of the people of the United States at the last election, if the declarations of gentlemen on the other side of the House are to be believed, because we were told then, and we have been told since, that the country demanded a revision of our present incongruous tariff system, and that

the country was not willing to intrust that revision to the Democratic party, and therefore reversed the majority which had control of this House in the last Congress and gave power to our opponents, with the understanding, as we supposed, that one of their first efforts on meeting here during this session would be to undertake the revision of the tariff. And it is my firm conviction, Mr. Chairman, that had the same zeal been manifested on the part of the majority in this House to revise our tariff system that has been exerted to postpone it and to invent reasons and to suggest arguments for that postponement, we might to-day have been quite as far advanced toward a solution of that question, as we are toward the solution of the question of appointing a commission to do that work for us.

Now, sir, I believe the tariff should be revised. I believe that under our present tariff system we are not collecting as much revenue as a properly-adjusted system would collect, while upon those articles of prime necessity entering most largely into the consumption of those who are less able to bear onerous taxation the duties are too high and impose a tax upon the people from which the Government derives little or no benefit, while upon other articles that are used mainly if not solely by the rich the largest importations are made.

I do not believe, sir, that the imposition of taxation in any way cheapens the article to the consumer. I cannot understand nor do I appreciate the force of the argument of gentlemen here who say that a tariff for protection leads to increased competition and to a reduction of price. As was said by one of the gentlemen in this discussion on the other side, the fact of deriving revenue was proof of the competition of the foreign article, because the importation of the foreign article upon which the revenue was derived competed with the home production. Therefore the tariff must be fixed to prevent the importation of any foreign goods, if goods of like quality are to be manufactured in our own country. So that protection as construed in this day means prohibition. I cannot understand, then, how the two arguments of gentlemen favoring the protective system can be reconciled when one claims the tariff must be prohibitory and the other that prohibition leads to competition. It is a palpable absurdity on the face of it.

And, Mr. Chairman, do not the facts which come to us daily prove conclusively that in many of the manufactures of this country there is prohibition, but no competition. Else how is it, for instance, that the nail-makers of Pittsburgh and Wheeling can hold their conventions and determine for themselves what shall be the price of nails for the ensuing week or the ensuing month, or that the iron and steel manufacturers can issue their monthly bulletins saying what the price of their commodities shall be for the coming week or month, or that the paper manufacturers can say what shall be the price of their manufactures for any given time in the future?

The fact is that under our prohibitive duties vast monopolies have grown up in this country, so that when new capital is invested in a business and new men organize for the manufacture of these articles notice is at once served upon them by the older manufacturers, who have associated themselves together in protective unions with different names but the same object, that unless they come into this close corporation their goods shall not find a market in this country. In other words, these monopolies, after securing the prohibition of competition on the part of imported goods of the same character, at once organize themselves into a system for "crushing out" all competition from new manufacturers in the home market. In this way they establish a law unto themselves and the price at which they will sell their manufactured goods depends at last upon their own sweet wills, regardless of any other consideration.

Now, Mr. Chairman, this is not so with the farmers of this country, and I believe it is not contradicted they comprise a large majority of our workers. The farmer has to sell his products for what he can get for them, the price being regulated by what our surplus is worth in Liverpool, where it comes in direct competition with the grain of Russia and of other countries which employ the cheapest and most degraded labor in the world. And no tariff can protect the farmer against this competition.

It has been most truly said that "history is philosophy teaching by example," and it becomes us to listen carefully to its lessons of wisdom. In the time of Louis XIV, when the revenues fell into the hands of monopolists and luxury became more extravagant than in the days of the Roman Empire, the agricultural classes were sunk in ruin and degradation, and agriculture everywhere languished. So it always has been; farmers and farming become degraded and enslaved where monopolists obtain sway of legislation; and where farmers and farming do not suffer unjust exactions and thrive and are respected we see the happiest outcome of free government.

Bancroft says that "absolute free trade as to exports became a part of the fundamental law of the United States." Now, these exports are chiefly, if not wholly, made up of our great staple products of the soil. It is the inevitable logical consequence of the protective or prohibitory theory that if the highest duties on imports do not furnish adequate protection then duties on exports should be imposed, so as to make our cotton and wool cost more to foreign manufacturers than to our own. It would seem, then, that this free Republic is not established, according to the theory of the protectionists, for the general welfare, but for the sole benefit and aggrandize-

ment of the manufacturing class. This would be to establish a merciless moneyed aristocracy, which to be hated needs only to be known.

I represent on this floor, Mr. Chairman, a constituency of laborers, of workingmen, for in Delaware we have no very rich men and few very poor ones, and I have no theories of my own which I desire to carry out regardless of their injurious and disastrous effect upon these laborers, nor am I wedded to the schemes of any one else, however refined and plausible, which I would not at once reject if they conflicted with the happiness and well-being of that people. But having seen the beneficent effects of cheap and simple government, with taxes at a minimum in my own State, I have great faith that like results would follow could simple methods be applied to the Federal Government. High taxes lead to extravagance which produces corruption and finally works ruin.

When Turgot, after the death of Louis XV, was called to take the reins of power and save if possible the nation from ruin, we are told he "found France, and in fact all Europe, steeped in poverty and threatened with future calamities, not because the country was deficient in natural resources or the people unwilling to labor, but because through the lack of any appreciation or understanding of the most simple economic laws and principles the government authorities had so multiplied taxes, monopolized trade, and restricted commerce that production was everywhere carried on at the minimum of profit, accumulation prevented, and distribution so impeded that the people in one province were sometimes allowed to starve, while in adjoining departments there was a surplus seeking a market." In 1776 the royal decree, made in the name of the king but written by Turgot, contained the following:

God, in giving to man wants, rendered it necessary that he should have property. The right to labor is not only the property of all men but it is the first, the most sacred, and the most inalienable of all property. We therefore regard it as the first obligation on our justice, and as an act most worthy of our beneficence, to free all our subjects from every restriction on this most inalienable right of humanity. We therefore abrogate every arbitrary institution that does not permit the poor to freely enjoy the fruits of their labor, which tramples down the sex whose weakness gives it more of wants and less of resources, and which, in condemning women to poverty and idleness, promotes immorality and debauchery; which extinguishes emulation in industry and renders useless the talent of those who are excluded from trade associations; which deprives the state of the industry, the trade, and the products of foreigners; which retards the progress of the arts; and, finally, which gives facility to members of corporations to so intrigue among themselves as to force those who are poor to submit to the will of the rich and so become the instruments of monopoly and the supporters of schemes, the sole effect of which is to enable a few to enjoy more than their rightful proportion of those commodities which are essential to the subsistence and comfort of the masses.

The average rate of duties in our present tariff is about 43 per cent. Now, that means that the purchaser here must pay 43 per cent. more for all manufactured articles than he would be compelled to pay if there was no tariff at all. When the fathers framed the Constitution 5 per cent. ad valorem was deemed to be an adequate duty on imports. Now, if this 43 per cent. was absolutely necessary to save our manufactures from extinction, that would be a different question; but, as I have shown, such is not the case. It is in effect a bounty given to the large manufacturers, for while foreign competition is prevented by this prohibitory legislation, at the same time all home competition is suppressed by the combination of powerful and wealthy manufacturing organizations. This is so well known I need not enlarge on it.

In our Government direct taxation has been reserved for times of great exigency, as when a war is waged and the largest revenue is needed. Nevertheless it has always been unpopular in this country. The people will submit patiently to very onerous taxation that is not felt directly by being taken from them by the hands of the tax-gatherer, while the attempt to collect a much smaller sum has several times led to serious outbreaks and to very general discontent. Therefore the most popular system of taxation in this country has been the indirect mode of raising revenue through the imposition of tax upon the importation of manufactured goods into this country. But as between the two systems of a prohibitory tariff, or absolute free trade with direct taxation, I am not sure if the latter would not be the preferable mode.

Of one thing I do feel absolutely certain, that the latter mode would lead to a much more economical expenditure of the public moneys, to a much more rigid accountability for public expenditures on the part of the representatives of the people, and to a purer, simpler, and freer administration of government than has been seen of late years.

But, sir, is there not reason to doubt it is the intention or desire of those advocating this measure there will be any revision of the tariff through the instrumentality of this commission? The very men who clamor against any revision of the tariff, and who insist on the highest rates of duty for protection *per se*, are the champions of this measure. And in order to make it absolutely impossible there shall be any revision of the tariff duties they advocate the repeal of all our internal-revenue laws and the total abolition of the entire internal-revenue system, knowing full well that the necessities of the Government in payment of the interest and principal of the public debt and the large annual appropriations for soldiers and sailors' pensions must, for many years to come, require an amount of revenue that will necessarily impose a high rate of taxation in the form of tariff.

If the internal-revenue taxes duties are repealed of course it must be the tariff duties will be in excess of those of which the people now complain. If I could believe, or if there had been any argument adduced by the gentlemen opposed to revenue tariff, that they would after this commission had discharged the function with which this bill clothes it address themselves earnestly and seriously to a revision of the tariff, I might overcome some of the objections which I have urged to this mode of legislation and would give this bill my hearty support. But I am forced to the conclusion that this is only a subterfuge to enable gentlemen on the other side to escape, if possible, the responsibility for not fulfilling their promise to the people who elected them at the last election.

That the danger to our liberties which I have referred to is a real one and not any figment of my imagination, I will support it by a brief quotation from a standard work, De Tocqueville's Democracy in America:

I am of opinion upon the whole that the manufacturing aristocracy which is growing up under our eyes is one of the harshest which ever existed in the world; but at the same time it is one of the most confined and least dangerous. Nevertheless the friends of democracy should keep their eyes anxiously fixed in this direction; for if ever a permanent inequality of conditions and aristocracy again penetrate into the world it may be predicted that this is the gate by which they will enter.

At the close of the canvass in Indiana preceding the last Presidential election, and when it could not possibly be for any legitimate election expenses, the manufacturers of Pennsylvania were thrown into terror by the threat that unless they responded the Democrats would come into power and all duties would be taken off; and they did respond in enormous contributions, which we have reason to believe were "put where they would do the most good" to the Republican party.

I conclude, Mr. Chairman, by indorsing the following just thoughts:

Cast your eye over the globe. Which are the happiest, the most moral, and the most peaceable nations? Those where the law interferes least with private activity; where the government is the least felt; where individuality has the most scope, and public opinion the most influence; where the machinery of the administration is the least important and the least complicated; where taxation is lightest and least unequal, popular discontent the least excited and the least justifiable; where the responsibility of individuals and classes is the most active, and where, consequently, if morals are not in a perfect state, at any rate they tend incessantly to correct themselves; where transactions, meetings, and associations are the least fettered; where labor, capital, and production suffer the least from artificial displacement; where mankind follows most completely its own natural course; where thought of God prevails the most over the inventions of men; those, in short, who realize the most nearly this idea: that, within the limits of right, all human transactions should flow from the free, perfectible, and voluntary action of man; nothing be attempted by the law or by force, except the administration of universal justice.

Department of Agriculture.

REMARKS

OF

HON. JEREMIAH W. DWIGHT,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882,

On the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture.

Mr. DWIGHT said:

Mr. SPEAKER: So much has been said by those who are, by the rules of the House, in charge of this bill, which provides for the enlargement of the Agricultural Bureau and elevates the head of it to a Cabinet position, that I have not thought it necessary to occupy the time of the House in attempting to give any additional reasons why the bill should become a law. In consequence, however, of the attacks that have been made upon it, I ask to be heard very briefly.

The first objection that I shall notice was made by the gentleman from Alabama, [Mr. HERBERT,] who said:

I do not want a bureau organized to control the farmer, and that will be the result of this scheme, so far as political influences can effect that result. This bureau, with its head in the Cabinet, taking its political complexion from the Administration, giving its political aid to the Administration, reaching out through its sub-bureaus all over the country, ramifying in every direction, touching the people at all points, will be a most powerful political machine.

In my judgment, Mr. Speaker, the gentleman fails to appreciate the purposes and scope of the bill, and the great interests involved in this discussion. He seems to forget or fail to realize that the agricultural, manufacturing, and commercial industries of the country are vastly more important than all other interests which engage the attention of our people. His fear that the proposed Cabinet office may be filled by a politician apparently dwarfs his conception, so that he is unable to comprehend the importance of the subject, and he would therefore defeat the passage of the bill.

Mr. Speaker, let me suggest that the President and Vice-President of the United States are politicians, and will continue to be. The Cabinet officers are and always have been politicians. The same is true of Senators, Members of Congress, and all other public officers. I am not aware, however, that it is the purpose of the people or the gentleman from Alabama to abolish all or any of the offices named because they have been, are, and will continue to be filled by politicians. It has not been hinted that I am aware of that the gentleman asks to have the office which he holds upon this floor abolished, or that he intends to resign because it is filled by not only a politician but a very zealous partisan.

The distinguished gentleman from Indiana, [Mr. BROWN,] who is usually on the right side of all public questions, has, as it seems to me, mistaken this one. He says:

There are many reasons, if I had the time to give them, why agriculture, so large and important an interest as it is, occupies no such relations to the Government as to make it either necessary or proper that it should be represented in the councils of the Executive.

He also says:

What do you do by creating a secretary of agriculture except to make a new officer, to increase salaries, and increase expenditures of the people's money from the Treasury? That is all.

I know of no one here or elsewhere who proposes to abolish any of the Cabinet positions which now exist under the laws of the United States. By the consent of all parties and all citizens, I believe they are regarded and treated as absolutely necessary. And I desire to call attention to the fact that no one of them is delegated to treat subjects or interests that are more comprehensive and important to our whole people than will devolve upon the new Cabinet officer which will be created by the provisions of the bill now being considered, if it becomes a law. I will also add that the magnitude of the aggregated business that will come under the considerate care of the new secretary will amaze us all when we come to examine the data from which we approximate the amount. I have not at hand the statistics to enable me to speak with definiteness. Nor have I now the time or opportunity to obtain them. Nor is it necessary after the full and elaborate discussion which has already been had upon the subject. I will only state two items approximately, as I recollect them. I believe that the aggregate value of agricultural productions for the year 1880 were about nine billion dollars, and that manufactured productions for the same year amounted to about six billion dollars. Include with these sums the other interests which the bill provides for, of which I will name the following:

Collecting and disseminating all important and useful information concerning agriculture, and also concerning such scientific matters and industrial pursuits as relate to the interests of agriculture, which shall include divisions of botany, entomology, and chemistry, and the modes of farming in the several States and Territories, and report such practical information as shall tend to increase the profits of the farmer respecting the various methods; the crops most profitable in the several sections; the preferable varieties of seeds, vines, plants, fruits, and fertilizers. The bureau of animal industry, to be in charge of a competent veterinary surgeon, who shall investigate and report upon the number, value, and condition of the domestic animals of the United States; their protection, growth, and use; the causes, prevention, or cure of contagious, communicable, or other diseases; and the kinds, races, or breeds best adapted to the several sections for profitable raising.

The bureau of lands, the chief of which shall investigate and report upon the resources and capabilities of the public and other lands for farming, stock-raising, timber, manufacturing, mining, and other industrial uses. It also provides that there shall be a division of forestry, the chief of which shall ascertain the annual amount of consumption, importation, and exportation of timber and other forest products; the probable supply for future wants; the means best adapted to the preservation and renewal of forests; the influence of forests upon climate, and kindred subjects.

It further provides that the bureau of statistics shall collect and report the agricultural statistics of the United States; and, in addition, all important information and statistics relating to industrial education and agricultural colleges; to labor and wages in this and other countries; to markets and prices; to modes and cost of transporting agricultural products and live stock to their final market; to the demand, supply, and prices in foreign markets; to the location, number, and products of manufacturing establishments of whatever sort, their sources of raw material, methods, markets, and prices.

The subjects involved in this discussion are more important to the country and to all its people than any other subjects that have occupied the time and attention of this Congress.

It is not saying too much, Mr. Speaker, when I state that they underlie and overshadow all other questions. How my astute and distinguished friend from Indiana should have been led to adopt the view he has expressed I am unable to determine. I am quite confident that he will find himself here and elsewhere acting with a decided minority, which will constantly grow smaller as the wisdom of the measure shall be made apparent by the beneficial results that will follow its adoption.

Tariff and Tax Commission.

SPEECH

OF

HON. W. C. WHITTHORNE,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 5, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. WHITTHORNE said:

Mr. CHAIRMAN: I had determined not to participate in this debate, believing and knowing that the final passage of the pending bill was a certainty, but, inasmuch as the discussion has taken so wide a range, and has assumed a phase in which the expression of individual views becomes proper, if not necessary, I ask the indulgence of the committee for a brief time, in which I shall attempt to discharge this duty.

In the discussion of the pending question of a tariff commission it is well to look at the condition of the Government for whose benefit revenue is to be raised, to examine into its present necessities, and to determine as far as it is possible what are likely to be the demands of the future upon its accruing revenues. I assume, Mr. Chairman, that the financial condition of the country is correctly exhibited by the Secretary of the Treasury in his annual report to Congress, and I quote from it here what I deem to be pertinent to the views I entertain as to the present duty of Congress to the people, and which, in my judgment, makes manifest and imperative the need of present action upon our part. Says the Secretary of the Treasury:

A revision of the tariff seems necessary to meet the condition of many branches of trade. That condition has materially changed since the enactment of the tariff of 1864, which formed the basis of the present tariff as to most of the articles imported. The specific duties imposed by that act, for instance, on iron and steel in their various forms had then a proper relation to the ad valorem duties imposed on the articles manufactured from those metals; but by a large reduction in the values, especially of the cruder forms of iron and steel, the specific duty imposed thereon now amounts, in many cases, to an ad valorem duty of over 100 per cent., while the ad valorem duties on manufactured articles have not been changed.

The growing demands of trade have led, also, to the importation of iron and steel in forms and under designations not enumerated in the tariff, and the great disproportion between the specific and ad valorem duties is a constant stimulus to importers to try to bring the merchandise under the ad valorem rate. This produces uncertainty, appeals from the action of collectors, and litigation, which prove embarrassing to business interests as well as to the Government; and what is instanced as the case with iron and steel will be found to be the case with other articles. An equalization of the tariff, and a simplification of some of its details, are needed. How far such revision shall involve a reduction of the tariff is a question for Congress to decide.

The rapid reduction of the public debt and the increase of the surplus in the Treasury present the question to Congress whether there should not be a reduction in the taxation now put upon the people. It is estimated that, if the present ratio of receipt and expenditure is kept up, the public debt now existing may be paid in the next ten years. In view of the large sum that has been paid by the present generation upon that debt, and of the heavy taxation that now bears upon the industries and business of the country, it seems just and proper that another generation should meet a portion of the debt and that the burdens now laid upon the country should be lightened. It is to be considered, too, whether the seeming affluence of the Treasury does not provoke to expenditure larger in amount than a wise economy would permit, and upon objects that would not meet with favor in a pinched or moderate condition of the Federal exchequer.

In some quarters there is already talk of an overflowing Treasury, and projects are put forth for lavish expenditure, not only to the furtherance of public works of doubtful legitimacy and expediency, but in aid of enterprises no more than quasi-public in character. Can a government be justly said to have an overflowing treasury when there is an outstanding debt against it greater than it could pay if lawfully presented, and when its means of payment in the future must be taken from its denizens by burdensome taxation? And is it a beneficial exercise of governmental power to raise money by taxation in greater sums than the lawful demands upon the Government require, when those demands are of themselves a heavy burden upon the industry and business of the country?

And very wisely has the Secretary called attention to the suggestion made by a large class of interested parties to the permanency of a national debt for investment and banking purposes. Approving his remarks in this connection as far as they go, I beg leave to quote them. Says the Secretary:

Other considerations have been presented; such as that if the public debt be fully paid and all Government bonds retired, the best and safest basis for the national bank system will be gone, and that a desirable mode of investment for savings-banks, trust companies, and fiduciary representatives will be taken away, and that the return of the sums paid to the holders of bonds, to seek investment through other channels, will disturb the business of the country. It is doubtful whether, in a government like ours, not designed for a paternal one, these will be held as sufficient reasons for keeping on foot a large public debt, requiring for the management of it, and for the collection of the revenue to meet the interest upon it, many officials and large expense.

The Secretary might have gone further and demonstrated, as I believe could be done, that "a permanent national debt is a permanent national curse," involving, as it always does, permanent taxation, attended with corruption. But he has said sufficient to arrest attention to the fact that he regards the payment of the public debt as important as affecting the character of our form of government, and

shows that in this regard he is imbued with the "ancient democratic faith."

Now, let us turn for a moment to the estimate made by the Secretary of the receipts and expenditures of the Government for the fiscal year 1883, remarking as we pass along that his estimate of receipts for the two last quarters of the fiscal year 1884 have been and will be exceeded, and expenditures will most likely be lessened. The estimate for 1883 is as follows:

FISCAL YEAR 1883.

The revenues of the fiscal year ending June 30, 1883, estimated upon the basis of existing laws, will be—

From customs	\$215,000,000 00
From internal revenue	155,000,000 00
From sales of public lands	2,500,000 00
From tax on circulation and deposits of national banks	8,000,000 00
From repayment of interest by Pacific Railway Companies	1,500,000 00
From customs fees, fines, penalties, &c	1,350,000 00
From fees—consular, letters-patent, and lands	2,450,000 00
From proceeds of sales of Government property	250,000 00
From profits on coinage	3,250,000 00
From revenues of the District of Columbia	1,800,000 00
From miscellaneous sources	8,900,000 00
Total estimated ordinary receipts	400,000,000 00

The estimates of expenditures for the same period, received from the several Executive Departments, are as follows:

Legislative	\$2,993,455 92
Executive	16,291,367 73
Judicial	403,200 00
Foreign intercourse	1,315,055 00
Military establishment	29,509,524 17
Naval establishment	17,249,148 46
Indian affairs	5,841,713 91
Pensions	100,000,000 00
Public works:	
Treasury Department	\$3,282,000 00
War Department	11,479,506 03
Navy Department	2,829,938 00
Interior Department	386,900 00
Post-Office Department	8,000 00
Department of Agriculture	43,730 00
Department of Justice	1,500 00
	18,031,574 03
Postal service	920,077 95
Miscellaneous	18,141,851 95
District of Columbia	3,562,599 31

Permanent annual appropriations:	
Interest on the public debt	\$65,000,000 00
Sinking fund	45,611,714 22
Refunding—customs, internal revenue, lands, &c	7,514,160 00
Collecting revenues from customs	5,500,000 00
Miscellaneous	2,577,125 00
	126,202,939 22

Total estimated expenditures, including sinking fund	340,462,507 65
Or an estimated surplus of	59,537,492 35

Excluding the sinking fund, the estimated expenditures will be \$294,850,793.43 showing a surplus of \$105,149,206.57.

Mr. Chairman, the receipts of the Government will be in excess of the estimates of the Secretary. This is apparent from the increase of importations, and the collections made from internal revenue and miscellaneous resources, and from the rapid extinguishment of the public debt. An interesting and reliable statement in this connection has been prepared and given to the public press by Mr. Carson,

Title of loan.	Authorizing act.	Rate.	When redeemable.	Total.
Loan of 1863, (81'a)	March 3, 1863.	6 per cent. continued at 3½ per cent.	June 30, 1881	\$47,855,700
Funded loan of 1881	July 14, 1870, and January 20, 1871.	5 per cent. continued at 3½ per cent.	May 1, 1881	401,503,900
Funded loan of 1891	July 14, 1870, and January 20, 1871.	4½ per cent. continued at 3½ per cent.	Sept. 1, 1891	250,000,000
Funded loan of 1907	July 14, 1870, and January 20, 1871.	4 per cent.	July 1, 1907	738,772,550
Refunding certificates	February 26, 1879.	4 per cent.		575,250
Navy pension fund.	July 23, 1868.	3 per cent.		14,000,000
Total interest-bearing debt				1,452,707,400

It will be seen that I exclude from the public debt statement all of the debt created prior to March 3, 1863, because all of the bonded debt so created has been called for, and that with a portion of the debt created under act of March 3, 1863, will be extinguished before the commencement of the next fiscal year, 1st of July, 1882. An analysis of this statement in connection with the calls for bonds made by the Secretary of the Treasury will show that of the debt now redeemable at the pleasure of the Government there will remain after the 1st of July, 1882, about four hundred and fifty million dollars.

Mr. Chairman, a careful study of these official exhibits makes it manifest that if our present tariff and internal-revenue laws remain as they are, and useless and extravagant expenditures are avoided, there will be collected under them a surplus of nearly or quite one hundred and forty millions per annum, and this too with liberal appropriations for pensions, and which being applied to the payment of the present redeemable debt of the Government, will extinguish

the able and efficient clerk of the Committee on Ways and Means of this House, and to which I ask your attention. It is as follows:

The reduction in the public debt for April was about the average for the preceding months of the current fiscal year, the amount for the month being \$14,415,824, and for the ten months, \$128,748,213. The largest reduction hitherto made in the public debt during any one year was in 1867, when the reduction was below \$128,000,000, or about \$100,000,000 less than has been reached during the past ten months. Thus far the reduction for the current year leads all preceding years, and is likely to reach \$145,000,000. While the reduction for April is reported at less than \$15,000,000, there was a reduction for the month, in the interest-bearing debt, of, \$20,707,850. This apparent discrepancy is explained by the fact that the cash in the Treasury compared with April 1 is reduced about \$5,000,000, and this in turn is explained by the large disbursements made on account of called bonds. Since July 1, 1882, the average monthly reduction in the public debt has been \$12,875,000.

Of the continued 6 per cent. bonds only \$89,000,000 are now outstanding, and nearly \$42,000,000 of this amount have been called for redemption. The one hundred and ninth, one hundred and tenth, and one hundred and eleventh calls for \$5,000,000 each will mature May 3, May 10, and May 17 respectively, and the one hundred and twelfth call, which is for \$15,000,000, will mature June 7. In these four calls \$30,000,000 are included, and the call issued yesterday for \$11,000,000 wipes out the remainder of the loan of 1861, the original amount of which was \$189,000,000, and which was the first loan authorized on account of the rebellion. Of the \$80,000,000 included in the four calls last matured, about \$7,500,000 are still outstanding.

The Treasurer's statement of assets and liabilities for April shows an increase of \$3,416,473 in standard silver dollars, the amount of these coins now in the Treasury being \$81,595,056. Against this amount there are outstanding \$58,900,000 silver certificates, which shows the Government to be absolute owner of but 28 per cent. of the amount of silver dollars now in the Treasury. In fractional silver coins the increase for the month was about \$250,000. In gold coins and gold bullion there are now on hand over \$155,000,000, a decline of \$11,250,000 since April 1. There is also a loss of \$2,000,000 in the amount of United States national bank notes held in the Treasurer's general fund since the last monthly statement was issued. The fund held for the redemption of notes of national banks, failed, in liquidation and reducing circulation increased during April \$3,000,000. This is accounted for by the rapid absorption by the Government of the 3½ per cent. bonds. Many banks holding the called bonds deposit United States notes for their bonds and reduce circulation rather than purchase 4 per cent. bonds at the present premium. The amount of 4 per cent. bonds now held by the Treasury to secure circulation and deposits is \$102,296,950, a decrease of nearly \$600,000 compared with May 1, 1881. During the month just closed, however, the deposits by national banks of this class of bonds were \$3,500,000, against \$870,000 withdrawn. The bulk of these deposits was by new banks established in the West. The available cash balance in the Treasury is \$142,334,183, a decrease of over \$5,000,000 compared with April 1.

The total receipts of April show an increase of \$3,500,000 over those for April, 1881, as will be seen from the following comparative statement:

Source of revenue.	1882.	1881.
Customs	\$17,862,836	\$17,056,836
Internal revenue	11,006,375	11,824,345
Miscellaneous	4,884,262	2,359,119
Total	34,743,473	21,250,100

For the ten months of the current fiscal year the total receipts were \$334,300,557 against \$298,008,253 for the corresponding months of last year, an increase of \$36,000,000. In consequence of the larger reduction in the principal and rate of interest on the public debt the expenditures for the ten months, closing with April show a decrease of over \$10,000,000 compared with the same ten months of the preceding year. This larger saving in expenditure has the effect to increase the net surplus revenue by that amount.

Now, Mr. Chairman, at the risk of being tedious in quoting "figures," I beg to call your attention to a statement of the interest-bearing bonded debt of the Government, giving the periods at which it becomes redeemable and payable, in order that we may see the demands that we make by this charge upon the public revenues. This statement I take from one of the current statements of the public debt issued by the Treasury Department:

it in about three years, or six years, before the next bonded indebtedness of the Government becomes redeemable, which, as is shown, is September, 1891.

In view of this state of facts, what is the duty of Congress? May I ask, is it just to the people that we should continue in existence onerous taxes in order to pay this debt prematurely? Is it not criminal to collect such a surplus over and beyond the necessities of the Government? Is it not already apparent from the vast schemes of subsidies, jobs, and extravagant propositions presented to this Congress that this surplus invites the public plunderer and lobbyist to a feast of corruption? To meet and defeat these schemes, and to be just to the people by the reduction of taxes, I hold to be the first and supreme duty of this Congress.

And it is this duty that the Republican party now shrinks from in their effort to create a "tariff commission." They would prolong the life of the national debt, but they dare not say so. They would

perpetuate the existing tariff, with all of its injustice, but they have not the courage squarely and honestly to face the people as its advocates and defenders, but seek by false issues and appeals to the fears of the people in their business relations to hide its enormities and eke out its life. No trained body of men in any service have ever been more effective in their work than the friends of the Morrill tariff in the Congress of the United States have shown themselves to be.

It is idle for gentlemen to arraign the Democratic majorities in this House of the Forty-fourth, Forty-fifth, and Forty-sixth Congresses for any failures to remedy the tariff. Those of us who were here know that outside of the overshadowing knowledge that the executive department was against any change, we felt and recognized the full power and efficiency of the friends of the Morrill tariff to defeat any proposed legislation, and this they will have the power to do in the future, notwithstanding any recommendation of a tariff commission, from their unity of purpose and cohesive organization. And they will do it, Mr. Chairman, unless the commission's report and the majority of this House is acceptable to them. Aggregated and corporate wealth is a fearful and powerful adversary to unorganized labor and industry.

I have said that the friends and advocates of the present tariff seek by false issues "to hide its enormities and eke out its life," satisfied as they must be that if the present large surplus of revenues is to continue much longer the people, unless misled and deceived, will unite to dethrone its exactions. Hence it is, Mr. Chairman, that they proclaim its opponents to be in favor of "direct taxation" and "free trade." There are no such issues, as they well know, tendered by any party in this country, and no practical person, however wise and correct he may believe the theories of either to be, deems it possible to establish such a policy on the Government even when the national debt is extinguished, much less so while it exists. The very frame-work of our Federal and State governments would make it a difficult problem, and the habits and customs of the people make it impossible.

It is, therefore, a false issue, sought to be made by the Republican party, and willfully so, in order to distract the attention of the people from the real issues in this connection tendered by the Democratic party in the interest and for the benefit of the people. These issues are the payment of the public debt, an economical administration of the Government, and the reduction of taxation; and in making this reduction such a reformation of the tariff as shall relieve the people of the burdens they pay, not to the Government, but to favored classes, and with the view and to the end that taxation shall be made to fall, as nearly as it can be done, in equal measure upon all.

These, Mr. Chairman, I repeat, are the real issues, and are those which the Republican party in the past have sought to postpone, and now insidiously avoid.

A brief retrospect of the proceedings of Congress and the action of the executive department will show that while the Democratic party on this floor have sought by their support of economic measures to retrench and reduce the expenditures of the Government so as to make the payment of the public debt easy, those efforts have encountered the opposition of the Republican party, and that in every endeavor to reduce the tariff made by the Democrats a sturdy resistance has been offered by the Republican party. A reference to the journal of our proceedings will also show that the Republican party leaders have sought to prolong the bonded indebtedness of the Government in the creation of a new bond payable at a distant period, the only purpose of such long bond or deferred payments being the perpetuation of the necessity of continued high taxes, or, in other words, "high duties," to the end that "protection," not to labor, but to "capital," whether invested in banks or manufactories, might be secured.

"Protection" to capital so invested is the aim and end of all their efforts. They are, by reason of the fidelity of the Democratic party to economy in the administration of the Government, and the resistance of that party to "monopoly" in gold, now confronted with such an exhibit of financial ability upon the part of the Government to pay the public debt in strict conformity with public faith, and at the same time largely to reduce taxation. So that to secure their object "a tub must be thrown to the whale," and hence the effort to show a reduction of taxation by the introduction of the bill to repeal certain internal taxes, the details of which I have not now time to examine, but I feel quite assured even this, it is not expected, shall receive final consideration by this Congress. If good faith had been intended, why not have made it a part of the pending bill, or had its consideration prior to this time? Yet again, if friendly to labor, why not prefer "farm laborers," and in it propose to take off all taxes on tobacco, instead of relieving capital?

No, Mr. Chairman, we cannot disguise the fact that the purpose of this present majority of the Committee on Ways and Means, and who are but the swift servants of a Republican caucus, is to secure and foster protective and prohibitory duties as the system of taxation which is to prevail and govern this country. If the "tariff commission" performs its intended office in its recommendations it will be supported by the advocates of the Morrill tariff; if not, it will be defeated by them.

Mr. Chairman, the question with them is not one of argument and reason, or even good faith to the great mass of the people; it is

solely one of interest. They will not yield the tributes paid by labor to their wealth.

"Protective taxation," Mr. Chairman, is not warranted by the genius and principles of our form of government. The theory of the republican institutions is that the Government shall not foster and encourage one class of the people at the expense of another; that the Government cannot rightfully interfere with the right of the citizen to pursue fortune as he may choose, except so far as to prevent him from trespassing upon the like right belonging to others, nor can the Government oppress one class for the benefit of another class. The very spirit that gave birth to our constitutional forms of government was a protest and limitation against the governmental authority to discriminate between citizens and classes by unequal taxation.

The inherent and necessary inequality of protective taxation tends to encourage the growth of corporate wealth and to beget monopolies. A careful study of the economic history of our country for the last few years, makes the truth of this proposition clear, and while we are rejoiced at the rapid development of the resources of our country in all of its economic relations, yet those who are mindful of the lessons taught by the history of the grand and magnificent struggles of peoples against vicious oppression and partial governments in all the past, must contemplate with fear and apprehension the great increase of incorporated capital and the support and favor it constantly demands and receives from the partial legislation of the Government.

Indeed, Mr. Chairman, it has already in a marked degree arrested attention; so much so, in fact, as to call for the assertion by the people, by constitutional amendments and otherwise, of their ultimate right to control all charters and grants of power and privileges. The very office of "protective taxation" is to foster, encourage, and support classes, and this begets that vicious and corrupt character which history unerringly teaches us is ultimately destructive to any form of government. We, sir, are witnesses to the fact that the great "protected" interests are by their paid agents and attorneys represented in all the avenues of approach to the deliberations of this Congress.

Sir, the advocates of "protective taxation" upon this floor and throughout the country assume that it is the province of capital to take care of labor. In this they ask of the Government by "protective taxation" to secure their "wealth," and out of its thus assured profits they will pay higher wages to labor. So reasons the wolf with the lamb. Do any of the protectionists propose to give security for the faithful performance of such pledges? No, sir. And may I add, who believes that such protectionists would fail for a moment to purchase machinery that cheapened the cost of labor to them, or that they would employ the "pauper labor" of Europe that may flock to our shores, or even to take "the Chinaman" if perchance they could thereby secure a less rate of wages per day?

No, sir. They are for "free trade" in labor because it enhances the value of their capital, and not for "free trade" in anything that tends to diminish it. It is not, and should not be, one of the objects of government to interfere so as to disturb the natural and proper union and harmony between labor and capital. Legislative interference in this country between labor and capital is a great and growing evil, and nothing contributes more to make the recurring conflicts between these economic forces bitter than "protective taxation." In vain may gentlemen declare that the existing tariff has advanced the interests of labor in this country.

May I not, in answer thereto, ask you, Mr. Chairman, why is it that during the years of this tariff, trade unions and labor organizations have so rapidly grown and multiplied in this country, and why is it that during these years "strikes," which have threatened the peace and stability of our political fabric, have repeatedly occurred? Do they not even now hear the mutterings of that volcano? Do not these advocates of protective taxation realize that but for our cheap tillable lands, where starving want may and does find relief, labor would not for one hour tolerate that system of legislation under which "strikes" become a necessity, while at the same time favored classes become enriched into millionaires in the course of a few years.

From your cheap lands have come at once the relief and prosperity of this country, and when by restrictive legislation you shut off the markets of the world to the surplus products of the laborers on this soil, the time will come when down will tumble all your castles erected by protective taxation.

Mr. Chairman, does not the present state of things demonstrate the correctness of this proposition? The drought of 1881 diminished your agricultural products. Its effect was to diminish exports, and with diminished exports has come a contraction in the value of all capital, as is shown in the depreciation of stocks and bonds and the tightness of money markets.

Suppose by continued restrictive legislation upon the part of this country toward the trade of other countries you invite retaliatory laws upon their part, (and this we know is contemplated by some of them,) and thus shut off a demand for our products and thereby diminish our exports, have you not, or, rather, will you not accomplish the same results as the drought of 1881? I commend to gentlemen the wisdom and truth of the words of a distinguished political economist that "a commercial nation has the same interest in the wealth of her neighbors that a tradesman has in the wealth of his custom-

ers;" and in this connection, to quote the equally wise and truthful words of another political economist, that "all obstructions to the exchange of commodities between any two countries desiring each other's products must injuriously affect the interests of both."

This we know to be true as between individuals, and must be so as between different countries. No section of the world can produce all that its inhabitants want, and hence, in order to supply such wants an exchange of products becomes a necessity. This exchange is commerce, and all obstructions thereto operates either to diminish this exchange, or to make the gratification of wants burdensome, and in either event to lessen the value of labor. Protective taxation tends, therefore, to isolate a country, and ultimately to impoverish it.

It would be instructive in this connection to look at the condition of the commercial nations of the world, commencing with the greatest in wealth and population, and going on down to those least in either, and testing their condition by the question of "protective taxation." I have not the time now to do more than make the suggestion.

"Protective taxation" for the benefit of one interest creates the demand and necessity of like taxation for another. Bounties to one begets bounties to another. Full many an illustration of this truth could be given, but it is especially shown in the demand of the ship-builders for subsidies. The subsidies, if granted, can only be justified because it is necessary to equalize, or rather neutralize, the injustice done this industry by protective taxation. But, Mr. Chairman, I hasten on, and hurriedly, to notice the main arguments made in support of "protective taxation." These arguments are:

First. That "protective taxation" for the benefit of manufacturers and other interests tends to and does cheapen the prices of the manufactured goods or protected articles.

Second. That the effect and office of "protective taxation" is to enhance the price of farm products.

Third. That "protective taxation" increases the price of the wages of labor.

Now, Mr. Chairman, if these propositions be true, it can well be understood that the farmer and wage-laborer would favor protective taxation, but why the manufacturer, whose goods are to be cheapened thereby, should desire it and involve himself in great expense to secure it is strange—passing strange. But, sir, upon their face these propositions are self-contradictory, and I submit that in the production of manufactured goods there are but three elements—material, labor, and capital. Now, if you increase the price of the material and the labor, which are the chief items of cost in production, it is impossible that the final cost of the product can be lessened by this process. A moment's reflection will demonstrate the falsity of one or the other of these propositions and their absurdity taken as a whole. My colleague [Mr. SIMONSON] very aptly made this manifest a few days since in his queries put to the gentleman from Michigan, when he asked how the farmer was to reconcile the proposition when told in the same breath that the tariff on oats "put oats up," and that the tariff on salt "put salt down."

In fact, these arguments of those who favor "protective taxation" reminds one of the bunko game, in which it is said of the "little joker," "now you see it, and now you don't."

But, Mr. Chairman, tables of certain and selected manufactured articles, showing large reductions in price, are exhibited, and at the same time tables of certain products of the soil are shown, and the advocates of protective taxation point to them to sustain these propositions, and display the tables of our large import and export trade as showing the great prosperity of this country. In answer to such arguments, it might be well to inquire what would have been the prices of these articles and the degree of prosperity in this country without the "Morrill tariff." Especially, sir, in view of the fact that it cannot be argued that "protective taxation" in the United States increased the commercial wealth of England and other countries of Europe. Turn for one moment to the exhibits of the export and import trade of Great Britain, France, Italy, and Germany since 1860, and you will note the immense increase in the volume of the trade of each.

That of the entire world has been largely augmented in these years, and the tendency in the alteration of prices in all of the articles which the advocates of protective taxation have exhibited is shown in each and everywhere. Now, is all this to be ascribed to the Morrill tariff of America? It is absurd to say so. Why do not these advocates deal frankly and candidly with the people, and say to them that the inventive genius of the world, as shown in the improvements of machinery and the use of steam, has cheapened the prices of labor in the cost of production; that the multiplication of the steamship and the steam railway has diminished very largely the obstructions and cost of transportation, and these, apparent and existing in all countries, have of themselves wrought changes in conditions and secured cheaper prices in certain articles and higher prices in others, according to the locality in which you may make the examination?

Take, for instance, the farmer in Illinois in 1845. Then his wheat, corn, and live stock commanded comparatively a small price, and his needed supplies a high price. Why? Because he had no means to reach the markets of the world. In 1880, by reason of increased transportation facilities, he is enabled to reach those markets; hence able to obtain higher prices for his wheat and corn, &c., and to se-

cure his supplies at a less price. I need not make other illustrations to demonstrate that it is to the inventive genius of the world, as displayed in improvements in the mechanical forces, that the world is most indebted for its present wealth. The sober, disinterested intellect of the world recognize this, and pays willing tribute to the fact. In the face of it, does it not seem ridiculous to ascribe the progress of the United States to the Morrill tariff?

There are other arguments equally as unreliable as those just now referred to made in support of protective taxation, such as the balance-of-trade theory and "foreign influence." I pause as to one, but simply to ask, what intelligent man of these United States that does not know that in all of the great corporations of this country—banks, railroads, and manufacturing establishments—"foreign gold" is largely invested, and that this gold is largely interested for its own increase in continued protective taxation? And if it is to be supposed that "foreign influence" is at work in this country it is much more likely to be with the protectionists than against them. And especially, Mr. Chairman, when we regard the fact that it is under "protective taxation" the foreigner derives from American commerce the annual subsidy of over \$100,000,000 in the carrying trade. The British ship-owner realizes, under the operation of the Morrill tariff, about one-half as much revenue as that received by the Government. Why should he complain and seek to have it altered?

"Protective taxation" is a tribute enforced by legislation, not for revenue, but as a bounty to favored classes from the great body of the laborers and wealth-producers of the country. When you come to look at the amount it is simply astonishing. I here quote what is said in reference thereto, in his recent speech before the Senate, by Senator COKE, of Texas:

During the fiscal year just closed the value of dutiable merchandise imported into this country from abroad, as the Treasurer's report shows, was \$448,061,587.95. Upon this merchandise was collected at the custom-houses \$193,800,897.67, being an average of 43½ per cent. This is the entire revenue of the Government, derived from the tariff for the last fiscal year. Now, what amount do the manufacturers receive from the tariff? By the census of 1870 it was estimated that \$4,000,000,000 worth of manufactured articles were consumed annually in the United States. The figures for 1880 are not yet published so as to be accessible, but following the ratio of increase in population and everything else, they must now amount to at least \$5,000,000,000 each year. All these manufactures being increased in cost to the consumer by the amount of tariff duty, which, as I have before stated, is an average of 45 per cent., which goes to manufacturers, it is easy to see on that basis what the share of the manufacturer would be. But I will discount that per cent. so as to more than cover all contingencies and all drawbacks, and say they only receive under the tariff 25 per cent. on the sum total of manufactured articles consumed in the United States, and it amounts to the enormous sum of \$1,250,000,000 annually. And the amount increases each year with the population and trade of the country.

So, for the year 1881, the results of tariff taxation and the distribution of its proceeds may be tabulated thus:

Revenue received by the Government	\$193,800,897.67
Bounty received by manufacturers	1,250,000,000.00

So that, for every single dollar paid into the national Treasury under the existing tariff, six and a half dollars, at the lowest calculation, go into the pockets of the manufacturers. If this vast sum of money were collected annually from the pockets of the people directly, to be given to the already richest class of people in this country each year, its monstrous iniquity would, of course, be so apparent as to defeat it.

And I submit further in this connection what was said upon the floor of the Senate a few days since by Senator HARRIS, from my own State:

Mr. President, the revenues collected upon imports in the fiscal year ending June 30, 1881, as appears from the report of the Secretary of the Treasury, amounts to \$198,159,676.02. Would that our Bureau of Statistics could report to us the exact data to show how many times that amount was, under this monstrous system of taxation, extorted from the earnings of the whole people to increase the profits and the wealth of the small number of capitalists who are engaged in manufacturing. The duty paid on the imported goods goes into the Treasury, but that paid upon the home-manufactured goods goes into the pockets of the manufacturer.

If we could show exactly what proportion the protected home-manufactured goods annually consumed in this country bears to the imported goods of the same character annually consumed, we could then see with absolute certainty what it costs the people to put a dollar into the Treasury under this system. I have no doubt that there are more than five times as many of the protected home-manufactured goods consumed by our fifty million people, as are consumed of imported goods of the same kind and character. But base the calculation on the proportion of five of home manufactured to one of imported annually consumed, and upon that basis it costs the consumers of these goods \$1,188,958,056.12 to put into the Treasury under this system of taxation \$198,159,676.02; or, in other words, in order to collect into the Treasury \$198,159,676.02 the people are compelled to pay a bounty to a small number of manufacturers of \$990,798,380.10.

Mr. Chairman, I have said that the amount paid by this country to foreign ship-owners in the carrying trade, which is estimated at over \$100,000,000 is the annual subsidy enforced by the existing tariff. In attempting to demonstrate this, Mr. Chairman, I waive all that may be said of "free ships," or "free materials" for their building, and the arguments to be deduced therefrom upon one side or the other, and content myself in saying that the loss of the carrying trade and the decrease of American tonnage is not to be fully accounted for by "free ships" or "free materials," nor will the remedy be found in subsidies. The true cause of this loss and this decrease is to be found in the fact that under "protective taxation," and your other special legislation, the employment of capital finds better rewards in the manufacture of steel, woolen and cotton goods, and the building of subsidized railroads. Who doubts that if the carrying trade paid better than manufacturing enterprises that the capital would be so invested. And so long as you attempt to foster one interest you may be sure, under the great law of compensation, another will lose.

Would you, sir, advise your friend who had \$100,000 of capital for investment to place it at 3 per cent., when following his own judgment he could use it at 10? Then, when by protective taxation you assure 10 per cent. and more in certain undertakings, must you not expect those that pay but 6 "to languish, and, languishing, to die." And is this not the truth as to the loss of American tonnage? In presenting this view I leave out what might properly be presented, namely, the enhanced cost of material, &c., produced by protective taxation, as tending directly to the destruction of the ship-building interest.

Mr. Chairman, I might pursue this line of thought and take up other industrial pursuits and show the effect of protective taxation on them; how it crushes small capitalists and small industries; but I choose now rather to turn for a moment to demonstrate its effect upon the consumers of taxed goods in their personal or individual relations.

In the absence of any official and certain data, but relying upon the tables of the census of 1870, and such as have been published of the census of 1880, it is safe to assume that the value of manufactured goods—the products of the industry of this country—per annum is fully equal to the amount stated by Senator COKE, namely, \$5,000,000,000. It is safe to say that of this amount one-half is of the articles fostered by protective taxation; and if you apply the rate of taxation as it is under the existing tariff, you will find the amount to be between those of the statements made by Senators COKE and HARRIS. But I come to apply and distribute this among the individual laborers in this country. By the census of 1870 it was shown that the number of persons engaged in the different fields of labor was 12,506,000, divided as follows: 5,922,000 persons engaged in agriculture, 2,685,000 in professional and personal services, 1,191,000 in trade and transportation, 654,000 in mechanical trades and mining, 2,054,000 in manufacturing.

Now, it is safe to assume that 15,000,000 will now represent the persons engaged in these same fields. Leaving out of view the amount of goods used by these laborers, upon which they pay revenue to the Government, it is safe to say that of the manufactured goods protected by taxation that these laborers, who represent, feed, and clothe the remaining 35,000,000 of our people, use and consume one hundred and sixty-six dollars' worth per annum, and applying the average rate of duties of the existing tariff thereto, it will be seen that each laborer pays the tribute of about \$70 per annum to the capital of the classes fostered by protective taxation. What does this tribute mean to the laborer? It means that from the food and clothing and education of his children he should take annually the sum of \$70 and contribute the same to the capital of those who are favored by protective taxation. Relieved of such protective taxation this amount each year with the same energy as now he could pay to the comfort of his home and the education of his children.

Away from all the fallacies of logic and prepared figures we come back, Mr. Chairman, to the fundamental principles upon which our political fabric was built, that is to say, "of equal and exact justice to all, exclusive privilege to none," and "that the burdens of government shall rest upon all alike." It was upon these principles the Democratic party had its origin, and when true to its faith will enforce them in the administration of the Government; recognizing now as its first duty the payment of the public debt and the reduction of taxation, in the performance of which the country may feel assured that no violence or wrong will be done to any of its great industrial interests, and in the discharge of which it is now, and always has been, willing to enter.

But this is questioned by gentlemen when they ask, why did not the Democracy enter upon it when they had control of this House in the Forty-fourth, Forty-fifth, and Forty-sixth Congresses? Sir, I reply that they did, and did all that was possible, in view of the fact that the Republican party had control of the executive department during all that time, which rendered, as those who ask this question well know, all positive and affirmative legislation upon their part impossible; the negative work, which was "no jobs," "no plundering of the Treasury," "no extravagance in expenditures," was well and vigorously done, and to such an extent as to enable the Government to decrease largely the public debt, and to make a reduction of taxation an immediate duty, a duty which, however, as I have said, the Republican party, in the interest of favored classes, seeks to postpone and avoid.

Before concluding, Mr. Chairman, I beg leave to notice another appeal made by those who favor protective taxation, and that is the appeal made to the "New South." We are told by gentlemen that this "New South" is to be resurrected and brought to new life through the "Bourbon" faith of Alexander Hamilton, a faith founded on "contempt of the capacity of the people for self-government." And the further principle that government must sustain a class that that class might take care of the mass of the people. Alexander Hamilton believed the form of the British Government to be the best in the world, and would have so modeled our institutions, but for the stern opposition of Madison and Jefferson.

The faith of Madison and Jefferson was a government of the people, by the people, for the people. Who are the Bourbons here, the followers of Hamilton or the pupils of Madison and Jefferson? The new South! From whom and by whom was it created? Sir, I

remember the facts and circumstances under which this appeal, if not apostrophe, was first made in the progress of the Republican party. Who will ever forget the welcome of the eminent Senator from Massachusetts [Mr. GEORGE F. HOAR] to the newly-elected Senator from Virginia, [Mr. MAHONEY?] It was then the new South, according to Republican ideas, was born. Who does not blush at the agencies that produced that birth? Without a parallel in debauchery, it involved not only the good name of individuals but brought shame to States and parties indelible and inefaceable. And by similar agencies and "pap" this new infant is to be nursed and maintained until the "infant" manufactured has sufficient strength to support its progenitors.

Mr. Chairman, I invite your attention a moment in a review of the state of affairs in the South, while we consider this appeal to the new South, and the assaults made upon its so-called Bourbon leaders. In doing so, will you pardon me if I refer to what I personally said upon this floor eleven years ago, upon my first entrance into this Congress, in a discussion of a measure intended, as I believed, to place the personal rights and liberties of the people of the Southern States in the hands of the Executive of the United States upon the allegations of their unwillingness to obey and support certain laws of the Government. I said upon the 28th day of March, 1871, speaking for the people of the South:

I respectfully but firmly deny, for them and in their name, that they are not animated by as true and loyal devotion to law, order, and the sacred rights of person and property as any portion of the American people. Crime exists everywhere. Defiance to law by exceptional individuals is historically coincident with law itself; and while to this extent it may exist, aggravated by the peculiar condition of a society just emerging from a war which swept over it with all the devastation of a flood and which like the flood left its drift and scum as a deposit, yet, sir, the whole body-politic is not demoralized. On the contrary, that people present to you higher evidences of thrift, economy, labor, wealth, and prosperity, the natural results of obedience to law and order, than any other given section of your Union, as I think I will be able to show before I am done.

To the returned confederate soldier, when his flag was furled, home was a scene of desolation. Gaunt poverty introduced him to barren fields and a cheerless fireside. His companions had been thinned; numbers of them were no more; all around him was mourning.

With courage, alacrity, and cheerfulness he went to work to repair his individual fortune, to build up waste places, to restore order, to aid his neighbor and the public; in fine, to perform all the duties of the laborious, useful citizen.

I have but glanced at the picture as it exists in the South. I would, sir, that before action had been taken upon the representations which I know do that people most grievously wrong and injustice, an inquiry, impartial and fair, had been made. Justice, I faintly believe, would have been done. You would have seen, sir, how grossly they have been slandered and how maliciously they have been misrepresented; how mountains have been made of mole-hills; how giants and heroes have been manufactured out of dwarfs and sneaks. You would have seen, by the removal of the skin, the ass; but beyond all that you would have seen what to you would have been a most conclusive answer to these libels upon the States, commonwealths, and people; and as your eye took in the full measure of the picture your heart would have swollen with exultant pride and your judgment and patriotism would have paid a tribute in their wonder and satisfaction at the convincing evidences of the devotion of this people to law and order presented in their repaired and new-built railroads, in their increased manufactures, in their flourishing high schools, in their luxuriant and rich-yielding crops, in their growing cities and towns, in their improved farms, and in their increase of population.

I followed this with exhibits in certain tables, showing an increase in all the evidences of wealth. These I will not now read.

I had the honor to be immediately followed in that discussion by the honorable Mr. KELLEY, then and now a member of this House, who, among other things, said:

Sir, as I listened to his statement of the productions of the South, as shown by the recent census, and which he seemed to think startling by reason of their grand tables, I could but grieve at the meager result.

No; the statistics presented by the gentleman from Tennessee do not prove his case. The results which he disclosed with such an air of triumph are so meager that they militate against his conclusion. When the census of 1880 shall be taken thoughtful men will study it, and looking back upon the results he has presented will see how terrible have been the results of the madness of the Southern Democracy as exhibited in their treatment of the freedmen and of Northern and other immigrants, and in permitting secret armed societies to intimidate capital and enterprise, and constrain them to remain without her borders or to flee from them after having the temerity to enter.

The census of 1880 has been taken and thoughtful men have studied it. And it is to the great body of the thoughtful of this country I appeal when, as they view in wonder and admiration the results of the census of 1880 in the Southern States, demonstrating to the surprise of the world as they do increase in population, increase in farm products, increase in railroads, increase in manufacturing establishments, increase in schools, and in fact, increase in all the evidences of great wealth and prosperity, as well as the evidences of progress in all the avenues of intelligence that is not surpassed in any other great section of the world. Sir, I pause to ask of these thoughtful men, whether statesmen, political economists, or practical business men, to reflect for a moment over the tremendous obstacles the conservative and progressive men of the South had to overcome in the accomplishment of these results.

The labor of no people was ever so demoralized nor the capital of any country so paralyzed as was that of the people of the South at the close of our gigantic civil war, nor was such labor and capital ever confronted with such powerful embarrassments as followed with the immediate years after the close of that war. Confronted with the solution of the very gravest economic, political, and social prob-

lems ever encountered by any civilization, is it not, I fearlessly ask of the judgment of the thoughtful men not only of America but of the world, the grandest, most magnificent gift that the struggle of any civilization ever gave to the world, this empire of wealth, of law, and of order; this country now peaceful, prosperous, and with a capacity of productive wealth unequaled by any other quarter of the globe?

All this, Mr. Chairman, has been secured to our country, with but comparatively little disturbance of the peace of the law, by the patient, industrious, conservative, and progressive people of the South in these years since the war, under the leadership of the so-called Bourbons of the South, namely, the Lamars and Georges of Mississippi, the Witherses and Johnstons of Virginia, the Ransoms and Vances of North Carolina, the Hamptons and Butlers of South Carolina, the Hills and Browns of Georgia, the Morgans and Pughs of Alabama, the Joneses and Calls of Florida, the Harrises and Jacksons of Tennessee, the Becks and Williamses of Kentucky, the Cockrells and Vests of Missouri, the Garlands and Walkers of Arkansas, the Jonases and Gibsons of Louisiana, the Maxeys and Cokes of Texas. And if the truth be told, it will be found that in their efforts to accomplish these results in advising observance of law, and the pursuit of peaceful labor in the private walks of life, and economy and good faith in domestic legislation they have encountered the opposition of the corrupt and lawless, and that these are the elements out of which by official patronage of the National Government, as now administered, and the appliances of the incorporated wealth of the classes favored by national legislation is to be created the new South. May thoughtful men, in view of this fact and the logic of the census of 1880, save us this attempted debauchery.

Sir, the truly conservative and progressive South has withstood many serious embarrassments and much oppressive legislation, and I believe that people will meet these new assaults upon their wealth and integrity, and reject these appeals to secure temporary profit at the expense of their permanent prosperity. In conclusion, and because I fully believe and concur in his reasoning and conclusions, I beg to commend to those who may for a moment heed the appeal of the advocates of protective taxation what is said by Senator COKE in the speech already referred to, as to the effect of such taxation on the industrial interests and commerce of the South. Says Senator COKE:

So I care not from what stand-point we view the subject, whether as an agricultural people content with our lot, or as a people ambitious to build up manufactures and consume their own raw material, the highest policy of the South is to favor the lowest possible tariff which will produce a sufficient revenue for the Government. Let the South, the West, let every section of this country where raw material is found, remember that the lower the tariff the greater is and will always be the compulsion upon capital to erect its workshops and factories in the localities where that raw material is, in order that the manufactured product may meet competition in the market with the least possible burden of cost in its production. Through a low tariff, as low as the necessities of the Government for revenue will permit, is to be found the only pathway of the South to manufacturing development.

If any confirmation of this proposition were needed, I have only to refer to the fact that under high protection for more than three-quarters of a century all the manufacturing establishments of every character in the South, if brought together in the same town, with owners, operatives, their families and dependents, all together would not equal in population or capital invested or wealth a prosperous manufacturing New England village. The protective tariff alone has enabled the New England States to draw our raw material to their factories. Take that away, and the factories and workshops will move to the raw material. The little pittance which the few embryo manufacturing establishments of the South receive from the vast wealth of bounties collected from the people is a "mess of pottage" offered us for the grand birthright which under a strictly revenue tariff is ours and cannot be wrested from us.

Geneva Award.

SPEECH

OF

HON. GEORGE W. LADD,
OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1882,

On the bill re-establishing the court of commissioners of Alabama claims, and for the distribution of the unappropriated money of the Geneva award.

Mr. LADD said:

Mr. SPEAKER: When our late sectional differences had culminated in hostilities we were at peace with Great Britain. Then it was her leading statesmen not only favored the project of her enterprising merchants and ship-builders to furnish a navy for the Southern confederacy, who were destitute of men and materials required, but they went further; they forced upon the Government the acknowledgment of the belligerency of the South, and for commercial purposes they induced their Government to tacitly permit the fitting and manning of vessels of war in their ports, in time of peace, to destroy our commerce, contrary to international law, which is so well described in

the minority report of the Forty-fifth Congress, in the following language:

The nation that recognized a power as a belligerent before it had built a vessel, and became itself the sole source of all the belligerent character it has ever possessed on the ocean, must be regarded as responsible for all the damage that has ensued from that cause to the commerce of a power with which it was under the most sacred of obligations to preserve amity and peace.

Again, when she became aware that our civil war was to end in a continuance of our Federal Union, to be made stronger and more durable by the war which she had so industriously fanned from its inception, Great Britain became willing and anxious to settle, in part, for her wrongs to us, perhaps from fear that her unusual proceedings might be used as a precedent by us against her in the future. Events occurring in Europe had, even then, foreshadowed such a contingency.

Let us look at our condition during this war. We had to put up with all the outrages that Great Britain chose to impose upon our citizens and their commerce. Everything she demanded of us we granted from prudential motives. We sent our ablest men to her court to beg and implore her not to acknowledge the independence of the southern confederacy. We succeeded in part by interesting her kind-hearted Queen in our civilization. When the war was ended, when we became one people again, we then, with one united voice, called upon her for a settlement for all wrongs we had suffered from her upon the ocean.

At this time our country was convulsed from one end to the other, not for individuals nor for companies, but a demand for an apology for wrongs done us as a nation. So important and earnest were those complaints that England feared that delay might lead to hostilities with the nation she had, during its local trials, robbed of its commerce upon the ocean for the selfish purpose of enriching her merchants and ship-builders. This brought about the treaty of Washington of 1871, which resulted in the Geneva award. The distribution of the balance of this sum of money is now before us.

Let me now allude to the character of the claimants who come into this House for this award. Mr. Speaker and gentlemen, you who live where your harvests have been abundant; you who live where you can exchange the harvests of this vast country for the products of the world for a profit; again, you who are protected in all of your manufacturing industries by a tariff, can know and feel but little of the ills which come from such a war as we had to a State one-half of whose people depended upon commerce upon the ocean for a subsistence. Excuse me for saying more. Were it not for the wise order of Providence, which is, where nature has done the least for mankind there they have learned to do the most for themselves—but for this we could hardly have an existence to-day to plead our cause before this high court of justice, for in all matters appertaining to the distribution of this award you are a court of justice; if not so, this treaty is but a mockery, so far as the money paid us for distribution is concerned. We therefore call upon you who constitute the American House of Representatives to be judges of our cause, rather than lawyers, in the settlement of this question.

The machinery of our Government has not failed. This powerful Government has performed its functions so far as to receive an apology from England for all national wrongs, and has received a gross sum as a public award for damages done to our commerce. This sum you received for distribution among those whom we should in our wisdom find were entitled to it. This has been accomplished in part. Yea, more; you have, from fear that there might be claimants come forward who were not entitled to it, enacted in the first distribution a provision to prevent any duplicate payments, which your committee have shown were expected from the first, as follows:

No claim shall be admissible or allowed by said court in behalf of any insurance company or insurer, either in its or his own right, or as assignee or otherwise in the right of the person or party insured as aforesaid, unless said claimant shall show to the satisfaction of said court that during the late rebellion the sum of its or his losses, in respect to its or his war risks, exceeded the sum of its or his premiums or other gains upon or in respect to such war risks; and in case of any such allowance the same shall not be greater than such excess of loss.

Ten millions of this award have not yet been distributed on account of obstructions offered by underwriters, those who have already obtained all they could justly claim, *i. e.*, for all losses, they could show over and above premiums received in their business. As the war enabled insurance companies to receive war premiums for risks before losses occurred, it caused them to be able to pay the war losses out of the war premiums in their hands; the business being profitable, a balance of interest and profit still remains in their hands.

I propose in the few remarks I have to offer simply to make a plain statement of facts, leaving the law questions for the lawyers of this House, who are so able and, I trust, willing for the most speedy and economical distribution of this award among those whom it is conceded actually lost upon the ocean.

The apology Great Britain has made in this treaty for the wrong done us was made for the country, and for our future guidance in such matters. The money paid us should be for those who lost by the war on the ocean. The simple question for us is, Who lost property on the ocean by the war, and who are entitled to that which we have to divide? In discussing this question I shall ignore those who made a profit by high charges for insurance against the captures of the cruisers complained of, believing, as I do, that those who had

property on the ocean at that time and dared for our benefit to keep it there until it was destroyed, have the highest claim to be considered, now that all animosities growing out of the war are changed into those noble aspirations for justice; so that you will not only consider those in want of relief but by your action will plant broad and deep seeds of patriotism that will bring forth in the future an abundant harvest to all who inhabit the plains of this vast country.

The three classes of claimants whom I have the honor to represent are doubly entitled to your consideration from what they have done for the country in the past and for what they can do for it in the future.

An independent government on this continent, or a government of the people, means much that the present generation know nothing of, except from a casual reading of the suffering of their fathers upon the Atlantic seaboard. If this Government of ours is to be perpetuated, we must foster and protect those interests which contributed to plant, sustain, and make renowned our power upon the ocean. The first class of claimants are those who sailed with the Stars and Stripes at the peak upon an ocean which they inherited from their fathers, without knowledge that their friends had turned to be enemies by the temptation of the enemies of American ocean commerce.

Said Mr. Adams in his famous note to Earl Russell of September 5, 1863:

When one of the iron-clad vessels is on the point of departure from the kingdom on its hostile errand against the United States, I am honored with the reply of your lordship to my notes of the 11th, 16th, and 25th of July and of the 14th of August. I trust I need not express how profound is my regret at the conclusion to which her majesty's government have arrived. It would be superfluous in me to point out to your lordship that this is war.

This class of claimants are those who lost from the exculpated cruisers, so called, and should be paid in full.

The second class, the enterprising men who owed money for vessels, whose creditors demanded they should insure and pay from 5 to 10 per cent. insurance on their property thus exposed or their credit would be ruined, they, too, should be reimbursed for all premiums paid to be protected.

The third class, the enterprising merchant, who for a long life had learned to prefer the American flag in his business; he who had chartered ships out and home, to China, India, Australia, Buenos Ayres, Rio Janeiro, and all the other ports of the world; who could only recharter home by paying to underwriters all he could receive for freight home; or if he chose to load his ship home, had to insure cargo and all, bills drawn on a cargo against capture, which absorbed all freight and profits, and often more.

My limited time will not permit me to go into particulars as to the numerous causes that have produced a suspension of the honest distribution of the Geneva award among those who lost. The arguments have taken a wide range, prompted, perhaps often, by selfishness. Wise men have given opinions, and, I regret to say, some that insurance companies who made millions by war premiums (and have already been reimbursed for all actual losses) are entitled to receive over again payment which should be regarded as duplicate payment, while he who paid the war premium to them and thereby made a loss is not to be considered.

Again, there is a more comprehensive view of this question, which its importance demands us to examine before we can form a correct judgment as to whom this money should be paid. Can any of you suppose for a moment that the millions of this country became excited almost to the point of asking for a war with Great Britain to atone for her great wrongs to us and our commerce, for her breach of international law, for her long duplicity to the North and her deception to the South to obtain a divided union for commercial purposes—all this for the low mercenary purpose of obtaining a few millions of dollars from her, to be divided by us to a gang of insurance companies who had made millions of dollars by a profitable business, a business that had enriched them by high premiums, which they obtained from those who had to insure their property or fail, or those who insured from caution? Companies who made millions of dollars by the war ought not to enter this House as claimants for this award, while the many who have suffered stand trembling at your doors asking for an existence—this House, which should be the "holy of holies" for the just rights of the American people. No one who did not lose by the war should have a place here, for all you have to distribute, if an accurate scrutiny could be made, would be but a tithe for those who did lose and can show a loss. The fact that claimants of a doubtful character have retarded the rightful distribution of this award should not now prejudice the claims of those who are honestly entitled to it. Who are they who are justly entitled to this award, and what great interest do they represent? The shipping interest of New England, which had its birth, away back in Cromwell's time in her fisheries, its youth in the Napoleonic wars of Europe, its manhood from the fostering care of every administration of this Government from its birth to its sectional struggle of 1860.

Our commerce, sail and steam, in 1860 was 5,353,868 tons. We freighted of our imports and exports 66½ per cent. in our own ships then. In 1880 our sail and steam shipping only amounted to 4,068,034 tons, a loss in twenty years of 1,285,834 tons, and carrying of our imports and exports only 17½ per cent.

Certainly these figures show a great suffering on the part of one of our leading industries worthy of our attention. You all must acknowledge that if bread and cotton are kings or rulers, our sailors and ship-builders are worthy, even in these degenerated times, of a fair consideration for what they have done in the past, and what they can do for us in the future, in building up a marine such as we once had, ships built, owned, manned, and sailed under the American flag.

Many of you have spoken of the importance of our ocean commerce. The people of my State have read your speeches and wondered what all this meant when you were keeping millions of dollars piled up in yonder Treasury which you obtained with an apology to satisfy the national honor, in part for them, from Great Britain. We are poor and often have been discouraged. We have fought against the hardships of our climate and against the losses of the war, often disappointed respecting the wrongs heaped upon us by those we have made renowned in past time by whitening every sea with our canvas and by deeds of war upon the ocean. If what we have done does not call for reward, it certainly calls for justice. The Stars and Stripes which we so proudly displayed on every ocean were but the pioneer to you all of that greatness that has come to you as Americans.

If our ocean commerce has declined from 66½ per cent. to 17½ per cent. we can only answer, we did it not. We did not sow even the seeds that have brought this calamity upon us. If we represent today the one great American interest that was destroyed by our late civil war, we stand by the shattered wreck without even a sympathizing mourner. For you have responded to every call of distress except from those who had in better days the most to give you when you stood almost naked against a foreign foe, the one which now does so large a share of your carrying trade.

Can you afford to go further and add to negligence the crime of robbery?

Since the war you have given billions of dollars in lands to build up railroads for internal commerce, and, as your late Secretary of the Treasury often asserted, \$100,000,000 for fictitious war claims. And you now keep locked up in yonder Treasury millions that belong to those who lost on the ocean and are as much entitled to it as are the children of men to the light of heaven. In God's name, has justice left this land; has the ship-owner and sailor, who first led the world hither to plant a Government of the people, who so nobly fought your early battles on the ocean, that gave you liberty, who can only restore your ocean marine—must he leave your halls with a curse upon his tongue for those who have forgotten the fisherman of New England? I will not believe it. We have had many bitter cups of sorrow to drain, but none equal to this.

I can excuse the distinguished gentleman from Kentucky [Mr. BLACKBURN] who said on the evening of March 20, "There is no politics in it, [this bill.] It simply proposes to take from the Federal Treasury some ten million dollars to distribute among men whom I do not believe to be entitled to a cent. There can be no politics here." While I have to thank the gentleman from Kentucky for that honorable vigilance which he has so often exhibited for the public welfare, I am constrained to say on this subject he knows not what he is doing by his earnest opposition to this bill.

Without burdening you with statistics within the reach of all, allow me to say our late civil war came upon us engaged in our industries like a thunderbolt from a clear sky. The Methodist denomination had divided; the Charleston Democratic convention had broken up. Yet we had full confidence in the future. We had learned in early manhood from the noble son of Kentucky, Henry Clay, that beyond the Alleghanies we had friends who would not look over our heads to Albion's shores for a marine that would defend us in war and make us renowned in peace. We had learned that compromises had been made, and we confidently expected another would be made. The great Senator of New York, W. H. Seward, had promised that sixty days would suffice to settle all. We continued our business upon our domain, the ocean of our fathers.

War came to us when in the full tide of ocean supremacy. Those who lost vessels from the cruisers complained of were the men of business, not politicians, men who had built up by personal attention the industries of our country, and who had brains, and whose vision extended, as their canvas had, to all the oceans and rivers of the world. They did not and could not be brought to believe that England could find dupes on this side to carry out her selfish purposes. They were mistaken, and for a period our ocean commerce went down. It remains with you, gentlemen, to say shall it now be restored by a simple act of justice to those who lost upon the ocean, and by fostering and protecting it in its struggle with the present gigantic power of Great Britain.

Who suffered and how did losses occur? The million of tons of our shipping, costing from fifty to one hundred millions of dollars, passed to English capitalists for half its real value. In every port of the world the American ship laid idle, to rot, unless the consignee had authority to give it away, or to purchase a cargo on owner's account, and to insure the ship and cargo against capture, for the benefit of the acceptor of his drafts, and he an English banker. If he freighted the ship home he had to insure the cargo and ship, which was liable to capture and destruction. I beg of you, gentlemen, to remember that when Spain lost Gibraltar from weakness, that want of manhood

prevented her from raising a generation capable of retaking it. Let us not imitate one of the dynasties that helped settle this continent.

In my own district where half a million of this money, if properly divided, belongs, and where many a brave sailor remains unpaid for labor upon the ocean, one hundred ships would have been built within the last four years if justice had been done. In the district of my colleague [Mr. MURCH] still more.

We do not come here as beggars. God has made the dwellers upon our hills too proud for that. We leave all that for the soulless corporations. We come to demand a pittance, that which belongs to us for the wrongs done us; that which you wisely took with an apology, reserving the right to distribute to whomsoever you should decide was entitled to it, and nothing more.

The report of the minority of your committee is but the old story—send the claimants to the United States courts; prolong the settlement; subject the poor claimant to pay exorbitant fees and charges, which means to rob the poor ones and to deal out expensive justice to the rich, and to subject some to an entire loss of a just claim.

This award was obtained from Great Britain in gross. Obtained without deceit, it came, thank God, to the sovereign power, to be divided to those alone who can show they have been losers; and we are to-day the judges.

Then let us rise above our several professions and make laws, not quote the prejudiced opinions of others, differently situated. Our people, our industries have lost, have suffered, are now suffering. They demand of the American Congress justice. Can you longer deny them?

The right of an insurance company that pays a total loss to all that can be picked up from a wreck is not denied; the trouble here is there was nothing left. It is not denied but what all the captures were legal. We had no accounts to settle with the belligerent; we took all they had. No individual or company had any claim on Great Britain or on the belligerents, for the one was free by sovereignty and the other ceased to exist. No one will pretend to deny this. If our Government was bound to protect the insurance companies and the ship-owner it failed to do it, for its very life was in peril. It paid two thousand millions to protect itself.

Yea, more, it had a right to take every dollar of all its citizens to do this if necessary, and this without recourse. No company could subrogate anything here. Our obligation to protect the property of our citizens is incidental to the sovereign power which allowed us to take all and to pay all when and where justice demands. Does, then, justice demand that we pay him or them who do not lose and withhold payment from him or them that do lose? This right rises as much above the question of the right of subrogation as the government of the universe rises above a ward caucus.

The treaty of Washington of 1871 only came after several failures in this direction, consequent upon individual rights. Mr. Gladstone said in Parliament:

No claims of individuals have been submitted to arbitration in relation to the Alabama. What was submitted to arbitration was entirely a question between two governments.—*Foreign Relations, U. S., 1873, part 1, page 377.*

And again:

The Alabama claim was a public claim arising between the two governments.—*Ib., page 74.*

Secretary Fish gave the following instructions to our counsel:

The President desires to have the subject discussed as one between two governments. In the discussion of this question and in the treatment of the entire case you will be careful not to commit the Government as to the disposition of what may be awarded. The Government wishes to hold itself free to decide upon the rights and claims of insurers upon the termination of the case. If the value of the property captured or destroyed be recovered in the name of the Government, the distribution of the amount recovered will be made by this Government without committal as to the mode of distribution.

After we became a united people and our statesmen had shaken off some of the shackles of fear, led by the eminent statesman, Charles Sumner, we began to appreciate, like an overgrown boy, that we had strength commensurate with our size. It was then we demanded of England satisfaction for the past and rules for the future. Thus came this treaty and this award. You of the South did as much as we when you came back; and we became a united people. The grand spectacle was seen all over the world that fifty million people had learned to govern themselves and to dwell in peace around the altars of their fathers. This gave us the power to dictate terms, and we did it.

The statesmen of England saw the necessity of healing the wounds they had made. They were shrewd enough to acknowledge three "inculpatated cruisers," while they knew that we knew there were a dozen. Our difficulties with England were compromised for the gross sum of fifteen and a half millions. It was done by the commissioners in secret session. No one can draw the curtain to expose the controlling motives that led to the happy result, but from instructions given our agents we are bound to believe a compromise was arrived at for the benefit of actual losers upon the ocean.

Now, then, we want this what remains divided among those who were absolute losers upon the ocean; no duplicate payments to those who trafficked on our distress and made a profit on their war business.

One word more. I have the honor, in part, to represent a State that Martin Van Buren said in 1840 would be one of the leading States of this Union, on account of her extensive seaboard, forests, and facilities for ship-building.

This prophecy looks dark to-day in consequence of our misfortunes,

our loss of population and decaying industries; the dark veil that has been drawn over us by the calamities of the late war; and the bountiful bestowal of the nation's wealth upon our internal commerce, upon railroads for the development of our vast continent, excites no envy in our breasts, but rather gratification, so far as its honest bestowal for the advancement and development of our glorious Union.

This union of States will by and by look smilingly upon a race of men dwelling up north who have done so much for others and so little for themselves that our nation might live and prosper and give us a chance in the future to do. When the dark cloud of war comes, as surely it will, we can be for this vast country what Venice was for Europe when the Ottoman crossed the Bosphorus into Europe; then aristocracies and democracies alike became dependent upon those who "go down to the sea in ships and do business on the great waters."

The original argument of the United States presents the claim as follows:

The United States maintain, as matter of fact, that the British Government was guilty of want of due diligence in permitting, or not preventing, the equipment, construction, &c., of confederate men-of-war in the ports of Great Britain; that such acts of commission or omission on the part of the British Government constituted violation of the international obligation of Great Britain toward the United States, and that thus and therefore Great Britain became responsible to the United States for injuries done to them.

Again, Mr. Evarts, in his colloquy with Lord Chief-Justice Cockburn, page 450, distinctly repudiates the suggestion that the American claim is based on or confined to the acts of any cruiser as the foundation of the demand:

We are not calling into judgment the authorities of this or that place. We are calling into judgment the British nation. It is a question of due diligence or not of the nation in all its conduct in providing, or not providing, for the situation, and in preparing, or not preparing, its officials to act upon suitable knowledge.

Later in his argument, page 454, Mr. Evarts deals with the British claim that the fitting out of a cruiser which goes out unarmed, although an offense against municipal law, is not a violation of neutrality. He says:

There is no act that the law of nations prohibits within the neutral territory that is not a hostile act. The law of nations prohibits it, the law of nations punishes it, the law of nations exacts indemnity for it only because it is a hostile act.

Senator HOAR, April 13, 1880, said:

We have, then, in our Treasury a sum of money received by America as the result of claims presented against Great Britain, not in the mode in which governments present their citizens' claims, but in the mode in which governments present their own; adjudged by the tribunal which awarded it as due to the nation and not to individuals; understood by the party who paid it as paid to the nation and not to individuals; accepted when we received it with the stipulation that it was to be held subject to our discretion, without obligation to any person whatever; received as compensation for injuries which by international law and by express treaty are declared to be national injuries, and which, either by international or municipal law, could not be ground of claim to an individual against any nation, corporation, or citizen whatever.

Upon whom shall we bestow it? Let it be paid over, not to those who have made vast gains by the circumstances from which it came, but to the actual losers whom the Government by design left unprotected, and with whose losses it bought for itself vast and incalculable advantages, alike in the darkest period of the war and in the remotest future in peace.

Again:

The insurance companies then cannot be subrogated to the claims of private owners, for the simple reason that no private owner ever had a claim against anybody to which they can be subrogated. The ship-owners suffered by war. Through Great Britain's neglect the war was carried on in a mode and place which otherwise might have been beyond the power of the belligerent. But the war and the negligence were alike offenses against the United States, and against them alone.

National-Bank Charters.

SPEECH

OF

HON. JESSE J. FINLEY,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882,

On the bill to enable national banking associations to extend their corporate existence.

Mr. FINLEY said:

Mr. SPEAKER: The proposition to recharter the national banks has been so fully discussed on both sides that I would not trespass on the indulgence of the House by submitting any remarks of my own were it not that I desire to place upon record some of the reasons which influence me to vote against the pending bill. This I will endeavor to do in a very brief manner. To change the monetary system of the country is an undertaking of great gravity and responsibility, and should not be entered upon lightly or inconsiderately, and we should be admonished to proceed with the present inquiry in the spirit of calm and dispassionate investigation, and, as far as may be, in the light of past experience.

I assume it to be true, and take it for granted, that no statesman of the present day will seriously advocate the revival of the old State-bank system, and will not, therefore, consume time in discuss-

ing it, but will at once proceed to consider the wisdom of continuing the present system.

The question that now demands the consideration and decision of Congress is, Shall the existing national banking system be perpetuated? That the national banks have afforded the country a sound and uniform currency cannot be denied even by the avowed enemies of the system, but at the same time it must be admitted by its most zealous advocates that the soundness and uniform value of its circulating notes are entirely owing to the pledged obligation of the Government to redeem them; and it may be safely affirmed that without this guarantee of the Government, based upon the deposit of United States bonds, our present banking system would be no better than that of the exploded and effete State banks which, as experience teaches us, produced a ruinous panic and widespread bankruptcy upon an average every ten years, and thereby unsettled the very foundations of both individual and national prosperity.

It is true that the national banks cannot increase their notes beyond the amount issued to them by the Government, but it is also true that they have the power to contract or expand the circulating medium of the country at will, and can thus obstruct the safe and healthful course of business, which can never be done without disastrous results. But it is contended by the friends of the bill now under consideration that it contains provisions which will obviate this objection to the present system. Even if this were so, which I gravely doubt, the question still remains whether it would be wise to continue it; and this is the question, I repeat, which now demands the consideration and action of Congress.

The duty devolves upon us to decide, and to decide now, whether we will continue the present system of banking, or whether we will adopt another in its stead; and I will add it is a duty that we cannot evade or escape, and for the performance of which every member of both Houses of Congress will be held to strict accountability by the country.

If we refuse to continue the present system we shall utterly fail in our duty if we do not at once inaugurate another and a better one, and so direct and control the transition from the one to the other as not to seriously disturb or rudely shock the business operations of the country.

Now, I contend that if we continue the present banking system we will necessarily be compelled to perpetuate the public debt. Would it be wise to do the latter? Is Congress prepared to accept and affirm by its action the absurd heresy in political economy that a "public debt is a public blessing?" Will the people approve and ratify such action on the part of their representatives?

I do not hesitate to declare that the people will place the seal of unequivocal and emphatic condemnation upon such a policy; for they have the good sense to see and to understand that it is with governments as it is with individuals, and that substantial prosperity cannot coexist with a heavy burden of debt and an appalling accumulation of interest. The people know, and cannot be cheated into the delusion to believe otherwise, that the public debt should be entirely discharged as soon as it can be done without being overburdened with taxation.

I have said that it is impossible to continue the existing national banking system without at the same time perpetuating the public debt; and I now unhesitatingly assume the responsibility of proving it.

The deposits of United States bonds in the public Treasury is the foundation upon which the entire national banking system is created, and without this foundation the whole superstructure would tumble into ruin, for, as I have already said, it is these bonds and the guaranty of the Government that impart to the circulation of the national banks both soundness and uniformity.

According to Comptroller Knox's report, the bonds deposited by the national banks in the Treasury, as a basis for banking, amounts to very nearly four hundred and twenty millions of dollars, which stated in figures is \$420,000,000. The bonded debt of the United States, less cash in the Treasury, is \$1,712,850,598.61. The Government is now paying the public debt at the rate of about \$150,000,000 per annum.

Now, I have made a calculation which will show the annual reduction of the public debt, at present rate of payment, from the present time to the period of its entire extinguishment:

Present debt amounts to.....	\$1,712,850,598 61
First year's reduction to.....	1,561,850,598 61
Second year's reduction to.....	1,411,850,598 61
Third year's reduction to.....	1,261,850,598 61
Fourth year's reduction to.....	1,111,850,598 61
Fifth year's reduction to.....	961,850,598 61
Sixth year's reduction to.....	811,850,598 61
Seventh year's reduction to.....	661,850,598 61
Eighth year's reduction to.....	511,850,598 61
Ninth year's reduction to.....	361,850,598 61
Tenth year's reduction to.....	211,850,598 61
Eleventh year's reduction to.....	61,850,598 61

So that at a little less than eleven years and a half the entire national debt, at the present rate of payment, would be entirely discharged, and it is safe to say that if we continue to pay off the public debt at the rate we are now doing it will not be more than five years, even if this bill shall become a law, before the banks will be compelled to call in much of their circulation in order to prepare for early and inevitable liquidation.

Are we to wait until this unavoidable contraction is upon us before we take the necessary steps to supply the vacuum in the channels of circulation which will be occasioned by the retirement of the national bank notes? In five years, according to the present rate of payment, the outstanding bonds of the Government will only amount to \$961,850,598, with a further diminution of the bonded debt in the ninth year to a sum less by about one million dollars than the amount of bonds now kept on deposit in the public Treasury by the banks.

These facts and figures prove to absolute demonstration the proposition that it is impossible to perpetuate the present banking system without also perpetuating the public debt. Which shall we do? In my judgment we ought to discharge the public debt as soon as it can be possibly done, without an oppressive tax upon the people.

If this is done, the time will come in the near future when we shall be compelled, even with a twenty years' extension of their charters, to abandon the present national banking system and adopt another. Provident forethought and wise statesmanship require that some well-considered plan shall be devised by which the withdrawal of the national bank notes from circulation may be supplied by an equally sound and uniform currency without any disturbance of the business operations of the country.

If the national banks are discontinued and their circulation retired as their present charters expire, what shall we substitute in their stead? I answer that the Government should do directly what it has been doing indirectly for the last twenty years; it should, in the exercise of its sovereign prerogative, issue all the paper money needed as a medium of domestic exchange in the form of non-interest-bearing Treasury notes, and made by law receivable for all public dues.

These Treasury notes would furnish as sound a circulating medium as the notes of the national banks, because the currency of both as a medium of exchange would rest on the simple guaranty of the Government to receive them at the option of the holder; while at the same time they would be endued with the essential quality of uniform value throughout the United States.

It is passing strange that the advocates of the national banks should object to national Treasury notes when both are alike indebted to the Government guarantee for their acceptance and safety as a medium of exchange. Ours is a mixed currency of gold, silver, and paper money, and must ever continue to be so. The metals have a currency throughout the commercial world, and will for this reason constitute the only stable medium of foreign exchange, while the paper currency will be the medium of local or domestic exchange. This localization of the paper money of each nation within its own borders is one of its most valuable characteristics, for the reason that it cannot be taken out of the channel of domestic circulation and transferred to foreign nations in the adjustment of adverse balances.

Now, just at this point, I venture to enunciate the distinct proposition that in all our legislation on the subject of the currency we should have due regard to domestic as well as to foreign exchanges, the metals for the latter and guaranteed paper money for the former, so that an adverse balance of trade could not disturb the equal flow of the needed medium for our domestic exchanges.

As to the authority of the Government to create paper money, I will here briefly observe that the power conferred by the Constitution to coin money is not a limitation upon the power of the Government to declare what shall constitute money. To make money and to declare what shall be money is a power inherent in every independent government, and needs no law, organic or otherwise, to confer it; and unless it is expressly prohibited by some fundamental provision, it is a power which exists in every sovereign government.

In my judgment the Government should issue all the paper money needed to effect a healthful exchange of commodities in our domestic trade, and at the same time adopt such a policy in regard to the metals as shall assure the needed supply, either in coin or bullion, to meet any adverse balance which in the fluctuations of our foreign trade may sometimes stand against it.

If the banks go into liquidation as their respective charters expire, the withdrawal of their notes from circulation will necessarily be very gradual, and Congress, by a law anticipating and providing for such contingency, can authorize the Secretary of the Treasury to supply the place of the bank notes as they are retired by the disbursement of Treasury notes in the payment of the current expenses of the Government to the extent necessary to prevent any undue contraction of the circulating medium.

But it is not at this point that the real danger lies in substituting Treasury notes for the national bank notes now in circulation, for, as I have shown, the Government would have it in its power to prevent contraction in consequence of the retirement of the bank notes. The real difficulty lies in guarding against an undue inflation of the currency by the issue of Treasury notes beyond the normal requirements of legitimate trade; and I will here remark that we will have neglected to profit by the experience of the past if we fail to recognize the fact that undue inflation of the currency always leads to an abnormal enhancement of prices, encourages extravagance, lures to wild and reckless speculation, and ends in bankruptcy.

Now, I again repeat, in order that I may emphasize it, that, as the annual expenditures of the Government are so nearly equal to the circulation of the national banks, the gradual retirement of their

notes cannot possibly produce contraction, unless the Government should cease to meet its liabilities by discontinuing the issue of Treasury notes. The question which demands a solution at our hands is, how can the Government so gauge the measure of the currency and so control and regulate the volume of its circulation as to prevent undue inflation? For it will, I think, be universally admitted that an extravagant inflation of the currency would be as mischievous in its results and as disastrous to the business prosperity of the country as undue contraction.

The power to contract or expand the circulation *ad libitum* is now in the hands of the national banks, and its exercise is only controlled by business considerations affecting their own individual or corporate interests, and their policy is shaped and governed by the very natural desire to increase their profits. The motives which govern them in the prosecution of their business are precisely such as influence the merchant, the manufacturer, and all who are engaged in the various business pursuits of the country, and viewed in this light may readily be admitted to be entirely legitimate.

Now, in my judgment, (and I think it is the opinion of a large majority of the people,) it is safer for Congress, clothed as it is by the Constitution with the power to regulate commerce, to coin money and provide for the general welfare, to control and gauge the volume of the currency so as to fill the channel of healthy circulation without overflowing its banks than to leave it to private corporations, which are always influenced by considerations of self-interest, just as other men are who are engaged in the other business avocations of life. It is the duty of Congress to adjust as near as may be the circulating medium of the country to the legitimate demands of trade, avoiding undue contraction on the one hand and mischievous redundancy on the other. How the volume of circulation shall be adjusted to the healthful demands of trade and commerce and brought under the regulating control of legal enactments is a problem which must necessarily be left to the wisdom and patriotism of Congress.

It may be possible that this power may sometimes be unwisely exercised, but the people stand behind Congress, and can and will, by the omnipotent power of the ballot, correct the errors which their representatives may have committed. But banks in the full enjoyment of their chartered rights, without legal restrictions on their power to increase or diminish their circulation, are beyond the control of the Government and the people, and, choosing their own time, they have it in their power, by concerted action, to produce a financial panic and a prostration of business throughout the country. The banks possess the dangerous power to encourage credits and overtrade, to inflate prices, and to stimulate speculation by putting aloft a redundant circulation, and then by contraction to stop credits, strangle trade, shrink values, leaving the people in debt, thus placing the property of the country within the unrelenting grasp of the capitalists, who buy it in under the sheriff's hammer at a merely nominal price.

This being accomplished, the banks, which as a general thing belong to these very capitalists, have it in their power to again inflate the circulation, to revive speculation, enhance prices, and thus to realize much greater profits on their investments than would be possible from the legitimate business of banking. I do not say the banks would do this, nor need we stop to inquire even whether they would pursue so selfish a policy. It is enough to know that they have it in their power to do so; and it is the duty of Congress as the guardian of the public welfare so to legislate as to make it impossible to them; and if we stop short of this we shall fail in our duty to the people whom we represent.

For the reasons I have given, I shall be constrained to vote against the pending bill.

Department of Agriculture.

SPEECH

OF

HON. BENJAMIN LE FEVRE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882,

On the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture.

Mr. LE FEVRE said:

Mr. SPEAKER: Ours is an agricultural country. Here the farming interests are paramount to all other interests, and for that reason I favor any measure that I think will advance and foster the great productive industries of the country. About one-half of the people of the United States are either engaged directly in agricultural pursuits, or are following some calling which is closely allied to and depends for success upon the strong arm of the tiller of the soil. It is the fundamental business of the country, the foundation-stone for the success of the mechanic, the artisan, and the professional man. We

are indeed a nation of farmers, and from the wide diversity of our climate and the varied richness of our vast valleys and plains, we must forever remain in advance of all other nations in the production of every article necessary to the sustenance of a vast, thrifty, prosperous, and happy people.

So vast is the productive capabilities of our soil that we not only produce about all we consume ourselves, but we export cereals and their products sufficient to supply many other nations. While famine may reach other countries it would seem almost impossible for such dire calamity to reach us here. Our domain is so extensive, our soils so productive, and our climates so varied, reaching as do our possessions from the arctic regions of the north to the semi-tropical regions of Florida and the Gulf States, it would have to be a blighting season indeed that would cause the failure of crops over so vast and wide-spread a domain.

Farming being the chief business of our country, our prosperity depends almost entirely upon the success of our crops. Even a partial failure of these leads to commercial depression and often to paralysis or ruin of great commercial enterprises. A depression of business invariably follows a short crop not only in this but in many European countries dependent upon us for their food supplies. And yet this great interest, upon the success of which depends our prosperity, has had but little encouragement by way of legislation. Why is this? Perhaps the farmer himself is responsible for much of the neglect shown by Congress and our State Legislatures. The day will no doubt soon come when the tiller of the soil will awake to his true interests, and send to this House men of his own calling to shape laws for the protection of the best interests of this Government.

During the last twenty years rapid strides in educational achievements have been made among the farming class, and to-day there is not a Congressional district—indeed, scarcely a county—in all this broad land that cannot furnish a score or more citizens who were born and bred farmers and who possess all the qualifications necessary to make intelligent legislators. This fact is yearly becoming better known, and the result is to-day an increase among the members of this House of those drawn from the ranks of the farming community. The lawyer and the professional man are to-day in the majority, but unless more concessions are made to this great class of producers—this class representing the foundation of our wealth, prosperity, and happiness—a few years only will have to elapse before these two classes will be reduced to a small minority on this floor. While on this branch of my subject permit me to quote the following eloquent words of a distinguished member of the Senate some few years ago. He, too, was pleading for a proper recognition of the farmers of the country, when he said:

Here, sir, the tiller of the soil is sovereign. All things that are possible for any one are possible for him, and yet his class rarely has direct personal representation in the great executive and legislative offices of the Government. This is a national misfortune. The farmers of our country who own and cultivate farms are of all others most patriotic, for ownership, occupation, and use of the soil induce the growth of patriotism everywhere. None so slow as they to engage in civil strife, or to consent to needless foreign wars; none more conservative, more steadfast in their opposition to tyranny, to communism, to revolutionary movements of any kind against law and order, against the rights of life and property, and that protection resulting for all through a well-organized society. Therefore it is especially needful in a country like this, where the Government rests upon the consent and in the will of the people, that such a great, conservative, patriotic element should hold its full proportional representation in the personal direction of affairs.

This eloquent tribute to the worth of our great industrial population is true in every respect. From the very foundation of our Government the tiller of the soil—the man who should be sovereign here—has been thrust in the background. But that day is fast passing away, for the agriculturist is fitting himself for every calling. The best schools of the land are open to him, and his sons and daughters are taking advantage of the rich inheritance which his strong arm has provided for them. He is no longer satisfied with the mere rudiments of an education, for he has learned that successful agriculture requires a knowledge of economical chemistry, of botany, of physiology, of entomology, of physics, and of engineering. From these follow a study of political economy, the rules, usages, and requirements of commerce, trade, finance, and currency. And supplementing all these follows a close attention to literature and philosophy, the whole resulting in a "cultured, mentally disciplined, enlightened, and refined citizen," prepared to fill with dignity, grace, and wisdom, any position to which he may be called.

From the earliest ages down to the present time the pursuits of agriculture have been honored by numbering in its ranks renowned statesmen, philosophers, and warriors. Among our own great men may be named Washington, Jefferson, Madison, Jackson, Webster, Clay, Silas Wright, Horatio Seymour, and many others. Washington wrote to a friend as follows:

I know of no pursuit in which more real and important service can be rendered to any country than by improving its agriculture and its breed of useful animals.

In his message to Congress in 1832, General Jackson spoke as follows:

The wealth and strength of a country are its population, and the best part of that population are the cultivators of the soil. Independent farmers are everywhere the basis of society and the true friends of liberty.

So much for the ennobling character of this pursuit. Let us now briefly allude to the enormous wealth the tiller of the soil annually adds to the nation. I will take the production of cereals for only

one year (1880) as that will be sufficient for my purpose. They were as follows:

Cereals.	Bushels.	Acres.	Value.
Corn	1,717,434,543	62,317,842	\$679,714,499
Wheat	498,549,868	37,986,717	474,201,850
Rye	24,540,829	1,767,619	18,564,560
Oats	417,885,380	16,187,977	150,243,565
Barley	45,165,346	1,843,329	30,090,742
Buckwheat	14,617,535	822,802	8,682,488
Total	2,718,193,501	121,926,288	1,361,497,404

So much for the production of cereals. The number of bushels raised is almost incalculable, as is also the value of the product. What other industry makes such a grand showing? What other enterprise adds one tithe to the above enormous aggregate? But this is not all. Other products of the farm for 1880 are given as follows:

Articles.	Quantity.	Acres.	Values.
Potatoes	bushels 167,659,570	1,842,510	\$81,062,214
Tobacco	pounds 446,296,889	602,516	36,414,615
Hay	tons 31,925,233	25,863,955	371,811,084
Cotton	pounds 2,854,471,100	15,475,300	280,266,242

Making a total aggregate value of \$769,554,155. This, added to the value of the cereal crop for 1880, gives a grand total of \$2,131,051,559! But this is not all. To this enormous total should be added the value of live stock. For the same year the number and value of our domestic animals are thus given:

Domestic animals.	Number.	Value.
Horses	11,429,626	\$967,954,325
Mules	1,720,731	120,096,164
Milch-cows	12,368,653	296,277,060
Oxen and other cattle	20,937,702	382,861,569
Sheep	43,576,899	104,070,759
Hogs	36,247,603	170,535,437
Total	126,281,214	1,741,795,264

Add this to the other productions given, and we have the enormous aggregate of \$3,872,847,123 as the value of farm products for one year. But even this is not all. The smaller productions of the farm, in which may be included fruits, berries, vegetables, nuts, &c., have found no place as yet in these statistics. Add the value of these to the above, and tens of millions of dollars will be added to the grand total of farm and garden products for one single season. Does not an interest involving such a vast sum need all the encouragement we can give it? Is there any other interest so vast or one more greatly needing the fostering care of the Government than this?

In connection with the animal industry of the United States I desire to call attention to the following table; it was recently compiled from official sources by the Department of Agriculture, and shows the number of domestic animals owned in Europe:

Official statement from the International Statistical Journal of Agriculture showing the number of domesticated animals in Europe.

Countries.	Horses.	Mules and asses.	Cattle.	Sheep.	Swine.
Great Britain	2,101,100	6,002,100	29,495,900
Ireland	532,100	4,142,400	4,482,000
Denmark	316,570	1,238,898	1,842,481
Norway	149,167	953,636	1,705,394	290,985
Sweden	438,090	2,026,339	1,636,201	124,673
Russia	16,160,000	22,770,000	46,432,000	1,700,000
Finland	254,820	997,960	921,745	30,639
Austria	1,367,023	42,976	7,425,212	5,026,398	979,104
Hungary	2,158,819	33,746	5,279,193	15,076,997	572,951
Switzerland	105,792	992,895	445,400	374,481
Germany—					
Prussia	2,278,724	9,708	8,612,150	19,624,758	1,477,335
Bavaria	351,669	228	3,066,263	1,342,190	193,881
Saxony	115,792	112	647,972	206,833	105,847
Württemberg	96,970	199	946,228	577,200	38,305
German dukedoms	133,122	674	1,114,178	544,611	212,388
Holland	253,393	3,466	1,469,937	898,715	146,169
Belgium	283,163	11,849	1,242,445	586,097	197,138
France	2,742,708	705,943	11,721,459	25,035,114	1,794,837
Portugal	79,716	188,640	520,474	2,706,777	936,869
Spain	680,373	2,319,846	2,967,303	22,468,969	4,531,228
Italy	477,906	718,222	3,489,125	6,984,049	1,690,478
Greece and Ionia	69,787	93,688	109,904	1,200,000	1,339,538
Roumania	426,850	6,734	1,842,786	4,786,317	194,188
Total for Europe	31,573,663	4,136,031	89,678,248	194,026,236	42,686,493
To which is appended:					
United States for 1880	11,429,626	1,720,731	33,306,355	43,576,899	36,247,603
Balance in favor of Europe	20,144,037	2,515,300	56,381,893	150,449,337	6,439,890

The above table shows how immeasurably greater are our interests in live stock than any European government. It will be observed that in cattle alone we have nearly two-fifths as many as all Europe combined, and more than five and a half times as many as England. In connection with this vast interest I wish to allude very briefly to the subject of contagious diseases incident to domestic animals. One of the most valuable acts of the late Commissioner of Agriculture was the organization in his department of a division of veterinary surgery. An investigation was at once instituted by this division to discover the nature and extent to which infectious and contagious diseases were prevailing among our farm animals. The results of the first year's labors disclosed the startling fact that our farmers were losing millions of dollars' worth of animals every year without knowing anything in regard to the nature of the maladies which were causing such destruction.

"Hog-cholera," now generally known as swine plague, was found to be the most destructive of any of the prevailing diseases, and it was found that this malady was annually carrying off animals valued at \$20,000,000 in round numbers. Another startling fact was the discovery of a disease known as contagious pleuro-pneumonia of cattle. This is one of the most insidious and destructive diseases known to the bovine race. Until this examination was made the existence of this disease among our cattle had been steadily denied, but the investigation revealed the fact that it has had a foothold in some of our Atlantic States for a period of about forty years. It is an exotic disease, and was brought to New York in the body of a ship's animal from England. Since that time the disease has gradually progressed southwestward, until it has spread over large portions of New York, New Jersey, Pennsylvania, Delaware, Maryland, the District of Columbia, and Virginia.

Some of the afflicted States have attempted to suppress the disease. In some cases this desirable end had been almost reached, when a new infection was brought in from a neighboring Commonwealth, where no efforts at suppression had been undertaken, and the disease was again started afresh on its destructive path. Unless some action is taken by the General Government for the eradication of this malady it will sooner or later find its way to the West, and, once located among the countless herds of that locality, it will be impossible to eradicate it. During the past forty years England, with only its six million head of cattle, has lost by death from this disease animals valued at \$500,000,000, or an average of \$12,500,000 per annum.

Under a like condition of affairs—a general prevalence of this plague among our cattle—for the same length of time our losses would reach \$2,000,000,000, (allowing a wide margin for the lower average value per head of such animals in this country,) or at the average rate of \$50,000,000 per year. Is it not time for Congress to be waking up to the importance of this subject? In order to show that the whole country is deeply interested in this subject, I desire to call your attention to the following table, which gives a sufficiently accurate list of the number of cattle owned in the infected States as compared with a like number owned in non-infected States in the West and Southwest:

Infected States.	Number of cattle.	Non-infected States.	Number of cattle.
New York	2,135,500	Ohio	1,514,100
Connecticut	237,300	Indiana	1,219,200
New Jersey	236,700	Illinois	1,925,500
Pennsylvania	1,515,400	Iowa	2,033,000
Delaware	65,200	Missouri	2,148,200
Maryland	219,700	Tennessee	659,700
Virginia	660,300	Texas	5,344,500
	5,060,100		14,844,200

More recent data will no doubt show that there are at least three times as many cattle in the non-infected States cited above as there are in the infected States. Texas, the Empire State of the South, alone contains more cattle than do all the infected States.

I cannot better illustrate the importance of this subject to the whole country than by quoting the following language from the National Live Stock Journal:

The United States Government is as much called upon to defend her possessions against an enemy like this—so implacable, so relentless, and so certain, if not repelled, to lay us under an incubus which will increase with the coming centuries and dwarf the prosperity to which we are entitled—as against the less insidious one who attacks us openly with fire and sword. Let the national Congress consider this matter well. Let every stock-owner press it upon his Representative as a matter that cannot be safely ignored, even for a single day. Let boards of agriculture, farmers' clubs and conventions, granges, and all citizens who value the future well-being of the nation, unite in a strong representation on the subject. If the present Congress should neglect it, let citizens make it a test question to every future candidate for their suffrages, and elect only such as are pledged to carry suppressive measures into effect.

The danger threatens all classes alike, though the first sufferers will be the stock owners; for every tax upon production necessarily enhances the value of the product; and, as agricultural progress must be seriously retarded, the tax will not fall upon meat alone, but upon every product of the farm. Nothing can excuse a continued neglect of this subject, the dangers surrounding which increase from day to day, and the final results of which, if once it reaches our Western and Southern States and Territories, can only be computed by the prospective increase of our population and our herds of cattle. For this is not like an evil preying on our currency, banking, trade, or manufactures, the full extent of which may be in a great

measure seen from the beginning, and the repair of which may be at any time inaugurated by legislative enactment. The animal plague only increases its devastations as we increase the numbers of our herds, and threatens soon to acquire an extension to which no legislation can oppose a check, and a prevalence in the face of which the most desperate efforts of the nation will prove of no avail. Thus our cattle are increasing at the rate of 13,500,000 every ten years, so that by the end of this century they may be exactly doubled, with a prospective loss, if our Western and Southern ranges are infected, of \$130,000,000 yearly in deaths alone.

The choice is now in our power. So far as we know, our stock-raising States and Territories are still unaffected. We can still successfully meet and expel the invader; next year it may be too late.

This subject has been before Congress now for three years, and during that time there has been appropriated for the purpose of investigating only as to the extent to which this terrible contagion prevails the sum of \$30,000, and one-half of this sum was appropriated to the Treasury Department for doing that which had already been quite thoroughly done by the Department of Agriculture. The time for investigation has passed, so far as this disease is concerned, and what is now needed is a national law, to be enforced by the Government, and a sufficient sum appropriated to purchase and slaughter all infected and diseased animals.

Speaking more directly to the bill under consideration, I am not satisfied with it. It is a short step in advance in that it provides for a secretary of agriculture. That provision I shall vote for heartily, but the remainder of the bill is not sufficiently liberal to claim my earnest support. Before the subject is finally disposed of I hope to see the measure shorn of some of its incongruities and rendered more in unison with the liberal spirit of this House.

Department of Agriculture.

SPEECH

OF

HON. EDWARD S. LACEY,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1882.

The House having under consideration the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture—

Mr. LACEY said:

Mr. SPEAKER: I should feel that I had not done my whole duty if I did not do all in my power by voice and vote and influence to promote the passage of the bill under consideration. I shall not attempt in the brief time allowed me to discuss its several provisions. They are not in all respects what I desired; but in the main they seem to be well considered and wise.

The people whom I represent here are not sticklers for details. They have no pride of opinion as to particular methods; but they do insist with surprising unanimity that the powers of the Agricultural Department be enlarged and that no extraneous interests be ingrafted. They ask that it be made an executive department, fully understanding that matters of detail will receive wiser and more intelligent consideration under the full light of experience after the main object shall have been accomplished.

There are three excellent reasons to be given for the adoption of this measure.

1. A large majority of the people of this country earnestly desire it.
2. The experience of other nations proves it to be wise and expedient.
3. The magnitude of the interests involved demands it.

THE PEOPLE DESIRE IT.

In regard to the first proposition it may truthfully be said that within my own district there is but one sentiment expressed on this subject. Petition has followed petition, and letters have poured in upon me without number. Resolutions favoring it have been passed by county, State, and national granges, by farmers' alliances, and by agricultural associations of every name and character, and outside of these representative organizations the demand is equally as earnest and universal.

Is there any good reason why this request, coming up to us from the representatives of more than twenty-five millions of our most worthy and intelligent people, should be refused?

They come not as a class asking for special privileges and immunities, but as enlightened citizens having a proper respect for the dignity and honor of the calling in which they are engaged and fully realizing its necessities; having carefully considered the magnitude of the interests involved, and actuated by a firm belief that whatever tends to promote the interests of the tillers of the soil will surely add to the prosperity of those engaged in every other vocation, and will as certainly tend to increased intelligence and thrift, to enhanced prosperity and contentment, to the highest welfare of society, and the greater permanence of our free institutions.

I cannot give a better idea of the desires of those who are prac-

tical farmers than by quoting from the proceedings of the National Grange, which met in this city in November last, the following resolution:

Resolved, That a committee of ten of this body be appointed to visit the honorable Commissioner of Agriculture, to confer with him in relation to the elevation of his department to higher rank, and to convey the protest of the National Grange against embracing in that department other industries beyond the one we represent—agriculture.

It will be observed that the earnestness with which they ask for an enlargement of the powers of the department is fully equaled by the vigor with which they protest against incorporating with it other industries having nothing in common with their own. This spirit runs through all that has come up to us from our constituents.

The Hon. Cyrus G. Luce, worthy master of the Michigan State Grange, a practical farmer and an old and experienced legislator, in an address delivered on the 13th day of last December, said:

For years the intelligent, progressive farmers of the country have earnestly desired that the Agricultural Department should be advanced in its scope and influence to such position as the importance and welfare of agriculture demands. The grange, both State and national, as true exponents of this advanced public sentiment, have taken active measures to secure its elevation to a Cabinet position. While their efforts have not been crowned with success, yet a bill was introduced in Congress providing for this change. It seemed to meet with much favor, and a motion to suspend the rules in order to put the bill on its passage came near succeeding. Let the fate of this measure be what it may, great advance has been made in the department. It has been lifted up from the very inferior position it occupied in the long years of the past to something like a just appreciation of its true mission.

A new danger in connection with this subject now presents itself. The idea is advanced of establishing a department of industry, and giving to agriculture a humble place in this department. This proposition is not and should not be satisfactory to agriculture. We believe that there is enough of this one industry that is great enough to command the energies of one-half of our whole people to claim a department by and for itself. The plan for connecting it with railroads, mining, and manufacturing will find no favor with us. While it is not within the scope of this communication to present reasons for this view, yet we may say that the man peculiarly adapted to preside over and care for an agricultural department might not be so well qualified to look after railroads, mining, and manufacturing. And we certainly have no desire to become the tail to a kite for any one else. We deserve and desire to occupy no second place.

Now, Mr. Speaker, I insist that we are here in a representative capacity, and that in legislating upon a subject which has been fully and intelligently discussed by our constituents it is both just and wise that the conclusions at which they have so unanimously arrived should have very great weight, especially where the question involved is one of method and not of principle.

EXPERIENCE OF OTHER NATIONS.

In passing to the consideration of my second proposition it is important for us to remember that all the great nations of Europe have made the agricultural an executive department except Great Britain and Russia. The former is so situated by nature as to oblige her to rely mainly upon commerce and manufactures, and yet she has given greater governmental aid to agricultural interests than have we.

The latter, although the most despotic of civilized nations, and possessed of a great class of farm laborers but recently emerged from serfdom, has, nevertheless, placed her agricultural affairs under the control of an executive department agricultural in everything but name, possessed of ample means and clothed with extensive powers.

Austria, France, and the Dominion of Canada have executive departments exclusively agricultural, while Hungary, Prussia, Italy, Spain, and Switzerland have like departments, in which agriculture is the great central figure. To this latter list may be added the greatest of South American nations, the enterprising and progressive Empire of Brazil.

In Prussia the minister of agriculture, domains, and forests is a member of the cabinet, and the executive department of which he is the head controls the expenditure of about \$12,000,000 annually, and is charged with the fostering of agriculture, the control of the public lands, the management of an experimental farm in each province, connected with each of which are horse-breeding stations.

It collects information through Prussian consuls in foreign countries, and from other sources and imparts it to the public through an official paper published and circulated by the government, and also by means of a vast number of public officials, all of whom, from the county superintendent to the rural police, are under the direction of this department, and are required to both gather and disseminate information in relation to the pursuit of agriculture.

In addition to this force, when the public interests demand, as in case of floods, the prevention of the spread of contagious diseases among cattle, and in other emergencies where vigorous and concerted action is required, the Army may be called into its service. In case of the total failure of harvests over large districts seeds are distributed without charge. It also conducts a governmental school of agriculture and one of forestry.

In France the head of the department of agriculture is a cabinet minister, and the annual appropriations for its support are over \$7,000,000. The policy of the department is broad and liberal, endeavoring to give aid and encouragement to everything appertaining to agriculture.

Agricultural schools are opened, in connection with which are taught trades and the arts. Model farms are conducted; stations are established for the improvement of sheep, cattle, and horses; veterinary schools are under its care; professors of agricultural science

travel from place to place giving instructions to the farmers; rare seeds are distributed, and the planting of shade and fruit trees is encouraged. These efforts have resulted in great good to the agriculturists of France, and the development of her silk and beet-sugar industries illustrates the beneficial effects of the application of scientific investigations and methods to agricultural pursuits.

I have thus mentioned briefly the organization and methods of like departments in two of the great nations of Europe to show that the measure before us has been fully tried and has stood the test of experience. The organization of the departments in the other countries named is of the same general character. The experience of all these nations has demonstrated the wisdom of the action proposed, and among their enlightened statesmen but one opinion, and that a favorable one, is entertained or expressed.

In none of these countries (if we except Russia) is the pursuit of agriculture to be compared with our own in point of magnitude, and looking to the near future even that exception becomes unnecessary.

MAGNITUDE OF INTERESTS INVOLVED.

But what shall be said in regard to the interests involved here in our own country? Shall we consider them in the light of past struggles, of present achievements, or of future promise? Shall we consider this pursuit as conducive to physical vigor, to pure morals, to correct social relations, to financial strength, and to intelligent and patriotic citizenship? Or shall we go to history and read of the pioneer farmer in his struggle with the savage, of the hardships endured by those sturdy men who have felled the forests, dried up the fountains of malarial death, and caused the land from ocean to ocean to bud and blossom and bear fruit?

Shall we look upon the cultivated fields, the comfortable homes, the hills crowned by schools and churches? Or shall we plunge into the ocean of statistics and bring thence indisputable proofs that those who cultivate the soil have filled the ranks of our armies and furnished their subsistence in times of war; have brought forth the means of deliverance in periods of financial gloom and danger; have been foremost in establishing and preserving our existence as a nation, and in rendering possible and probable the perpetuity of our political institutions and the enjoyment by our descendants of the blessings of free government in all the centuries to come?

Mr. Speaker, from whatever point of view we contemplate these interests we shall be well-nigh overwhelmed with a sense of their vastness. Can we fully comprehend the figures given us by the statisticians when they tell us that 25,000,000 of our people are engaged in or dependent upon this pursuit; that its surplus products exported in 1881 were valued at \$729,650,016, and that the total production for the same period, by agriculture alone, is estimated at \$9,000,000,000? Under what influence and with what speed have we reached these marvelous results? Let us pause a moment and inquire.

When, in 1839, in response to the urgent appeals of Hon. Henry L. Ellsworth, the first Commissioner of Patents, the Twenty-fifth Congress, in its closing hours, passed an act appropriating \$1,000 for the establishment of a division of agriculture, this great interest received its first governmental recognition. From the day when the first colonist went forth with loaded gun and sharpened ax to conquer the savage and the forest alternately, through all the weary march, with ax and brand and plow and sickle, from the shore of the great ocean westward past rivers, lakes, and mountains to the then western limits of civilization, in the valley of the Mississippi, the man who tilled the soil had fought his way until this day unaided, relying alone upon his own strong arm and indomitable energy for success.

This was the first real indication that the terrible disadvantages under which he had thus far labored were to be in some degree removed by governmental aid and his own crude and ill directed efforts to receive the assistance afforded by organized research and investigation. Contributions from a common fund were henceforth to furnish means for collecting the abundant knowledge resulting from a wider and completer experience among the older nations of the world, and the wisdom thus gathered was to give greater potency to his efforts, impart greater intelligence to his methods, and bring more certain and abundant rewards when future harvests crowned the year. At this period—1840—we find that we were producing of Indian corn, 377,531,875 bushels; of wheat, 84,823,272 bushels; of oats, 123,071,341 bushels; sheep numbered 19,311,374, and the clip of wool was stated at 35,802,114 pounds.

The first decade after the establishment of the new division of agriculture was one of progress. The panic of 1837 had arrested emigration to the westward for a time, but the tide was soon again turned toward the rich prairie lands of Indiana, Illinois, and the farther west, and what was once deemed a region almost valueless for agriculture began that wonderful development which has made it the garden of the world.

When the statistics gathered by the seventh census came forth in the agricultural report of 1851 the progress of the decade was found to be truly inspiring to those who tilled the soil. The improved lands were reported at 113,032,614 acres; the leading grain in point of quantity, Indian corn, had advanced to 592,071,104 bushels; oats, ranking next, to 146,584,179 bushels, and wheat to 100,485,944 bushels. Horses now numbered 4,336,719, sheep 21,723,220, and the clip of wool aggregated 52,516,959 pounds.

During the second decade of the existence of the division of agriculture its importance began to be more fully understood.

The value accorded to its reports, the excellence of the rare seeds, plants, vines, and cuttings distributed, and the great aid it had rendered in the investigation and arrest of the potato disease, the Hessian fly, and other devastating visitations which had afflicted the land, had arrested public attention and had so commended it that in 1854 the annual appropriation, which had heretofore vacillated between \$1,000 for the lowest and \$5,500 the highest, (with an occasional year when it had none at all,) was now advanced to \$35,000. A new impetus was given to the business of the division.

A propagating garden was established; sorghum and tea plants were introduced from China, and various cuttings of native and foreign grapes were distributed, in addition to the line of grain and seeds heretofore sent out. Entomological, chemical, and botanical branches were added in 1855, and through an arrangement with the Smithsonian Institution were commenced the procuring and publishing of meteorological statistics, which resulted in the present Signal Service.

And now comes the census of 1860 with its tale of progress. During the ten years over 50,000,000 had been added to the acres under tillage, which now stood at 163,110,720. The production of corn had advanced to 838,792,742 bushels, wheat to 173,104,924 bushels, and oats to 172,643,185 bushels. Horses numbered 6,249,174, sheep 22,471,275, and the clip of wool touched 60,264,913 pounds. Truly a wonderful increase all along the line, but particularly in wheat, which showed an increase of 73 per cent.

Notwithstanding the terrible gloom which the civil war cast over the opening years of President Lincoln's administration, the importance of giving all possible encouragement to agriculture did not escape the attention of the Executive nor of Congress.

On the 15th of May, 1862, the act establishing the "Department of Agriculture" became a law, and on the 1st of July in that year the same was formally organized, and Hon. Isaac Newton, of Pennsylvania, who had been chief of the division since early in 1861, was placed at its head. At the demand of the leading agriculturists, Congress had increased the appropriation to \$60,000, and the first year of the new departure saw its powers for usefulness greatly enlarged and several new features added.

A statistical division was established, and valuable information in relation to the condition of the crops, their yield, prices obtained, supply and demand, and other facts of value to the farmer were collected and published and bulletins issued monthly. Notwithstanding the existence of a rebellion of unprecedented magnitude for one-half the period, the ten years ending in 1870 were full of activity and advancement in the affairs of this newly organized department. Its effects were visible all through the land. The withdrawal of 1,000,000 men from the fields and workshops did not suffice to arrest the onward march of this great industry. Improvement in methods appeared on every hand; newly invented machinery overcame the loss of laborers; great diversity of crops gave increased returns; vastly more attention was given to animal industry, and everywhere was to be seen the effects of patient investigation and careful experiments, resulting in the elevation and advancement of agricultural interests all over the land.

When the results of the census of 1870 were made known it was found that despite the obstacles which hedged the pathway a great advance was apparent. The lands under tillage had increased to 188,921,099 acres, the yield of wheat to 287,745,626 bushels, oats to 282,107,157 bushels, while the number of horses was stated at 7,145,370, sheep at 28,477,951, and the clip of wool at 100,102,387 pounds. Indian corn alone showed an apparent decrease, and was recorded at 760,944,549 bushels.

Just at the close of this last decade (1868) the department removed to the new building which had been erected for its accommodation, and inspired by its new surroundings and the evident appreciation of its efforts on the part of the practical agriculturists of the country, as reflected in the favorable action of Congress in the increased appropriations for new buildings, improved grounds, and enlarged operations, it entered upon the decade of 1870-'80 with increased activity and a broader and more liberal policy.

Among the many things which engaged the attention of the department we may mention a few which will give some idea of its plans and purposes. It was engaged in an investigation of the agricultural condition of the Pacific coast; sinking artesian wells in Colorado, with a view to the reclamation of the arid regions; experimenting in the culture of the tea plant; investigating the manufacture of sugar from beets and sorghum; observations as to the existence of pleuro-pneumonia and other contagious diseases in animals; examining into the necessities and opportunities of American forestry; testing textile fibers, both animal and vegetable; the scientific investigation of the habits of insects injurious to vegetation and the best methods of destroying them; all these in addition to the regular work of the several divisions of the department, with which we are all familiar.

In the midst of labors such as these came another census year. One-half of the decade just ended had been a period of almost unexampled depression, during which all branches of industry had lain prostrated. The fearful wastage of the war, aggravated by the losses incident to an irredeemable currency and the public and private ex-

travagance produced by the enormous redundancy of circulation and its resulting era of speculation and financial intoxication, had borne their legitimate fruits and the blow had fallen with terrible force.

A revival of business came in 1879 with resumption of specie payments, and in June, 1880, before the effects of the reaction were fairly apparent, we proceeded once more to inventory the property of the nation. The increase in farm products was, under the circumstances, simply marvelous. The acres under cultivation had increased nearly 100,000,000, and is recorded at 287,220,231; the corn crop foots up 1,754,861,535 bushels, an increase of 1,000,000,000 in ten years; wheat is placed at 459,479,505 bushels; oats at 407,858,999 bushels; the number of horses at 10,357,981; sheep at 35,191,656, and wool 155,685,750 pounds, to which latter should be added about 100,000,000 pounds from herds on public land, ranches, &c., not enumerated.

Thus, Mr. Speaker, I have endeavored to trace the contemporaneous growth of both the department and the business of agriculture, through the four decennial periods which followed the date of the organization of the former in 1839.

I do not wish to be understood as asserting that this wonderful increase in farm property and products is due to the action of the department, but it is clear, in my judgment, that its efforts have been well directed and of immense value, and that its contributions to the general prosperity, through its aid in the development of the most important of all our great industries, have proved conclusively the wisdom of those who projected it, and have demonstrated the necessity for its continued existence with enlarged powers and increasing range of usefulness to the end that it may in the future, as it has in the past, keep abreast of the industry of which it has been and should be the help and guide.

During these forty years the practical farmers of the country have watched it with anxious solicitude, sometimes with generous praise and at other times with friendly though honest criticism; but through all this period, unmindful of the jeers and gibes of aristocratic idlers and cynical wisecracks, they have never doubted the wisdom which dictated its establishment nor the great value of its achievements, and they now demand with one voice its advancement to a higher plane of usefulness—to the full honors of an executive department. Shall this request be granted?

Some excellent gentlemen object on account of its causing increased expenditures. But, sir, the cost would be inconsiderable, and even were it vastly greater who shall say nay to those who simply claim their own? Who, allow me to ask, pay the taxes in this country? It is a notorious fact that a farm cannot be hidden from the taxing officer; its presence and its value are known to all.

The farmers are the taxpayers; and Jefferson says, "The revenue is the state." Does the magnitude of the possible expenditure in this case call upon us to stand between the people and the Treasury which they themselves have filled?

Another objects because it will add another to the members of the Cabinet. But, sir, it is well to remember that the Cabinet is an organization unknown to the Constitution and formed without authority of law. The President calls about him those whom he desires as advisers, and these constitute the Cabinet.

Washington's Cabinet was composed of three—the Secretaries of State, War, and the Treasury. The Secretary of the Navy was added in 1798, the Postmaster-General in 1829, the Secretary of the Interior in 1849, and the Attorney-General in 1870, making seven in all. The addition of a secretary of agriculture would make the number eight, which is considerably less than the average size of those of European governments, where the smallest cabinet, that of Austria, and called a council, is composed of seven members; and the largest, that of England, consists of fourteen. The number being not open to objection, it is difficult to understand what other can be raised. Most assuredly one, otherwise eminently fit, coming up fresh from the people, endeared to them by long association, enjoying their full confidence, jealous of their rights and impatient of their wrongs, ought to be welcome to the council chamber of the Chief Executive of a great agricultural people.

In this era of colossal fortunes and powerful corporations Representatives, who by birth, occupation, and association are free from their baneful influences, and are in full and hearty sympathy with the common people, should find a place in that chamber from which the legislative department is reminded of its duties to the people, where enactments are given the executive sanction and the officers are selected to whom are intrusted the interpretation and execution of the nation's laws.

And, sir, how important it is for the whole country that the affairs of this department should be in the hands of a man of great ability, fully understanding the matters with which he is to deal.

In the seventeen years during which specie payments were suspended in this country, commencing in 1861 and ending on January 1, 1879, our net exports of coin and bullion were \$868,381,844, a yearly average of over \$51,000,000, and had that continued the proposed resumption on January 1, 1879, would have ended in disastrous failure, and this nation would have gone on down the stream of inflation until at last ingulfed in the whirlpool of repudiation. Nothing saved us from financial ruin at this critical period but the export of agricultural products, which for the three years 1879, 1880,

and 1881 amounted to \$1,959,137,695, a sum so vast as to be beyond our comprehension. This and this alone arrested the outflow of coin, turned the tide in our favor, and gave us in net imports of coin and bullion for the years 1880 and 1881 the sum of \$167,060,041.

Why, sir, notwithstanding the great importance attached to the vast mining interest of this country it is a mere pigmy beside the industry we are considering. After supplying the necessities of fifty million people in our own country and paying for \$642,664,628 worth of merchandise brought from abroad, our agriculturists received from foreign nations \$91,168,650 in the year 1881, a sum greater than the entire product of all our gold and silver mines for the same period by over \$12,000,000.

But, sir, gratifying as this exhibit is there still remains much to be done. The extravagance of our people will soon outstrip the capabilities of the producing classes, and even now the insane desire for goods of foreign make bids fair to turn the balance of trade against us. In this event our deliverance can only come from the productions of the soil. How can we best meet this emergency? By continuing to turn all our attention to those articles consumed abroad which must be transported thousands of miles to be sold in competition with the products of other countries situated as we are? Or shall we carefully look over the list of articles imported and see if we cannot supply our own people with what they are now bringing from great distances at great expense for carriage?

Among the tables which I shall print herewith as an appendix will be found one which shows that we imported during the fiscal year ended June 30, 1881, agricultural products valued at \$255,681,008. A careful examination of this table will show that it is possible to produce in this country by far the larger part of the articles here enumerated. Is not this a field for grand effort? To save to this country this importation of products, more than three times in value the annual output of all our mines of gold and silver, is an undertaking worthy the best efforts of any man, be he in or outside of the Cabinet. The sugar and molasses imported into the United States in 1881 was valued at \$93,392,322. Every pound of sugar we use should be produced at home.

For sixty years after it was discovered that sugar could be made from beets private enterprise struggled in vain to solve the difficulties which prevented its successful manufacture, and not until the first Napoleon was forced by the English naval power to largely abandon the importation of sugar did the French department of agriculture undertake to find the true solution of the question; and by reason of the governmental aid thus rendered not only is France now manufacturing from beets all the sugar used by her 36,000,000 people, and exporting to other countries, but the continent of Europe is producing of this same article over one-third the entire product of the world, and nearly double the crop of Cuba and the United States combined.

Have we not a right to expect that our department, with proper effort and sufficient expenditure of money and brains, will right speedily solve the difficulties which now prevent the profitable manufacture of sugar from sorghum and beets, and in good time render us independent of foreign supply, the lack of which independence is now a source of great weakness in times of war, and can we not for the years to come prevent this fearful drain upon our resources?

We are paying \$21,004,813 for our yearly supply of tea, when our great diversity of soil and climate render it quite probable that the near future will enable us to raise all we consume, provided the Government will give its culture proper attention.

Why, sir, we imported last year of fruits and nuts, \$12,365,529; of breadstuffs, \$10,663,675; of wool, \$9,703,968; of provisions, \$1,278,788; of eggs, \$1,206,067; and of potatoes, \$874,223; and so on through all the list, millions upon millions being paid for what we can and should more cheaply produce for ourselves. Besides, much good can be accomplished by promoting greater diversity in the character of our productions. We are depending too much upon our wheat. Besides tending to the exhaustion of the lands thus tilled, the vast increase of this grain during the last decade, if continued, will lead to overproduction, and a full crop on both sides of the Atlantic is now the only condition needed to greatly embarrass those engaged in its culture.

While only 22 per cent. of this grain has been exported on the average for the past ten years, yet the price of this 22 per cent. would have much to do in fixing the value of the 78 per cent. consumed at home, and under the circumstances I mention the extremely low price which would prevail would bring great loss to those who now depend so largely on this cereal.

What a vast field for research and experiment is open to him who would bring under profitable tillage the vast regions now barren and sterile in our Western Territories and the growing area of worn-out lands in the older States of the Union. That this is proper work for the Government to engage in is apparent from the magnitude of the undertaking and the experience of European nations in like cases. Their agricultural experiment stations have accomplished grand results.

In the tenth annual report of the Sheffield Scientific School, quoted from by the gentleman from Vermont, [Mr. GROUT,] we read:

About the middle of the last century a light-house known as Dunston Pillar was built on the Lincoln Heath, Lincolnshire, England. It was erected to guide

travelers over a barren, trackless waste, a very desert, almost in the heart of England; and long it served its useful purpose. The pillar, no longer a light-house, now stands in the midst of a fertile and rich farming region where all the land is in high cultivation. For twenty-five years no barren heath has been visible even from its top. Superphosphate of lime, a chemical invention, first applied to land by the British chemist Murray and brought to the notice of reading farmers by Baron Liebig, has been the chief means through which this great change was effected. Superphosphate over great stretches of English soil makes the turnip crop. Turnips there support sheep, and with sheep the English farmer knows how to get rich on the poorest light lands.

Again we read:

Chemistry has taught agriculture how to utilize the refuse of slaughter-houses and fisheries, the bones, the flesh, the blood, which but a few years ago was a waste, a nuisance, and a peril to public health. It has found vast mines of fossil phosphates in England, Canada, Norway, Spain, France, Germany, South Carolina, Russia, and Austria, and has shown how they may be quickly and profitably converted into a precious fertilizer. Italy, Germany, France, Britain, and the United States have seen, or are seeing, the productiveness of thousands of their fields decline to a profitless minimum, until lands once beautiful with harvests are desolate and abandoned. But the artificial barrenness of exhaustion, like the natural barrenness of the heath or the sand-dune, yields to the touch of science; and in all the older countries I have named the work of reclamation is in full progress, and, barring some great calamity of politics or nature, we are confident that the producing power of their soil will never again be less than now, but will increase many-fold in the future, until they become gardens in all their breadth and to the very hill-tops.

France had so far back as 1835, in the neighborhood of Strasburg, an experiment station on the farm of Boussingault, who was professor of rural economy in the conservatory of arts in Paris. Both in the laboratory at Paris and on his estate of Bechelbrunn, Boussingault had for forty years carried on a series of most valuable researches, whether considered from the point of view of practice or of science. But Moreau was the first station where farmers themselves brought science to their own farms to aid them in farming. The example thus given was so brilliant and solid that within two years in the town of Chemnitz a second station was set up, and of the twenty-two years that have since elapsed, 1867 is the only one which has failed to witness the founding of one or more similar institutions in Germany or the neighboring countries. The experiment station shortly came to be regarded, not as a costly embellishment or an agricultural luxury, in which universities or wealthy gentlemen might harmlessly indulge, but as a most remunerative and necessary agency for the use as well as for the education of farmers.

I am glad to notice that our own department is giving this matter its attention, and from its action we may look for great results in due time. But, sir, I have already occupied too much time; I cannot go further into details. I can only suggest that the protection of our vast animal industry from the contagious diseases which threaten its very existence, the inauguration of some plan by which the farmers of the country may be able to save their crops from the locust, the grasshopper, the Colorado beetle, the canker-worm, the midge, the Hessian fly, the weevil, and a thousand other such foes are matters properly coming before this department for consideration. And, sir, these are not all the ills that the farmer is heir to. The cruel despotism established in some cases by vast corporations; the frequent unjust exactions and discriminations made by transportation lines; the outrageous black-mailing operations engaged in by the unprincipled owners of patents; the unwholesome conditions of the markets produced by gambling in options; and many other evils of lesser but still grave importance, are now proper subjects of governmental inquiry and of legislative action, and I sincerely hope that the department which we hope to establish by this bill will aid in bringing these matters to the notice of the proper authorities, with such suggestions as to the proper remedies to be applied as shall at last bring all interests into harmony, and insure a just and equitable division of the fruits of labor between all the different branches of industrial and commercial pursuits.

Mr. Speaker, I believe that this is a propitious time for the movement we contemplate. The present administration of the department is peculiarly acceptable to the people, and all are convinced that any new powers granted to it by the present Congress will fall into capable and experienced hands. And, sir, I repeat, let us limit our action to the enlargement of the powers of the present independent department. If in the future it shall be found practicable to add certain divisions or bureaus having control of subjects in greater or less degree affecting the pursuit of agriculture, our successors, in the light of experience, after the department is fully organized, can do so much more wisely than we. But for the present let us be content with the action recommended by those who have made the pursuit their life-work and study.

In conclusion, sir, let me say, that as for myself duty seems clear. I shall vote for this bill. It is in the interests of those who are conspicuously the conservators of the public weal. Time and again when some tide of dangerous error has swept over the land, bearing upon its seething bosom the discontented, the thriftless, the ignorant, and the vicious, threatening to engulf all that makes this land the hope of the world, we have looked always, and never in vain, to the farmers of the land as to the rock whose firm unyielding strength should breast the flood and safely shelter us until the waters had receded and the danger passed away.

It is in the interest of that class among whom life and property are safest, and ignorance, indolence, intemperance, and vice most rarely found. It is asked for by those whose hearts always beat in sympathy with the oppressed, and to whom the downtrodden have never appealed in vain. It is desired by those whose success is necessary to the prosperity of every other vocation; by those who best understand and will longest defend those personal, civil, and political rights the enjoyment of which is guaranteed to every American citizen.

APPENDIX A.

Comparative statement of aggregates for the United States, from the Census of Agriculture.

	1880.	1870.	1860.	1850.
Land in farms.....acres..	539,351,713	407,735,041	407,212,538	293,560,614
Improved land.....acres..	287,220,321	188,921,090	163,110,720	113,032,614
Value of farms.....dollars..	10,197,161,905.9	262,803,861	6,645,045,007.3	2,271,575,426
Farm implements.....dolls..	406,522,414	336,878,429	246,118,141	151,587,638
Farm animals.....dolls..	1,500,503,807	1,525,276,457	1,089,329,915	544,180,516
Farm products.....dolls..	2,447,538,658			
Horses.....numbers..	10,357,981	7,145,370	6,249,174	4,336,719
Mules and asses.....numbers..	1,812,932	1,125,415	1,151,148	559,331
Working-oxen.....numbers..	993,970	1,319,271	2,254,911	1,700,744
Milk-cows.....numbers..	12,443,593	8,935,332	8,585,735	6,385,094
Other cattle.....numbers..	22,488,590	13,566,005	14,779,373	9,693,069
Sheep.....numbers..	35,191,656	28,477,951	22,471,275	21,723,220
Swine.....numbers..	47,683,951	25,134,569	33,512,867	30,354,213
Corn.....bushels..	1,754,861,535	760,944,549	838,792,742	592,071,104
Wheat.....bushels..	459,479,505	287,745,626	178,104,924	100,435,944
Oats.....bushels..	407,858,999	282,107,157	172,643,185	146,584,179
Rye.....bushels..	19,831,595	16,918,795	21,101,380	14,188,813

Buckwheat.....bushels..	11,817,327	9,821,721	17,571,818	8,956,912
Cotton.....bales..	5,746,414	3,011,996	5,387,052	2,469,093
Hay.....tons..		27,316,048	19,083,896	13,838,642
Wool.....pounds..	155,685,750	100,102,387	60,264,913	52,516,959
Butter.....pounds..	777,204,471	514,092,683	459,681,372	313,345,366

The value of products of agriculture has not yet been computed, nor the value of the hay crop of 1879. The wool does not include that on public lands and ranches, nor in hands of butchers, &c., 100,000,000 pounds.

J. R. DODGE.

Special Agent, Tenth Census, for Collection Statistics of Agriculture.

MAY 6, 1882.

APPENDIX B.

Statement showing the imports of agricultural products into the United States during the year ended June 30, 1881.

Articles.	Agricultural products.	
	Quantities.	Values.
FREE OF DUTY.		
Cocoa, crude, and leaves and shells of.....pounds..	8,642,970	\$1,044,816
Coffee.....pounds..	455,189,534	56,784,391
Cotton, raw.....pounds..	4,449,866	757,308
Eggs.....dozens..	9,578,071	1,206,067
Hair, unmanufactured.....pounds..	4,170,196	874,039
Hides and skins, other than furs.....pounds..		27,477,019
Indigo.....pounds..	1,745,350	1,535,530
Madder, other than the extract of.....pounds..	914,086	59,918
Seeds.....pounds..		271,823
Silk, raw.....pounds..	2,550,103	10,888,264
Tea.....pounds..	81,843,988	21,064,813
Articles admitted free under reciprocity treaty with Hawaiian Islands:		
Fruits and nuts.....pounds..		20,600
Rice.....pounds..	6,984,406	389,017
Sugar, brown.....pounds..	76,907,247	4,927,021
Molasses.....gallons..	198,987	35,037
Tallow.....pounds..	28,083	1,402
All other free articles.....pounds..		4,326,553
Total, free of duty.....pounds..		131,603,618
DUTABLE.		
Animals living.....pounds..		3,972,835
Breadstuffs:		
Barley.....bushels..	9,528,616	6,692,125
Barley-malt.....bushels..	685,297	653,645
Indian corn.....bushels..	75,155	88,126
Oats.....bushels..	64,412	23,223
Rice.....pounds..	61,755,003	1,413,543
Rye.....bushels..	473,925	413,763
Wheat.....bushels..	200,620	204,508
Wheat flour.....barrels..	2,396	12,719
All other breadstuffs, &c.....pounds..		771,006
Bristles.....pounds..	838,840	911,519
Chicory, ground or prepared, and root.....pounds..	4,207,544	149,201
Flax, raw.....tons..	5,446	1,462,289

TREASURY DEPARTMENT, BUREAU OF STATISTICS,
Washington, D. C., May 7, 1882.

DEAR SIR: I hand to you herewith a table purporting to show the value of the products of agriculture imported into the United States. It is impossible to prepare an accurate table showing such imports for reasons fully explained on pages 18 and 19 of part I of the Report of the Chief of the Bureau of Statistics on Commerce and Navigation.

Very respectfully,

JOSEPH NIMMO, JR.,
Chief of Bureau.

HON. EDWARD S. LACEY, M. C.,
House of Representatives.

APPENDIX C.

Values of exports from the United States of domestic merchandise, and of the exports of the products of agriculture, and the percentage which the exports of such products bear to the total value of exports of domestic merchandise, for the years mentioned.

Year ended June 30—	Value of exports of domestic merchandise.	Value of exports of products of domestic agriculture.	Percent. of products of agriculture.
1820	\$51,683,640	\$41,657,673	80.60
1830	58,524,878	48,095,184	82.13
1840	111,660,561	92,548,067	82.91
1850	134,900,253	108,606,713	80.58
1860	316,242,423	256,560,972	81.14
1870	455,208,341	361,188,483	79.34
1880	823,946,353	683,010,976	82.90
1881	883,925,947	729,650,016	82.55

Values of exports from the United States of bread and breadstuffs, cotton, provisions, mineral oils, and tobacco during the years 1840, 1850, 1860, 1870, 1880, and 1881.

Year ended June 30—	Bread and breadstuffs.	Cotton, raw.	Provisions.	Mineral oil.	Tobacco and manufactures of.
1840	\$13,535,026	\$63,870,307	\$3,503,704	None	\$10,697,628
1850	13,066,509	71,984,616	10,927,485	None	10,599,855
1860	24,422,310	191,806,555	16,612,443	None	19,289,975
1870	72,250,933	227,027,624	29,175,539	\$32,668,960	22,705,225
1880	288,036,835	211,535,905	127,043,242	86,218,625	18,442,273
1881	270,332,519	247,695,746	151,528,216	40,315,609	20,878,884

Interstate Commerce.

SPEECH

OF

HON. THERON M. RICE,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882.

On the bill to regulate interstate commerce and to prohibit unjust discriminations by common carriers.

Mr. RICE, of Missouri, said:

Mr. SPEAKER: During this session of Congress a very large number of petitions, numerous signed, have been presented to the Senate and this House, praying for legislative action upon the all-important and all-absorbing question of regulation by law of interstate commerce.

Urgent and pathetic appeals from hundreds of thousands of our people who have representation upon this floor have, in the peaceful and constitutional mode prescribed by law and custom, time and again called our attention to flagrant violation of their most sacred privileges and rights by cormorant corporations, who to-day, governed only by their selfish greed for wealth, absolutely control the commerce and trade of the nation. Up to this hour these petitions, coming from all quarters of our broad and wonderful land, from the tens of thousands of those who produce and the thousands who transport our immense productions to the millions of consumers in our own land and to the markets of the world, have received but little or no attention. The right of the people by petition to manifest their grievances to Congress is unquestioned; that they are oppressed may be clearly shown; and that they are entitled to the relief prayed for may be demonstrated beyond all controversy.

Mr. Speaker, I shall offer no further apology for at this time addressing the committee on a measure identified as this is with the general welfare of the whole people.

"The business of transportation," as was forcibly said on this floor

last session, "in the last quarter of a century has grown into such vast and almost immeasurable proportions of importance to the general welfare of mankind that legislative restraint upon its alleged aggressive tendency and power has become as indispensable and imperative as law for the suppression of crime."

The great highways of trade, of commerce, and of travel, stretching across the continent and uniting the oceans by steam; the highways of public enterprise, of industrial exchange; the highways of the nation for military and governmental purposes; in one word, the highways of the people, have been usurped and to-day are held, not as public avenues to facilitate and promote the public welfare, but as corporate property to promote corporate monopoly and corporate greed.

There is no subject wider in its range or more general in its effect than transportation. It rules subsistence, and subsistence is life. It rules values, and value is property or ruin, just as it is regulated. It rules comfort, for it gauges the price of the elements of comfort. It rules the price of land and the price of labor, for it determines the value of each. It is the one element upon which all exchange is dependent. Exchange is commerce. Commerce rules all activities of labor, all activities of education; the status of our labor and education is the true measure of our civilization.

To fully comprehend the power and properly measure the influence of railroads upon transportation, and to show, under proper control, how essential they are to the life of our social, civil, and political body-politic, and, unrestrained within legitimate limits, how dangerous to the prosperity and liberties of the people, I ask the indulgence of the House for a brief examination of the question.

GROWTH AND EXTENT OF THEIR POWER.

There is nothing in the history of human progress that shows any parallel to the growth, development, and power of corporations in the construction and use of railroads in the United States. Starting in 1830, the following statement will show how rapid has been their construction:

In 1830 we had but 23 miles; in 1840 we had 2,810 miles; in 1850 we had 9,021 miles; in 1860 we had 30,635 miles; in 1870 we had 52,914 miles; in 1880 we had 94,000 miles; in 1881 we had about 100,000 miles.

Up to 1850 they were mainly confined to the States east of Lake Michigan. To-day they extend from ocean to ocean. They interlace and gridiron the whole habitable portion of the Union. They unite cities, States, and peoples from the rock-ribbed shores of New England on the Atlantic with the golden sands of the Pacific. They have become the great, grand highways of American civilization. They transport the products of all sections and climates, all industries and trades; they transport the people, the mails, the Army, munitions of war and munitions of peace. Steam is their power and alike their slave. The commerce of the world is upon their wheels. Progress depends upon their velocity and prosperity upon their connections. The profits of agriculture, of manufacturing, of trade, and all the manifold industries of the mine, the farm, the shop, the forge, and the loom depend upon their charges. They have developed into immense engines of public convenience, public necessity, and public outrage and wrong.

In the beginning they were chartered for "a public use," to promote the general welfare of the people. Corporations were created as the express instruments and for the express purpose of a public use, public convenience, and public utility. They were granted the highest powers and franchises which it was possible to confer under State and national prerogative. They were given the right of appropriating the power of eminent domain simply and solely because they were to use this right as a universal agency for universal well-being of the people.

Local at first and limited in capital, in extent, in use, and in benefits; built with economy, worked with care, and solicitous to win public favor, they won it. Demonstrating their capacity as an almost immeasurable factor of public advancement, in convenience, in rapidity, and in cheapness of intercourse, they secured approval, commanded confidence, and marched with giant strides into practically universal occupancy of the highways of the nation and the people. That which was at first but local has become universal in extent, unlimited in use, overwhelming in capital, and so general in its connection with the industries, exchanges, commerce, and intercourse of States, cities, people, and individuals as to have become a universal necessity. Beginning with small capital they have rapidly advanced to the highest combinations of capital ever concentrated in human enterprise. To-day the railroads of the United States represent more than \$5,000,000,000, and their yearly earnings and income is computed at \$600,000,000; more than double the annual receipts of the Government of the United States.

This vast sum is managed by a limited number of men. Practically the whole system is controlled by the few individuals who have the lead in the management of the five great trunk lines which dominate over the transportation between the oceans. The New York Central, the Pennsylvania Central, the Erie, the Baltimore and Ohio, and the Union and Central Pacific, directly and indirectly have sovereign control of the transportation of all the through freight from the Pacific Ocean to the Atlantic. The four trunk lines above named,

independent of the Union Pacific and Central Pacific, have so absorbed the roads, routes, and feeders which center at Saint Louis, Chicago, Milwaukee, Indianapolis, Louisville, and Cincinnati, tapping the entire sweep of the Northwest, the West, and the Southwest, and having the financial control of nearly all of them, they virtually hold every highway of travel and transportation with gates barred by their combined capital, and by such mutuality of agreement among themselves that all opposition to their dictation is useless, and so will inevitably continue until the Government of the United States in this behalf asserts its right, proclaims its power, and exercises its authority.

I have no positive means of ascertaining the exact combination by which railroad power is managed, but a careful examination of statistics has resulted in showing that of the \$5,000,000,000 aggregate capital invested in railroads in the United States, \$3,319,000,000 is controlled by Jay Gould, Vanderbilt, the Pennsylvania management, Garrett of the Baltimore and Ohio, Huntington, Jewett, Garrison, Field, Sanford, and the few men who make up the combination. Their capital is divided as follows:

The Pennsylvania Central.....	\$629,000,000
Jay Gould and associates.....	565,000,000
Vanderbilt combination.....	564,000,000
Huntington combination.....	321,000,000
Jewett and Erie combination.....	317,500,000
Garrett (Baltimore and Ohio) combination.....	194,000,000
Pennsylvania coal roads.....	508,000,000
Mitchel management.....	129,000,000
Garrison management.....	62,000,000

In looking over the list of the various lines which run into Saint Louis, Chicago, Milwaukee, and all the central and radiating *foci* of the West, forming the complete net-work of all the important lines from the shores of the Pacific to Omaha, the valley of the Mississippi, and the West, it will be found that while the trunk lines are owned by separate companies and corporations, the names of the leading men who form these companies will be recognized in the management and direction of nearly every tributary line of railroad upon which the trunk lines depend for their trade. It may therefore be asserted without fear of contradiction that all the great transporting lines are worked under the same management. There is a semblance of competition, but it is but a semblance. Combination has killed competition. They skirmish and have their periodical battles to deceive and cheat the people, but they are but battles for show—sham fights—for nothing is more certain than the fact that all the controlling roads are worked substantially in the same interest, and on a basis of mutually-agreed prices, fixed and established in united council.

The capital, influence, and power of each combination is pledged to support the united interest against all competition; against all State and local interferences, and against any and every attempt to subordinate their power, their exactions, and their tyranny to Congressional control.

The New York Central was the first company to enter upon the system of combination by which the great trunk lines have grown into colossal power. It started its work by consolidating the ten local lines which made up the route from Albany to Buffalo; then combining the Hudson River and Harlem roads, its way was clear to Lake Erie, and from New York to Cleveland it secured control of the Lake Shore road; from Cleveland it got possession of the lines to Toledo; thence to Chicago, by gathering in a controlling interest in the Michigan Southern, the first great trunk line from New York to Chicago was established. The work thus commenced, herculean and gigantic as it was, was but the commencement. Every road tributary was brought into subjection; not a line between New York and Chicago on the great central belt was overlooked; the purpose was absolute control, and there was no stoppage and no hesitation until it was attained. Consolidation was the order of the day, and the New York Central brought every element of competition under its control.

The Pennsylvania Central, taking an entirely different route, commencing in 1857, worked its way from the Hudson to the Delaware, from the Delaware through Pennsylvania, over the Alleghany Mountains to the Ohio, thence through Ohio and Indiana to Chicago; like the New York Central, uniting and combining every road, river, and appliance by which the travel and transportation of the entire region of country through which the route passed could be carried on.

In the same way the Erie made its way through the southern tier of counties of New York to Lake Erie, and thence to the great cities of the West and South.

The Baltimore and Ohio worked its way to Wheeling and the Ohio River, and thence westward until, like the other lines, it reached the great central points of trade and travel. Thus, from different starting-points, and by different routes, the railroads constituting the four trunk lines control the entire transportation from the West to the East.

Having secured every avenue of communication forming connection with the entire traffic east of Lake Michigan, they commenced extending their roads through the vast regions of the West, Southwest, and Northwest.

It was a stupendous work to organize into regulated order the thousand currents all converging into natural markets, so as to make the whole net-work of railroads gridironing the vast regions from the

eastern slope of the Rocky Mountains, the valley of the Mississippi, and the agricultural districts of the Northwest into connecting limbs, united lines, and systematized feeders of the four great trunk lines to the Atlantic. But the work was done with masterly ability. There is nothing more instructive, nothing more incomprehensible, nothing which so illustrates the marvelous progress since 1850 as the railroad maps, which show the lines and extent of the railroad commerce organized and perfected into channels of trade and transportation west of the great lakes.

The wonderful resources of the immense belt of country lying between the Middle States and the Pacific Ocean, in proportions an empire by itself, have been unfolded with a rapidity and grandeur approaching the marvelous. We have shown that we possess nearly all the minerals valuable to man, and especially of the precious metals, in such wealth of profusion as to astonish and captivate the world; that we can produce agricultural products in greater variety and more abundant quantities than any country on the globe; that we possess every description of climate, from regions perpetual in ice to lands ever blooming with flowers; that we have but just opened the way for future productions so vast as to defy all computation. Over and through all this vast area of our domain the kings of the rail, the owners and directors of the trunk lines of railway, have assumed control, exercise power, and in fact assert the full sovereignty of dominion.

It was natural that all the new lines built in the States, springing as they have almost by magic into the arena of transportation, should connect themselves with and subordinate themselves to the trunk lines. It was equally natural that the mineral fields, unfolding their treasures of untold wealth, should have easy and quick transit to market; the immense cattle ranges along the base of the Rocky Mountains, the grain-producing fields from the Red River valleys in the North to the granaries of the Missouri and Mississippi valleys and the sugar and cotton fields of the South, could do no less. A market was essential to their people and their prosperity; short lines would lead them to the trunk lines, and the short lines were built.

The extension of power has been as natural as it has been persistent. Having command of all the trunk lines to the East and the highways to the Pacific, completely royalized into monopolistic control, the kings of the rail have made themselves absolute monarchs of our transportation system, and have become defiant in their position and dictatorial in their demands.

If competition lent a stimulant to the extension of their outstretching arms, combination became more forcible as a means for larger profits. Each of the Eastern monarchs of the trunk lines is found in the directorship of all, or nearly all, of the principal arteries, starting from the trade centers on the Atlantic seaboard, pointing toward the West, and by diverging lines permeate all through the producing regions, so that every bushel of grain, every pound of produce, every head of cattle, every article which can be spared for market, is made dependent upon the price of transportation for its home value. No government on earth ever exercised so direct and positive a power over its subjects as the American railroad management exercises over the producers of this country. No government was ever so defiant, so dictatorial, so tyrannical.

There are many Representatives on this floor who are older in active life than the railroads, and not one so young as not to know that they were chartered and brought into being by the power granting them their charter for a public use, to build highways for the people, for their convenience, for their wants, and to meet the demands of their necessities. To this end they have been granted privileges, powers, and immunities such as pertain to public rights alone. But as power has accumulated, capital increased, and their influence been extended they have ceased to be the servants, the benefactors of the people, and assumed to be public dictators, and use their franchises to oppress and wrong the people.

In the early history of railroad management in this country the right of the State or the Government to control the extent and use of the delegated power was not questioned. At first the power conferred upon railroad corporations was conferred by State authority, and only exercised and potent within the limits of the State granting it; but since, by their acts of consolidating connecting lines, thereby and through the liberality of State legislation, the great railroad belts span the continent, each under a directory controlling the whole, they deny the authority of State or Federal power to limit or in any manner control their use. It may be urged that since these main trunk lines have passed beyond local State lines and local State jurisdiction, passing over and through States, across the continent, all under the management of one consolidated directory, that they passed from under local State authority and State control. It is claimed by railroad magnates that this is true; that States have no jurisdiction, and that the Federal Government has none, for the reason that conferred franchises can only be modified, changed, or controlled as a reserved right to the legislative power conferring it.

But I deny this assumption and assert that it has no foundation in law, reason, or justice. The franchises and rights of a railroad corporation are no greater, no higher, than such as are specifically conferred by the terms of their charter. Their personal act in consolidating different connecting lines under one management may increase the facilities of the use, but in no sense does it increase or enlarge delegated power. By the individual acts of different corporations,

they may perhaps combine uses, franchises, and powers, and, as applied to railroad corporations, they may by such action enlarge or expand what was in the beginning but a State and local use into a national and public use, and by such combination of the exercise of local powers in effect transform that which was but a local franchise for a local use into a national franchise and for a national use.

The great American railway system has become the national highway for trade, for travel, and for commerce, without regard to State lines, without regard to municipal, civil, or political subdivision of our vast domain; it bears upon its tracks of steel our productions, our commerce, and our people; it is to-day the most potent element of our social, political, and physical power; it has created our nation's commerce; it has inspired production and has made markets; it has, in an unprecedented degree, enriched the East, made great and powerful the interior; it has covered the plains, valleys, and mountains of the great West with teeming life, industry, and enterprise; it is the grandest development of civilization; it is to-day a nation's necessity.

Railroads, like individuals, should be subject to legislative control. With all their good, they are chargeable with gross wrongs upon the people. And since they have become national in their character and uses, that control should, and of right ought to be, exercised by the Federal Congress. That Congress has this power inherent within itself under the Constitution, I will attempt to show.

Our great rivers, inland lakes, and seas, are natural highways of commerce and free to be navigated by whoever will; likewise our railroads are highways of commerce, but differing from our rivers in this only: they are artificial in their construction and private in their operation; but both alike are highways, the latter created for, and both in their operation designed, contemplated, and fostered for a public use, and both alike in this use must be subject to legislative control.

The Constitution expressly recites, as one of the delegated rights by the people to Congress, the right "to regulate commerce among the several States."

To regulate is defined to mean "to prescribe the rules by which commerce is to be governed." (Gibbon *vs.* Ogden, 9 Wheaton, 196; Story on Con., sec. 1061.) The power thus conferred is specifically conferred. It admits of no limitation, no expressed or implied qualification, and, being complete and entire, may be exercised to the full extent of the jurisdiction of the United States. (Gibbon *vs.* Ogden, *supra*; also Passenger cases, 7 Howard, 283.) The language of the Constitution is, "to regulate commerce among the several States." Not merely that carried upon the bosom of our rivers and lakes, but all commerce, let it pass over or through whatever channel it may.

This conferred power is not only absolute and entire but it is necessary. It is necessary to the perpetuity of the Union, to the tranquillity of the people, and to the interest of commerce itself. It is vital to the common rights and common wants of every community; indeed, independent of the power of Congress, there is no power competent to enforce obedience to law, to restrict abuses, and punish wrongs. (Gibbon *vs.* Ogden, *supra*; Federalist, pages 4, 7, 11, 22, and 37.)

Paschal, in his Annotated Constitution, says: "Commerce is traffic in its broadest sense. It is intercourse, and all the means by which traffic and intercourse are carried on." (Story on Con., section 1062 and note; United States *vs.* Halliday, 3 Wall., 417; 9 Wheaton, 101, 102.)

All buying, selling, and exchanging is commerce; all means by which communication for trade, traffic, or exchange is carried on is embraced in the term.

It includes navigation in every form—by steam-vessels, ships, boats, and vehicles—used to convey merchandise, the products of the soil, and every article entering into the business of life. (3 Wall., 417; 4 Denio, 469.) It covers and includes every means by which transportation, in its broadest terms, is made use of to convey passengers, merchandise, products of the soil, of the forest, of the mines, and of industry and trade in their widest significance from the points of production to market, for consumption, for use, or for exportation from one State to, through, over, and across another. It includes all the means by which trade and exchange can be carried on between the inhabitants of one State and the inhabitants of another State by passing overland and by water. (4 Wash., 388; Pennsylvania *vs.* Wheeling Bridge Company, 18 Howard, 421; Columbus Insurance Company *vs.* Peoria Bridge Company, 6 McLain, 70; Gilman *vs.* Philadelphia County, 3 Wall., 724.)

To the end and extent that railroads are a public use they are public property; and as public property they are subject to Congressional legislation and control, (see case above cited,) and it is for Congress to determine when, how, and where it shall exercise its authority and power. (U. S. *vs.* Combs, 12 Peters, 72; New York *vs.* Milne, 11 Peters, 102; Gilman *vs.* Philadelphia, 3 Wall., 725.)

Congress not only has the power to build and construct facilities for transportation but may prescribe absolute rules for their government. (2 Gale, 395; 3 Howard, 239; 9 Wheaton, 1; 11 Peters, 102-135.)

Railroads are essential parts of the highways which belong to and can alone be controlled by the nation. No corporation, no individual, and no State can lock up or appropriate these common essentials of

our common rights; the Constitution has given to Congress the sovereign power over them. (New Orleans *vs.* U. S., 10 Peters, 662 to 729.) The public right is supreme; it is superior to all private rights. There can be but one sovereignty over that which is common to all the States and to all of the people of the States. Congress may select, adopt, and hold sovereign power of control over any and every interstate highway. It may select those which exist; it may adopt new routes, or it may construct and control one or all of the highways of interstate commerce. (10 Price, 350; 3 Wheaton, 383.)

The right to regulate the charges of common carriers has always existed as a positive element of sovereignty; it is a public business in which the whole public are interested. I may be permitted to make allusion to the decision in the celebrated Georgia cases. Though all was not accomplished in those cases that was anticipated, still the movement was anything but a failure. In those cases the court declared all that is essential to my argument. It held that a railroad company was a public and not a private corporation; that as such it has entered into an implied contract with the State to submit to such regulations as the Legislature may prescribe. The court also said that every corporation which appeals to the public for patronage is a public corporation, and by the act of organization *ipso facto* becomes subject to legislative regulation. An elevator company, an express, a car, a freight, a forwarding company, is as completely a public corporation as the railroad company. And I may add a flouring mill, built for custom service, is a public use for which they may charge toll, but the rates are regulated by statute. The mill is constructed purely as a private enterprise, upon private land, built wholly from the owner's private purse, and yet the right by statute to regulate his exercise of the use has, to my knowledge, never been questioned.

Pray show me what right, what higher immunity, a railroad company should possess than the modest, uncomplaining miller. The law, in respect of which we are now considering, applies to both alike, but for highest considerations should apply with the greater force to the former. It is created by act of sovereign power and to it is delegated important and valuable franchises; it is clothed with the right of eminent domain; its creation and its franchises are *in perpetuo*; it never dies; like Tennyson's poetic brook, "it goes on forever."

There is another consideration which is an important factor in determining the status of railroads and their relation to the public and liability to legislative control. A large majority of them have been built in part, and many entire, by Federal, State, county, and municipal aid, and this under the lying pretext of the projectors and managers of the return of valuable consideration in the issuance of stock.

In a few instances the stock, according to contract, has been issued, but the instances are very rare when that stock has ever been worth or realized a dollar to the parties who thus gave generous aid. Practically, the first step of the projectors in building a railroad is to get all the money they can, the greater portion of which is put down into their pockets, and then the road is built by money raised on what are called construction bonds, secured by mortgage upon the road, its right of way, and franchises. Soon follows a foreclosure, and the result is the directors have become millionaires, owning the road and the stock at a cost to them but little in excess of a nominal value. Thus it is seen that the enormous sum which it has cost to build our railroads has been paid either directly or indirectly by the people; that every dollar of the \$600,000,000 annual earnings is a direct tax upon the people. The princely salaries paid to their officials, the money paid to sinecures and needy relatives, the annual salaries paid to attorneys, which in many instances is more than they could earn in a life-time, all come from the pockets of the people. And the \$1,500,000 annually expended by their lobbyists with legislative bodies in attempts to persuade friendly legislation is raised by a tax upon the people, through exorbitant passenger and freight tariffs.

I have shown that railroad corporations are by the law of the land subject to legislative control. I now call attention to reasons, which have become manifest, why they should be thus controlled.

Railroads are a public use, so created, so designed, and so in fact should be. The claim that they are operated primarily in the interest of the public is not made by the managers; this species of labor is left to their apologists. The American railroad king said: "It is cheaper to buy than to elect a legislature." And the lesser Vanderbilt asserted: "If there is to be a railroad commission, the commission must own the railroads or the railroads must own the commission." Mr. Rutter, a vice-president of the New York Central and Hudson River Railroad, and a witness before the recent Hepburn committee of the State of New York, stated: "I serve the stockholders only, and only regard the public interest to make it tributary to the interests of the shareholders." "The managers of a railway company desire to make all the money they can for their clients, and to do this they have constantly before them the question: what rate within their chartered limits will an article bear?"

So that, upon the admission of leading managers of railway companies themselves, they have no higher aim than selfish greed, no higher or other ambition than to extort the last farthing the necessities for their services may be able to demand.

In consideration of the truth of the statements of railroad officials, permit me here to introduce a few passages of daily concurrent history, declarations of leading statesmen, and editorial statements upon this point from the press.

The National Board of Trade, at its convention in 1881, adopted a report which declared that:

The degree to which the great powers of steam and electricity have been allowed to pass into corporate hands, which employ them as a means to tax the public unduly for their use, is at this time forcing itself upon the attention of our statesmen, and there is a wide-spread feeling that the public welfare demands that the power and privileges of corporate grants shall be limited in the future.

The third semi-annual report of the railroad commissioners of the State of Georgia, submitted May 1, 1881, says:

The moral and social consequences of these corruptions are even worse than the political; they are simply appalling. We contemplate them with anxiety and dismay. The demoralization is worse than that of war, as fraud is meaner than force and trickery than violence. Aside from their own, the operators aim directly at the corruption of the press and the Government. Worse even than a miasmatic storm is this malaria in the air, which poisons all the body-politic and corrupts the youth of the country by presenting the highest prizes of society to its most unscrupulous and unworthy members.

The report of the legislative committee of the State of New York that investigated the management of the Erie Railroad in 1873 concludes with the following remarkable words:

It is not reasonable to suppose that the Erie Railroad has been alone in the corrupt use of money for purposes named; but the sudden revolution in the direction of this company has laid bare a chapter in the secret history of railroad management such as has not been permitted before. It exposes the reckless and prodigal use of money wrung from the people to purchase the election of the people's representatives, and to bribe them when in office. According to Mr. Gould, his operations extended into four States. It was his custom to contribute money to influence both nominations and elections.

In 1879 a committee of the State of New York, Mr. Hepburn, chairman, after an exhaustive examination, declared that the charge of flagrant abuses in railroad management had been fully proven, and added:

The mistake was in not providing proper safeguards to protect the public interest and to hold the railroads to a strict accountability for their transactions; thus, through the laxity of our laws and the want of governmental control, measurably excusable, considering the unforeseen possibilities of railroad development at the time of the enactment of those laws, but no longer pardonable in the evidence herewith submitted, have crept in those abuses hereafter mentioned so glaring in their proportions as to savor of fiction rather than actual history.

Hon. DAVID DAVIS, late of the United States Supreme Court, now acting Vice-President of the United States, says:

The rapid growth of corporate power and the malign influence which it exerts by combination on the national and State legislation is a well-grounded cause of alarm. A struggle is pending in the near future between this overgrown power, with its vast ramifications all over the Union and a hard grip on much of the political machinery, on one hand, and the people in an unorganized condition on the other, for control of the Government. It will be watched by every patriot with intense anxiety.

Governor Gray, of Indiana, in his message to the Legislature of that State in January of last year, said:

In my judgment the Republic cannot live long in the atmosphere which now surrounds the ballot-box. Money corporations, to secure favorable legislation for themselves, are taking an active part in elections by furnishing large sums of money to corrupt the voter and purchase special privileges from the Government. If money can control the decision at the ballot-box it will not be long before it will control its existence.

The attorney-general of the State of New York, in commenting upon an extraordinary proceeding in the Supreme Court, January 3, 1881, to thwart proceedings instituted by the State to protect the public interest in the case of the New York elevated railroads, stated that he was—

Amazed now at the power that corporations seem to have to embarrass necessary legal proceedings taken against them; that the increase of the influence of corporations in this country, and their ability to thwart the supervisory proceedings taken against them by the public authorities to prevent great monopolies or to subject them to proper restraints, are among the most alarming characteristics of the time, and constitute a danger to which all the people must be aroused before long if we would preserve our free institutions.

On the 27th day of January, 1880, Mr. Gowen, then president of the Philadelphia and Reading Railroad Company, in an argument before the Committee on Commerce of the House of Representatives in Washington, said:

I have heard the counsel of the Pennsylvania Railroad Company, standing in the supreme court of Pennsylvania, threaten that court with the displeasure of his clients if it decided against them, and all the blood in my body tingled with shame at the humiliating spectacle.

United States Senator WINDOM, in a letter to the president of the anti-monopoly league, says:

The channels of thought and the channels of commerce, thus owned and controlled by one man, or by a few men, what is to restrain corporate power, or to fix a limit to its exactions upon the people? What is then to hinder these men from depressing or inflating the value of all kinds of property to suit their caprice or avarice, and thereby gathering in to their own coffers the wealth of the nation? Where is the limit to such a power as this? What shall be said of the spirit of a free people who will submit without a protest to be thus bound hand and foot?

Hon. Jeremiah S. Black, ex-judge of the supreme court and ex-Attorney-General of the United States, recently stated:

All public men must take their side on this question. There can be no neutrals. He that is not for us is against us. We must have legal protection against these abuses. This agitation once begun, and the magnitude of the grievance being understood, it will force our rulers to give us a remedy against it. The monopolies will resist with all their arts and influence, but fifty millions of people, in process of time, will learn the important fact that they are fifty millions strong.

Nor is this all, the press, the exponent of the dangers that to-day environ our free republic and threaten the liberties of fifty million people, also sounds the alarm.

The New York Maritime Register says:

Much has been said about monopoly and anti-monopoly, and the latter has been condemned in influential quarters as only a spasmodic movement with politicians at its back. Time will prove the contrary. The anti-monopoly feeling is growing among the great mass of the people. They see in the gigantic monopolies which now impede healthy progress an evil of the greatest magnitude. They see in them a power which will separate people into two great classes—those who control and belong to monopolies, and those who must submit to their mandates. Comparatively few people enter into subtle distinctions. The majority recognize two or three prominent features and are guided by them. It is this characteristic that will obtain in the monopoly fight. People recognize in monopoly a power which closes every avenue of advancement and prosperity to all but the favored few; a power that would be master of all things, either directly or indirectly. They see that this leaves them practically at the mercy of the few. The spirit of our institutions is opposed to that. These points are all that they need to strengthen their determination not to leave the contest until a more equitable condition of affairs is established.

RAILROAD POWER.

H. C. Lord, ex-president of the I. C. and L. Railroad, writes the following to the Locomotive Engineers' Journal:

We have had a civil war, wonderful in its proportions, its terrible cost of life, human suffering, treasure, and national credit; and yet, in spite of all pride and boasting, how do we stand to-day? I put the question most honestly and earnestly, and future history will answer it. Is not capital realized through devious ways and by means of unjust methods reveling in luxury while labor is comparatively unrewarded, deferred, often unpaid and too often despised? Is not this an era in this country in which mediocrity, pride, and public corruption are holding high carnival, can railway managers accumulate great fortunes in half a score of years except at the ultimate, if not the immediate, expense of labor? If not of it, of what? It must strike every thinking man that the pride and avarice of our country is growing too rapidly and without any sufficient cause, and it will be better to put the brakes on in time. Let my readers commence, if they please, at Washington or New York, and prosecute their investigations over and through the railways spanning this continent and connecting the waters and commerce of the Atlantic and Pacific, and tell me when and where public integrity has prevailed against both political and financial corruption, or where capital and greed have not taken an unfair advantage over the rightful property and labor of the people.

The Kearney (Nebraska) Press says:

The virtue of the people must be placed against the money of monopolies, and if our present form of government is worth preserving they will prevail. The danger is imminent to the country, and should be met with the same spirit and courage shown by the young Republican party when it met, restricted, and finally abolished slavery.

The Washington Post says:

The managers of railroads in this country show less intelligence in dealing with the public than the owners of any and all other property. The patience of the people is taxed to its utmost limit year after year by railroad corporations. No obligation into which they enter with the public, or which is imposed upon them by law, is voluntarily performed. The history of their dealings with the Government is a history of evasion, deception, and stealth. They water their stock in order to absorb their earnings and make appear reasonable their otherwise extravagant dividends, the result of extortionate charges. The beneficiaries of munificent land grants disregard the conditions under which they receive these endowments and retain the benefit thereof.

The San Francisco Chronicle says:

If the past may be accepted as a fair index of what is to come, it will be but a few years at furthest before railroad monopolists will dictate the laws and control alike the legislative, judicial, and executive departments of the Government, own the territory, and fetter the working classes with the shackles of peonage. Already some of these corporations closely approximate that measure of power, and, unless their arrogance is signally rebuked, their aggressiveness checked, and they are forced to deal justly and respect the rights of the people, the existing form of government will collapse, and on its ruins will be reared an oligarchy of wealth.

THE COUNTRY'S DANGER.

The New York Real Estate Chronicle says:

There is real danger to the country in the vast expansion of power which the monopolists have secured, and by the time the people perceive the coils that are being wound around their necks there may be trouble. The safest way is to look the situation squarely in the face and to understand that the entire business of the country, linked as it is to-day to the telegraph and the press, is virtually at the mercy of Jay Gould, Cyrus W. Field, and D. O. Mills. They own the cables to Europe, the entire telegraphic machinery on this continent, and three out of the seven newspapers of the Associated Press. One paper more and the triumvirate will have the majority of that organization.

Do the people as yet understand the importance of this? It means that this triumvirate will have the news of the markets of the world in their possession, can operate in accordance with this news long before the great public is made aware of the dealings on the London Stock Exchange, the Paris Bourse, or the Chicago grain market. One week's operations in this manner alone will pay for the construction of more and more cables to all parts of the civilized world.

The masses will say "organize an opposition associated press," but how can newspapers construct telegraph lines when the entire machinery is already in the hands of the monopolists? There is only one remedy, and that is for the Government to take possession of the wires and deal on an equal and just footing with all those using the telegraphs.

The Omaha Bee says:

Railroad millionaires are already a menace to free institutions, and the country will not stand it to have many more of them created.

The Cincinnati Gazette says:

Honest railroad management is what is needed in this country; and it is needed badly.

The New York Journal of Commerce says:

Sooner or later the people will understand their rights and will maintain them, if this is their Government and not one of railroad pools and rings.

The Rochester Morning Herald says:

They have been hedged in and protected on every side by statutes in their interest, while the people who have nourished them until they have grown to the stature of giants, and in many cases the insolence and despotism of tyrants, are left almost wholly at their mercy. It is surely time that the people began to look after their own interests.

The Buffalo Express says:

No people in the world have welcomed the railroad era so joyfully as Americans; no other people have done so much by land grants and corporate aid to build railroads; no other people have so fully recognized the value of railroad transportation. If railroad managers have chilled this cordiality and changed it to distrust, they can blame nothing but their shortsightedness.

The Chicago Express says:

The curse of the country is not bank monopoly alone, nor railroad monopoly, but a tendency to concentrate and centralize the wealth and power of the people by means of monopolizing the wealth resources of the nation, and thereby commanding the political forces of the Government. Not a branch of industry nor an element of sovereignty but is under the ban of monopoly. Not a legislative body nor hardly a representative of the people but is a slave to its imperial dictation.

The New York Times says:

Nobody questions the value of railroads to the public or the necessity of the corporate organizations by which they are owned, but unless they are brought under the wholesome control of law, whereby the rights of individual citizens and of the community at large can be secured, sooner or later a conflict will come between their power and the might of the people which will shake the very foundations of law and order.

Corporate power is not only absorbing to itself the fruits of labor and the gains of trade and piling up wealth in the hands of the few but it is controlling legislation and endeavoring to sway the decisions of courts in its own interest. We are now at a state in the contest where the people may vindicate their authority and place these corporations under the regulation of law.

The New York Evening Post says:

All this, we may be sure, is not a summer cloud that can overcome the community without causing either special fear or wonder. It betokens a real, menacing, a present danger. It implies that a time has come when the forces of public opinion must be set at work in earnest to breast and bear back a grievous calamity. Supineness will not answer; to close our eyes and stop our ears will not answer. A moment has arrived when we must change all that—a moment when legislators and those who bribe them must cry halt. "Combines" and "consolidators" and all other plotters against the common weal in the interest of corporate monopoly must be told in trumpet tones and in something more than words if need be, "Thus far shall ye go and no further."

The Boston Journal of Commerce says:

The tendency of rapid accumulation of property, or what represents property, in the hands of a few, is one of the greatest measures of subversion of sound principles of government, and has proved itself so in the history of the nations, and, as a few become richer, the masses of the people become poorer in an inverse ratio.

The Cleveland Leader says:

A feeling prevails throughout the country that the present management of our railways is inimical to the best interests of the people. This feeling has begotten a dissatisfaction which is constantly increasing in intensity, and may eventually provoke a conflict which will end disastrously in more ways than one.

The Western Stock Journal, Iowa City, Iowa, says:

Combinations of men who own large capital for the purpose of controlling great and important business interests are the overshadowing evil of the present time.

The Saint Joseph (Missouri) Herald says:

The great danger of the day is the power of corporations. We feel it on election day, we see it in Congress, we feel it every time there is a change in freights, fares and telegraph rates.

The Portsmouth (Virginia) Times says:

Trouble, serious trouble, will just as surely grow out of the present state of affairs, and be precipitated by unjust railroad management and discrimination and the exercise of the power and influence of railroad monopolies in State and national elections, as that day follows night.

The Louisville (Kentucky) Democrat says:

There are few questions of more importance to the general welfare, owing to the aggressive spirit and arrogance of the great railroad corporations, their active participation in elections, and influence in legislative assemblies.

On another occasion, Judge Black forcibly describes the commercial situation, arising from oppressive exactions and unjust discrimination of railroad companies, in the following language:

They boldly express their determination to charge as much as the traffic will bear; that is to say, they will take from the profits of every man's business as much as can be without compelling him to quit it. In the aggregate this amounts to the most enormous, oppressive, and unjust tax that ever was laid upon the industry of any people under the sun.

Nor is this all. A grain dealer at Baltimore gets a reduction or drawback which is denied to others, and he makes a fortune for himself while he ruins his competitors by underselling them. A single mill at Rochester can stop the wheels of all the rest if its flour be carried at a rate much lower. By discrimination of this kind the profits of one coal mine may be quadrupled, while another, with all its fixtures and machinery, is rendered worthless. Such wrongs as these are done not only in a few sporadic cases but generally and habitually on a very large scale. Certain oil-men, whose refinery was on Long Island, got rebates amounting to \$10,000,000 in eighteen months, and seventy-nine houses (I believe that is the number) engaged in the same business were broken up. The creditors of the Reading Railroad, having coal lands of their own, made discriminations between themselves and others which drove competition out of the field, gave them the monopoly of the Philadelphia market, and enabled them to charge for their coals as they charge for their freight—whatever they please. Thus producers, dealers, and consumers all suffer together.

Mr. Speaker, that there is cause for alarm in the aggressive tendencies of railroad corporate power in this country, there can be no question; the press and declarations of notable men above quoted are but truthful statements of unvarnished facts.

It is not my purpose, and I do not conceive that it is, or will ever be, the purpose of this Congress or of any other American legislative body to do any injustice to railroad corporations. On the other hand, they should in their employment be accorded the equal protection that should be accorded to every citizen, however high or low, exalted or humble, in this free land, in this land where law, under the genius of liberty, "grants special privileges to none." Railroad corporations are created by law; their dealings and business are with

the public; they are common carriers of persons and goods, for which they are entitled to a fair compensation adequate to a reasonable interest on their actual cash investment and cost and risk of service.

The charge against railway corporations is, that they know no law, and observe none, which in their management shall limit or control their selfish greed; that their rule for making rates of toll is not what is a fair compensation, but "what will the traffic bear;" that they make unjust discrimination against both citizens and localities; that they have fraudulently inflated their capital stock by adding to it from 50 to 100 per cent. of fictitious value with seeming fairness upon the face of their books, but with fraudulent purpose in fact, to obtain exorbitant dividends; that their capital stock has been largely made up of lands and money donated by the people, municipalities, and the Government, for which they make no deduction in their estimates of the interest charge or dividends on account of capital stock; that they are criminally extravagant in their salaries to officials and in their prodigal expenditures for useless employments; and that they wantonly corrupt the purity of the ballot-box and commit high crimes against the sanctity of State and national legislative bodies.

Mr. Speaker, grave and astounding as the above charges may be, I shall now show them to be true. To the intelligent and observing it will not be disputed that everything pertaining to railroad management is discriminative. The village is made to pay higher rates of toll than the city; the town dealer than the village dealer; the retail dealer than the wholesale dealer; the small producer than the large producer. Throughout the West, Southwest, and Northwest, off from the artery lines, the moment a point is reached away from the main thoroughfares the farmer and the merchant are forced to pay just such rates as the magnates dictate. There is no exception to the rule which governs their absolute power; their aim is—it is their own confession—to make the highest rate the market will bear. What does it matter to a soulless corporation how many its sins or how revolting its oppression. One single corporation, controlling fifty-two branches or feeders, has nearly as many rates for freight as there are stations, not *pro rata* but arbitrary. By discriminations and drawbacks the railroads virtually decide who shall do business and who shall not, and who and who not shall be driven from their pursuits and from the public markets. To the rich, who can monopolize a large traffic, they grant special rates and favors, which they deny to small dealers, this difference in rate, or drawback, equaling a fair profit on the aggregate of the rich man's trade.

As a proof of my assertion I call attention to the following resolution, presented to this House for reference, in the third session of the Forty-sixth Congress, by Hon. Rollin M. Daggett, a member from the State of Nevada, in February, 1881:

The following joint resolution of the Legislature of the State of Nevada being presented for reference—

Joint resolution to the Congress of the United States in relation to discrimination in fares and freights by interstate railroad companies.

Whereas the people of the State of Nevada have long suffered and do now suffer under the impositions and exactions of the Central Pacific Railroad Company, which, besides retarding enterprise, injures the business and prosperity of the people of this State, and amounts to the most enormous, unjust, and oppressive tax ever laid upon the industry of a people. The said railroad company exercises over the persons and property of others an almost absolute power, vicious and tyrannical, destructive of the rights of persons and of property, and opposed to common justice, as well as to every principle of civil and constitutional liberty known since the days of Magna Charta; and

Whereas it is proper that the truth should be known concerning this corporation and its transactions, the following facts are herein stated: The people of Palisade, distant four hundred and thirty-five miles east from Sacramento, have to pay for freight on flour (fourth-class freight, per published special rate tariff of Central Pacific Railroad) per car-load the sum of \$282 from Sacramento, while the people of Toano, one hundred and twenty-nine miles further east, pay freight on flour per car-load, according to the printed special rate, the sum of \$275 per car-load, while the merchant having a contract for some so-called competitive point with this railroad company pays freight on the same article, to wit, flour, per car-load, only \$200. The merchant at Toano, having a special contract, pays \$82 per car-load less freight than the merchant at Palisade, although, as before mentioned, the carriage is one hundred and twenty-nine miles more. The goods delivered at Palisade or Battle Mountain, distant respectively four hundred and thirty-five and three hundred and eighty-three miles from Sacramento, have a freight charge of \$480 per car-load, while at Toano the freight amounts to \$275 per car-load to persons having special contract rates for so-called competitive points, the greater service being performed for the less amount. Persons shipping wool or other products from Palisade, Battle Mountain, Elko, or other points in this State to the Eastern States, have to pay local rates to Sacramento, thence freight at through rates back over the same road to the point of destination, the shipper being often compelled to pay freight at local rates for a distance of over five hundred miles, a service useless and unnecessary even if rendered. The same unjust discrimination is practiced by this railroad company against the people of this State in the rates of freight upon goods shipped from points east of this State. The freight on a box of eggs from Ogden to Toano costs one man \$3.35 per box, and the same number of eggs, in the same sized box, and of the same weight, costs another man sixty-five cents. A hundred pounds of squashes costs one man in freight \$1.36, while it costs another fifty-five cents. Hams and case goods costs one man \$2.04, while it costs another but fifty-five cents. The distance from Ogden to Toano is one hundred and eighty-three miles. The same unjust discrimination is also practiced by this railroad company in passenger fares. A ticket from Omaha to San Francisco costs \$100, while a ticket from Omaha to Palisade, being six hundred miles nearer, costs \$95. A person desiring to go East is charged within a fraction of the full fare, through and from San Francisco to the point he desires to reach, although he may ride over one-third or less of the line of the Central Pacific Railroad. More appalling examples of injustice than are shown by the above instances, selected from among a myriad of kindred transgressions, are hard to conceive; and

Whereas such pernicious practices should be no longer tolerated: Therefore, Be it by the senate and assembly jointly resolved, That the passage of the bill now before Congress known as the Reagan bill, prohibiting discrimination in fares

and freights on interstate railroads, will be hailed with joy by the people of this State as a measure of justice and relief.

Resolved, That our Senators in Congress be instructed and our Representatives requested to vote for and use all honorable means in their power to secure the earliest passage of said Reagan bill.

Resolved, That his excellency the governor is hereby requested to transmit an engrossed copy of these resolutions, under the great seal of the State, at the earliest moment, to each of our representatives in Congress.

STATE OF NEVADA, Secretary's Office, as:

I, Jasper Babcock, secretary of state of the State of Nevada, do hereby certify that the foregoing is a true, full, and correct copy of the original joint resolution which passed the Nevada Legislature February 10, 1881, on file in my office.

In witness whereof I have hereunto set my hand and affixed the great seal of State. Done at office in Carson City, Nevada, this 12th day of February, A. D. 1881.

[SEAL.]

JASPER BABCOCK,
Secretary of State,
By J. J. CHESLEY, Deputy.

Upon the presentation of the above resolution Mr. Daggett, in his speech thereon, presented a tabulated statement of facts showing the atrocious character of the management of the Central Pacific and Union Pacific Railroads. These statistics so aptly illustrate and prove the truth of the foregoing charges practiced by railroad companies not only in the locality mentioned by Mr. Daggett but throughout the whole extent of our railroad system, that I give them.

The following table shows the distances referred to in the following expense bills:

Distances by the Central Pacific from San Francisco eastward to points in Nevada.

	Miles.
From San Francisco to Reno.....	306
From San Francisco to Wadsworth.....	340
From San Francisco to Winnemucca.....	475
From San Francisco to Battle Mountain.....	535
From San Francisco to Palisade.....	587
From San Francisco to Elko.....	619
From San Francisco to Kelton, (Utah).....	803
From San Francisco to Ogden, (Utah).....	895

Mr. Daggett says:

That on all merchandise consigned from New York to railway points in Nevada, and there delivered, must be paid the following charges:

First. Full through rates from New York to San Francisco, when in reality the freights are not taken through, but delivered six hundred or seven hundred miles east of San Francisco; and,

Second. Excessive way rates back from San Francisco to points of delivery in Nevada of the same freights, which have neither been forwarded beyond nor brought back by the railroad company making the cold-blooded charge.

So inhuman, so infamous are these combined charges, that, familiar as I am with their enforcement, I should refer to them with hesitation but for the proofs in my possession, to which I invite the scrutiny of the skeptical.

And now, sir, that the full rates exacted in Nevada may be seen at a glance on commodities of largest consumption there, together with the distinct charges embracing the unwholesome aggregates, I present the following exhibit, and challenge the world to produce a parallel of tabulated railroad robbery. Should the showing fail to appal, I will submit to a change in the title:

Expense bill.

No. 253. RENO, NEVADA, 9—11, 1879.
Messrs J. & J. B. Mallon to Central Pacific Railroad Company debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
500 boxes candles.....	20,950	\$1 14	\$238 83
Advances, (meaning through rates to San Francisco).....			312 00
State toll.....			
Total.....			550 83
Storage.....			
Date of way-bill, 9—8. No. of way-bill, 263. No. of car, 5008.			

Received payment for the company,
(Signed)

J. E. WRATTAN, Agent.

Expense bill.

No. 689. RENO, NEVADA, 8—12, 1879.
Messrs J. & J. B. Mallon to Central Pacific Railroad Company debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
250 cans lard-oil.....	22,200	\$1 14	\$253 08
Advances, (meaning through rates to San Francisco).....			441 02
State toll.....			
Total.....			694 10
Storage.....			
Date of way-bill, 8—9. No. of way-bill, 327. No. of car, 520.			

Received payment for the company,
(Signed)

J. E. WRATTAN, Agent.

It is possible that the railroad tyrants of the Pacific may devise some punishment for the gentlemen who have furnished these bills, for they brook no interference with their plundering practices in Nevada. But I warn them to move with caution. This is an inauspicious time for them to single out men who have dared

to speak for their especial vengeance, for there is a spirit abroad which is growing red-eyed under the contemplation of such tyranny, and those who are now intolerant of reproach have reached the verge of a visitation of radical, irrevocable, and irrevocable retaliation. Up the bronzed and sturdy arm of toil is steadily being rolled the sleeve of preparation, and they are wise who will not provoke the blow.

I now offer the following bill from Palisade, five hundred and eighty-seven miles east of San Francisco:

Expense bill.

No. 418. PALISADE, NEVADA, 9—17, 1879.
Mr. H. Johnson to Central Pacific Railroad Company debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
6 boxes canned goods.....			
25 boxes common soap.....			
6 boxes Castile soap.....			
6 boxes maple molasses.....			
2 boxes sardines.....			
2 barrels baking powder.....	3,480	\$1 91	\$66 46
Advances, (meaning through rates to San Francisco).....			73 53
State toll.....			
Total.....			139 99
Storage.....			
Date of way-bill, 9—14. No. of way-bill, 1409. No. of car, —.			

Received payment for the company,

(Signed)

J. L. FAST, Agent.

Expense bill.

No. 425. BATTLE MOUNTAIN, NEVADA, May 16, 1878.
Mr. A. A. Curtis to Central Pacific Railroad Company debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
13 boxes machinery—100 boiler-tubes; 3 iron drums, 1 casting, 2 sections W. pipes, 12 pieces W. pipe, 1 balance W. pipe.....	20,600	\$2 04	\$420 24
Advances, (meaning through rates to San Francisco).....			502 88
State toll.....			
Total.....			923 12
Storage.....			
Date of way-bill, 5—13. No. of way-bill, 603. No. of car, 4764.			

Received payment for the company,

(Signed)

J. BROWN, Agent.

Expense bill.

No. —. BATTLE MOUNTAIN, NEVADA, February 16, 1878.
Mr. A. A. Curtis to Central Pacific Railroad Company debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
1 punch, 4 boxes P. plates, 2 crates.....	7,700	\$2 00	\$160 93
Advances, (meaning through rates to San Francisco).....			360 56
State toll.....			
Total.....			522 49
Storage.....			
Date of way-bill, 2—14. No. of way-bill, 508. No. of car, 2740.			

Received payment for the company,

(Signed)

JAMES BROWN, Agent.

Expense bill.

No. 6200. BATTLE MOUNTAIN, NEVADA, 7—24, 1879.
Messrs Gage, Curtis & Co., to Central Pacific Railroad Company, debtor, for transportation of merchandise from Ogden:

	Weight.	Rate.	Amount.
260 cars refined petroleum.....	20,600	\$2 25	\$463 50
Advances, (meaning through rates to San Francisco).....			310 25
State toll.....			
Total.....			773 75
Storage.....			
Date of way-bill, 7—16. No. of way-bill, 10829. No. of car, 776.			

Received payment for the company,
(Signed)

JAS. BROWN, Agent.

Although this last bill has been made to conform with the others from Battle Mountain, the charges are really embraced in two distinct bills—the first from Pittsburgh to Sacramento, comprising the through rates, amounting to \$310.25, and the second from Sacramento back to Battle Mountain, with an additional charge of \$463.50 and a total of \$773.75.

APPALLING EXHIBIT.

Through-freight rates from New York to San Francisco, added to way rates back from San Francisco through the State of Nevada.

Car-load of ten tons.	Through rates from New York.	Back rates from San Francisco.	Charges at Reno.	Through rates from New York.	Back rates from San Francisco.	Charges at Winnemucca.
Coal-oil	\$300+	\$236=	\$536	\$300+	\$416=	\$716
Candles	300+	236=	536	300+	416=	716
Machinery, in car loads	600+	218=	818	600+	396=	996
Dry goods, in boxes	1,200+	236=	1,436	1,200+	416=	1,616
Clothing, in boxes or bales	1,200+	246=	1,446	1,200+	596=	1,796

Nails and spikes, in kegs	300+	236=	536	300+	416=	716

The charges in this table are compiled from the printed schedules of rates of the Union and Central Pacific Railroad Companies, and must therefore be authentic. East of Winnemucca, as I have mentioned before, their figures do not extend. I therefore supplement the exhibit with the following figures, derived from receipted railroad bills and other information:

ADDITIONAL EXHIBIT.

Through-freight rates from New York to San Francisco, added to way rates back from San Francisco to points in Nevada east of Winnemucca.

Coal-oil and candles, per car-load.	Through rates from New York.	Back rates from San Francisco.	Total.
To Battle Mountain, 535 miles from San Francisco	\$300+	\$450=	\$750
To Palisade, 587 miles from San Francisco	300+	480=	780
To Elko, 619 miles from San Francisco	300+	500=	800

Is comment necessary upon these terrible rates? Do they not speak trumpet-tongued of impositions unparalleled in the annals of railroad ruffianism? These charges have been neither known nor credited beyond the State of Nevada. When mentioned by the press they have been denied, and with threats of still greater oppressions the railroad dictators have silenced the complaints of their victims.

The following letter, under date of December 9, 1879, from a prominent and respected citizen of Elko, I quote:

In relation to getting railroad receipts for freights I have been unsuccessful, for the reason that merchants and business men are afraid to have their names connected with the matter. They say the railroad company could and would ruin them in their business; therefore, they decline to give any printed receipts. Hence, I have only been able to collect the following items from a few of our leading merchants:

The Central Pacific Railroad Company charge \$350 for a car-load of coal from San Francisco to Elko.

From Cleveland, Ohio, to Elko, freight charges on a car-load of oil, (ten tons,) \$806.

Car-load of wagons from Racine, Wisconsin, to Ogden, \$350; from Ogden to Elko, on the same, two hundred and seventy-five miles, \$350; total, \$700.

Car-load of stoves, from Ogden to Elko, two hundred and seventy-five miles, \$344.

The merchants and business men of Eastern Nevada would be perfectly satisfied if they were not charged more for the delivery of freights at Elko than is charged for through freights to San Francisco, a distance of six hundred and nineteen miles farther on; or, in other words, they believe the Reagan bill now before Congress will give the desired relief, and all join in hoping that it may become a law.

What little I have written you in this matter is in confidence, as the little property I have is on the line of the railroad, and I, like others, am at their mercy.

What, I ask any gentleman upon this floor, is the meaning of this strange revelation? It means a lawless and cold-blooded levy of over \$500 per car-load upon the people of Elko, with a threat to increase the amount should they make it public. It means highway robbery, sir, with hot pincher and thumb-screw accompaniments.

The gentleman who furnished the Battle Mountain bills writes as follows:

I inclose herewith several bills of lading of the Central Pacific and Union Pacific Railroads. It is difficult to understand their system except that they get all they can, as they have four or five classes, and seem to use their own judgment or whim as to which class they will rate your freight under. The bills are all of the Manhattan Company, which has shipped a large amount of machinery from the East during the past two years. We have simply paid whatever they asked without growling, as that would do no good.

Certainly not; growling "would do no good." The agents of the Central Pacific Railroad Company are instructed to dismiss their consciences, close their ears to protest, their hearts to mercy, and their eyes to everything beyond the ghastly schedule of rates which has been placed in their hands, and charge—charge to the right of them, to the left of them, in front of them—charge everywhere and everything and see that the charges are collected. That is their business, their sole business, and it

is no part of their duties to listen to complaints and rectify wrongs. Life is too short for that; and the directors of the Central Pacific, who are fast nearing the misty realms beyond the cloud-rifts and the storm, have not yet completed by some miles the southern road, which they expect in time to exchange for the one they are now operating in Nevada.

Mr. Speaker, upon examination of the Congressional Directory, Forty-seventh Congress, I see that in 1880 Mr. Daggett was a candidate for re-election to this Congress. And, sir, I query whether his gallant opposition to and exposures of railroad robbery did not have something to do in his defeat.

The foregoing exhibits need no comment. They show a system of robberies so excessive, so unblushing, and so defiant that it is only surprising that the Nevada merchant and shipper have not risen in open rebellion. But these bills and facts therein presented are but fair illustrations of the high-handed brigandage practiced to a greater or less extent by railroad autocrats all over the land.

The Standard Oil Company, chartered of course, devoted its attention to the production and transportation of the mineral oil found in vast quantities in Western Pennsylvania. It commenced its operations when its trade amounted to only about fifty million dollars annually. It furnished employment to a hundred thousand people. The trade extended over the United States and Europe; and its value was largely increased by a foreign demand. It had to be transported to seaboard markets, when cost of transportation became the ruling element in determining its market value. In addition to the Standard Oil Company, there were in the oil regions thousands of other dealers, producers, and refiners, who, enjoying a lucrative trade, gave employment to thousands of other laborers.

Now, the Standard Oil Company was organized to control this trade, and they conceived this would be easy, provided they could control the cost of transportation. To this end the Standard Oil Company colluded with the railroads, agreeing to ship a certain quantity of oil per annum, provided the roads would so fix the price of transportation as to pay back to the company a rebate of fifty cents on each barrel. No other dealers or shippers could obtain a like contract, and at once, as by magic, the Standard Oil Company became the king and tyrant of the trade. It went deliberately to work, under the fostering care of the railroads, to, upon their own terms, buy out, crush out, and drive out all opposition, and all production except such as yielded to its exactions and subscribed to its monopoly. It at once became the sole arbiter of the fate of every man and company in the oil business; it swept away the business of whole communities; it devastated fortunes it had taken long years to earn; millions of honestly earned competencies were swept into the damnable vortex of rebates of railroad tolls. The figures show that under this iniquitous system the amount of rebates covered back to the Standard Oil Company in the short period of fourteen months was \$10,151,218.

This enormous sum, this immense profit, was a rebate paid on a single article, the product of five counties in Western Pennsylvania, and was paid by—

The Baltimore and Ohio Railroad Company	\$1,166,633 98
The New York Central Railroad Company	2,131,755 78
The Erie Railroad Company	2,131,755 78
The Pennsylvania Central Railroad Company	4,771,072 46

Thus these railroad corporations deliberately robbed the people of the Allegheny Valley by their special contract to pay a given percentage of their stolen plunder to the Standard Oil Company. And this by their exercise of an unjust and unlimited power of discrimination.

The extortions of railway companies for short hauls on their lateral lines "are so cruel and so base," says an eminent statesman, "that they cannot be thought of without bitter indignation." It is certain it costs more, relatively, to move freight a short than a long distance, but that this excess is susceptible of a fair adjustment far below the rates arbitrarily charged on our short lines cannot be doubted or questioned. By reference to tables I find that the Belgian authorities have made pro rata rates upon the following basis. The estimates I give are from a table of established rates by the Belgian Government in 1868, and upon the basis of one ton of freight per mile:

15 miles0252	93 miles0102
31 miles0186	108 miles0092
46 miles0160	124 miles0086
62 miles0138	139 miles0080
77 miles0118	155 miles0074

The regularity of increase and decrease in rate charges may be, in fairness to railroad companies and in justice to the public, governed by fixed rules. There are certain charges which are always practically the same, whether the haul be long or short, on any given road, namely, the cost of loading and unloading. Upon the through lines in New York it was estimated in 1878 that the cost of loading and unloading per ton was 33 cents, and other items of fixed cost, 27 cents per ton; the cost of haulage (maintenance of track, repairs, &c., included) was eighty-three-hundredths of 1 cent per ton per mile, thus making the cost of transportation of one ton one mile, \$0.6083.

The Senate committee of the Forty-third Congress appointed to investigate and report the cost of transportation from the West to the seaboard also adopted the above figures, and in extending the

principle here shown to different distances report the following as a fair table of rates. It must be borne in mind this was in 1875, and that by reason of increase of trade and other natural causes rates are much lower now than they were then. The principle of this estimate is upon the ratios of .60 divided by distance, plus the expense of haul, and is by the committee stated thus:

Haulage, &c.	Fixed rates.	Total.
1 mile.....	.0083	.6083
10 miles.....	.0083	.0683
20 miles.....	.0083	.0383
30 miles.....	.0083	.0283
40 miles.....	.0083	.0233
50 miles.....	.0083	.0203
60 miles.....	.0083	.0183
80 miles.....	.0083	.0158
100 miles.....	.0083	.0143
150 miles.....	.0083	.0123
200 miles.....	.0083	.0113
300 miles.....	.0083	.0103
400 miles.....	.0083	.0098
500 miles.....	.0083	.0095
1000 miles.....	.0083	.0089

Experience has demonstrated that under proper economic management freights can be carried at rates less than the above and still yield to the company a fair net profit on the actual investment; but an examination of schedule rates will show their charges to be all the way from three cents to \$1.60 per ton per mile and, as we have shown, in some instances rates far higher.

Mr. Speaker, to demonstrate the enormity of the crime yearly perpetrated upon the people of this country by unscrupulous exercise of power by railroad corporations, I call the attention of this House and the country to the following facts and figures:

The Pennsylvania Central road, in its cost of construction, is one of the most expensive roads in the United States; hence as the basis of our calculation we select this road, and upon the assumption of moving 400 tons of freight a distance of 150 miles. The estimate is made upon this company's reports for the year 1880. Now, it is stated that the actual cost of moving 400 tons of freight 150 miles was—for motive power, including locomotive repairs, fuel, and stores, \$19.50; the cost of maintenance of way, \$11.21; of maintenance of cars, \$8.12; to which they add, for expenses of conducting transportation, which includes salaries to officers, agents, conductors, and train employees, advertising, expenses of stations, losses and damages, legal expenses, &c., \$27.40; and cost of loading and unloading at terminal points at twenty cents per ton, \$80, making the aggregate cost of moving 400 tons of freight 150 miles \$146.23.

Before proceeding allow me to observe that, taking 150 miles haul for my base of calculation, the average between a long and a short haul is largely in favor of the company. Now, my deduction. If it cost \$146.23 to move 400 tons of freight 150 miles, then my arithmetic shows that 400 tons for 1 mile will cost 97½ cents; 1 ton for 1 mile will cost .0024375; 1 pound for 1 mile will cost .0000121875; 60 pounds for 1 mile will cost .000073126; 60 pounds for 1,000 miles will cost .073126. Hence it is shown that the total cost of moving 60 pounds of freight 1,000 miles is 7.3 cents; and at the same rate, that the net expense of shipping 1 bushel of wheat from the Mississippi River to the Atlantic seaboard would be only 7.3 cents per bushel.

I repeat, this estimate is made upon the estimated costs on the Pennsylvania Central road, a road the construction of which cost some \$50,000 per mile, while the average cost of railroads from the Mississippi to the Atlantic cities is less than \$20,000 per mile; a road the operation of which is much more expensive than other average lines, on account of its heavy grades, so that, allowing 7.3 cents per bushel for shipping wheat 1,000 miles, upon the basis of the Pennsylvania Central Railroad Company's estimate as to actual net cost, I have been liberal to the railroads. The fact is, the estimate of Hon. S. E. Chittenden, of New York, in his letter published in the recent number of the journal of the American Agricultural Association, comes near the truth, in which he asserts that the actual cost is much less. Mr. Chittenden shows that a rate of one-fourth of 1 per cent. per ton per mile, for 1,000 miles, would pay all costs of transportation and expenses, and 10 per cent. on cost of construction or upon capital stock. From this last statement it appears that the tariff charge for all-rail transportation of wheat from Saint Louis, Saint Paul, and intermediate points, to New York, or Baltimore, would be only 7½ cents per bushel.

This estimate, based on calculations made upon the data furnished by reports and statistics compiled by railroad officials, shows that, limiting the charge of railroads for shipments of wheat from the West to the Eastern seaboard to 7½ cents per bushel, 7.3+ cents is actual cost, while 6.7+ cents per bushel is net income on capital stock. But again, on the 16th of December, 1872, the Senate of the United States adopted the following preamble and resolution:

Whereas the productions of our country have increased much more rapidly than the means of transportation, and the unprecedented growth of population and products will in the near future demand additional facilities and cheaper ones to reach tide-water; and

Whereas in his recent message the President of the United States invites the attention of Congress to the fact that it will be called upon at its present session to consider "various enterprises for the more certain and cheaper transportation of the constantly increasing surplus of Western and Southern products to the Atlantic seaboard," and further says "the subject is one that will force itself upon the legislative branch of the Government sooner or later; and I suggest, therefore, that immediate steps be taken to gain all available information to insure equitable and just legislation. * * * I would therefore suggest either a committee or a commission to be authorized to consider this whole question, and to report to Congress at some future day for its better guidance in legislating on this important subject." Therefore,

Resolved, That a committee of seven be appointed, to whom shall be referred that part of the President's message relating to transportation routes to the seaboard.

Afterward, in March, 1872, the said committee was appointed, with Senator WINDOM, of Minnesota, as chairman. Senator Conkling, of New York, was appointed a member of said committee. After months of labor, thorough investigation, and careful research they made an elaborate report, comprising two large volumes of printed matter. The committee in their report were unanimous in all matters therein contained except as to the question of legislative control of railroads.

On page 128, volume 2, the committee say:

The regularity of decrease in rate charged corresponds with a general law governing all railway service, namely, cost of loading and unloading, and fixed expenses being the same, whether the trip is long or short. Cost of transportation per ton per mile regularly decreases as distance increases, being cost of haulage plus fixed cost divided by the number of miles. Thus if the cost of loading and unloading be 33 cents and other items of fixed cost 27 cents per ton equal 60 cents, and the actual cost of haulage (maintenance of track, repairs, &c., included) being .83 of a cent per ton, then the cost for different distances will be 60 cents divided by distance plus .83 of a cent, thus:

Miles.	Fixed.	Total.
10.....	.60	.6083
20.....	.30	.0383
30.....	.20	.0283
40.....	.15	.0233
50.....	.12	.0203
60.....	.10	.0183
80.....	.75	.0158
100.....	.066	.0143
150.....	.044	.0123
200.....	.033	.0113
300.....	.022	.0103
400.....	.015	.0098
500.....	.012	.0095
1000.....	.0086	.0089

Haulage, .0083.

From the above it is shown that in 1875 the actual net cost of shipping wheat 1,000 miles was \$0.0263 per bushel and corn \$0.0251; and that to ship a ton of freight the same distance cost \$8.90.

Mr. W. C. Kibbe, of the Continental Railway Company, in his report to the Windom Senate committee in March, 1874, makes what, from a railroad stand-point, he being a railroad man, appears to be a liberal report for railroads, based upon the ratio of charges for transportation to necessary expenses, and to interest on stock and dividends. In his estimate he states that he makes a liberal allowance for all contingencies. Mr. Kibbe bases his calculation upon the actual business which may be done upon a double-line, steel-rail track from New York City to Council Bluffs, Iowa, 1,224 miles, assuming the road to be amply equipped, with a capacity to carry 18,180,000 tons annually over its track, and running trains of thirty cars and 300 tons at the rate of 200 miles per day.

He estimates the cost of road fully equipped at \$225,000,000:

EXPENSES.	
5 per cent. on \$87,500,000, mortgage bonds.....	\$4,375,000
8 per cent. on \$87,500,000, capital stock.....	7,000,000
7 per cent. on \$50,000,000, equipment bonds.....	3,500,000
To annual sinking fund.....	1,000,000
Total interest and sinking fund.....	15,875,000
Estimating the number of trains per day at 1,000 this expense will be.....	\$43 49
Cost of all labor.....	90 00
Material and repairs to rolling-stock.....	13 00
Material and repairs to roadway.....	12 20
Train supplies.....	41 00
Total per train, 300 tons, 200 miles.....	199 69

Taking the above figures as the basis of all cost, expense, and interest-charge for transportation, the tariff on a bushel of wheat 1,000 miles would be \$0.0996. I use the above figures, made by Mr. Kibbe, a railroad man, and who admits they are liberal to the railroad company, for the purpose of showing that while transportation by all rail from the Mississippi Valley to the Atlantic has received from 15 to 35 cents per bushel on wheat, that to say the least, upon the admission of railroad management, from 6 to 24 cents per bushel has all the time been to them an unconscionable profit.

I now propose to show, from statistics furnished by railroad companies, the correctness of which cannot be questioned, the figures stated above, upon which Mr. Kibbe makes his estimate, are largely in excess of the fact as shown by reports of the Pennsylvania Central, Baltimore and Ohio, and the Philadelphia and Reading Companies.

The average cost of construction, steel track, and equipment of railroads in America is \$52,134 per mile. This makes the cost of

the Continental line, 1,224 miles, double track, full equipped, \$127,-624,032, which, at 6 per cent., makes the interest account per train per day	\$20 89
Labor account per train per day	90 00
Material for rolling-stock per train per day	6 50
Material for roadway per train per day	6 39
Train supplies	41 00

Total expense and interest per train per day

164 78

Upon this basis a four-hundred-ton train would carry wheat 1,000 miles at \$0.0617 per bushel, and a five-hundred-ton train at \$0.0484.

It will be seen that there is a difference between my estimate of the cost of the Continental line and the estimate of Mr. Kibbe of \$97,375,968. My estimate is based upon statistics of railroad constructors and railroad operators as to actual cost, while his calculation no doubt is based upon the practice of watered stocks, a large bonded debt, negotiated to bonanza stockholders at a heavy discount to swell the exorbitant tributes paid by the people to the kings of the rail. I cannot be mistaken, for such is the history of railroad construction and management.

By reference to Poore's Manual of the Railroads of the United States for 1880 we see that the aggregate paid-up capital stock of the railroads in the United States is only \$29,274—i. e., twenty-nine dollars twenty-seven cents and four mills per mile—while the funded and floating debt amounts to \$28,795.61 per mile, to which may be added capital on account of watered stock, \$23,309.11 per mile. Thus it appears that our vast railroad system, aggregating in 1881 ninety-four thousand miles, has been produced and, with all its immense control of power, with all its complications and lavish expenditures of money, managed on a cash capital of \$29,274 per mile. The owners and managers of our railroad system, upon a pittance investment of \$2,750,000, own property to the extent of over \$5,000,000,000, and are the recipients and disbursers of an annual income of over \$600,000,000, with ambition unlimited and power unconstrained.

To recapitulate: as dispensers of a public use, for a fair and reasonable compensation, I have shown where they only justly earn from \$4 to \$6 they extort from \$15 to \$40, and even more. To do this I have shown it to be their determined policy, their employés, agents, and managers declaring that it is their purpose and determination, "to serve the stockholders only, and only regard the public interest to make it tributary to the interest of the company, and to this end have constantly before them the question what rate within their chartered limits will an article bear."

The foregoing figures and estimates are made to show to the toiling producer and the consumer the extent they are taxed by unjust discriminations and exorbitant charges; they are made to show to them the extent of the wrong imposed; they have been made to show how easy it has been and is for the masters of the rail to build their palaces, gather together their fortunes, no longer counted by the thousands, but by the hundred millions, and live in luxurious pomp; they are made to show how \$5,000,000,000 of concentrated capital has been combined into the most colossal corporate power that ever dominated over a nation or people; they are made to show how by legislation a few unscrupulous financial adventurers have been favored by giving their small investments an unlimited credit, so that from a few thousand dollars they control thousands of millions of property and realize incomes of hundreds of millions; they are made to show with how bold and ruthless a hand the railroad kings impose their taxes upon the people, with no power to resist their arrogance and no means of ending their tyranny.

Mr. Speaker, in the name of my constituency, in the name of the people of my State, I ask that their voice be heard and that this body do give heed to their petition. Memorials from nearly every county in Missouri, numerously signed, have been here presented, asking for relief, and demanding of you immediate action. That railroads are entitled to a fair toll compensation for their service is not questioned, and it is equally certain that their use of franchises sustains such relation to the Government and the people that they are of right liable to legislative control. To deny Congress this right is a bold assumption of power unsupported by principle or law, and in antagonism with all just theories relating to interstate commercial relations.

Railroad companies in justification claim that the roads are private property; that the road belongs to the company owning it; that they may use it or not use it; and in using they may dictate their own terms. I again assert that the assumption is not only false but arrogant in the extreme. More, I assert, it is shamefully impudent and basely ungrateful to a Government and people who gave them not only creation but the bone and sinew, the life-blood, the money which has in the last thirty years developed the American railroad system into colossal proportions. As before stated, the aggregate wealth of the present American railway system in 1881 amounts to about five billion dollars, all to-day owned and controlled by some fifteen or twenty so-called bonanza kings of the rail. In view of these astounding figures I ask gentlemen to pause and reflect. Nor is this all. The above figures simply represent the cost value of the construction and equipment of the 96,000 miles of railroad lines alone.

In addition to this, the men who own and control this immense railroad interest also own and control all over our broad, rich, and fertile land the vast wealth of our coal and iron fields; the coal mines and the iron and steel manufacturing industries. They own and con-

trol over 200,000,000 acres of the most valuable and productive of our public domain, all of which, in addition to the value of their railroad interest, from most careful estimates, from the best and most accurate obtainable data, amounts to \$450,000,000,000.

The railroad kings, the iron kings, the coal kings, and the land kings are Vanderbilt, Jay Gould, Huntington, Jewett, Garrett, Mitchell, Dillon, Sanford, the Garrisons, and others, operating under some twelve or fifteen different corporate names, and yet, by mutual reciprocity of action and combination as one grand whole, to-day they wield and monopolize the iron and coal industry and production, the avenues of commerce, whether by land or water, of fifty million people. With an ephemeral beginning thirty years ago they have, by special legislation, princely grants, and enormous public and private contributions, become despotic masters over labor, production, commerce, and money of the nation and our people. In the beginning none were rich, some were poor, each was an humble and pliant beggar for grants and donations of money and lands to aid in extending and building up transportation thoroughfares from the markets of the East to the then comparatively undeveloped empire of the West.

I say and repeat, Mr. Speaker, thirty years ago these men were comparatively poor; their financial means and credit as men and as corporations were limited; they were suppliant beggars for favors, and were likewise profuse in their professions of good faith and fair dealing, while to-day their personal wealth is estimated by hundreds of millions and their personal and corporate control of the business interests of the country by hundreds of thousands of millions. To-day they are dictatorial in their methods and despotic in their rule; they toy with all departments of American industry; they foster, flatter, and at their pleasure destroy as may best conserve their own gain. The wards of the nation in the people's benefaction have become veriest agents of tyranny and oppression. That these assertions are true, that they are living facts, needs no further proof than to call attention to daily observation and experience of business men of the country. I have placed upon the witness stand Jay Gould, Vanderbilt, and other railroad magnates, and from their own lips, while they do not use my language, despotism, tyrant, dictator, I assert that by implication what they do say is ample affirmation of the full truth of my charge.

Now, I inquire how came Jay Gould, Vanderbilt, Dillon, Sage, and others, so vastly rich, and the corporations to which they belong the controllers of such vast wealth—Jay Gould who long since earned and invested securely in the name of his wife \$15,000,000, and Vanderbilt with his \$20,000,000 income? I reply, sir, it came from no earnings upon investments of their own capital; it has not come from their personal labor, for "they have toiled not." On the other hand, I assert that more than 97 per cent. of all their vast personal and corporate wealth has under their management been derived from the thousands of millions of money and property placed in their hands for the development of a public use, contemplated and designed by the donors for a great public good.

I again assert, and without fear of successful contradiction, that of the \$5,000,000,000 present estimated value of railroad property in the United States, and of the \$450,000,000,000 of other property controlled by the railroad syndicates, less than 3 per cent. of the capital invested which has produced this fabulous wealth was their personal advancement. Therefore, I assert and repeat on this floor, to this House and the country, that the fact is Messrs. Gould, Huntington, Cook, Sage, Dillon, Vanderbilt, Jewett, Garrett, Michell, and others have, in all these years in which the people have lavishly given and confidently trusted, been but financial adventurers in a vast enterprise, in which, if successful, they hoped fortunes to win, and unsuccessful, but very little to lose.

Stephen D. Dillaye, in one of his able articles upon railroad monopolies, so forcibly describes the growth of railroad monopolies from 1840 to the present time that I quote. He says:

In 1840 corporations, or corporation speculators, as speculators, began to look to them as the great highways of profit, enterprise, and power. Yet there was no great overreaching, no systematized system of wiping out stock, no large combinations of capital independent of local and immediate interests, no watering of stock, and but few if any of the rings which have for the last quarter of a century manipulated railroads into mediums of kingly power and aristocratic monopoly. Down to 1848 there had been no prearranged first-mortgage swindles, by and through which the real owners, projectors, and stockholders were sacrificed to build into colossal fortunes and power the scheming few.

There are four distinctive periods from which the monopolistic elements of railroad power may be said to have arisen and marched with ever-increasing disregard of public rights into that sovereignty of dictation over the highways of the nation which to-day characterizes these oligarchic powers:

1. The land grants, commencing in 1849-'50.
2. The consolidation of short and independent lines into vast trunk lines, inaugurated in 1873.
3. The war land-grant extension, reaching to the Pacific.
4. The unification of all roads from the Atlantic to the Pacific for distinctive power and distinctive monopoly.

As I have before stated, Poore's Manual for 1880 gives the aggregate of railroad capital stock as \$29.27 per mile, which for 96,000 miles would be \$2,810,120. At the same time it is assumed that the actual cost of construction and equipment amounts to about \$5,000,000,000. The estimated cost of right of way and graduation of roads is \$20,000 per mile, and \$32,133.75 as the total average cost of rail, rolling-stock, and equipage, so that the aggregate cost of right of way and graduation is \$1,920,000,000, while the aggregate capital stock is \$2,810,120,000. Capital stock here stated is the sum estimated for 1880, with all so-called watered inflations. Amount of capital stock

is never any indication of what a railroad has, or may cost. I use these figures furnished by estimates and reports of railroad companies to show how railroads are built and equipped, and at how little real cost to the ring-masters, the projectors and managers.

I assert, and think I will be able to prove, that the immense railroad property in the United States, amounting in valuation to over \$5,000,000,000, has been built up upon a capital entirely furnished by the people, by private and public advancements, in the character of absolute donations and loans, and under the intendment of subscription to capital stock, for all of which there has been but little or no payment or return of equivalent. I have no means of ascertaining the amount of private, municipal, county, and State subscriptions in the form of donations on stock, but I may say that these donations and stock subscriptions amount to many millions of dollars. I may safely say hundreds of millions, as the people in the Western, Northwestern, and Southern States can affirm. Millions of debt in the form of bonds to railroad companies, on account of municipal stock subscriptions, are to-day oppressing, beggaring, and impoverishing the people.

For the accomplishment of the full purpose of my argument, I would be glad could I state the amount of the subscriptions, but I know of no tabulated statement containing the information. I think I am safe in stating that the money thus furnished to railroad companies has been nearly equivalent, especially in the West, to the cost of construction of road-beds. In addition to cash subscriptions, Congress has at different periods from 1850 to 1871 made land grants to eighty-two different railroad companies west of the Alleghany Mountains and in the South, amounting in the aggregate to 215,203,807 acres of land. Of this grant 6,859,544 have by subsequent acts of Congress become forfeited to the United States, leaving net lands to the several companies 208,344,263 acres.

These lands are the most valuable of all the agricultural lands in the West, and may be safely estimated at an average value of \$5 per acre, and aggregating cash realized and which may be realized, \$1,041,721,315. To this may be added the Government's loan to the Central Pacific, Kansas Pacific, Union Pacific, Central Branch Union Pacific, Western Pacific, Sioux City and Pacific, under act of 1862 of 6 per cent. thirty-year bonds amounting to \$64,623,512, with unpaid interest thereon amounting April 1, 1882, to \$37,654,729.83. These bonds now amounting, principal and interest, to the sum of \$102,278,241.83, by the act of 1862 were made a first lien upon the respective railroads, but by act of 1864 this lien was released in favor of first-mortgage bonds issued by the companies, so that to-day the said companies pay no interest, and likely, we may say, to never pay any portion of the principal.

To all roads passing over public lands a right of way has been granted of 100 feet on each side of the track, also all necessary grounds for stations, buildings, workshops, depots, machine-shops, switches, side tracks, turn-tables, and water-stations, and all timber required for the construction of the roads to be found on the public lands. To the six named Pacific railroads also was granted all the timber and coal to be found within ten miles of the roads on either side.

One word as to subscriptions to railroad stock by individuals and municipal corporations. I have stated but little if any equivalent returns have been made for such subscriptions. I mean subscriptions by a class of persons other than by those who may be the managing projectors and directors of their corporate business.

It is well known as a matter of history in railroad construction that all such subscriptions are obtained that are possible. The people all along the line of course want the roads as a means of development of their country; they regard its construction as a great public benefit, and are therefore disposed to give liberal encouragement and liberal aid. By the knowing ones, the directors, they are also persuaded to take stock as a source of profitable investment. Large subscriptions are made by individuals, by towns, townships, counties, and cities. Millions of stock are thus taken for a single road, and upon assessments the money is promptly paid and certificates of stock issued. With the money thus raised the road is located, graded, and in due time is ready for the rail and rolling stock. This work has cost on the average \$20,000 per mile, the money, all, or nearly all, raised from among the people and has all been expended and the treasury is empty. Now mark what follows:

The directory, under the power granted in their charter to raise the necessary funds for iron, rolling-stock, and equipments, costing \$32,313 per mile, issue from \$40,000 to \$50,000 per mile first-mortgage 10 per cent., ten, fifteen, or twenty years bonds, which are put upon the market and sold from 25 to 30 per cent. discount, and out of the proceeds of the sale money is raised which equips the road. The bonds by the act of the directory, under the company's charter, become a first lien upon, not only the iron rail, the ties, rolling-stock, and all equipments, but also upon the right of way, the franchises, and the road-bed, purchased and paid for with the people's money. The road is operated for a time, when it is represented by the directors that more money is needed for repairs and perhaps the construction of lateral branches and feeders. So a series of second-mortgage bonds are created and issued, in all respects like the first, only subsidiary to them, and at the rate of \$30,000 to \$50,000 per mile. The second bonds are also negotiated and the proceeds absorbed under the wise management of a so-called honest directory, acting professedly in good faith for the best interests of the company; the peoples' and public good. For a moment pause, and let us see how the account stands.

We have now got one hundred miles of railroad fully equipped, in complete running order, and paying expenses. The actual money invested is \$20,000 per mile, and no more, all paid by the people on their stock subscriptions; for one hundred miles the road has cost \$2,000,000. Upon this \$2,000,000 paid by the people and invested in road-beds, the property of the company, the directory have created a debt charge of \$10,000,000, out of which they as the legal custodians or the companies' financial business have realized in cash the sum of \$7,500,000, which has equipped the road, leaving a surplus by them uninvested and perhaps unaccounted for of \$4,286,600, absorbed may be in the vortex of contingent expenses!

The people, under their different styles of subscription in this one hundred miles of road, are the owners of \$2,000,000 honest, *bona fide* stock; the road has been operated under its full equipment for ten or fifteen years; expenses have been large (so represented) and the interest charge heavy. No dividends have been paid, no interest on capital stock, for all surplus net earnings have been consumed in payment of the interest on the \$10,000,000 of bonded debt.

The bonds are now due, and no money in the treasury with which to pay. The bonds are nominally in the hands of a national bank in the city of New York, and prompt payment is demanded. The sequence is, the mortgage is foreclosed, the road with all its equipment, fixtures, and supplies is sold in the public market, at public outcry, and to the highest bidder for cash. The road is really worth, with all its furnishings, only about \$5,231,400, while the actual debt is \$10,000,000. They who hold the bonds cannot afford to sacrifice; consequently they are the purchasers, and more than likely the only bidders. The sale completed, the title, in accordance with recognized legal forms, is transferred to the purchasers. Here the curtain drops, and \$2,000,000 of hard-earned money the product of long years of labor and toil, this railroad stock, this remunerative, dividend-paying investment, this hopeful reliance for old age, or a fond father's legacy to his widow and orphans, by the intricate and mysterious philosophy of financial science is lost in oblivion forever. But, Mr. Speaker, let us for a moment look upon another scene.

On the morrow's dawn the curtain rises; before us lies the magnificent depot and grounds of our bankrupt railroad company; our eye rests upon the grand proportions and costly ornamentation of its headquarters business office; entering we witness luxurious profusion in all its appointments; we walk upon marble floors and stand on Brussels carpets; we are cordially entertained by the superintendent and all the employees; gladness smiles in every face and joy sparkles in every eye; all is bustle, all is animation, all is business; all the faces we meet, from superintendent to the page, are familiar; we have known them in the various employments of the company since the stock-subscription books were first opened; out in the yard and on the track we meet familiar faces, loaded trains upon rails of steel are hurriedly passing to and fro. The immense freight depot and elevators standing just beyond on a side track are filled with grain and merchandise, with trains of cars on either side loading and unloading. Astonished and bewildered with the scene before us, we again turn to the superintendent and ask: "Mr. A, we understood there had been a mortgage foreclosure against your road, and that you had a sale on yesterday, and that there would be a change of management." "Yes, we did have a sale. You see in the construction and equipment of the road we had to incur a large debt, for which the company issued \$10,000,000 of bonds. Those bonds were sold to five of our directors, one of whom, you are aware, is president of the National Exchange Bank of New York, and by them were pledged to the National Exchange Bank for what money we needed to complete and equip the road. The bonds becoming due, it was thought best by the holders to foreclose, raise the money by new bonds and mortgage, pay off the old debt, and begin anew." "Mr. A, is not your road paying expenses?" "Oh, yes; it is one of the best-paying roads in the country. Since we commenced running through trains it has paid all expenses, including interest on the bonded debt."

Now, Mr. A, if that be so, and it be also true, as you state, that your five directors owned the old first and second mortgage bonds, and on the foreclosure bought in the road, you now having the whole road with all its equipments and franchises for your debt, why do you again make another bonded debt? As I stated, our five directors borrowed the money of the bank on the pledge of the bonds, first and second mortgage. Their purpose now is, since these bonds are due, to pay them off and consolidate the debt into a new fifty-year bond at 5 per cent., and then the sale will be likely to increase the road's facilities for a prosperous business, by thus consolidating its ownership, thereby rendering its business management more stable.

Ah, yes, Mr. A, we understand! Good day!

Now, seated in the kitchen-corner of our farm fireside, we ponder over the past fifteen years of hope and toil, and conclude our morning's reverie with the following table of figures:

Directory of railroad in account with company.	
DR.	
To cash received on subscriptions.....	\$2,000,000
To cash received on first and second mortgages.....	7,500,000
Total cash.....	9,500,000
CR.	
By cash paid for cost of road and equipment.....	5,213,400
Net profit.....	4,286,600

I say net profit. What else can it be? I show the directory received the money—every dollar; their total expenditures on the cost of road and equipment \$5,213,400, and that there is a balance of four and a quarter millions of dollars. The sequel is, the directory now own the road, and by their management have absorbed \$4,286,600 besides! I say again, Oh, people of our boasted land of the free, pause and reflect!

Mr. Speaker, I thus illustrate my ideas of the method adopted by scheming financial charlatans in the construction and management of railroads, and show how it is that the few absorb the industries of the many and thereby amass colossal fortunes. They may have subscribed to the capital stock to the extent of \$50,000 or \$100,000, but never paid a single dollar on their stock beyond fees and salaries, charged at such rates they could well afford to pay their stock for their salary, and thereby save a handsome income. It is a very rare occurrence for a railroad owner and manager to bankrupt. I do not remember now a name. On the other hand, from small beginnings they have become very wealthy. Not a man I now remember interested as a proprietary stockholder in any of the leading lines of railroad in the country but can now, or soon may, estimate his estate by millions.

I therefore say to this House and the country there is in all this a grievous wrong, and that Congress must assert its legitimate constitutional powers by controlling and regulating railroad companies or they will surely rule the country and the people. No one will deny but what reform in railroad management is needed, and this as to tolls to the extent of fixing and limiting charges to reasonable *pro rata* rates, which shall pay the companies, estimating expenses and hazard of business, a fair compensation for their investment, but nothing more. They should be prohibited from making fictitious inflations of stock or from making any stock estimates except upon a basis of actual capital invested. They should be forever prohibited from estimating or receiving dividends upon stock or valuations of property received by the companies by means of private or public donations of lands or money.

In other words, I know of no equitable or just reason why a railroad company, which has only furnished one-half or one-fourth of the actual cash capital for construction and equipment, should be permitted by means of toll-charges to tax the people to the extent of a dividend upon the whole. It is unfair that the people should, after having largely contributed to the building of a road, be taxed upon their advancements. This is compelling the people to pay something for nothing. The company have got the people's money; it is equivalent to one-half the real value of the road; and yet they are compelled to pay the same rates for transportation as though they had contributed nothing. I say this is not just, it is not fair, it is not honest dealing as between man and man. Do gentlemen say the road has built up the country and increased the value of farms and the farmers' facilities? This is true to some extent; but, under present management, only to them available under the perils of a fearful cost.

I assert that in all these cases, while the farmers' condition may be slightly improved, the railroad kings have amassed their millions, and that the relative advantages and gains are altogether disproportionate. These wrongs and outrages daily and yearly practiced upon the people can only be regulated and controlled by legislative action. I say to members of this House, knowing these wrongs and the shameful burdens borne by a long-suffering and patient people, knowing their urgent appeals to you for relief, will you, I may say dare you, long withhold it? Beware! beware, lest you delay too long!

Tariff and Tax Commission.

SPEECH

OF

HON. JOHN RANDOLPH TUCKER,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 5, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. TUCKER said:

Mr. CHAIRMAN: The subject involved in the discussion upon this bill is of all others now challenging public attention the most important, and one of the most difficult of practical solution. The fiscal action of this Government and of all governments—by which I mean the raising of revenue and its appropriation for the expenses of government—is necessarily unequal in its operation and effects. There is a large class of people who pay more into the Treasury than they

ever get back from it; and there is a large class who get more out of the Treasury than they ever put into it.

The effect of this exaction and appropriation is, that there is in every country a tax-consuming class and a tax-paying class. Therefore, it should be the policy of all good governments to confine within the narrowest bounds consistently with the needs of the public service this fiscal action of the government, because it must necessarily operate unequally in the distribution of benefits and burdens.

But in the character of our own revenue system there is a most unpleasant tendency to irresponsibility for expenditure as well as for taxation. Our whole system of taxation by the Federal Government is indirect in its character; and therefore taxation and expenditures are felt very little by the people, the consequence of which is that the Government may lavish enormous revenues upon its favorite projects, and the people be all unconscious that they are paying any taxes to meet these expenditures.

Now, how we are to apportion the \$300,000,000 of revenue needed for the Government among 50,000,000 people, making on the average \$6 per capita or \$30 to the family of five persons; how we are to adjust this burden upon the people for the necessities of the Government; how to lay our taxes with justice and with the least oppression, so as to bear in due proportion to the ability of each citizen, rich or poor, to pay, is one of the most important and difficult problems of government.

Taxation is a branch of what the law writers call "eminent domain;" that is, the supreme dominion which government has over the property of the citizen or over his person, when either is needed for a "public use." Man and his property may be commanded by government for a "public use;" that is, for a purpose which concerns all as members of society, and gives benefit to the party subjected to this power, in common with all others. It must be a public use, as distinguished from a private benefit.

But government cannot take private property, even for a public use, without just compensation. This principle, canonized in Magna Charta six centuries ago, is a part of the fifth amendment of the Constitution of the United States.

Taxation exacts the property of the citizen for public use. It does not, it cannot, give him compensation for this, for that would be to give him back what it had just exacted, which would make nugatory the power of taxation. The just compensation which each citizen thus contributing of his means to the support of government receives is in the equal benefits which he derives in common with all others from the beneficent action of the government for the safety and well-being of the whole people.

Now, to take property for public use without just compensation is clearly unconstitutional. To take it for private use, even on just compensation, is as clearly unconstitutional. It assails the manhood of the citizen to take what he has earned for the private use of another. This is tribute exacted for the support of privilege. Take it for a public use, on just compensation, and it is right. But to take it for public use without compensation, or for private use, even on just compensation, is to violate the liberty of the man in his self-use, and his right to hold all he earns against men and government, except for the common benefit of society.

Taxation exacts property for public use without any compensation but the common benefit. Bearing a common burden, the citizen must derive a common benefit. When revenue is needed it is his contribution to the common fund for a common benefit; but when taxation is laid, except for the revenue needed by the Government; when it takes the property of A to give it to B; when it exacts a tribute from one to bestow a bounty on another, this violates right and justice; this lays burdens on one to create a privilege for another; this is despotism and tyranny; for if when compensation be given it is unconstitutional to take A's property for private purposes, *a fortiori* it is unconstitutional to tax A for B's benefit without compensation. When, therefore, the tax power is exerted to raise revenue for the Government it is just and legitimate; but when it is perverted from the purpose of revenue to the grant of a bounty or special privilege to a man or a class, if done directly, it is a robbery; if indirectly, it is a fraud, under forms of law. It is no longer for the use of government, but a bounty exacted from the citizen to maintain a privileged class. This is despotism and tyranny.

Taxation for revenue only is therefore a fundamental maxim of all true liberty! Taxation perverted from this purpose to the object of so-called protection to any class, directly or indirectly, is not only illegitimate but a violation of right and justice, and, in my judgment, contrary to the spirit of the Constitution.

Now, I advance another step and affirm that all taxation should be equal. I do not mean that each man should pay the same amount of tax; but it should be equal in this: it should be proportioned to the ability of each citizen to contribute to the common revenue, and by being thus proportioned it will meet that other view which has been taken of taxation by some writers; it will be in proportion to the means of each man, which are protected by the Government.

With a view to considerations which will be presented later in this discussion, I propose now to take a summary notice of the various modes of taxation which might be adopted by this Government.

The first form is direct taxation, which is a tax on the *corpus* of property, or on the income of property, or a tax on the head—a capita-

tion tax; and secondly, indirect taxation, which I may state generally is on consumption—

Mr. CHACE. The gentleman does not claim this Government can make a tax on property?

Mr. TUCKER. Yes, I do.

Mr. CHACE. The Constitution provides especially it shall be *per capita*.

Mr. TUCKER. I am sorry to see my friend from Rhode Island does not know as much about the Constitution as I think he ought, for he will read in the first article of the Constitution, and I think in the second section, that representation and taxation shall be proportioned to the number of people in the State; and a direct tax may be laid, observing that proportion, on the lands of citizens of the State, as that is one of the forms of direct taxation.

Mr. CARLISLE. And the Supreme Court has decided that is the only one.

Mr. TUCKER. Yes, and also the capitation tax. These two forms, and these only, the Supreme Court has decided may be adopted by the Federal Government under the terms "direct taxes."

Mr. CHACE. To be laid in proportion to numbers.

Mr. TUCKER. That is true; but it will be laid on the land or the persons. The indirect tax is a tax on consumption; because, as will be shown hereafter, customs duties, license taxes, and the excise tax, at last fall on the consumer, and therefore these indirect forms of taxation are really taxes on consumption.

Let us look at them for a moment. Suppose we should raise (as the gentleman from Rhode Island has suggested) the \$300,000,000 of revenue we need by a capitation tax on 50,000,000 of people; that would be \$6 per head or \$30 for the family of five persons. Now, this tax would be very unequal and unjust, and specially onerous on the poor; but I will show you presently, Mr. Chairman, that there is not a poor laboring man in the country who would not make money by paying such a capitation tax instead of the taxes he pays under this tariff. Thirty dollars per family raised by a capitation tax would be very unequal, because Vanderbilt and Gould would pay no more tax than the pauper in the street. They would pay by the head and not according to ability.

Now, take a tax on the *corpus* of property. That ought to be *ad valorem*; because if specific then the same tax would be laid on an acre of mountain land as upon an acre in the city of New York. Therefore, it must be *ad valorem* in order to approach equality.

But if *ad valorem*, it would be an unequal tax, because it would tax the scanty furniture of the wretched room of the poor seamstress in the same ratio that you tax the owner of a palace filled with luxury and plenty.

And besides, you would tax the widow with her two mites, which she needs for her living, in the same ratio that you tax the property of the millionaire, which is far in excess of his needs. Besides, you would make the non-income-bearing property pay equally with that which breeds ample income, and furthermore, you would relieve the ample income of the professional men and others of all tax because they have no tangible property you could reach.

What then? It is best and fairest to lay the tax according to the ability of the tax-payer to pay, because all taxes, you perceive, are at last paid out of the man's income. The fairest tax of all the various forms of taxation, in my judgment, that can be laid on the citizen would be a tax proportioned to incomes; with an exemption of a part to cover the needs of life; because thus you would make the man pay, in proportion to his ability, to meet the exigencies of the Government. And while thus you would not burden non-income-bearing property, you would make those contribute to the public Treasury who get an income, although they have no ostensible property. Their income measures ability to pay—and also the benefit which the Government affords to him who earns the income under its protecting care.

I come now to indirect taxation. It is an ingenious device of government by which the citizen is chloroformed into unconsciousness of the source and cause of the felt burden which he bears. I will venture to say there is hardly one man in ten in the secluded parts of this country who realizes the fact that he pays in some States as much as fourfold more of tax to this Government than he does to the government of the State under which he lives; and therefore it is that there is a temptation—and I beg to call gentlemen's attention to it—on the part of the people to see power go out of the hands of the States into the hands of this Government, because power which requires an appropriation of money is felt by the people of the country less consciously when it is expended by this Government than when it is expended by the State government.

And, in my judgment, one of the most centralizing tendencies of our federative system results from this fact: that the power of this Government is made effective through indirect taxation of which the citizen is unconscious, while the power of the States is exerted by means of direct taxation; and the people, so unconscious of the one and so sensitively conscious of the other, are reluctant for the exercise of power by the States which will require the taxation they see and feel, and more willingly concede that power to the General Government because it is to be exercised through indirect taxation which they do not see and feel.

But the payer of the duty, of the license tax and of the excise knows

that he pays no tax which he will not recover back from the consumer; and the consumer forgets or fails to remember that he is repaying the tax or duty already paid to the Government by these middlemen, the amount of which tax or duty is included and concealed in the price of the article which he buys. These are therefore taxes on consumption, and were originally invented to drug the people into unconsciousness and thus make the Government irresponsible for taxation and for expenditure. It thus stimulates extravagance and perpetuates heavy taxation; for from the effect such taxes have on the business industries and trade of the country, taxation becomes permanent, for fear a change may disturb these sensitive interests; and this generation is to-day paying taxes to which it never gave its consent through its representatives, but which was entailed upon it by a generation now dead and gone.

Now, Mr. Chairman, all this, in my judgment, is a great evil, and it seems to be an unchangeable evil, for when we proposed to change the law and reduce taxation it was postponed at one time since I have been in Congress because the country and its business interests were too depressed in their condition to bear the change, and now when it is proposed we are told we are too prosperous to admit of any change of our tariff system lest it may cause a panic in the land. Thus the calamity of grievous taxation is perpetuated.

And thus it has come to pass that this bill proposes that the whole tariff question be put into the hands of a commission, giving to other parties the responsibility which belongs to this House to find the facts upon which the tariff may be revised and a new system may be established. And I may say in passing here what would perhaps more properly come in at another time, that you propose to give the power to create this commission to the President and the Senate, thus divesting the House of the power which, under the Constitution, we have—to originate revenue bills, and placing it in the hands of the President and Senate. This is the second time in a month in which we are expected to do, what the President insisted should be done in the Chinese matter—that to him and the treaty-making power we should surrender our power to pass laws affecting commerce. Are we tamely to give up all our power to the President and Senate?

The question, Mr. Chairman, which is suggested at this stage of the discussion is this: Why is it—and I wish to press this inquiry upon the House—why is it that this House, which represents the tax-paying people, has been so reluctant for so many years to reduce the taxation upon the people? Was there ever a time in the history of any other country when the reduction of taxation was so difficult? Ah, Mr. Chairman, if you could call into full view the reason which operates in the minds of a portion of the people of this country and their representatives here against the reduction of this tariff system, you would find that their purpose in continuing this taxation is not to raise revenue for the support of the Government but to secure and perpetuate special benefits to those classes which have become predominant in legislation, by making other classes pay tribute to them.

Now, for one moment let me call your attention to this view. I arraign this tariff system as the most insidious form of the evil which results from indirect taxation that could be devised, in that it taxes incomes and the income of the poor in a larger ratio than that of the rich. Look at it for a moment, and see if I am not right in that proposition. Take the man who has an income derived from his labor of \$300 and the man who has an income of a million. The poor laborer consumes the whole of his income from necessity. Suppose the millionaire only consumes as much through penuriousness. Now, suppose you tax all the necessities of life through your tariff, and what will result? If you impose a tax of 50 per cent. upon the articles consumed by the laborer and those consumed by the rich man, then to buy the necessities of life, which without duty he could buy for \$200, he must expend all of the \$300 earned by him. In other words, he pays 50 per cent. in their enhanced value upon their original cost.

That is to say, he will pay \$100 out of the income he earns as a tax upon the necessities of life which he consumes. This is 33½ per cent. upon his entire income. Now, take the millionaire, or the man who spends the same amount of his income as the poor man. He pays \$100 upon the articles he consumes and no more, and that \$100 is a tax of the one-hundredth of 1 per cent. upon his income of a million. The poor man therefore pays three thousand times as much in proportion to his income as the rich man does, and therefore the burden of taxation under your tariff system, by being laid upon the articles of necessary consumption, are to the extent the income is used in purchasing these articles a heavy and onerous tax upon the income of the laboring classes. You tax all the income buys, which is equivalent to taxing the income itself and exempting the articles bought from all taxation.

And this is what you call protection to the American laborer, by which the poor become poorer and the rich richer through your system of taxation. This makes a tax upon consumption strike down the poor while it benefits the rich. It is a heavy tax upon the wages of labor and exempts capital from its proportionate burdens.

Now, while it is true that all of the necessities of life are not taxed under the tariff, yet to a large extent they are, and to that extent the proposition I maintain is a correct one. I take it that of the \$300 earned by the laborer \$150 are consumed in buying articles taxed under the tariff, and that would make the tax on the poor man about

\$50 out of the \$300. That would be a tax of 16½ per cent. upon his entire income.

Now, let me compare with the operation of this tax that of the other forms of taxation which I have considered. A has \$300, and spends one-half for articles on which he pays a tax of \$50 under the tariff. Hence A pays \$50 tax per year for his family of five persons, which is one-sixth of his income. Now, see how the capitation tax would affect him. He pays only \$30, as I have shown, out of his income of \$300 as his proportionate share, and would thus make \$20 by paying a capitation tax rather than by paying duties under such a tariff system.

And so with the tax upon property. The assessed valuation of the entire property of the United States is put down at \$16,000,000,000, from a tax on which we are to pay this revenue of three hundred millions. If A earns \$300 and owns \$1,000, his tax would be only \$18.75, instead of \$50 under the tariff.

Now, suppose it was a tax upon incomes, and that the incomes of the entire country were seven billions of dollars, as was estimated in 1870. A would then pay out of his \$300 of income only \$13 tax, instead of \$50 under our tariff. He would pay less tax therefore in any one of these other forms of taxation than he pays now under the operation of the tariff.

Now, I do not mean to be understood as maintaining that because of these evils I am for abrogating the tariff system. I am only arraying this tax by way of comparison with other modes of taxation, to show that the operation of the tariff system is to tax the necessities of life consumed by the poor, and is in effect to tax the incomes of the poor in great disproportion to any tax paid out of their incomes by the rich.

I admit that the tariff system is a necessity, because a resort to direct taxation has other evils connected with it which I would gladly avoid and intend to avoid. I would rather see this whole internal-revenue system swept from existence if it could be done in justice to the revenue of the Government and without rendering necessary the increase of the rates of duty under this tariff; but at the same time, looking at the tariff system as a necessity, I ask my friends on both sides of the House if it involves this evil, this vice of inequality of burdens upon the poor and the rich, is it not right we should diminish these evil effects instead of increasing them or continuing them in their oppressive operation?

We are willing, sir, to pay revenue to support the Government, but not to pay bounty for the support of privileged classes.

If, then, the tariff means tax and is laid for revenue, I admit it is right; but if the tariff, which is tax, is imposed upon articles of consumption not for purposes of revenue, but with the object and design of bestowing a benefit upon any privileged classes in the community at the expense of any other; if it taxes one class and supports another, then I maintain it is against right, against law, and is unconstitutional in its character. Gentlemen will admit that a bounty paid out of the Treasury is a subsidy. Now, is there any gentleman on this floor who will maintain that this Government could pay to the iron interests of the country \$100,000,000 out of the Treasury in order to support them and make them prosper? And yet I shall show to you hereafter that \$100,000,000 is the amount of the bounty paid by the consuming classes of this country to the iron interests protected by this tariff. Where is the difference whether, on the one hand, you tax the people to fill your Treasury, and then pay out of it to these favored classes \$100,000,000 by direct appropriation, or, on the other hand, while putting no money into the Treasury, you put your hands by your tax-power into the pocket of the consumer and take out his money and put it into the pockets of these favored classes? Does not the one injure the consumer and benefit the privileged class as much as the other? If different in form, do the methods differ in substance? The one would be done by open violence; the other is done—I mean no disrespect to anybody who maintains it—by fraud on the part of the Government. Can you do by indirection what you dare not do directly?

Mr. Chairman, I maintain that this tariff system is not only against right but is really unconstitutional. This is no new position. I quote the resolutions of the great Massachusetts expounder of the Constitution, proposed in 1820, and adopted by the people in Faneuil Hall:

Resolved, That we have regarded with pleasure the establishment and success of manufactures among us, and consider their growth, when natural and spontaneous, and not the effect of a system of bounties and protection, as an evidence of general wealth and prosperity.

Resolved, That relying on the ingenuity, enterprise, and skill of our fellow-citizens, we believe that all manufacturers adapted to our character and circumstances will be introduced and extended as soon and as far as will promote the public interests, without any further protection than they now receive.

Resolved, That no objection ought ever to be made to any amount of taxes equally apportioned and imposed for the purpose of raising revenue necessary for the support of government; but that taxes imposed on the people for the sole benefit of any one class of men are equally inconsistent with the principles of our Constitution and with sound judgment.

Resolved, That the supposition that until the proposed tariff or some similar measure be adopted we are and shall be dependent on foreigners for the means of subsistence and defense is, in our opinion, altogether fallacious and fanciful and derogatory to the character of this nation.

Resolved, That high bounties on such domestic manufactures as are principally benefited by the tariff favor great capitalists rather than personal industry or the owners of small capital, and therefore we do not perceive its tendency to promote national industry.

Resolved, That we are equally incapable of discovering its beneficial effects on agriculture since the obvious consequence of its adoption would be the farmer must give more than he now does for all he buys and receive less for all he sells.

On the limitations upon the powers of every government in respect to the rights of the individual, I quote the massive language of Chief-Justice Marshall in *Fletcher vs. Peck*, reported in 6 Cranch, 87-135:

It may well be doubted whether the nature of society and of government does not prescribe some limits to the legislative power; and if any be prescribed, where are they to be found if the property of an individual fairly and honestly acquired may be seized without compensation? To the Legislature all legislative power is granted; but the question whether the act of transferring the property of an individual to the public be in the nature of the legislative power is well worthy of serious reflection.

In the case of the *Loan Association vs. Topeka*, 20 Wallace, 602, the same doctrines are applied to the case of a diversion of the power of taxation for private benefit instead of being exercised for revenue only. Mr. Justice Miller, delivering the opinion of the court, said:

Beyond a cavil there can be no lawful tax which is not laid for a public purpose. * * * To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals, to aid private enterprises and build up private fortunes, is none the less robbery because it is done under the forms of the law and is called taxation.

Again:

It must be conceded that there are rights in every free government beyond the control of the State. A government which recognized no such rights, which held the lives, the liberty, and the property of its citizens subject at all times to the absolute disposition and unbounded control of even the most democratic depositary of power, is after all but a despotism.

No court, for instance, would hesitate to declare void a statute which enacted that A and B, who were husband and wife to each other shall be so no longer, or which should enact that the homestead now owned by A should no longer be his, but should henceforth be the property of B.

If these decisions be true expositions of constitutional law, how can any tariff be constitutional which is not laid for revenue only, or which is not laid for a public purpose or use, but is designed to defeat revenue by an entire or partial prohibition of imports in order thus to enhance the price of domestic products (to use the language of Justice Miller) "for the benefit of private enterprises and to build up private fortunes?"

These decisions seem to me to cut down to the very roots of this protective policy and to invalidate the principle on which it is based. But let me look at the question more in detail.

Is the protective principle constitutional? On what clause of the Constitution does it rest? If its claim rests on the clause "to lay and collect taxes, duties, imposts, and excises," then I confront it with the clear purpose of the clause to give a power for revenue only. There is no power to lay duties, except as connected with that to collect. It is a power for revenue only. Its purpose is defined in the succeeding words, "to pay the debts and provide for the common defense and general welfare of the United States." These words, taken from the old Articles of Confederation, fix the objects thereby defined as for revenue only. You cannot pay debts with a tariff which defeats revenue; you cannot provide for general welfare by taxing one part for the benefit of another. That is special, not general welfare. You cannot provide for the general welfare of the United States when some of these States are burdened for the benefit of other States. If the claim is based on the power "to regulate commerce," I deny that that clause gives the power to lay duties on imports, and this for several reasons.

First. Before the Revolution our ancestors distinguished between the power of the mother country to regulate commerce and to levy duties. The last was denied, the former was largely conceded by the colonies. The framers of the Constitution could not have intended by giving to Congress the power to regulate commerce to grant the power to lay duties. (See *Dec. of Rights*, Oct. 14, 1774; *Jour. of Cong.*, 27-29.)

Second. In the convention the power to regulate commerce was restricted at first by requiring a law regulating commerce to have a two-thirds vote in both Houses. In the mind of the convention then the power to lay duties could be exercised by a majority, that to regulate commerce by a two-thirds vote. How, then, can we suppose they intended by the power to regulate commerce, which could only be done by a two-thirds vote, to include the power to lay duties, which could be done by a majority vote?

Third. This interpretation is sustained in *Gibbons vs. Ogden*, 9 Wheat., 1.

Fourth. The origination of bills for raising revenue in the House of Representatives shows this distinction. Must a bill to regulate commerce originate in the House? And so in article 1, section 9, we read of "a regulation of commerce or revenue"—showing the same distinction.

Fifth. If the power to regulate commerce with foreign nations includes the power to tax imports from a foreign nation, how can we avoid the conclusion that the Government may tax articles passing from one State to another? And yet no such power has ever been claimed, nor is its negation due to the prohibition on taxing articles exported from any State, for the Supreme Court has interpreted that word "exports" as meaning exports to a foreign country.

Taking, therefore, the absence of power to lay duties except for revenue, and the deeper view presented by the Supreme Court, that to tax for a private benefit is against right, as I have shown it was

contrary to a provision of Magna Charta, now incorporated into our Constitution, I feel I am on firm ground in disputing the constitutional power to lay duties to protect and foster special and favored interests. It is a perversion of power from its lawful to an unlawful use.

But gentlemen say the power is conceded by the historic action of the Government; that the first tariff act of 1789, in its preamble conceded the claim of the Government to lay a tariff for the purposes of protection. That preamble is as follows:

Whereas it is necessary for the support of this Government, for the discharge of the debts of the United States, and the encouragement and protection of manufactures, that duties be laid, &c.

Interpreting the preamble by the act passed, in which the duties ranged from 5 to 15½ per cent., we can readily see that the idea of our fathers was that such protection as manufactures could get as an incident to a tariff for revenue only they did not deny. The average rate under that act was 8½ per cent.

Well may we say with Burke, in speaking of the preamble to the Grenville act in regard to the claim to tax America: "It is the weight of that preamble, of which you are so fond, and not the weight of the duty, that the Americans are unable and unwilling to bear!"

There is not a so-called free-trader on this floor who would not gladly adopt that act as the consummation of all their desires, and which protectionists vaunt as the precedent for their power to levy duties under this tariff of 100 and in some cases several hundred per cent.

The tariff of 1790 averaged 11 per cent.; that of 1791 13½ per cent. In 1809 the highest duty was 24½ per cent. The tendency to increase is observable and fruitful in suggestion of evil from a bad precedent. Power, when it once gets a foothold, never yields what it has won, but stealthily and step by step moves on, until to-day it claims a manifold larger measure of protection for its manufactures in their maturity than when it fostered them in their infancy.

It was not until after the war of 1812, in the year 1816, that the real era of protection began. And yet, looking at that tariff, with one or two exceptions, we would adopt that, which was deemed sufficient for the infant, as the measure of your fostering care over these sturdy adults, who now clamor for larger protection than was required for helpless childhood.

I proceed now, Mr. Chairman, to consider the effect of the tariff upon imports and revenue. The natural effect of a tariff—and I dislike to seem to go into the simple principles of this question, but for its being the best method for reaching its real philosophy—the natural effect of the tariff must be to raise the price of the article which is imported. The formula for revenue is revenue equal to duty multiplied by imports, (or $R = D \times I$.) Now, when you lay the duty on an imported article, the result must be that either the importer, the foreign producer, or the consumer will pay that duty. And I admit that there are cases in which it is divided between them; but there are also cases in which the consumer pays it all.

When the duty is very low there will be very little decrease of importation. In fact as you increase the duty, while the duty remains very low, you will also increase the revenue almost in the same proportion. But when the duty is much increased the tendency will be to diminish consumption more rapidly, because consumption is in the inverse ratio of prices.

And it is curious to see how the consumption of such a prime article of necessity as sugar has gone up and down in Great Britain and the United States with an almost infinitesimal decrease and increase of price. In other words, the man with scant revenues has to cut his coat according to his cloth. And where there is an increase of the price of any article of prime necessity he has to reduce the amount of consumption in order to meet the exigencies of his case.

Now, this would not be so if the duty did not enhance the price of the article to the consumer. I admit that it is not always true that the full amount of duty is paid by the buyer; for the seller may abate his price (which abatement may come out of his profit or out of the cost of the article which includes the duty paid by him) in order to secure a market; and thus the seller would share with the consumer the payment of the duty. But the rule is as I have said, that the consumer pays back in price the duty which the importer has paid. Demand and supply may also temporarily affect the question.

Again, sometimes the foreign producer may have to pay the whole or a portion of the duty in order to secure our market through the domestic importer. Hence the foreign producer, the domestic importer, and the consumer may in some cases divide the duty; but ordinarily the duty will fall on the consumer in whole or in great part because the foreign producer will not continue to produce nor the importer to import if neither can get back from the consumer what the custom-house demands in the form of duty.

Suppose the duty is over 100 per cent. on the first cost of the article, then it is obvious, if the importer or the foreign producer pays it all, he will be paying in duty more than the value of the article in order to give it away. If the duty is just 100 per cent. and the foreign producer pays it all, he will really be giving away his product. And then as the duty rises from 1 per cent. to 100 per cent. consumption will decline with the advancing price, and the producer may begin to abate his price to retain the market until he finds his abatement has exhausted his margin of profit; when foreign production for our market will cease, imports be at an end, and the prohibitory point be reached.

In this way the foreign producer or the importer may to a certain extent divide the duty with the consumer. The margin of profit to either defines the limits within which they may for a time, but beyond which they will not long consent to, share the burden with the consumer.

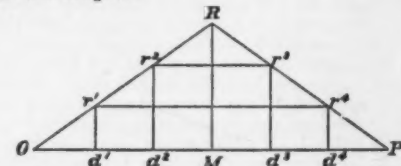

Taking now the formula $R = D \times I$, the results may be stated thus: In the case of the tariff system, it follows that as the rate of duty increases, the amount of consumption or importation will decrease. When the duty is nothing, the revenue will be nothing, however great the importation. When the importation is nothing the revenue will be nothing, however great the duty; and as the importation falls off with the increase of the rate of duty until the duty becomes prohibitory by so increasing the price of the import as to prevent any consumption, it follows that between the point of no duty and the prohibitory rate there will be an ascending scale of revenue to a maximum point of revenue and a descending scale of revenue from that maximum point to the point of prohibition; so that on either side of that duty which raises the maximum revenue on any article there will be a lower and a higher duty which will raise the same amount of revenue.

Therefore, as no higher duty ought to be laid than is needed to raise the requisite revenue on any particular article, it follows that the true revenue duty is the lowest duty which will bring the required revenue. To lay the higher duty to obtain the required revenue, instead of the lower, which will achieve the same result, is an oppressive violation of right in making the burden heavier than the needs of the Government require for its support. Such higher duty is not a revenue measure, but is a needless limitation upon consumption, oppressive to the citizen and an improper restriction upon freedom of commerce. In other words, the lowest rates of duty which will secure the required revenue may be termed a revenue tariff; the highest rates securing the same will be a protective tariff. The former enlarges consumption, the latter diminishes it, and both bring the same amount of revenue. The one decreases the comforts of the people by decreasing ability to consume; the other increases their comforts by enlarging their capacity of consumption.

That is my idea of a revenue tariff—the lowest rate of duty on every article which will produce the required amount of revenue from that article. To lay the higher rate of duty which is on the other side of the maximum revenue point is to make a protective tariff, and is to lay heavier burdens on the people than the needs of the Government require.

This view enables us to test the object and design of different forms of duty. If the higher duty is laid when the lower will produce the same revenue, then the difference between the two duties is that amount of duty which is not laid for revenue at all but is laid for protection only. Thus if we should find that 20 and 40 per cent. on any one article would raise the same revenue, and we should lay 40 per cent. rather than 20 per cent., the difference, or 20 per cent., would be the duty not laid for revenue at all, but laid simply to raise a bounty which consumption is compelled to pay for the support of privilege. This test fixes the purpose, lawful or unlawful, as a stamp upon the act.

If the committee will allow me I will give a ready geometrical illustration of this subject:

Let the isosceles triangle O R P have its base O P as the measure of rates of duty, and the perpendiculars $r' d'$, &c., from the sides falling on the base be the measures of the revenue from the rates measured on the base. The perpendicular R M is the maximum revenue point, the duty O M being that which obtains it. Now, observe at O and P, points of no duty and of a prohibitory duty, there is no revenue marked on the diagram. When the duty is O d' and O d'' the revenues marked by $r' d'$ and $r'' d''$ are equal. If the duty O d' be laid, the duty is for revenue only. If O d'' be laid, O d' being for revenue only, the excess of duty measured by $d' d''$ is the measure of tribute exacted, not for revenue at all, but for privilege only. This enables us clearly to mark the line between a tariff for revenue only and one laid with another design or purpose.

Hitherto I have considered the effect of the duty only upon consumer, foreign producer, and importer.

But a new party must need be now more particularly noticed, though he has already been introduced. As the price of the foreign product is enhanced to the consumer by the duty and by freight and other incidental charges involved in transportation from point of production to point of consumption, it is obvious that if a producer of the same article can be found at home who can afford to do so at the enhanced price, but could not at the prime cost abroad, plus freight, &c., he will get his chance to do so under a tariff system. And this is the respect in which a tariff becomes useful in the eyes of some gentlemen for a purpose, which disregards revenue as the primary object of the grant of power to lay duties, and looks

almost exclusively to the support of classes of industry through this sovereign power of taxation. This purpose, some gentlemen of full advanced ideas regard as the principal object, and, so far from favoring a tariff for revenue with incidental protection, they uphold a tariff for protection for protection's sake, and only for revenue as an incidental object.

Let me examine this question critically. When, for any cause, the cost of production of any article is greater in this country than in foreign countries, it is obvious if all duties were abolished the only enhancement to the price of the foreign product would be in freight and other charges of transportation. These last give a constant advantage to the home producer.

But when a duty is laid it increases that advantage. Yet, unless the prime cost of the foreign product plus duty plus transportation charges raises its price to the prime cost of the home product, the latter cannot compete in the home market successfully, that is, with profit, with the foreign article. The duty in such cases may decrease consumption of the foreign article by increasing its price, but it gives no protective advantage to the domestic product and the duty is thus a duty for revenue only.

But if the duty be raised so as that the cost of the foreign product plus duty plus freight, &c., shall equal the cost of the home product, the two will be in fair and equal competition in the home market. This is the rate of duty which my friend General Garfield always said he favored, and I may term such a tariff a competitive-protective tariff. The prices of the foreign and domestic article are by the duty thus made equal, and the consumer may buy the one or other for the same price according to his preference. And this competitive tariff will generally be beyond the maximum revenue point, because consumption of the foreign article will fall off from the double cause, increased price and the new domestic competitive source of supply. But there will be revenue from such a tariff and yet protection; a tariff bringing in revenue, and yet raised for the distinct object of giving protection, competitive protection.

When you raise the duty beyond this precise point where each puts his article on the market with equal chance for profit, you increase the advantage of the domestic producer, because you compel the foreign producer to abate his profit in order to put his product on the market on equal terms with the domestic producer, who can still sell at full profit.

When your duty is raised so high that the foreign product must abate all profit or even lose if sold at equal price with the domestic product, importation will cease and your tariff becomes prohibitory. It protects by the absolute exclusion of the foreign product, and hence revenue ceases and your prohibition gives a monopoly of the home market to the home producer. In this case you cease to lay a duty for revenue; you lay a duty to prevent revenue, and give a monopoly to your privileged class in the command of the home market.

I proceed now to answer a very natural question: Can and, if so, how can a tariff for revenue only, a duty this side of the maximum revenue point, give any protection to the home product? Can and, if so, how can a tariff for revenue only incidentally protect?

What do we mean by "incidental?" As the word indicates philologically, it means that which may fall into, that which may either casually or probably fall into, or happen; for it has this latter meaning (probability) secondarily. Now, how will this happen with reference to a revenue tariff? There are different modes in which it may happen, and the House will excuse me if I indicate them, for a great deal has been said on this topic, and I hope that what I shall say will throw some light upon it.

The cases already considered have been taken, as if all foreign production, as well as domestic, was by one person, at one place and under one fixed condition. But this is not the fact, and from this variance between the reality and our previous hypothesis arise the conditions which make it possible to have a tariff for revenue only—which may and does give incidental protection to domestic products.

First. The foreign article may be produced in two countries abroad; one of which can produce it at a much less rate than the other, and therefore the rate of duty may exclude the higher-priced article from abroad, and may not exclude the lower-priced article. Take, for instance, a case of this kind: suppose a ton of pig-iron can be made in this country for \$15, in England for \$10, and in Sweden for \$5. It is obvious that a duty of \$7 per ton would raise the price of the English pig to \$17, so that it could not compete with the American pig at \$15, yet the duty of \$7 per ton on the Swedish pig would raise its price to only \$12, so that it could not only come into competition with, but undersell, our domestic product. Thus a tariff may be laid for revenue only, and may bring the maximum revenue, by reason of a large importation of some foreign articles which can be so cheaply made, and yet other foreign products be excluded by the same duty, and the domestic product take their place in home consumption. The cheaper foreign product might not supply the whole home demand, and hence home production would fill the vacuum from which the higher-priced foreign product would be excluded by the duty.

Second. But there is another mode in which a similar result may happen. I desire to call particular attention to this because the conditions which give rise to it exist in this country and in all countries. There are certain places in every country where a given article can be made more cheaply than elsewhere in the same country. Take, for instance, pig-iron. I have before me an article from "Bradstreet,"

in which the writer says that in Pennsylvania pig-iron can rarely be made for less than \$19 per ton; in Ohio, for not less than \$20 per ton; while it can be made in Virginia, Tennessee, and Alabama for \$12 to \$14 per ton. It can be made in the district I represent at these low figures. It is obvious, therefore, that a duty of \$7 a ton on English pig-iron, which can be made at \$10, (I find \$12.50 seems to be the average,) would, with the freight and charges, say \$4, bring it into delicate competition with the Pennsylvania and Ohio pig, while the Alabama iron and Virginia pig could undersell both in our markets. And I say to my Southern friends who are fascinated by this doctrine of protection that the advance of Southern manufactures will come not from protective duties, but from the fact that she has cheaper raw materials than Pennsylvania for iron manufacture, cheaper ores, as cheap coal and fluxing material, and as nearly in contact. Pennsylvania may need this high duty to compete with the foreign product, but not so the South. At a lower rate of duty she can undersell England and Pennsylvania, and the capital now invested in Pennsylvania would, if the duty were lower, have to make its plants in the South in order to meet the foreign rival in the home market.

The South has her cotton-fields by the side of her factories, and without any or only a moderate duty on cotton goods, with skilled labor such as New England has, the freight on the raw cotton alone will give her the advantage of her Northern and her foreign rivals.

Third. Another mode in which a tariff for revenue only may afford protection incidentally has been already intimated, but I must give more prominence to it.

When I was a boy, I will not say how long ago it was, I went to Northern Indiana when there was scarcely a railroad west of the Alleghany Mountains. I went to an iron furnace in that State. No doubt the pig-iron made there had a market in the neighborhood. What did the maker care about English pig? Why, sir, to make a haul overland in wagons, and by water in part, from the seaboard to that furnace in Indiana would have enhanced the price of the English pig-iron more than the duty now laid on it. So there is an element of protection from freight; not only freight from abroad, but domestic freight to the point of consumption, or, in other words, freight from the point of production to the point of consumption, which makes a large factor in protection the domestic product receives. Therefore you may, in competition with the English iron, have an advantage equal to freight on the foreign product to its seaboard plus the ocean freight and insurance plus the freight from the seaboard to the interior point of consumption; and that will so raise the price of the foreign article in the far-off interior market as that it cannot come into competition with the domestic article made near to that point of consumption. This is nature's protection, given without oppression, and independent entirely of the duty which you propose to lay by law to help the one man who produces the article at the cost of another who consumes it.

Now, the furnace on the seaboard may not be able to compete with the English iron but the furnace in the interior may well do it, because it has the additional protection of the freight from the seaboard to the place of consumption. So that, while on the sea coast foreign iron may be consumed, and hence pay a large revenue, in the interior the domestic product may exclude the foreign, and thus the same duty may be laid with the object of raising the largest possible revenue, and yet incidentally protect some of the domestic products.

Fourth. There is another mode I will now mention. When the home consumption is far beyond the possibility of home production to supply its needs, then a very high duty may be laid for very large revenue, and which will be highly protective to the home product. This arises chiefly where the article is one of prime necessity. Consumers must have it, though the price be largely enhanced by the duty, and when so enhanced it raises the price greatly of the home product, and thus protects it.

A strikingly beautiful illustration of this is in the article of sugar. I give table of imports:

	Pounds.
1879 total imports, (dutiable).....	1,598,461,986 00
1880.....	1,592,261,958 00
1881.....	1,869,173,897 50
1881 total imports, (from Hawaiian Islands, free).....	77,136,270 00

Our products at home were as follows:

1879.....	239,478,753 00
1880.....	198,962,278 00

In round numbers we consumed in 1880 of sugar forty pounds to the head; we produced only one-ninth of what we consumed; we admitted from Hawaiian Islands two-fifths of our production.

We could hardly by any duty prohibit importation of sugar; people must have it. Hence a very high duty brings us \$46,000,000 of revenue, and yet gives sugar planters a large incidental protection. And if we did not fear to lose the revenue from sugar—nearly one-fourth of all we derive from customs—the duty should be decreased, by which revenue and protection would be diminished.

But in this case the bounty paid to the home producer is one-ninth of what the Treasury gets. Rice is another article on which a very high duty brings large revenue and yet gives great, too much, I think, incidental protection. In this case, the duty no doubt is beyond the maximum revenue point; in sugar it is not.

Fifth. One other mode may be mentioned in which a purely revenue duty gives incidental protection in special conditions of the market. A specific duty when the price of an article is low may be absolutely

prohibitory, for its equivalent ad valorem duty is very high. The same duty may become a revenue duty when the price of this article is high, for then it is a relatively low equivalent ad valorem duty. Thus when English pig-iron is worth \$10 per ton the duty of \$7 is 70 per cent. ad valorem, which would be nearly prohibitory. When the price is \$20 per ton (because of active demand) the same duty is only 35 per cent. ad valorem and will give large revenue. This has been demonstrated by experience in the last decade.

An ad valorem duty may, when prices are low, be prohibitory, but when high may be a revenue duty, because at high prices the producer may abate his price to secure the market in which he can sell despite abatement at remunerative profits.

Hence a tariff for revenue only at the time of enactment may become a tariff for protection at another.

These instances must suffice to show how a tariff for revenue only may incidentally, perhaps accidentally, protect domestic products.

When I am asked what I mean by a tariff for revenue only, I answer: I mean a tariff the object and design of which is only to raise revenue, and which is limited to the necessities of the Treasury. If that revenue duty accomplishes the purpose of protecting any industry at home, at the same time it raises the requisite amount of revenue, and be the lowest duty on the article which will produce it, then, gentlemen, so well and good; I will not fail to accomplish the principal purpose I have in view and for which the duty was laid, and which it does accomplish, because of that result which falls in as an incident to my legitimate purpose. I will not, to avoid the incident, abandon the principal design. But as soon as you pass the maximum revenue point and lay a heavier burden on the people than revenue demands, you step beyond the limits not only of the constitutional power you have but overleap the bounds of right and invade the sanctity of property. You strike a blow at the manhood and personal liberty of the citizen.

If the only design of the duty be to raise a certain revenue on any article, and the lowest duty which will do that is laid, the incidental protection which casually or more probably will arise from it is not unlawful; it is the incident and not the object. The object is revenue, and that is attained; the incidental protection which follows is lawful. And I may say that the benefit of such an incidental protection is that thus only healthy enterprises will spring up, and while they will thrive, they will do so with no detriment to consumers. The incident of protection arises from the natural relations between the foreign product, the domestic product, and consumption; between the points of supply and demand, and out of the cost of production and of carriage; so that the domestic producer under a revenue tariff invests his capital, thrives, and blesses others while he himself is blessed.

I am afraid I am traveling by slow stages to what gentlemen may consider the practical bearing of this subject, but I hope to be excused, because I desire to discuss the fundamental principles of this whole tariff system as far as my capacity will permit.

If I am now asked the question: "But does the duty enhance the price of foreign products, and does it enhance the price of domestic product?" I say it does. But if gentlemen ask me "does it enhance it to the full amount of the duty?" I say no, not always, but always to a greater or less extent, in the normal condition of things.

There may be exceptional conditions which will prevent it doing so, and some I will now mention.

For instance, supply and demand will effect the result. Thus high duties, when they are first imposed, (and I desire to call attention to that,) offer such a stimulus of bounty to all those who would go into the business, all over the country, that they rush in regardless and not knowing of other people doing the same, and the result is overproduction, and overproduction brings about a fall in prices, and then the high-tariff man says, "Don't you see, gentlemen of the consuming classes, that high tariffs make low prices?"

A few years ago, when this question was before the Committee on Ways and Means, a gentleman by the name of Parks, an intelligent witness, appeared before that committee, and a colloquy occurred between him and myself on the subject of Bessemer steel rails. I quote from his testimony:

Mr. TUCKER. Can the American steel manufacturer, in ordinary times, make steel as cheaply as the English manufacturer?

Mr. PARKS. No, sir; not as cheaply. Labor is very much higher in this country, and the cost of almost everything, except perhaps fuel, is higher in this country. In ordinary times a tariff is necessary to raise the price of the imported article so as to allow the American article to be sold, and we are obliged to sell it two or three cents a pound below the foreign article.

Mr. TUCKER. Has the price of steel fallen within the last two or three years?

Mr. PARKS. Yes; it has fallen on an average three to five cents per pound.

Mr. TUCKER. To what do you attribute that?

Mr. PARKS. Partly to competition, partly to prejudice.

Mr. TUCKER. How can that competition be overcome by continuing the present tariff?

Mr. PARKS. In this way: those of us who are thoroughly and fairly established and who have expended large sums of money in economical appliances and reduction of labor can go on and probably make a little money.

Mr. TUCKER. It is an application of the new doctrine of the survival of the fittest?

Mr. PARKS. Yes, sir; the strongest can survive.

Mr. TUCKER. What will become of the weaker ones?

Mr. PARKS. They will go down, as they have been going down.

Mr. HILL. The more the tariff is reduced the greater the number will go down?

Mr. PARKS. Yes, sir; and still the price will go up. The fewer there are in the business the better prices we will have.

Thus a tariff stimulates overproduction, a temporary fall in prices follows with the ruin of the weak investors, the strong survive as monopolists, prices rise to their normal condition, and that is the enhancement of price of the foreign and domestic product to a point approximate to if not to the full extent of the duty imposed on the foreign article.

Now, Mr. Chairman, all this is denied by our friends on the other side of the House. They say the tariff does not enhance the value of the domestic article. I think that there are some answers on the surface of this statement to which I will briefly call attention. First, if the price of the home product is not raised but reduced by the tariff, why is it that for seven long years since I have been in Congress the room of the Committee on Ways and Means has swarmed with the representatives of the iron, steel, and other protected industries, clamoring that Congress shall keep up this system of duties, and piteously declaring that if the duties are taken off they are ruined? Ruined by high prices! and prosperous under low prices! Are they clamoring to keep up the tariff system in order that prices may be kept down and their gains lessened? Do they protest against lowering the tariff because they fear the articles that they manufacture may go up in price?

How absurd! Is not your demand based upon this, that you are in such an unhappy condition in this country that you cannot produce articles in competition with foreign products because of your dear labor and dear capital? That is, that the English and European factory man can make a cheaper article than you can because he has cheap labor and cheap capital. Then what is the duty for? To enable you, with dear capital and dear labor, to sell at the same prices as he does with cheap labor and cheap capital; to force his low price to the higher one, at which you can afford to sell. Why, Mr. Chairman, there is not a sensible man who represents the protected industries on this floor who could be induced to maintain such a proposition for an instant; and do you gentlemen of the protectionist school who profess a desire to protect the wages of the American laborer aim to do so by lowering the prices of the articles he produces and thus decreasing the fund out of which his wages are to be paid?

Now, I put you upon one or the other horn of the dilemma. Either this tariff system increases the price of the article to the consumer or it does not. If it does, what right have you to force the consumer to pay more for the article than he could buy it for in the open market of the world? And if it does not raise the price, then I turn you over to the American laborer, and now ask how can he be protected by low prices instead of high prices? You may take either horn of the dilemma you please, and I insist you must be impaled upon one or the other to your utter discomfiture. And notwithstanding the boast of my distinguished friend from Michigan [Mr. BURROWS] the other day, who prophesied that the high-tariff system of this country is bound to prevail, I venture to predict that this protective system is bound to be condemned by the free public opinion of the intelligent people of the United States in this the nineteenth century.

Upon this question of political economy I quote Alexander Hamilton:

Exorbitant duties on imported articles would beget a general spirit of smuggling, which is always prejudicial to the fair trader, and eventually to the revenue itself; they tend to render other classes of the community tributary, in an improper degree, to the manufacturing classes, to whom they give a premature monopoly of the markets; they sometimes force industry out of its more natural channels into others in which it flows with less advantage; and in the last place they oppress the merchant, who is often obliged to pay them himself without any retribution from the consumer. When the demand is equal to the quantity of goods at market the consumer generally pays the duty, but when the markets happen to be overstocked a great proportion falls upon the merchant, and sometimes not only exhausts his profits but breaks in upon his capital. I am apt to think that a division of the duty between the seller and the buyer more often happens than is commonly imagined. It is not always possible to raise the price of a commodity in exact proportion to every additional imposition laid upon it. The merchant, especially in a country of small commercial capital, is often under a necessity of keeping prices down in order to a more expeditious sale.

The maxim that the consumer is the payer is so much oftener true than the reverse of the proposition that it is far more equitable that the duties on imports should go into a common stock than that they should redound to the exclusive benefit of the importing States.—*Federalist*, No. 33.

John Quincy Adams, in a most able report upon manufactures made in 1832, said:

The doctrine that duties of import cheapen the price of the articles upon which they are levied seems to conflict with the first dictates of common sense. The duty constitutes a part of the price of the whole mass of the article in the market. It is substantially paid upon the article of domestic manufacture as well as upon that of foreign production. Upon one it is a bounty, upon the other a burden, and the repeal of the tax must operate as an equivalent reduction of the price of the article, whether foreign or domestic. We say, so long as the importation continues, the duty must be paid by the purchaser of the article.

The incidental effect of competition in the market, excited, on the part of the domestic manufacturer, by the aggravation of duty upon the corresponding article imported from abroad to reduce the price of the article, must be transient and momentary. The general and permanent effect must be to increase the price of the article to the extent of the additional duty, and it is then paid by the consumer. If it were not so, if the general effect of adding to a duty were to reduce the price of the article upon which it is levied, the converse of the proposition would also be true, and the operation for increasing the price of the domestic article would be to repeal the duty upon the same article imported—an experiment which the friends of our internal industry will not be desirous of making. We cannot subscribe, therefore, to the doctrine that the duties of import protective of our own manufactures are paid by the foreign merchant or manufacturer.

Now, Mr. Chairman, after discussing this question upon the general features and upon the authority of those two distinguished gentlemen from the North, two of the most distinguished men in American history, I come to prove the fact that your high tariff does enhance the prices of the domestic product. Take pig-iron: I have a table which was made by myself several years ago from reliable data; the duty was 7 per ton:

Year.	British pig-iron.	Philadelphia pig-iron.	Difference.
1871.....	\$15 00	\$35 12½	\$20 12½
1872.....	25 00	48 87½	23 00
1873.....	30 00	42 75	12 75
1874.....	23 00	30 25	7 25
1875.....	17 00	25 50	8 50
1876.....	15 00	22 75	7 25

I present another, made up from the Iron and Steel Bulletin, the organ of the iron and steel associations of this country, in which also the price of pig-iron is given abroad as compared with domestic prices:

	English pig.	Scotch pig.	American.	Duty.
1879.....				
Average.....	\$8, \$10, \$13	\$10 to \$17 50	\$21 50	\$7
Jan. 14, 1880.....	\$22 50		40 00	7
May 15, 1880.....	\$12 25 to \$14 25		25 00	7
Dec. 28, 1881.....	51s. 6d. = \$13 61s. = \$15 25		\$23 00 to 27 00	7
Feb. 15, 1882.....	50s. to 59s. = say, \$15		24 00 to 27 00	7
Mar. 29, 1882.....	\$12 50 to \$15		23 00 to 25 50	7

Freights, \$3, \$4, \$4.50, \$5.

Take March 29, 1882: price of British pig (\$12.50) + duty (\$7) + freight (\$3) = \$22.50. This is the cost to the consumer of British pig-iron. The cost of American pig-iron is \$23, showing that the price of the home product is enhanced to the full amount of the duty and freight on the foreign article.

The duty on pig-iron is \$7, and the freight from \$3 to \$5 per ton. So if you make an equation you will find that the price of the foreign product plus duty plus freight equals just about the price of the American pig in the American market.

In other words, as a friend of mine outside of this House says, the pig-iron manufacturer gets the "full pound of flesh" which is given to him by the duty on the foreign product. And so in reference to bar-iron. I take a comparison as of January 6, 1882:

Price of Staffordshire bar-iron in London £7 5s. to £7 15s., say.....	\$37 50
Duty.....	22 40
Price of bar-iron in New York.....	60 48

It is thus seen that the difference between the British and American bar-iron is about the amount of the duty, which in this and the former case the consumer pays to these privileged classes.

I come now to Bessemer steel rails, and I take the table, for which I am indebted to my careful, learned, and distinguished friend, Mr. CARLISLE, of Kentucky, in which it is shown that the difference between the price of the two does not always come up to the full duty of \$28. In 1882 it was \$25.90, the duty then being \$28. Then I have the statements here from the Iron and Steel Bulletin, in which the prices are given, from which it is shown that the full pound of flesh is almost always taken in that case.

Hon. J. G. Carlisle's table.

APPENDIX A.

Year.	Price in Eng-land, free on board.	English price.	Price of Amer-ican steel rails in gold.	Difference in price.	Rate of duty.
					Per cent. Per ton.
1864.....	17 12	\$85 65	\$148 50	\$62 85	45
1865.....	16 7	79 56	127 50	47 94	45
1866.....	14 10	70 56	117 50	46 94	45
1867.....	13 10	65 70	113 28	47 58	45
1868.....	12 12	61 32	105 00	43 68	45
1869.....	11 6	54 99	97 38	42 39	45
1870.....	10 7	50 37	91 17	40 80	45
1871.....	11 6	54 99	91 18	36 19	
1872.....	13 18	67 64	98 43	30 79	28 00
1873.....	16 9	80 05	103 91	23 06	28 00
1874.....	13 2	68 75	85 76	17 01	28 00
1875.....	9 2	44 28	59 75	14 97	28 00
1876.....	6 12	32 12	44 97	12 75	28 00
1877.....	6 0	29 20	42 08	12 88	28 00
1878.....	5 5	25 55	42 00	16 45	28 00
1879.....	5 10½	26 88	48 25	21 37	28 00
1880.....	7 1½	34 36	67 50	33 14	28 00
1881.....	6 10	31 53	60 00	28 47	28 00
1882.....	6 7½	31 10	57 00	25 90	28 00

I now add my own table, taken from prices current in the Bulletin:

Bessemer steel rails.

Date.	British price.	American price.
December 28, 1881.....	\$31 25 to \$32 50	\$57 50 to \$60 00
February 15, 1882.....	31 25 to 32 50	55 00 to 58 00
March 29, 1882.....	28 25 to 32 50	55 00

I come now to iron rails, and give a table compiled from same sources:

Iron rails.

Date.	British price.	American price.	Duty.	Freight.
1879.....	\$27 50	\$41 25	\$15 68	\$3 00 to \$5 00
March, 1880.....	45 00	68 00		
May, 1880.....	30 00	50 00		
December 28, 1881.....	\$27 50 to 30 00	\$48 00 to 50 00		
February 15, 1882.....	27 50	46 00 to 46 50		
March 29, 1882.....	27 00	47 00 to 48 00		

By equating the items in this table it will be seen that on March 29, 1882, the result is as follows:

British rails, \$27 + duty, \$15.68 + freight, \$3 = \$45.68.

This is less than the price of the American rail; so that the consumer pays to the iron-rail manufacturer the full amount of duty plus freight in enhanced price.

We consumed in 1880 of iron and steel, imported \$51,454,573; we consumed in 1880 of iron and steel produced at home, \$296,557,685. On this the Government got a revenue of \$21,462,534.36, or an average duty of 41.6 per cent. If we suppose the enhanced price paid on the domestic product was only 30 per cent., or about three-fourths of the duty—and this was moderate, as I have shown; the full duty was paid on pig, rails, and nearly so on bar-iron—then the bounty paid on all iron and steel products by the consumers to the protected classes was not below \$80,000,000; I think it was over \$90,000,000. Allowing only \$6 for pig-iron, \$20 for bar-iron, \$12 for iron rails, and \$25 for steel rails, as the enhancement of price per ton on the domestic product consumed, I find the bounty paid on these alone is over \$65,000,000; that on the residue would bring it up to \$90,000,000.

The Government gets none of that. The Government gets \$21,462,534.36, or about one dollar in revenue for every four or five dollars that the iron manufacturer gets in bounty. Contrast this with sugar. The Government gets eight dollars for every one the planter gets in bounty. One-fourth as much in case of iron and steel, eight times as much in case of sugar.

Now, as regards woollens. My friend and colleague on the committee, Mr. RUSSELL, of Massachusetts, said the other day that he had an instance that was got up by somebody in reference to blankets, which seems to me most unreliable and inaccurate. I give my statement in reference to blankets, which I have from good authority. A pair of wool blankets of five pounds' weight in England costs \$2.50 a pair; a wool blanket with no shoddy in America costs \$4.50. In other words, the blanket buyers, shivering in the cold winter blast, pay only \$1,500 of revenue to the Government, and I estimate seven or eight millions of dollars to the blanket factory man in this country in bounty. The amount of revenue from blankets is the stupendous amount, at a duty of from 80 to 100 per cent., of \$1,500. It is absolutely prohibitory. The diamond that glitters in the ear of beauty pays a duty of 10 per cent., and the shivering pauper who wants a pair of blankets to cover his nakedness pays nearly 100 per cent. duty upon their cost.

The English laborer with three days of work can buy a pair of blankets; he does that in what is God-cursed England, according to the idea of protectionists; and the American laborer cannot buy a pair of blankets in this country except with four days' labor. What matters it if he gets more wages if they will buy less than the wages of the English laborer? Is not this a fine specimen of the protection given to the American laborer by this tariff policy; to make our laborer pay more for a blanket than the pauper laborer of England?

I had from the great house of A. T. Stewart & Co. a letter, about two years ago, in which they give a statement of the prices of a number of articles of woolen goods within their knowledge and connected with their business. I remember there was a great laugh in the Committee on Ways and Means a year or two ago when I insisted on reducing the duty on balmorals and alpacas. It was thought to be astonishing that I knew anything about balmorals. [Laughter.] I did not know a great deal about them. Still what little I did know gave me an interest in them. You will find, Mr. Chairman, from an inspection of this table that the amount of enhanced price of the American goods of like character with the British goods is almost in every case the full pound of flesh, the duty on the foreign articles:

NEW YORK, October 2, 1879.

J. S. MOORE, Esq.:

SIR: Agreeably to your wishes we herewith hand you statement showing rela-

tive values of certain goods made in Europe with similar goods made in the United States. In all cases manufacturers' prices only are stated:

Cost.	Cost of similar goods of American manufacture.	Duty.
BLACK ALPACAS.		
<i>Cost in England, fall of 1879, per yard.</i>		
27-inch, 4d. = 8 1-6c.	\$0 20	6c. + 35 per cent. = 8.8c. = over 100 per cent. ad valorem.
4 1/2d. = 9 1-5c.	22 1/2	6c. + 35 per cent. = 8.1c. = 100 per cent. ad valorem.
5d. = 10 1-5c.	25	6c. + 35 per cent. = 8.50c. = 95 per cent. ad valorem.
5 1/2d. = 11 1-4c.	35	6c. + 35 per cent. = 9.9c. = 90 per cent. ad valorem.
6d. = 12 1-4c.	37 1/2	6c. + 35 per cent. = 10c. = 83 per cent. ad valorem.
7d. = 14 1-4c.	40	6c. + 35 per cent. = 11c. = 79 per cent. ad valorem.
8d. = 16 1-3c.	42 1/2	6c. + 35 per cent. = 11.6c. = 72 per cent. ad valorem.
9d. = 18 3-8c.	45	6c. + 35 per cent. = 12.3c. = 68 per cent. ad valorem.
BLACK CLOTHS.		
<i>Cost in Germany, fall of 1879, per yard.</i>		
54-inch, 5 marks = \$1.22	2 50	50c. + 35 per cent. = 92.7c. = 75 per cent. ad valorem.
FANCY SUITINGS.		
<i>Cost in England, fall of 1879, per yard.</i>		
6-4, 5s. 10d. = \$1.40	2 30	30c. + 35 per cent. = 69c. = 50 per cent. ad valorem.
BLACK WORSTED COATINGS.		
<i>Cost in France, fall of 1879, per yard.</i>		
56-inch, 9.25 francs = \$1.80	3 25	30c. + 35 per cent. = 83c. = 46 per cent. ad valorem.
MERINO HALF-HOSE.		
<i>Cost in England, fall of 1879, per dozen.</i>		
1 lb. 12 oz., 9s. 10d. = \$2.40	\$4 50	50c. per lb. + 35 per cent. = 84 + 87c. = \$1.71 = 68 per cent. ad valorem.
MERINO VESTS.		
<i>Cost in England, fall of 1879, per dozen.</i>		
Men's, 10 lbs., 43s. 1d. = \$10.55	20 00	50c. per lb. + 35 per cent. = \$8.50 = 85 per cent. ad valorem.
Ladies', 8 lbs., 42s. 7d. = \$10.42	22 50	50c. per lb. + 35 per cent. = \$7.30 = 73 per cent. ad valorem.

We have on hand samples of all goods represented by the above statement. In many instances it can readily be seen that the imported articles are much superior, notwithstanding the great difference in prices.

The imports of woolen goods according to the report for last year amounted to \$45,164,149; the revenue from duties thereon to \$27,285,625; which makes an average of 60 per cent. duty. The total woolen product of this country—of which none, or almost none, is exported because the woolen manufacturer of this country cannot go into the markets of the world and compete with the manufacturers of the world—for 1880, as per census returns, was \$267,271,254, which we buy at the enhanced price. This would make the total amount of bounty which we pay to the woolen and worsted manufacturers of the country \$125,000,000, counting the enhancement of price not at 60 per cent., the full rate of duty, but taking it at 45 or 50 per cent. of the duty.

When it is remembered that there is embraced in this class of woolen goods not only blankets but flannels, hats of wool, and other goods that are used for clothing for the poor of this country—when I show you this I ask you, Mr. Chairman, is it not time that this enormity of oppression on the masses of the people of the country and the laboring classes for whom the gentlemen on the other side profess so much friendship and care should be at once and forever destroyed? I do not mean that the whole tariff system should be destroyed, but that its enormous bounties should be cut down and its oppressive burdens on the poor should be largely reduced, and that we should by judicious steps reduce these heavy duties to a standard which will avail to raise the revenues of the Government and avoid that system by which tribute is exacted from the many in order to pay for privilege to the few.

For, see what revenue you derive from woolens; you get, as I have stated, \$27,285,625; you pay in bounty to this privileged class, say, \$125,000,000. That is for every dollar we pay to the Government we pay nearly \$5 as a tribute to privilege.

Take one or two articles of glass, and the story is the same. Even that article which admits the light of heaven while it shuts out the

storm is burdened to the humble cottager with a heavy duty—a tax on light and shelter in America from which the British home is free.

Plate-glass above 24x60 per square foot.

Cost in Europe in United States money	\$0 31
Duty	50
Wholesale price in New York	94

Window-glass, common, 24x30 per box of fifty pounds.

Cost in Europe in United States money	1 01
Duty	1 38
Wholesale price in New York	3 50

I have not been able to procure anything in reference to the current prices of British and American cotton goods. I understand that a great many American cotton goods have been sent abroad to be sold. When I mentioned that fact to a friend some years ago (I will not give his name, because it was said in private conversation) he said that a great deal of that resulted from the fact that over-production had thrown upon the hands of our manufacturers a large amount of goods that were unsalable in this market; and like a great many dealers who advertise that they are selling off at cost or below cost, the manufacturers shipped off these goods anywhere that they could get anything for them rather than hold them without sale and at a loss.

But if it be true that American cottons can compete in foreign markets with foreign goods, then here is another dilemma. Can the cotton manufacturer of the United States manufacture as cheaply as the Englishman? Can he compete on equal terms and without protection with the Englishman in foreign markets? Then in the name of common sense why is it that you give strangers the benefit of your high skill, and make the children at home pay an exaction of from 30 to 50 per cent. for your benefit? If you can compete profitably in the foreign market without a duty, then you can compete at home with the foreign manufacturers without a duty, and we are entitled to the same privilege of obtaining at low prices cotton goods from you at home that the foreign consumer is entitled to abroad.

Now, you may take your choice of these two horns of the dilemma: either you can make your goods as cheaply as they can in England, or you cannot. If you can, then take off the duty; if you cannot, then, gentlemen, we pay the enhanced price of your product on account of your inability to produce as cheaply as they do in Great Britain; and therefore, by reason of the duty on foreign goods, we pay an enhanced price for home goods.

Now, what is the amount of tribute paid by the consumers of this country to the protected interests? That, of course, is a matter very largely of conjecture. There are certain facts to which I have already called your attention, and they are facts about which there can be no doubt, which show in the case of certain articles what is the amount of tribute that is paid beyond all controversy.

Looking over the whole field, and giving credit to the principle of supply and demand as bringing the price of goods down, with the margin which they have of high profits, from the full pound of flesh to what the manufacturers can get for their goods in the market, I take it that the total amount of bounty paid to privileged classes of this character cannot be far short of \$800,000,000 a year. Professor Perry, as my friend from Illinois [Mr. MORRISON] said in his very able speech of yesterday, has put it at \$600,000,000. Some years ago I put it at \$500,000,000. The elements of the calculation may be stated thus: In 1870, the manufactured products amounted to \$4,232,325,442. In 1880, the amount cannot be less than \$6,000,000,000. Suppose one-half only is affected by the duty, and that only two-thirds of the duty is the measure of enhanced price. The average duty is 43 per cent. That would make the amount over \$800,000,000, which is nearly one-tenth of the annual product of the country; and that amount is thus transferred annually from the mass of consumers who are without bounty, and who pay thus much of tribute to the privileged orders erected by this protective policy.

Now, take any one of these sums and you have this enormous problem to solve: Why is it, on what principle of right is it, that you can lay a tax upon the mass of the consuming classes of this country of from five hundred to eight hundred millions of dollars, in order to support the privileged classes engaged in manufactures?

It is said, however, by our friends on the other side, and they argue their case with great power and great ingenuity—for power never failed in all the history of the past to have the means by which its intrenchments may be made strong and its fortresses and bulwarks well-nigh impregnable—our friends on the other side say "Oh, it is true that at present you do pay more for the goods you buy than you would if you bought them abroad. But remember fifty years ago you had to pay a great deal more for these goods than you have to pay for them now, and you ought to be content with that."

Why should I be content with that? Is the whole advance of civilization, by which the production of the world has so greatly increased that all the comforts of life are almost, or ought to be, within the grasp of the poorest man in the land—are these great benefits to be denied to me and to you for the purpose of enhancing the profits of the producer of the article at home? Am I not entitled to the advantage which this generation has inherited of cheap prices for all of these articles of necessity and comfort?

"But," they say, "it is pretty hard on you now, but hold still and in the 'sweet by and by' it will come easier, and a high tariff will

reduce the prices of these articles after a while. You ought to be content to pay heavily for them to-day in order that twenty years hence you will pay much less for them on account of the protective system."

Now, let us see about that. I will not go into the details. They say: "Why, you complain of Bessemer steel rails being so high. Look at it; ten years ago they were \$150 a ton, and now they are down to \$60 a ton. Do you not see of what advantage the protective tariff has been? If it had not been for the protective tariff Bessemer steel rails would be very high yet."

Now, has your protective tariff reduced the price of Bessemer steel rails? It is like the fly on the wheel of the carriage that thinks he is turning it around. Sir, your tariff has nothing to do with it. If it had, then what has lessened the price of the article in Europe? It is true that Bessemer steel rails have gone down all over the world. Is it due to your tariff?

And, gentlemen, if it is due to your tariff, will you tell me why it cannot do something else? Why does it not reduce the price of iron rails? Eh? What is the reason? Here I have a table giving the price of iron rails. In 1850 they were \$47 a ton; in 1860, \$48 a ton; in 1882 they were \$49.25 a ton. Why does not your protective tariff operate a cure in that case?

Look at pig-iron prices: In 1844, \$25.75 per ton; in 1850, \$20.87 per ton; in 1860, \$22.75 per ton; in 1880, \$28.50. Take bar-iron: In 1850, \$59.54 per ton; in 1860, \$58.75, and in 1880, \$60.38.

Do you not see your specific is not a panacea in any case but in Bessemer steel rails? And I will now show you it had nothing to do with the fall of prices in that case.

One cause is that machinery is ever taking the place of the man. In 1850 in manufactures wages was 23 per cent. of product; in 1860, 20 per cent.; in 1870, only 13 per cent. The percentage of labor in Bessemer steel rails is only 9 per cent.

Mr. Robinson, in an address at Sheffield, in 1879, (quoted in a note to Mr. Levi's British Commerce, 533,) shows how the inventions of Mushet, Krupp, Bessemer, Siemens, and Whitworth have revolutionized the production of steel and cheapened it in all branches everywhere.

Twenty-five years ago cast-steel tyre cost 120 shillings per hundredweight; now 18 to 25 shillings. Forged-steel cranked axles when first introduced cost £15 per hundredweight; now, £3 5s., &c.

In 1851 Great Britain produced 51,000 tons of steel. In 1878 Bessemer steel product alone was 800,000 tons, showing how largely the capacity of production has increased under the cheaper processes which inventive genius has introduced.

This promise of what protection is going to do for low prices is an old one. You will find that the little infant, "mewling and puking in the nurse's arms," is still as greedy, and demands as much of the milk of its mother, protection, as it did forty years ago. When will it gain its majority? It was born from the genius of the accomplished statesman of Kentucky (Mr. Clay) in 1816. At the age of 66, I suppose it has attained its second childhood, for it certainly cannot stand alone even now.

Mr. SPRINGER. And the father is already dead?

Mr. TUCKER. Yes, all the family, its mothers, and sisters, and uncles, and aunts. [Laughter.] But I am told, "Oh, what you say may be all true; but you do not understand that all this burden is what the country has to pay for general prosperity. Free trade will ruin any country, it will ruin ours; protection will benefit every country and will make ours more prosperous."

Let me consider these propositions on principle, and then in the light of facts and experience.

Mr. Chairman, wealth is the child of labor and nature. The brain, the brawn, the bone constitute that trinity of human powers at the call of whose almost superhuman voice dead nature leaps into life for the service of man. It is when labor weds itself to the objects of nature that there spring into being these agencies and these products for the use, the comfort, and the tastes of man which bless and ennoble the human race. Labor is the great wealth-producer.

Its creative power is such that labor will in not more than four years create values equal to all the accreted values of the world. Let labor cease and consumption would strip the earth of all its accumulations and leave nature childless of a product for man's use.

If this be so, it follows that wealth increases—

1. By increased productiveness of labor.

2. By economy in saving its products.

Let labor stop work or consume all it makes, and the wealth of the world would not increase.

The question of economy does not come into the plan of this discussion, except to say that true civil-service reform in our day must take hold of taxation and expenditure and patronage, all effectual agencies to defeat true reform. If taxation is oppressive and partial, if revenues are excessive, thus tempting to large expenditure, and if extravagance is tolerated, these breed corruption, misrule, and despotism. Let taxation, which is a drain on individual wealth and thus a check on aggregated wealth, be limited to what is needed for an economical administration of the Government, and take no more from the means of the many than the Government needs for its public uses, and nothing from any man to lavish as bounty on another.

I turn back to the increase of productiveness of labor and its effi-

cient direction as the great source of national wealth. How can labor be most efficiently directed?

My first proposition is this: each man's interest is a better guide to the efficiency of his labor than government; because—

First. His interest and his intentness and exclusiveness of thought in respect to it make him, if intelligent, a surer judge than a stranger.

Second. Government must know less of his affairs than he does, and may have adverse interests to his own to subserve.

Third. Social life is too intricate in its character, its relations are too infinite, and the laws of its action too subtle for human intervention. God rules it by laws as fixed, but as inappreciable and unmanageable by man, as the winds, the tides, the air, the light, the heat, the electric currents which thrill through the material world.

Take another view: the sum of human products is the fund from which all human labor is paid for the supply of human wants. Profits and wages, in their largest sense, are drawn from this common fund for each and all. The larger this common fund, the less restricted by interfering action its accumulation; the more free labor is left to select its field of operation, the more just and equal will be the distribution of the fund, and the larger to each individual man.

Thus the interest of all is at one with the interest of each, and all and each suffers by the idleness or by the misdirected energy and labor of any one bee in the hive of society. All must consume, and all therefore should labor most efficiently in order to increase to the largest degree the fund for consumption. *Non omnia possumus omnes*. Each must select the field he is best fitted for in order to the largest product. Hence division of labor is a wealth producer. And social progress is in each man's work being exchangeable for every other's, thus each becoming a multiple of the efficiency of all by attending to his own work and bartering its results for those of another man.

Let me use some illustrations used by me on a former occasion. There was an old idea among the economists that in all exchanges one man must be the loser and the other must be the gainer. I believe in the civilized world that is now an exploded doctrine, and commerce, in its honest conduct, is regarded as productive of benefit to each nation engaged in it. In most exchanges each man is benefited.

The question in all these cases is the biblical question, "Wherefore should we spend our money for that which is not bread and our labor for that which satisfieth not?" Why should we put our labor and energies into employments that do not yield profit, that do not pay? Why should we do this and then require those who are making profits by their employments to contribute to our support in a profitless enterprise? It is in this assignment of each man to that occupation which he can do best and with least labor that the triumph of the great principle of the division of labor in the increase of wealth of all and of each is to be realized in these modern times.

Take another illustration: a bootmaker can make a pair of boots in a day, and a tailor can make a coat in a day; but it would take the bootmaker two days to make a coat, and he would botch it at that; and it would take the tailor two days to make a pair of boots. Do you not see each gains a day of labor by confining himself to his own business and exchanging his product for that of the other? For each thus by two days' labor gets both boots and coat, when each would take three days' labor if he made both for himself. Both make a profit, therefore; the one by sticking to his last, and the other by sticking to his needle.

I hold that each man is fitted for his special mission by Providence; there is something each can better do than another; and each locality and each nation has its special productive capacity and its distinct and peculiar forms of industrial development. The tropics are fitted for the growth of cotton, sugar, &c.; the northern climes for the cereals. Commerce, by exchange of these various products, gives to each people all the blessings which God has given to every other people for the use of mankind. It is in this interchange between man and man that each enjoys the profit of every other's industry; and thus each is enriched by the possession of useful commodities, the productions of every country and every climate, and all are made better morally, intellectually, and physically. Each draws to himself the special good which others have, by transferring what he has to others in exchange; and thus each member of the race, as each member of the body, by mutual dependence and exchange gets all that others have, as if they had been originally his own.

It is in the free commerce of thought that each mind is made larger and stronger. Neither mind loses, both gain by the exchange. And so it is in the interchange of commodities that each nation is made richer and greater. No nation loses, both gain by mutual exchanges. England cannot grow cotton, except in a hot-house. Under the exclusive and protective policy of England, in order to supply herself with cotton, would be told to raise it in hot-houses! What folly! She makes more raw cotton by making cotton manufactures and buying cotton with them—ten times, a hundred times more—than she possibly could if she were to attempt to raise cotton. In the same way we make more cotton manufactures by exchanging our cereals, which we make cheapest and best here, than we could by building up through artificial means manufactures of cotton in this country. If these manufactures can be made here by natural means, and not

by the hot-house policy of high tariffs, it is a healthful and good result. I have no objection to this, but only to the forced process, against nature, by which it is proposed to bring it about.

But if gentlemen still insist that it is better for the consumer and the producer to be close to each other, I ask are they not so in this wonderful age? Look the world over. Steam, the telegraph, the telephone, the phonograph, that gives its significant prophecy of our solemn account in its perpetuation of every idle word that we may speak—all these great improvements indicate, and especially to us in America, that we must stretch out our hands to embrace the whole human race in the arms of our commerce, trade, and industry; and this miserable fallacy (if gentlemen will permit me to use the expression without any disrespect) which constricts within its fatal folds the limbs of this infant Hercules, that tells us we can and should live within ourselves, produce only for ourselves, and hug our self-interests to our hearts, steeling them against the sympathies of universal intercourse, would dwarf the genius of America, stifle all its noblest aspirations, and defeat its destined mission of blessed influence upon the progress of human civilization.

What, then, is true national policy? I answer, as the aggregate wealth of a people is the sum of the wealth of its individual members, it must increase with the profitable employment of each member. Let each put his energy and labor to what will do most good at least cost, that is, will be most valuable with least expenditure of energy, labor, and capital; for profit is equal to price of product minus cost, (which includes capital and labor.) It is obvious if the cost is greater than the price of product, profit will be a minus quantity, or a loss; if the cost is equal to the price, profit will be zero; and it is only when the price of the product is greater than the cost in capital and labor that there is any profit.

Now, is it not obvious that to expend energy, labor, and capital on what produces no profit is wasted by the individual and is a loss to the aggregate national wealth? If each and all put out their effort upon profitable occupations they get rich, and the nation too. If any, instead of doing so, engage in profitless occupations, such get poor, and the national wealth suffers decrease, for they are not only not working-bees in the social hive but drones, consuming what others have secured.

Nobody doubts of this law when applied to any particular nation or to the individual man. The man who would insist on making all he consumes in order to keep his money at home would be justly denounced as a fool, and would starve for his pains. Hence the man must not only be free to work but free to trade and barter, to exchange his products for those of others, to buy and sell, to sell where he can sell for most and buy where he can get most for his own labor product. The value of property is in its possession and in the power to dispose of it. To retain the power to hold without the right of disposition is to emasculate the right of property; and manhood labor is assailed in its most precious and divinely vested right when the freedom to buy and sell is denied, as well as when his freedom to take and hold the product of his labor. Property is the equivalent of the brain and muscle expended in its creation. It is an intensely personal right, because it is the fruit of individual energy and skill. It is the right to acquire by personal energy, to hold by absolute title, and to dispose of freely and without the hindrance of man or of government. To deny this is to deny the liberty of the individual man. This is free trade, as a branch, an indispensable branch, of that liberty of life, of self-use, for self-development, for the well-being and for the honor of the man and progress and civilization of the race, and for the glory of that God who gave to every man his life and his freedom.

Exchange thus is the necessary adjunct to the efficiency of labor in production, whether it be between men or nations. If each was compelled to keep all he made, it would ruin him and reduce social and international life to stagnation. Its value to the participants in it is based on the soundest though most simple philosophy. Each can get most for his labor by doing what he can best and with least labor do, and exchanging his product with others for what they can best and with least labor do. Each thus gets most for his labor, each thus gains most wealth; and so society will have a larger aggregate wealth and a grander development.

As a corollary from this proposition I deduce this: that exchanges, personal and international, are the best *indicia* of the measure of wealth, because in fair exchanges each party is benefited, both are enriched, and neither is worsted. Exports show an excess of what each nation can best and most cheaply do, (that is, with least labor,) and hence exports and imports are the marks of increasing wealth, because they spring from the exchange of that which is least valuable to each for that which is most valuable. It is thus that commerce has enriched all nations engaged in it and that the wealth of a nation is marked by the progress of its foreign trade.

If these views be correct, how in the name of common sense can any gentleman maintain that free trade, which is the liberty of a man to produce with his brain and his brawn and his bone whatever he chooses, and to hold his earnings against everybody and every power on earth, except for the legitimate purposes of government—so to hold it with the right to dispose of it and exchange it as he pleases—how is it possible that such a system as this can impoverish any man or any nation? And how is it possible that the contrary system, which misdirects the man in the use of his energy,

which restrains him in the disposition and exchange of the products of his labor, can be otherwise than like the Chinese shoe of restriction, which actually destroys the very thing it was intended to protect?

My distinguished friend, the chairman of the Committee on Ways and Means, [Mr. KELLEY,] has used an expression, I believe he quoted it from John Stuart Mill, that free trade is a science based on assumptions.

Mr. KELLEY. That "political economy is a science based on assumptions."

Mr. TUCKER. Well, my friend would say that the free-trade theory is one of the branches of political economy that is based on assumptions.

Mr. KELLEY. My recent article was written to show that.

Mr. TUCKER. So I understand. My friend has the exclusive credit for that article and for all the articles that he produces in that direction; and the world, while it may differ with him, will always thank him for the industry and zeal with which he has advocated a cause in which he believes.

Mr. KELLEY. I would remark to the gentleman that the article is not copyrighted; if he wants to distribute it in the Lynchburgh district it is free to him. [Laughter.]

Mr. TUCKER. I will tell my friend that in this matter there is a question of exchange and reciprocity; I will give him my speech to distribute in his district. [Laughter.]

Mr. KELLEY. And I will be obliged to the gentleman from Virginia, because I intend to buy a good many copies for distribution. You will make a better argument for my district than I can.

Mr. TUCKER. I will be glad to hand it over to your people.

I come now to the evidences afforded by experience. Let us see what is the effect of this free trade and this protective policy, as shown by the census reports for 1850, 1860, 1870, and 1880.

In 1850 there is an estimated true value but no returns of assessed values of total wealth. The assessed value would be less. In 1860 and 1870 there are returns of estimated true values and of assessed values. Let me compare them. In 1880 only the assessed values are returned:

1850:	
Estimated true value	\$7, 135, 986, 732
No assessed value.	
1860:	
Estimated true value	16, 159, 619, 068
Assessed value	12, 084, 500, 000
1870:	
Estimated true value	30, 068, 513, 517
Assessed value	14, 178, 986, 732
1880:	
No estimated true value.	
Assessed value	16, 902, 755, 893

During the decade from 1850 to 1860 the tariff rates were thus: from 1850 to 1856, on all articles paying duty an average of 24 per cent.; on all articles dutiable and free an average of 20.4 per cent. From 1857 to 1860 the average duty on all dutiable articles was 19 per cent.; on all dutiable and free 13.8. This was, therefore, a decade of low tariff—of a tariff for revenue only. And yet wealth increased 126 per cent. on estimated values, and it would have been no less on assessed values had that for 1850 been given. Did free trade ruin the country?

During the decade from 1860 to 1870 there was, from 1861 to 1865, an average duty on all articles dutiable 37.5, and on all dutiable and free 29.3. From 1866 to 1870 average duty on dutiable articles was 45.41 per cent., and in all 36.57 per cent. This was a tariff with nearly double duties. It was high tariff, protective almost to prohibition on many articles. Wealth increased on estimated values 87 per cent. only, and on assessed values only 16 per cent. Did protection make wealth grow and the country prosper?

From 1870 to 1880, after the waste of war, the average duty was, from 1870 to 1872, from 1873 to 1877, and from 1877 to 1880, respectively, as follows: On all dutiable articles 45.41 per cent., 41.50 per cent., and 43.64 per cent., and on all dutiable and free 36.57 per cent., 28.48 per cent., and 29.57 per cent. And yet wealth increased only 20 per cent. Did high protection prosper the country and make its wealth increase?

These three decades tell the story. Wealth and prosperity leaped forward in splendid progress during what gentlemen call the free-trade decade, from 1850 to 1860, and was checked from 1860 to 1880 under protection. In the one decade of free trade the aggregate increase was greater than in the two decades of high protection. Let the facts guide the verdict of the people.

But gentlemen will ask, how was it as to manufactures and agriculture? I will answer. From 1850 to 1860 (the revenue-tariff period, or, as the gentlemen please to call it, the free-trade era, and during the last three years under a great reduction of tariff duties) the capital in manufactures increased from \$533,245,351 to \$1,009,855,715, or 90 per cent; the products of manufactures increased from \$1,019,106,616 to \$1,885,861,676, or 86 per cent.; the profits from \$227,227,330, or 42 per cent. on capital invested, to \$475,377,618, or 47 per cent. on capital. Did free trade destroy manufactures and ruin them?

But gentlemen will ask, how as to the special manufactures? I answer: The pig-iron product increased from 1830 to 1840 (when the tariff on pig-iron fell from \$14 per ton to \$11.20) 90 per cent.; from 1840 to 1850 (when the duty fell from \$11.20 to 30 per cent. ad valorem) the product increased 79 per cent.; from 1850 to 1860 (when it fell to 24 per cent.) the product increased over 50 per cent.

From 1850 to 1860 capital in pig-iron increased nearly 50 per cent.; product over 50 per cent. In bar, sheet, and railroad iron capital increased over 45 per cent., products over 100 per cent., and profits rose from 18 per cent. on capital to 30 per cent. Steel products increased from \$172,080 in 1850 to \$1,778,240 in 1860, or tenfold. Did free trade ruin iron and steel manufacturers?

Take cotton goods:

In the same decade capital increased 29.6 per cent.; products nearly 80 per cent., and profits rose from 13½ per cent. to 45 per cent.

Take woolen and worsted goods:

In the same decade capital increased 18 per cent., products 41 per cent., and profits rose from 43 per cent. to nearly 50 per cent.

In view of these facts I again ask, did free trade ruin our manufacturing industries?

Now let me turn to agriculture:

During the same decade the value of farms increased over 100 per cent., product of wheat 73 per cent., Indian corn over 40 per cent., cotton nearly 120 per cent., tobacco over 100 per cent., and live stock 100 per cent.; farming implements 63 per cent.

I call special attention to the fact that these two great industries seem to advance hand in hand and with equal step under a tariff for revenue only. Population increased about 33 per cent., and agriculture and manufactures increased in a larger ratio; the country advanced in wealth, and all its industries were healthful and prosperous.

But gentlemen will say under the protective system manufactures advanced more rapidly. I shall take account of that, and call special attention to it, because while manufactures, under the system of bounties they received, greatly advanced, agriculture, which paid them, fell back in the equal progress it had shown in the previous decade.

Comparing the decade from 1850 to 1860 with that from 1860 to 1870 as to general results for manufactures and agriculture, and calling, for brevity, the one free trade and the other protection, I present this result:

Capital in manufactures increased during free trade 90 per cent., during protection 110 per cent.; products of manufactories increased during free trade 86 per cent., during protection 125 per cent.; profits of manufactories increased during free trade 47 per cent., during protection 90 per cent.

This was a bloated prosperity. But whence derived?

Comparing the progress of agriculture during the same periods, we find: values of farms increased during free trade over 100 per cent., during protection 40 per cent.; wheat increased during free trade 73 per cent., during protection 60 per cent.; Indian corn increased during free trade over 40 per cent., decreased during protection 9 per cent.; cotton increased during free trade nearly 120 per cent., during protection decreased over 40 per cent.; tobacco increased during free trade over 100 per cent., during protection decreased over 60 per cent.; live stock increased during free trade 100 per cent., during protection increased over 40 per cent.; farming imple-

ments increased during free trade 63 per cent., during protection increased over 36 per cent.; wool increased during free trade 15 per cent., during protection increased over 66 per cent.

This appalling difference between the growth of manufactures and agriculture in the two decades tells the sad story (even allowing for the wastes of war, which devastated the agricultural South more than the North) that under free trade both were prosperous and neither preyed upon the other; but that protection meant license to the bounty receivers to plunder and leaving defenseless and unprotected the bounty payers to the enormous exactions of the privileged classes.

These facts establish that free trade does not retard but helps manufactures in a healthful development, making its growth steady and natural, while protection increases that growth to abnormal proportions, acquired by feeding upon, and thus impoverishing, all the other great industries of the country. The facts prove that free trade did not destroy but promoted the growth of manufactures, and, by forbidding their plunder of other industries, benefited each and all, and gave to our country an era of peace, plenty, and prosperity.

But I take another basis of comparison. I have shown that exports and imports of a country are the *indicia* of its progress in wealth, because based on the production cheaply (that is, with less expenditure of labor relatively than can be done in the country to which exports go) of certain products which, as exports, are exchanged for what others produce more cheaply than we can do, and come to us as imports. This cheapness of product depends on the relative plenty and accessibility of natural resources, (a better phrase than raw material,) the efficiency and supply of labor, and the other conditions which make production easy, and on the costs of transportation from the point of production or supply to that of consumption or demand.

We have, for example, cheap land, easy and cheap culture, though dear labor. England and Europe have dear land, expensive and difficult culture, though cheaper labor. We make bread and cotton, &c., cheaper than Europe can. The ratio of product to cost is much larger here than there.

In manufactures we have dear capital and dear labor. Europe has cheap capital and cheap labor. The ratio of product to cost is larger there than here.

These are just the conditions of a fair exchange, which is not only no robbery by either, but a profit to both. Free trade invites it; protection forbids it.

The more of it the better for the nation achieving the result. It is all the time bartering things cheap to it for things dear to it, and that means profit. The nation which insists on production at heavy cost, when it can get the product at less cost, is bound to remain poor comparatively, as the man who does it is on the high road to the poor-house.

Now, what has been the result of free trade and protection on the export and import trade of the United States.

I give a table of exports and imports during various periods, with the average duty on dutiable articles, and average duty on all, and see when the free list was increased over \$100,000,000, (which was partial free trade,) in August, 1872, how the average duty on all articles fell and trade leaped forward. No better barometer of progress can be used than this table, looking to the population of each period:

	Average duty—		Exports.	Imports.	Total.	Average population.
	On all.	On dutiable.				
	Per cent.	Per cent.				
1822 to 1832.....	39.1	32.2	\$56,697,347 00	\$62,669,841 00	\$119,367,188 00	11,000,000
1833 to 1842.....	21	15.5	96,782,810 00	114,399,434 00	211,182,244 00	15,000,000
1843 to 1846.....	32.4	25.2	94,737,657 00	91,851,044 00	186,588,701 00	19,000,000
1847 to 1856.....	24	20.4	196,497,454 00	202,195,714 00	398,693,168 00	23,000,000
1857 to 1860.....	19	13.8	335,456,750 00	340,436,954 00	675,893,704 00	28,000,000
1861 to 1865.....	37.5	29.3	225,384,319 00	251,290,155 00	476,674,474 00	33,000,000
1866 to 1872.....	45.41	36.57	408,412,288 00	450,244,269 00	858,656,557 00	37,000,000
1873 to 1877.....	41.50	28.88	586,392,328 00	576,036,626 00	*1,166,428,954 00	43,000,000
1877 to 1881.....	43.64	29.57	785,830,302 00	538,963,360 35	1,324,793,662 35	48,000,000

* Increase nearly all free goods.

Of course the great fall in trade during the war and its revival after it and the extraordinary demand for breadstuffs since 1878 will be taken to modify the results presented by this table, but it shows in any two consecutive periods the point on which I am insisting very impressively, that the more free the trade, the larger and the more restricted, the smaller the sum of exports and imports.

Now, let me illustrate the effects of these systems by Great Britain. If free trade ruins and protection advances, this will afford evidences of it. In 1846 Great Britain abandoned the protective policy, and in 1849-50 entered on the policy of free trade, not by abrogating her tariff, but by laying it for revenue. Her corn laws were repealed; her navigation laws were annulled; she entered the world's lists as a carrier, and invited all to her own. Did ruin follow? I do not mean to maintain that all that has followed is the beneficent result of free trade. I deny your proposition that free trade ruins a coun-

try because Great Britain has flourished under it. My argument need not insist that free trade is the cause of her prosperity, but only that it does not bring ruin.

I start with coal, the light giver on the march of national progress. If this is the test, as the gentleman from Iowa [Mr. KASSON] says, how is it with Great Britain? One hundred years ago the product was 6,000,000 tons. In 1878 she made 133,000,000, and exported coal valued at £7,330,000. The United States produce and consume about 70,000,000 tons. Great Britain makes over 6,000,000 tons of pig-iron, (fourfold the product of the United States,) valued at \$12.50 per ton. Comparing 1828 with 1878, she exports four times as many cotton goods, fifteen times more of iron and steel—\$90,000,000 in 1878—three times more of woollens, &c. The total foreign trade of the United Kingdom was £172,132,716 in 1840; £268,210,145 in 1850, just after free trade started. It rose in 1860 to £375,052,224; to £547,-

337,000 in 1870; and to £697,644,030 in 1880, or nearly three and a half billions of dollars. This doubles our foreign trade. Great Britain has 34,000,000 of people; we have 50,000,000. In 1849, before the repeal of her navigation laws, her tonnage was 3,096,342; in 1861, 4,359,695; in 1871, 5,761,608; in 1880, 6,344,577. She has doubled her tonnage under thirty years of free navigation laws.

Look at the United States.

From 1850 to 1860, the free-trade era, their tonnage advanced from 2,562,084 to 5,539,813 tons. Under the protective policy, it fell to 1,517,000 in 1875, and still to 1,353,000 in 1880.

France has only advanced from 688,000 tons in 1851 to 932,000 in 1880.

Does free trade destroy shipping? Does protection advance it? If so, why does free-trade England outstrip protective France and the United States?

Population has increased in the United Kingdom from 27,523,694 in 1850, to 34,788,814 in 1881, over 25 per cent. Yet pauperism has declined 11 per cent., crime nearly one-third, and school attendance has advanced from 271,126 to 3,155,534. Wealth has increased from £3,800,000,000 in 1843, to £8,500,000,000 in 1875, or 125 per cent., while population has increased only 28 per cent.

And how has free trade affected the laboring classes? I will only speak of its general effects, relatively between Great Britain and countries on the continent of Europe.

The following table will show how much better labor is paid in free-trade England than in Germany and France where the protective policy prevails:

Statement showing the weekly rates of wages in the several countries, compiled from the consular reports.

Occupations.	Belgium.	Denmark.	France.	Germany.	Italy.	England.
Agricultural laborers:						
Men, without board or lodging			\$3 15	\$2 87	\$3 50	\$3 60
Men, with board and lodging			1 36	1 48	1 80	2 60
Women, without board or lodging			10	1 08	1 55	1 80
Women, with board and lodging				75	60	1 15
House-building trades:						
Bricklayers	\$6 00		4 00	3 60	3 45	8 12
Carpenters and joiners	5 40	\$4 25	5 42	4 00	4 18	8 25
Gas-fitters	5 40			3 65	3 95	7 25
Masons	6 00	4 45	5 00	4 30	4 00	8 16
Painters	4 20	4 15	4 90	3 92	4 60	7 25
Plasterers	5 40			3 80	4 35	8 10
Plumbers	6 00		5 50	3 00	3 90	7 75
Slaters				4 00	3 90	7 90
General trades:						
Bakers	4 40	4 25	5 55	3 50	3 90	6 50
Blacksmiths	4 40	3 90	5 45	3 55	3 94	8 12
Book-binders		3 72	4 85	3 82	3 90	7 83
Brass-founders		4 20		3 20	5 49	7 40
Butchers	4 50	4 50	5 42	3 85	4 20	7 23
Cabinet-makers	4 80		6 00	3 97	4 95	7 70
Coopers		4 10	7 00	3 30	4 35	7 30
Coppersmiths		3 85		3 30	3 90	7 40
Cutlers		3 85	4 63	4 00	3 90	8 00
Engravers				4 00	4 00	9 72
Horseshoers		3 85	5 40	3 25	3 50	7 20
Millwrights		4 00		3 30	4 95	7 50

But not only is labor better paid in Great Britain than on the continent of Europe, but its bread and meat, its sugar and rice, its blankets and flannels, and other clothing; its iron and steel, its glass and pottery, are untaxed. The following table shows how increased is the annual average consumption, per capita, by the people, under free trade:

Articles.	1840.	1850.	1860.	1870.	1878.
Bacon	.01	1.41	1.27	1.98	12.60
Butter	1.05	1.30	3.26	4.15	5.82
Cheese	.92	1.38	2.24	3.67	
Corn, wheat, &c	42.47	81.76	118.86	124.39	
Sugar	15.20	24.79	33.11	41.93	48.56
Tea	1.22	1.86	2.67	3.81	4.66
Tobacco	.86	1.00	1.22	1.34	1.45
Rice	.90				7.50

John Bright, one of the great men of England and of this age, in a recent speech before workingmen in England, spoke as follows; and this testimony is very strong, because reliable. He was comparing wages in 1840 with present wages in Great Britain, before and since free trade, and in a country where population has increased and is crowded beyond anything we know of in this country:

There, according to his statement, was an actual doubling of the wages of the laborers in Lord Beaconsfield's own county of Buckingham. Perhaps some of you may recollect a letter which was published almost immediately after Lord Beaconsfield's death, which he wrote to a gentleman who had sent him a book about the condition of the population in the southwestern counties of England, and Lord Beaconsfield said he thought he underrated the improvement in the condition of the farm laborers; that according to his opinion the rise in the wages of the farm laborers had been at least 40 per cent.; that is 10s. of wages per week had risen to 14s. per week. I believe, indeed, that in many parts of the country the wages of farm laborers, taking into account the hours which they work and all particu-

lars, are doubled since the free-trade policy was established. [Hear! Hear!] Now, take the other class of men. I walked down from the Reform Club through the park to the House of Commons one day in the past summer, three or four months ago, and a man—an intelligent, respectable-looking workman—joined me and addressed me by name. I asked him how he knew me. He knew me because, he said, "I have been a good deal in Birmingham, and have attended your meetings there, and so I know you very well." [Laughter and cheers.] I talked to him a little about his business. He said he was then getting 7s. 6d. a day as a bricksetter, and he added, "formerly I used to work for 4s. a day." There is a jump. From 4s. to 7s. 6d. is a considerable leap.

ADVANCE OF WAGES IN THE COTTON TRADE.

Now, I should like to tell you of something that has happened nearer home, for I suspect there are many persons in this meeting who have not the least idea of the actual increase of wages that has taken place among the factory operatives in this neighborhood during the last forty years. I was looking the other day at one of our wages books for 1840 and 1841. I will tell you what I found in it and what I find in our wages book now. The figures are taken over an average of two months at that time and over an average of two months now, and therefore are a fair statement of what happened then and what happens to-day. Many persons here know, of course, all about the interior of a cotton factory, and therefore I shall speak as if we were in a mill and looking over the different people at work. I find that in 1839 the throstle piercers—I need not explain who they are—were receiving 8s. a week, and they were working twelve hours a day. I find that now the same class of hands are receiving 13s. a week at ten hours a day. If they worked for twelve hours, and were paid at the same rate, it would be 15s. a week, or exactly double what they received in 1839, 1840, and 1841. [Cheers.] The young women who worked at the drawing frames at that time had 7s. 6d. a week; they have now 15s., and that is without reckoning the fact that they are working two hours a day less. The rovers and slubbers got 8s. a week then, and they are getting 14s. a week now. The doffers, [laughter], are considered a class whose wits are a little too sharp—[laughter]—and are sometimes not very manageable. They used to have 5s. 6d. a week, and they now have 9s. 6d. The warpers in those days, as far as my recollection serves me—I am speaking of our own business—were all women. They earned on the average of the two months 17s. 6d. a week. The warpers now are all men, and they have earned in the two months an average of 35s. 6d. a week. [Cheers.] Well at that time we had a very clever man as blacksmith, whom I used to like to see strike the sparks off; his wages were 22s. a week. Well, our blacksmith now has wages of 34s. a week, and that only for factory time, which is ten hours, whereas the man of 22s. a week worked the then factory time, which was twelve hours. Now, you see the enormous change to the people in these factories. They have two hours leisure which they had not before, and their wages are nearly double.

I think it is impossible to account for this extraordinary improvement in the wages of agricultural laborers, of bricksetters and carpenters, and all your factory operatives, and all your mechanics, upon any other theory than this, that the new policy with regard to trade, which has made your trade fourfold, has been the cause which has made this stupendous and unimagined improvement in the condition of the people. [Cheers.]

And after speaking of the increase of population, he adds this piquant sentence:

And yet, with all that increase of population, you have had the demand for labor more steady, employment better paid, the time of labor shorter. The man must be absolutely blind, or worse than blind, who cannot see and will not acknowledge that the great mass of the people, in physical condition, are enormously better off than they were forty years ago.

Mr. Leone Levi, to whose works I am indebted for much of the statistical matter already given in his History of British Commerce, (1880,) pages 506, 507, sustains the testimony of John Bright by detailed statement of wages paid to laborers.

Without going into a tabular statement, I will say that in agriculture wages have since 1862 increased fully 25 per cent.; to seamen, from 30 to 40 per cent.; in building trades, from 1853 to this time, from 60 to 80 per cent.; in cotton manufactories, an average of over 50 per cent.

Does free trade ruin England? Does it starve labor? Does it give it pauper wages? It has prospered England. It has fed and clothed and educated her poor. It has increased the wages of the laborer, and cheapened everything he buys with them. Great Britain is a noble monumental evidence that the policy of free trade does not ruin but advances all classes and the whole society in wealth and prosperity.

Mr. MILLS. The incomes of the poor deposited in savings-banks have increased.

Mr. TUCKER. Yes; that is an additional proof that the laboring classes of England are prospering under her free-trade policy, and not wretched because they are not protected by a tariff.

If I am still asked by gentlemen for the experience of the world in reference to free trade, I answer further: I challenge your attention on this point. Look at the American Union. What is the law of this American Union of free States? Free trade between all the members composing it. Is there any man here who will advocate a system of custom-houses between the States of this Union? Why not? If protection is a benefit, if it enriches each commonwealth that establishes it, why not establish it among the States in order to their growth in wealth? Is the Union a failure? Is it a blunder? Does it fail because of its original intent to break down custom-houses and establish free trade between the States?

Here is another dilemma for gentlemen who support the protective principle: either the Union is a failure, or free trade is a blessing and protection a curse. Am I to be told that so long as Canada is not a part of the United States she is enriched by having a protective policy, and so are we by our protective policy as against her products; and if we should happen to annex Canada to the American Union it would be a curse to both, because necessarily protection would then end and free trade would begin? There is a dilemma on which you must decide, and you can take again either horn of it.

Is there a man who believes such a thing? But you will say this is a question between nationalities; we are different people, with

different interests. But I put to you a politico-economic question, and ask, if the United States and Canada should be brought under one form of government would not both be benefited by free trade? If they would not be benefited by free trade, then why longer permit it between the States already in the Union? And yet my learned friends upon the other side, and the honorable gentleman from Pennsylvania, the chairman of the Committee on Ways and Means, who will close this debate, will insist that this argument has no bearing because of the different interests of the two countries. But I speak of this as a politico-economical question, and our friends argue that, irrespective of international relations, the protective policy enriches, and free trade ruins a country. But how can this be if the States of this Union are prosperous by reason of free trade? And if free trade is ruinous to each and protection would prosper all, then is the Union a curse and not a blessing. But would not Canada and the United States both be benefited by her admission into the Union? If so, both would be blessed by abandoning protection and adopting free trade. How, then, can the argument of the gentleman be sound, or otherwise than a fatal fallacy?

So much for facts and experience, as well as sound philosophy, as to the two lines of policy. I have thus far been on the defensive in part; I now assume the aggressive. I arraign this existing tariff because it taxes not only classes for the benefit of manufacturers but it taxes the many for the benefit of the few. In 1870, of all engaged in industries—12,505,923—there were: agriculturists about 48 per cent.; professions, trade and transportation proper, about 30 per cent.; and manufacturers and miners about 22 per cent. Eliminating from the latter those clearly not protected, (as the blacksmiths, the carpenters, plasterers, tailors, bakers, &c., all of whom pay duties on their tools of trade, as well as on all they use,) and there was not more than 1,500,000 within the privileged classes protected. That is about 12 per cent. of all. The percentage is no greater now; and yet to uphold the business and enhance the profits and wages of twelve men in a hundred the eighty-eight are to pay tribute. Is not this taxing the many for the few?

Again, I charge that this tariff is a tax on one section for the benefit of another—on all the States for the advantage of a few States. It enriches the favored States at the expense of all. There are burden-bearing States and bounty-receiving States. It is not only a tax on one class for the benefit of another, but on many States for the advantage of a few.

In 1870, of all the products of manufactures Pennsylvania produced one-sixth and had 20 per cent. of all the capital invested. Pennsylvania, New York, New Jersey, Rhode Island, Massachusetts, and Connecticut, six States, had two-thirds of the whole capital.

In 1880, of all capital in iron and steel industries Pennsylvania has 46 per cent. Five States have 75 per cent. of all. In Bessemer steel five States have 96½ per cent., of which Pennsylvania has nearly 50 per cent.

In the iron and steel trade the annexed table shows the distribution between the grand divisions of the country in the census year 1880:

Grand divisions.	No. of establishments.	Capital invested.	Hands employed.	Wages paid.	Net tons produced.	Value of all products.
Eastern States.....	556	\$149,507,461	82,842	\$34,361,600	4,671,808	\$192,696,010
Southern States.....	218	29,145,830	20,595	6,261,344	649,153	25,353,251
Western States and Territories.....	224	50,755,990	36,663	14,542,587	1,912,689	76,933,686
Pacific States and Territories.....	7	1,562,693	878	311,194	31,490	1,574,738
Total United States.	1,005	230,971,884	140,978	55,476,785	7,265,140	296,557,685

If this system transfers bounties from the mass to privileged classes, and these last are congregated in a few States, wealth will not only flow in a steady torrent from all sections to the favored one, but from all classes to those of privilege, who are fed with the bounties the mass are forced by law to pay.

But this is not all. This present tariff taxes the poor at a heavier ratio than the rich, by taxing luxuries more lightly than necessities, and lays a higher duty on the cheaper goods bought by the poor than on the higher goods bought by the rich.

Diamonds pay 10 per cent., or 25 per cent. if set in gold; blankets pay 70 to 100 per cent.—the highest-priced ones 70 per cent., a low-priced one 98 per cent.; balmorals, 66 per cent. if high-priced, 85 per cent. if low-priced; flannels worth not over 40 cents a pound pay 95 per cent., if over 80 cents, 61 per cent.; hosiery not over 80 cents, 89 per cent., over that 55 per cent.; hats not over 80 cents, 96 per cent., over 80 cents, 58 per cent.; shirts, drawers, &c., under 80 cents, 100 per cent., over, 67 per cent. So as to cottons and carpets and other woolen goods. Chains, trace, halter, and fence, 51 to 58 per cent.; a finer species, 35 per cent.

Plows and all farming and mechanic tools of steel are 45 per cent. By the specific duties on brandy and spirits, all at \$2 per gallon, the poorer spirits pay the same tax as the expensive brandy. Thus

brandy pays only 85 per cent. while spirits from grain pay 322 per cent. and wines and champagne only 44 to 49 per cent. The same rule prevails as to cigars.

So in the internal-revenue system. The cigars which cost \$250 per thousand pay no more than those worth \$50. The poor in this way, if the process was applied to horses, would pay as much on a \$50 cart-horse as Mr. Lorillard would pay on the \$20,000 racer.

Is it not obvious that this is not only unjust, but tends to make the rich richer and the poor poorer?

And this is the natural effect of specific duties. The ad valorem where it can be adopted, and so as to avoid frauds in the revenue, is most fair, because it proportions tax to ability, and to the value of the thing taxed.

I cannot go fully into the injurious effect which the tariff has on the agricultural people, as they are the chief export producers. They furnish 82 per cent. of all our exports. These must be directly or indirectly paid for by imports.

Who is our best customer? Who buys most of our breadstuffs, cotton, meat, and even manufactures exported? Great Britain, out of \$883,915,947 of total exports, took \$481,135,078. We took of her only \$174,493,738. She took of us in excess of what we took of her \$306,641,340.

On the other hand, with countries on these twin continents of North and South America and the West Indies, including Cuba, Hayti, &c., we reverse the case. Our excess of imports over our exports is \$120,000,000. With China, Japan, and the East Indies the balance against us is over \$50,000,000.

Now, see how it is with Great Britain. In 1880 she had a balance in her favor with South America, including West Indies, of \$35,000,000. We exported to these, our neighbors, only \$54,358,789, while Great Britain exported \$123,761,060, or more than double our exports.

It is obvious that we pay South America our balance by drafts on England, and she pays them by sending her goods to South America.

What can be done to improve our trade with South America, to enable us to pay our balance to her with our exports without drawing on England? Why can England sell cottons to Brazil and other American countries to the extent of \$15,440,470, while we only sell \$3,415,455?

Manufacturers must look to the foreign markets, especially on this American continent; must cease to live only on the home markets, and prepare to enter the foreign lists for their real triumph. Why should we not succeed? We have cotton grown at the door of the factory; iron, coal, and other materials in abundance and accessible; we have the most efficient labor, and what cramps us? Duties on raw materials, duties on the supplies for labor, duties on machinery, duties on tools and implements of trade, mechanic arts, and agriculture, duties on ship-building, restraints on ship-buying, heavy freights, which the consul at Nassau says makes American iron goods cost nearly as much for carriage as British; which are four times as far away.

Strike off the fetters which constrain and cramp industrial enterprise; open our products to cheap freights; make production less costly by removing tax on materials and the instruments of production, and we will rapidly, by devoting our energies to what we are best fitted for, realize a growing trade in manufactures, which will increase our wealth, diversify healthily our industries, and be a blessing to all and an oppressive burden on none.

One thing is certain: for a long period our great exports must be of food and the raw material for clothing. Great Britain takes more than 50 per cent. of our exports. She took of food in 1880 over \$150,000,000. This will increase with removal of restrictions. The great agricultural interest cannot allow our best market to be closed by closing our ports to the products of England. By opening our market to her we open her market to us.

Thus it is that free trade must help the growers of cotton and the cereals the products of the beef and the pork and of other farm products. Agriculture finds her market for \$784,755,413 of her products abroad, of which she gets \$481,135,078 into Great Britain and Ireland. Close our ports by prohibitory tariffs, and nearly a billion of products would rot on the farms of America. If so, is it not clear that to the extent you restrict our foreign market you cramp the farming producer, and to the extent you expand it you benefit him.

What answer can be made to this array of facts and reason against the protective policy?

The agriculturist is told, "We give you a home market." It is said we consume more of agricultural products than we export. This is true as to breadstuffs; not as to cotton. The mills of Great Britain consumed an average for the years 1877, 1878, 1879 of 1,220,000,000 pounds; our mills only 724,800,000 in 1880. It is not what we consume, but what we cannot consume. The real question is, can we consume all agriculture can produce? Clearly not. The excess of agricultural production over home consumption is increasing, and is bound to increase more and more. If shut out from foreign markets our wheat and corn will be valueless, and may be used for fuel, as they will be useless for food.

The economic law is this: When a country produces anything in excess of its consumption, its price will depend on and be regulated by foreign demand, and the home buyer will pay no more than, but must pay as much as, the foreign market offers.

This is a full answer to the home-market argument. The farmer's price for all his crop depends on foreign demand for his surplus, and not on the home consumption.

And this answers that other taunt, that wheat and corn, &c. are protected by the tariff. Protection never helps an article made in excess of home consumption and which must in large part be for export; for no matter what the duty on such an article, the price will never be offered in the home market beyond what the home buyer knows the home producer must take for his excess from the foreign buyer.

But the great and bold argument against free trade is that we need to protect our capital and labor, which are dear, from the products of foreign capital and labor, which are cheap. And then the corollary is jumped at that otherwise our labor would fall to the rates of the pauper labor of other lands.

The corollary does not follow from the main proposition. I address myself to the manufacturer.

You wish protection for your product against the competing foreign product. Why? Because to make it you have to pay high wages, and you need to be compensated for having to do so. The danger is therefore not to the wage man, but to you. If you do not pay the laborer what he can get elsewhere he will go elsewhere and leave you. To keep him you must give him what the market price of labor requires. And if you pay high wages and get a price for your product only equal to the cost of the low-wage product from abroad you will get back in your price only the pauper wage, when you have paid the laborer the high wage. Thus you are crying for help for yourself, and not for the laborer.

There is no danger of pauper wages here. It is because no man will take them, that capital which has to pay the high wages demands a bounty to enable him, after paying for labor at the high rate of wages, to get a profit besides on his investment. Protection is to help him to make profit, though compelled to pay high wages. The laborer is above the need of protection by Government; he is protected by natural causes, which are independent of all tariff or free-trade policies. What are these? The price of labor depends on two things:

First. Its supply.

Second. The demand for it, which includes the opportunity of the laborer for better results by independent operations if not employed as a subordinate laborer by capital.

The first is greatly in his favor. We have plenty of elbow-room; the supply is limited compared with the glutted labor markets of the Old World; capital cannot grind labor down to a low wage by its crowded demand for employment.

The second is the great lever of labor in our country. The demand is active for new employment constantly opening in this infinitely fruitful land for the development of great industrial enterprises.

But the chief thing is the opportunity to better himself, which the laborer has by making his independent *strike* for a home in the new Territories. The strike for wages in Europe or Asia is the outburst of despair; in America it is the bold demand of hope and faith in the future which beckons him to the West and South. Labor in the Old World knows it must starve or work at the wages which capital offers; in the New World it knows it need not starve while the heaven-blessed West offers food, and shelter, and raiment in abundance to him who will reach out his hand to receive them.

If, therefore, capital will not give the high wages an American laborer demands, he can refuse to work, and go West or South, and command the wages which he has demanded and which was refused. Labor, if every factory in the land were closed, would therefore still be employed at high wages. Its wages do not depend on the factories. The prairies of the welcoming West, the lands of the sunny South, will give him ample wages. He need not demand at this Capitol full wages; he can always command them, unless under a false system he has been led to spend his labor for that which satisfieth not.

That there is no danger of pauper wages for American labor is evident from the stream of emigration from Europe. It is the demand for laborers by employers; it is, above all, the opportunity which laborers have for large returns in our virgin lands, which stretch from ocean to ocean and from the lakes to the Gulf.

But there is a double aspect of this wage question:

First. What wages can a man get for his labor?

Second. How much can a man get with his wages?

No matter how much wages he gets for his labor, if the things he buys with his wages are taxed 50 to 100 per cent. the result is delusive. It is this double aspect which gives rise to these proper questions: What wage does he get, and what is its purchasing power? In other words, how much, not of money, but how much of the necessities and comforts of life will he get in barter for his day's work? The amount of money is nothing to the question; how much with the money, as a medium between his work and the needs of life, can he get of the comforts of life? If you tax the things he buys, you might as well tax the wage he receives or decrease it to the amount of the tax.

But there is one other element which must be looked at: How many hours of work do you call a day? Pay men by the hour; do not pay by the day of ten or twelve hours' work, and then say you

pay more than in Great Britain where the day may be only nine hours' work.

But there is another element: comparing two workmen, what is the efficiency of their respective labor? Does one do more in a given time than the other? Do you pay by the time, the hours employed, or according to the work done? For example, an American, it is claimed, can do 50 per cent. more than an English laborer. If you only pay 50 per cent. more wages than in Great Britain your wages are no higher than theirs for the actual work done. In 1850 each hand in the iron industry produced \$640 of the total production; in 1860, \$1,310; in 1870, \$2,672; in 1880, \$2,103. Yet wages were not paid in the increasing ratio of the product per hand.

But there is a deeper question still. I must content myself with suggesting the line of thought, rather than attempt to develop it.

In all industries capital and labor are partners. What share of the product is each entitled to? Taking material from gross product, what part of the difference, which is the value created by the partners, should labor have? What should capital have?

In Bessemer steel product \$10,000 of capital gets as much as fourteen men. That is, each man is valued as the equivalent of \$710!

Is that your valuation of a white freeman or of a freed African? A slave was valued at double that amount.

Take another view. Capital is the saved wages of labor—labor of brain or brawn.

A manufacturer can hire \$1,000 for \$60 per year. Why should that \$1,000 hired for \$60 get more than a man out of the jointly earned product?

Again, capital at 6 per cent. doubles in sixteen years, or at compound interest in eleven.

Labor, (in which I comprise brain labor as well as that of muscle and nerve,) produces in four years the totality of wealth now existing; that is, labor doubles all accreted capital in four years at farthest. This is shown by the estimate of total wealth in 1870 as \$30,000,000,000, and estimated annual product as \$7,000,000,000, or one-quarter of total wealth.

If capital doubles itself in sixteen or at least in eleven and labor doubles it in four years, why should capital get more of profits out of products than labor does of wages?

Capital invested in all iron and steel is \$230,971,384; the product is \$296,557,685. That is, capital has more than doubled in a year. It is true this included raw materials, which may have been confused with the capital fund. The owners of the capital are few. The hands employed were 140,978. Capital gets in profits \$49,809,750 and labor in wages \$55,476,785, or \$393 per hand. A man gets as much as \$1,900 of capital; in Bessemer works, only as much as \$710, as I have shown.

Is this the fair dividend for labor? Is the wage man equivalent to \$1,900? or more or less?

An agricultural laborer in England gets on the average \$4.30 per week, or \$223.60 per year, with cottage and garden; in all, say \$260 per year. Say his living would be \$100. Then his net earning would be \$160 per year. Take him at twenty-four years of age, and his chances of life by De Moivre's tables will be thirty years. The present value of an annuity of \$160 for thirty years at even 3 per cent. would be, say \$2,500. That is the present capitalized value of the English laborer. Now an American laborer ought to be worth \$3,000 at the least. Now when the man is yoked to capital and is worth \$3,000, we would have in the case now in hand the capitalized labor of 140,000 laborers to be \$420,000,000 as against \$230,000,000 of capital invested in the iron and steel business. That is to say, the input of labor is nearly double that of capital. The fund of product, less material, is about \$105,000,000, of which capital gets forty-nine millions and labor fifty-five millions, whereas the fair dividend would seem to be about thirty-seven millions for capital and sixty-eight millions for labor. Capital gets twelve millions more and labor twelve millions less than the fair dividend.

I do not assert that this view is precisely accurate or may not be open to some objections. It seems to me, however, that it is a problem of great interest whether brain and brawn and bone get a fair dividend with capital in the partnership products of their united enterprises.

I am satisfied labor is at a disadvantage in its bargains with capital; and how seldom it is that human nature stands the test of integrity when men meet to bargain on matters of interest on unequal terms.

Capital can live for a time without employment. It is saved wages. Labor cannot live a day without work. Idle capital may manage to survive with food, raiment, and shelter; but idle labor suffers from want. With this vantage ground capital dictates wages to labor and labor submits until, hungry and naked and homeless, it strikes in desperation. In crowded Europe it strikes in vain. In America it strikes for bread and raiment and shelter—in the new territory which Providence has given to us for the comfort of the poor and as an asylum for the oppressed.

I come now to discuss concisely the concrete and practical question, What wages does labor get in our protected industries? Let protection show its triumphs in enhancing the wages of labor.

Take the iron and steel, the most prosperous of all. In the blast-furnaces the average wages for skilled labor is \$1.90; for unskilled, \$1.17, for a day of twelve hours; that is 15½ cents per hour for the

one and 9½ cents for the other. Taking the whole of these iron and steel industries and the result is as follows: average wages for skilled labor, \$2.59; for unskilled, \$1.24, for a day of 10½ hours; that is 24 cents per hour for the one and 11½ cents for the other.

The highest daily wages for skilled labor is \$4 per day, the lowest, \$1.35; for unskilled the highest \$2, the lowest 54 cents. The highest wages are usually paid in the far and new West, where the opportunity for better remuneration raises wages, which shows that wages everywhere in America are regulated by the opportunity our new Territories offer to ill-paid labor.

Looking to the effect of free trade and tariff on wages, I take the plan which my able friend from Kentucky [Mr. CARLISLE] has done of tabulating the wages in currency, gold, and in purchasing power, according to the careful tables of the Director of the Mint, Mr. Burchard, one of the most accurate and able of American statisticians.

We have not yet full returns of annual wages of labor for 1880 in all of the industries, but we have in cottons, woolens, and iron. In cotton the annual wages average \$242.89; in woolens, \$293; in iron and steel, \$397.51. Combining these, and we get the average for 1880—\$277.

It is fair also to say that the low average of wages in purchasing power in 1870 was due to our debased currency, and the greater purchasing power in 1880 was due largely to the return to the better currency based on specie. The result is as follows:

Year.	Currency.	Gold.	Purchasing power.
1830.....	\$244 83	\$244 83	\$244 83
1860.....	287 00	287 00	255 32
1870.....	358 12	306 55	230 83
1880.....	277 00	277 00	272 91

It will be thus seen that wages advanced in the free-trade decade 17 per cent. in gold, but only 4 per cent. in purchasing power. In the protective decade, from 1860 to 1870, wages advanced in gold about 6 per cent., but declined 10 per cent. in purchasing power. In the last decade wages fell 10 per cent. in gold, but increased 18 per cent. in purchasing power.

Comparing 1860 and 1880 wages declined 4 per cent. in gold value, though in purchasing power they advanced about 6 or 7 per cent.

These results show that the barometer which regulates wages is not in the factories; not due so much to tariff or free trade, but to those more general causes which enable labor here to demand and command better wages than in foreign countries.

But let us compare the wages of labor here and in England, and in other European countries.

I have already shown that English wages are much higher than those paid in France or Germany. Free-trade England pays better wages than protection does in France or Germany. And I have shown that under free trade in Great Britain wages have increased from 50 to 100 per cent., and that in the United States the increase in thirty years has been very small.

In comparing wages in Great Britain and the United States the gentleman from Massachusetts [Mr. RUSSELL] and a Senator from Maine [Mr. FRYE] have taken the wages in New York, which are highest, instead of those paid in New York and Chicago, as their basis of comparison. I shall take Liverpool and London for Great Britain, and Chicago and New York for the United States, and give the hours of work. Our laborers work, as will be seen, full one-ninth more time than in Great Britain, and are entitled to more wages per day than there.

Weekly wages.

Occupations.	New York.		Chicago.	
	Wages.	Time.	Wages.	Time.
		Hours.		Hours.
Carpenters.....	\$9 00 to \$12 00	59	\$7 50 to \$12 00	60
Bricklayers.....	12 00 to 15 00	59	6 00 to 10 50	60
Masons.....	12 00 to 18 00	59	12 00 to 15 00	60
Painters.....	10 00 to 16 00	58	6 00 to 12 00	60
Bakers.....	5 00 to 8 00	86	8 00 to 12 00	60

Occupations.	Liverpool.		London.	
	Wages.	Time.	Wages.	Time.
		Hours.		Hours.
Carpenters.....	\$9 00	54	\$7 30 to \$9 72	54
Bricklayers.....	10 00	55	7 30 to 9 72	54
Masons.....	\$8 00 to 9 00	47 to 49	8 46 to 10 96	54
Painters.....	9 50	54		
Bakers.....			*4 38 to 7 30	

*A part board.

It will be seen that the difference of wages paid in the two countries is very small.

Agricultural skilled laborers get in Bradford, England, \$5 to \$6.25 per week, or say \$200 to \$375 per year; and common laborers, \$3.75 to \$4.50 per week, or \$195 to \$234 per year, with a cottage and lot.

Some laborers get higher wages in Staffordshire; an ordinary laborer gets \$340 per year without his board.

In Sheffield an ordinary laborer in farming gets from \$4.14 to \$4.86, or say an average per year of \$230, with cottage and garden.

Comparing the wages of factory operatives in America as already given, \$277, with agricultural wages in Great Britain, and the difference is very inconsiderable.

Another mode of comparison may be adopted:

I have already shown that in iron and steel industries (which give the highest wages paid in any manufacturing industry) skilled labor gets 24 cents per hour, and unskilled 11½ cents. In blast furnaces the former gets 15½ cents per hour, and the latter 9½ cents. In Pennsylvania, the great iron and steel State, skilled labor gets only 13 cents per hour, and unskilled less than 9 cents.

Now, in the Report on Labor in Europe for 1878, page 235, I find engine-drivers on railways get 10 to 15 cents per hour, and there are car-drivers and conductors in Washington who get \$2 per day of sixteen hours, or 12½ cents per hour.

These facts show that the so-called pauper wages of Great Britain are nearly, in some cases fully, as high as the wages of the American laborer under the protective policy.

But in cotton manufactures, I have more precise means of comparison. In the Consular Report of October, 1881, issued by the State Department, the conclusion is stated in regard to the comparative efficiency of British and American labor in these words, page 91:

It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly one dollar and fifty cents' worth of manufactures to the British operative's one dollar's worth, and even in piece goods, where the superior quality and weight of the American goods are so marked, the American operative turned out 2.75 yards to 2.50 yards by the British operative.

This being so, the wages of the American laborer ought to be higher in the ratio of the greater amount of work done by him than by the British operative.

But is this so? I append the statement of this same report, pages 98 and 99:

Owing to the different arrangements of the English and American tables of wages, it is difficult to give comparative analysis thereof which would show at a glance the difference in the wages of the operatives of both countries.

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, \$7.20 to \$8.40, (master spinners running as high as \$12;) American, \$7.07 to \$10.30.

Weavers: English, \$3.84 to \$8.64, subject at the date on which these rates were given to a reduction of 10 per cent.; American \$4.82 to \$8.73.

The average wages of employés in the Massachusetts mills is as follows, according to the official returns: Men, \$8.30; women, \$5.62; male children, \$3.11; female children, \$3.08. According to Consul Shaw's report the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about \$8 per week, subject to a reduction of 10 per cent.; women, from \$3.40 to \$4.30 subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are 56; in the Massachusetts mills, 60 per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually 66 to 69 per week.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

In the two prime factors which may be said to form the basis of the cotton manufacturing industry, namely, raw material and labor, we hold the advantage over England in the first, and stand upon an equality with her in the second.

Having the raw material at our doors, it follows that we should be able to convert it into manufactures, all things else being equal, with more economy and facility than can be done by England, which imports our cotton and then manufactures it in her mills. The expense of handling, transportation, and commission must be an important item in this regard as compared with our turning in the fiber from the cotton-fields to our mills and shipping it in the advanced form of manufactured goods. Add to this the secondary fact that it costs us no more to handle and manufacture the same than it costs in England, and we stand on an undoubted equality thus far in the race of competition.

In Massachusetts men get \$3.30 for sixty hours' work, or 14 cents per hour. Women get \$5.62 for sixty hours' work, or 9.3 cents per hour. Boys get \$3.11 for sixty hours' work, or 5.2 cents per hour. Girls get \$3.08 for sixty hours' work, or 5.1 cents per hour. In Lancashire, England, men get \$8, subject to 10 per cent. reduction, for fifty-six hours, or say \$7.20, or 13 cents per hour. Women get, say, \$3.85, subject to 10 per cent. reduction, or 6.1 cents per hour.

I have shown that our laborer is more efficient. On this point I quote Mr. Nelson, the intelligent correspondent of the Philadelphia Press, in his letter from Atlanta on the 26th of last November:

I have already shown in a former communication that a British operative will run over eighty-four spindles, while the American operative runs about sixty; and that this makes an enormous difference in the wage account in favor of the British mill-owner. The difference between New England and the South is vastly greater. The average New England operative runs sixty-eight spindles, and the average Southern operative runs thirty-four spindles.

This state of facts does away in a large measure with the wage question. The New England mills can afford to pay very much larger wages to operatives who can do so much more work.

Our French consul says an American laborer can in nine hours do as much as a French laborer in eleven or twelve hours. Our Ger-

man consul at Leipsic says our laborer will do two or three times as much as the German laborer.

In "Labor in Europe," page 36, already quoted, Mr. Secretary Evarts says:

9. That the average American workman performs from one and a half to twice as much work as the average European workman. This is so important a point in connection with our ability to compete with the cheap manufactures of Europe, and it seems on first thought so strange, that I will trouble you with somewhat lengthy quotations from the reports in support thereof.

These official data show, taking the efficiency (that is, the amount of work done by the laborer) and the time occupied in work, that the wages of labor in Great Britain and America differ very little—certainly not over 25 per cent., and some of the statements show not at all.

I have not, in the previous discussion, insisted that the better condition of labor in Great Britain was due to free trade, or the reverse elsewhere to protection. But looking to the results of the diverse policies in Great Britain and in the United States, I think I am warranted in holding that these policies and these results stand in the relation of cause and effect.

I have already argued that as wages are paid out of the aggregate fund of products, as labor is more efficiently directed under free trade than by the protective policy, wages will naturally tend to rise under the former and be depressed by the latter.

In thirty years the population of Great Britain has increased 28 per cent.; its wealth 125 per cent. This shows her growth in productiveness has quadrupled her growth in population. Is it wonderful her wages have advanced from 60 to 100 per cent.? In the same period the United States have increased in population 117 per cent.; in wealth not over 200 per cent. This disproportion in the increase of wealth and population, as compared with Great Britain, is followed by an increase of wages of less than 12 per cent.

Free trade has stimulated wealth and wages in Great Britain. Protection has retarded both in the United States.

I now advance to the examination of another question. What duty on our manufactures will compensate our manufacturers for the difference in the prices of labor? What duty will so enhance the price of our domestic product as to enable the employer to give his operative full American wages and compete with the foreign product?

Take pig-iron. Pig-iron product by the census returns for 1880 was 3,781,021 tons. I have taken the wages, capital, various materials, &c., and dividing each by the number of tons have ascertained the amount of each entering as a factor into the price of a ton of pig-iron. The average cost per ton is \$19.

Of this labor is \$3.10, or 16 per cent.; ore is \$8.38; coal and coke is \$6.03; fluxing material is 67 cents; all others 42 cents; making \$19. Allowing that the American manufacturer pays 50 per cent. more for labor, the amount to be allowed to compensate for that would be \$1.14; 20 per cent. more for ore would make \$1.46; for bituminous coal, 4 cents; for flux, anthracite, and charcoal, (no duty;) for coke, 43 cents; allowing 3 per cent. more of interest and 2 per cent. more of taxes on capital, \$105,151,176, \$1.40; total, \$4.37.

Thus \$4.37 would be a full compensatory duty. The duty is now \$7. Five dollars would more than compensate for every difference due to difference of cost of labor and capital and for the duty on our raw materials. A like calculation on Bessemer steel rails will show \$14 per ton is a compensatory duty. The present duty is \$28. The duty on all other iron and steel products can be shown to be largely in excess of what is compensatory.

My friend from Kentucky [Mr. CARLISLE] has been called to account for his statement as to bar-iron; but I have made a calculation, in which I have included the labor in every raw material used, as stated in the census returns, and I find it differs slightly from his own. My estimates are very liberal, and I find the cost of all labor in the raw materials used and in the production of rolled iron, including bar-iron of commerce, is \$23.49.

The duty on bar-iron is \$33.60, or more than ten dollars in excess of all wages paid in the manufacture; and if we suppose we pay 50 per cent. more for labor than abroad, then we do pay about \$8 more than the British manufacturer for all the laborentering as a factor into the perfected bar-iron product. Eight dollars duty would compensate for that difference, and yet this duty is \$33.60, or \$25.60 more than labor needs for its protection—which excess goes into the pockets of the capitalist as his share of the bounty exacted from the consumers. And I may as well add that in these computations I have allowed for difference of cost of iron-ore due to the duty of 20 per cent. ad valorem; and yet I find the ore used by our manufacturers costs on the average \$4.57 per ton, and the Iron and Steel Association report the average cost of ore to the British manufacturer as \$5.25; so our ore is the cheaper of the two.

Without going into details I will add, as the result of like calculations, that a compensatory duty on woolens would be 34 per cent., yet the duty on woolens ranges from 70 to 100 per cent., and that includes blankets, flannels, knit goods, carpets, &c.

A full compensatory duty on cotton goods would be 16 per cent.; 20 to 25 per cent. would be ample.

If, then, the duties imposed by this tariff are so far beyond what the cry for protection to labor demands, the question now arises, to whom does this great excess of duty inure? Who gets it? Labor does not, for the compensatory duty I have stated makes up for all

enhanced cost of raw materials on which duties are paid, for all the difference between foreign and American labor, and for all difference in interest on capital or alleged difference of taxation, and my friend from Kentucky [Mr. CARLISLE] has shown we pay less taxes really here than in England. Who then gets the benefit of this large excess of duty? I answer, the capitalist engaged in manufactures.

What are the profits? If we deduct from the value of the product the wages paid and the cost of raw material, the remainder is profit.

Mr. Swank, the secretary of the Iron and Steel Association, was employed by the Census Bureau to report the facts. He did so. The results are before me. I predict, however, that it will be found they are less favorable to my views than these facts would exhibit, for the following reason:

He estimates as capital invested all which is invested in works, which did not produce, because not in operation, as well as those which were in operation. It is obvious, therefore, that the profits which result from the returns on which I base my estimates will be a less percentage on all the capital, active and non-active, than if taken as the profits made by those actively at work. I enter this caveat. So that the results I shall so state are below the real percentage of profits, and cannot be in excess. Besides, the wages paid for repairs of plant must have been confused with those paid in production, for Virginia seems by the returns to have lost money in making pig-iron, when the fact was otherwise.

I find that in all the iron and steel works the profits realized were 21 per cent. on capital invested. In Bessemer steel the profits were nearly 67 per cent.; in woolens the profits were 34 per cent.; in cottons, 21 per cent. This shows us that while these excessive duties did not enhance wages of labor, they filled the swollen coffers of the monopolists who, under the guise of protecting American labor, wax fat with spoils filched by this protective policy from the mass of the people to satisfy the greedy demands of these privileged classes. But it is said these alleged profits are not net profits; that some of them go to restore the waste and wear of machinery and for the improvement and repair of the plant, &c. Suppose it does; it leaves a large margin for net profits. But where in your fund for wages is your margin for the repair of the wear and tear of the brain and brawn and bone of the worker in your factories? What restores the life of the laborer, worn out or lost in your service, to his widow and his children? What do you allow from your well-filled treasury to heal the distress which strikes in bold demand to-day for better recompense to the man and less to dead capital and driving machinery.

Mr. Chairman, I have shown that this tariff policy taxes the income of the workman at a rate which would appal the millionaire, whose income is free, by the burdens which labor bears; that it taxes luxury lightly and necessities grievously; that it builds up a privileged order of wealth which menaces the equal rights of men in our society; that it takes at least a half billion of dollars annually as a tribute to the greed of 12 per cent. of our people from the uncompensated 88 per cent. of toilers in other industries; that it creates in the Union two classes of States—one bearing burdens, the other feeding on bounties; that it obstructs access to the world's eager markets for the produce of our teeming soil; that, without benefit to labor's wages, it makes enormous profits to its favorites under the specious plea of a tender love for the workingman; and that it cripples the industries, impairs the wealth, and impedes the progress of the American Union. And does all this without warrant from the Constitution and in flagrant disregard of the rights, the sacred rights of liberty bequeathed from our fathers to the manhood of the people of the United States.

When we come and ask that this monstrous burden, which has been borne by our people for twenty years, shall be removed, or its chief enormities decreased we are met with a sturdy protest against disturbing the vested rights of privilege.

I would not strike down the system at once. I recognize the danger of change. Many of these investments have been induced by this vicious policy of the Government. This forbids the hand, which invited them, to destroy them at a blow. But moderate their excesses. Reduce the most flagrant and oppressive duties, especially those which burden the clothing, the shelter, and the food of the poor. Reduce by degrees, so as not to injure honest men who have gone into these employments, but limit and reduce their profits, and thus relieve the consumers. Look to revenue, for a reduction of duties, as I have shown, which are now prohibitory on many articles, will increase the revenue. They are beyond the maximum revenue point, and reduction of duty enlarges the revenue in such cases.

No man favors free trade in the sense of repealing all tariff laws. But let us turn back from a policy which makes our revenue system a pretext for bounties to favored classes, which makes protection the object and revenue the incident, and march honestly forward toward a tariff system which is laid with the design only of raising revenue, but will not avoid the protection which incidentally may arise from such a *bona fide* purpose.

I shall consume the remainder of my time by making some general observations upon the bill pending. There was a gentleman outside of this House, and the remark has been before quoted to the House, who laughingly said—he is a man of weight and power, and a lawyer—that this tariff-commission bill was an affidavit for a continuance. An affidavit for the continuance of a bad cause; a cause

in which the defendant dares not go to trial before the people. But what is the proposition here? It is that this House, charged by the Constitution with the origination of all bills for raising revenue, shall hand over to the President and to the Senate the absolute power of appointing a commission that shall gather together evidence as the basis upon which to frame a tariff bill, but which, after all, must be digested, considered, and first passed by this House.

The object of this commission is to take all the evidence in the case as it may be presented by the general interests of the country on either side, and report them to this House. Is this right? Can we do this justly to our constituents, justly to the country, and justly to the cause of truth? Gentlemen say that this bill is not intended for any delay, but the matter is given to a commission because this House and the Committee on Ways and Means cannot do the work. Why, sir, I do not know that I am telling secrets of the committee, and if I am, my friends will tell me, when I say that the McKinley bill—

Mr. MORRISON. It is published in the newspapers of the country.

Mr. TUCKER. Yes, sir, that the committee was ready to report the McKinley bill which did not reduce but increased the duties, and that it was determined to report it until this commission bill came up, and then the question arose, if you are going to vote a commission why bring in a bill for a partial revision of the tariff? Why, if that bill of my friend from Ohio [Mr. MCKINLEY] had been brought into the House the entire tariff question, as gentlemen upon the other side of the House know full well, would have been opened to debate in this Hall. We had a tariff bill ready then to report and the House was ready to consider it. It ought to have been brought in in some shape. This House can do the work now as well as next winter, or two years hence. If it cannot we should resign and let the people send representatives who can do it. The Committee on Ways and Means can do it now. My friends who disagree with me, and gentlemen upon our side of the question (except myself) are fully able now to revise this tariff and perfect a scheme that can be brought in and adopted. This scheme of the commission will have to be at last discussed and adopted or repudiated by this House. Why not, then, take it up now?

It is, as I have said, an affidavit for continuance. What ought we to do? Why, instead of voting to put the whole question into the hands of a commission, this House ought to march up boldly to its duty, and meet the issue squarely before the country. They ought to say to the Committee on Ways and Means, report a bill good or bad and let us consider it. Let us at least labor for the correction of the iniquities of a system which taxes the necessities of life higher than it does the luxuries; which taxes the great agricultural and other industries of the country for the benefit of the manufacturers, and which necessarily checks our foreign exports, in which agriculture is deeply interested. But as I have said, I have no time now to discuss these questions specially. I only ask that the Committee on Ways and Means may give a careful consideration to this system, and bring in a bill of their own, so that in the end we may not only have a just system but one not marked by the inequalities and enormities which inhere in the present tariff policy, under which certain industries are being built up and fostered at the expense of the great body of the people of the country. [Applause.]

National-Bank Charters.

SPEECH

OF

HON. JOSEPH H. BURROWS,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882,

On the bill to enable national banking associations to extend their corporate existence—

Mr. BURROWS, of Missouri, said:

Mr. SPEAKER: This amendment is so short, its purpose so apparent, that it is almost useless for me to occupy the time of this House in explanation or even to urge the necessity of its adoption. A uniform and stable currency is the bed-rock of prosperity and peace; without it all is in jeopardy and peril every hour. Every member upon this floor knows, and it has often been admitted here during this discussion, that there is no limit to the number of banks that may be organized or the amount of circulation, with the bare exception of the bonded debt, less the 10 per cent. retained in the Treasury. We know to our sorrow that there is nothing in the law as it now is to prevent banks from retiring their circulation and reducing the volume of money at will.

The gentleman from Pennsylvania [Mr. RANDALL] sought by his amendment to put in a preventive, an ounce of which is said to be bet-

ter than a pound of cure. I do not now offer mine as the cure but as a penalty to a violated trust as well as a safeguard to a recurrence of an evil everywhere admitted in inflating and contracting, as the spasm may take them. I therefore offer the following amendment:

Add:

"Sec. 8. Whenever any banking association, organized under the provisions of this act, shall withdraw from circulation their circulating notes, or shall take up their bonds deposited with the Comptroller of the Currency by depositing Treasury notes or those of their own with a view of retiring the same, such association shall not again be permitted to increase the volume of its circulation for a period of twelve months next succeeding the date of such retirement."

If this section is adopted it will add largely to the stability and uniformity of our currency, and take from these corporations a power they have not only used but abused. I will reprint from my speech of April 11 some remarks upon this same topic:

A dangerous power? I call the attention of the House to the action of one single bank, as reported by United States Treasurer Gillilan in the financial reports for 1880; and if one national bank may do this all may do so; and is there a man upon this floor wise enough to portray the evil which would result from such action if it were a united action by the 2,200 national banks? He says:

"In January and February, 1875, a certain bank retired its circulation from \$208,400 to \$45,000 by deposits of legal-tender notes. Between September 20, 1876, and May 26, 1877, and before that deposit was exhausted, it increased its circulation to \$450,000. Between August 14 and September 10, 1877, it again reduced its circulation to \$45,000. On September 19, 1877, nine days after completing the deposits for this reduction, it began to take out additional circulation, although \$42,550 of prior deposits remained in the Treasury, and by the 28th of that month its circulation had again been increased to \$450,000. July 22, 1878, its circulation had again been increased to \$450,000. July 22, 1878, it for the third time reduced its circulation to \$45,000, and in August and September, 1879, again increased it to \$450,000, at which it now remains, the balance of its former legal-tender deposit then in the Treasury being \$112,615. From January 13, 1875, to the date of this report, \$778,275 of its notes have been redeemed, of which only \$40,700 were redeemed at the expense of the bank, although during more than one-third of that period it had outstanding and was deriving the benefit from the full amount of circulation which its capital authorized. The only assessments which have been made on the bank for the expense of redeeming its notes were \$24.14 in 1875, and \$4.39 in 1878. At one time there were in actual circulation \$852,550 of its notes, although the highest amount ever borne on its books was \$450,000."

Is this a safe power to be lodged anywhere outside the people themselves, through their representative, the Congress of the United States?

I think not. A little more than one year ago the New York Tribune said in an editorial, and surely did not make so bold a threat without authority:

The national banks are so well organized that they can act at a moment's warning and can defy any act of Congress.

Is it indeed a fact, and shall we admit it here, that there is in this country a power higher than the Constitution and stronger than Congress and the people themselves? If so, then where is your boasted liberty and republican government? It would be but little less than a "hiss and a by-word," and Congress has become a mere "sounding brass and tinkling cymbal."

During the rage that took possession of Wall street during the discussion of the funding bill in the last days of the Forty-sixth Congress, as is very vividly remembered all over the country, when these same national bankers gnashed their teeth and threatened to bring death, destruction, and I had liked to say damnation, to the whole country, and made the Chief Executive very uneasy in his chair, until he had obeyed the behests of these autocrats, the people stood aghast at their own humiliation; the press (that was not subsidized) teemed with its denunciations of the attempt at "bulldozing." I will print with my remarks an editorial that appeared in the Globe-Democrat, the most influential Republican paper published west of the Mississippi River, and it was warmly indorsed by the country press throughout the West and South. I ask for it a careful perusal:

THE RECENT FLURRY.

The Wall-street tempest in the tea-pot is over. The stocks that on Friday were down so low that nobody would touch them were on Saturday so high that nobody could reach them. The excited bankers who went at express speed from the West to Washington, laden with greenbacks for the withdrawal of their circulation, now claim that they just wanted to see the inauguration; the more excited brokers who left Wall street for the White House to tell Hayes that he had to veto the refunding bill are drinking cocktails at Willard's with the air of men who are above getting excited about politics; the greenhorns who let go of their stocks under the apprehension that Jay Gould was going to break are remarking that Wall street is a queer place anyhow; the old sharps who always make their heaviest haul of fish in troubled waters are chuckling internally over the facility with which a storm can be conjured up; but outside of the little crowd who gamble in Wall street, no trace remained last night of what threatened twenty-four hours before to turn to a panic worse than that of 1873.

The country has gotten off with a bad scare only because the country was in good condition, its current values for all commodities being in nearly all cases legitimate, real, and reasonable values. But if an extension of credit, an enlargement of speculative investment, and an inflation of currency and prices had placed our transactions on an insecure basis, a much smaller contraction than the one so suddenly forced on us by a couple of dozen national banks might easily have knocked down a larger line of speculative values; a much smaller decline in stocks would have led to failures that might have sent bank after bank down like a row of bricks. Nothing of the kind happened, because the holders of stocks were solvent and their values were real values, and two days of unprecedented fluctuations in the stock market have gone by without a single failure in consequence thereof. Nothing could better establish the stability of our financial dealings, but it would not do in congratulating the country over its escape from a great disaster not to recall the circumstances which made disaster a possibility.

Congress was undoubtedly wrong in frightening weak and foolish bankers with the prospect that their bonds would be indefinitely locked up while they were chasing their own identical notes around the country. Congress is undoubtedly correct in its notion that the banks should not have the power of suddenly contracting the currency at will, and the flurry of last week is a proof that Congress is doing right in restricting this dangerous power. But Congress did the right

thing in the wrong way, and invited the very calamity it wished to avert when it took snap judgment on the banks with an unexpected amendment, and served notice on them that those who did not get out their bonds before the refunding bill was signed might have hard work in getting them out at all. This would have been an injudicious proceeding at any time; it was especially injudicious as an amendment to a bill which, by reducing the rate of interest on the bonds held as security, made it certain that some of the banks would desire to withdraw their circulation.

Congress was ill-advised, but the sin of Congress sinks into insignificance compared with the sin of those wild-cat bankers who, partly through the fear of a panic and partly through the hope of a panic, went to work to smash things generally. In the rush to deposit greenbacks and to withdraw bonds it is easy to distinguish two classes of national-bank presidents—the fools and the knaves. The fools were those who were so panic-stricken at the mere prospect of being obstructed in the retirement of their circulation that they did not stop to calculate the much greater loss they would suffer from any injury to the national credit. The knaves were those who deliberately helped to contract the currency to lighten the money market and to create a panic in order that they might go in after the battle, like camp-followers, to rifle and scalp the fallen.

It might be very hard to prove, but it is still harder not to suspect, that every New York national bank that went into such sudden retirement is managed by speculators in stocks, who helped the bear movement in the sub-treasury for the sake of profiting by the bear movement in the stock exchange. The sooner the United States Government severs its connection with such disreputable agents the better. The national credit and good faith are interests far too valuable in themselves and too far-reaching in their connections to be made the counters of desperate gamblers, who see nothing beyond the morrow's quotation of the stock-list. One such performance as that of last week has opened the eyes of the people to the real nature of the national banking interest and the motives which move it; and the complaints of the national banks against adverse legislation hereafter will meet with little sympathy, but will be taken rather as an evidence that they are getting just what they deserve.

Mr. Speaker, for the Government to pay interest on the bonds of its own indebtedness that lay in its Treasury and are virtually paid off, save 10 per cent., is bad; and for Government to give to those who are already rich 90 per cent. more, thus doubling their wealth, is worse; but to allow these same corporations or associations to increase or decrease the circulating medium is the worst of all, and is the most objectionable, if not the most dangerous, feature in the national banking system. It is a well-established principle in political economy, and one so oft repeated and but so recently proven in our own country, that as the stock of money increases prices advance, and as it decreases prices decline. This is as true of labor as of property. To this I challenge contradiction. Shall we, then, permit any man or body of men less than the Congress of the United States, who should but voice the will of the people, to put a price upon all labor and all property? I trust not. Let us, then, take out the sting from this serpent, the virus from the monster, by adopting this amendment.

National-Bank Charters.

SPEECH

OF

HON. IRA S. HASELTINE,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1882,

On the bill to enable national banking associations to extend their corporate existence.

Mr. HASELTINE said:

Mr. SPEAKER: I propose the following amendment:

Strike out all after the enacting clause and insert the following:

"That all the interest-bearing indebtedness of the United States now due or optional with the Government, and all other interest-bearing indebtedness as it shall hereafter become due, shall be paid in lawful money of the United States.

"SEC. 2. That all money now in the Treasury, and all revenues of the United States Government not otherwise appropriated, shall be applied in payment of the interest-bearing debt.

"SEC. 3. That the Secretary of the Treasury be, and he is hereby, authorized and required to issue non-interest-bearing Treasury notes of the United States of the denominations of one, two, five, ten, twenty, fifty, and one hundred dollars, which shall be made lawful money and a legal tender at its face value for all taxes, revenues, and debts, public and private, within the United States, which may be necessary in addition to the aforesaid money and revenues to pay the said interest-bearing debt now due, and also the interest-bearing debt now optional with the Government, and all other interest-bearing debts as they shall respectively become due.

"That the Secretary of the Treasury is hereby authorized and required to issue Treasury notes made a full legal tender and lawful money in denominations convenient for currency, and in quantity equal to any contraction which may be caused by the withdrawal of national-bank notes.

"SEC. 4. That all acts and parts of acts in conflict herewith be, and the same are hereby, repealed."

Mr. Speaker, this amendment provides for paying into the circulation all money and revenues not otherwise appropriated, and issuing legal-tender currency to take the place of interest-bearing bonds now due, or optional with the Government, and also to take the place of national-bank currency. It provides against any contraction by the withdrawal of bank paper and saves to the people from \$12,000,000 to \$15,000,000 per annum. The adoption of this amendment would provide for the payment of the interest-bearing debt and supply the people with money which is preferred to gold.

Mr. Speaker, Hon. Peter Cooper, the great American philanthropist and political economist, who in moral and patriotic grandeur is second to no man of his time, in his late petition to Congress protests against the passage of the bill under consideration as reported by the committee, and presents the argument for a just and enlightened policy so clearly and forcibly that I deem it due to the cause and in the interest of good government and humanity to give his petition entire:

Petition of Peter Cooper to the honorable Senate and House of Representatives of the United States.

HONORED GENTLEMEN: Your petitioner, now in the ninety-second year of his age, respectfully prays that the present Congress may not adjourn until they have made the necessary and proper law requiring that all banking shall in future be carried on with United States Treasury notes, receivable for all forms of taxes, duties, and debts, both public and private, and that after the expiration of the charter of our present banks no paper money shall ever be allowed to circulate in this country in excess of the amount of the people's money actually found circulating as the currency at the close of the war. For every dollar of that currency the people had given value to the Government, and it should only be increased as per capita with the increase of the population after every census.

Your petitioner further prays the honorable Senators and Representatives to examine with care the following reasons that prompted him to offer this petition: Impelled as I am by an irresistible desire to do all that is possible to call and fix the undivided attention of the Government on the appalling scenes of wretchedness and ruin that would inevitably follow the rechartering of the 2,200 banks deceitfully called national, I cannot help addressing you on this occasion once more.

Such an army of banks, all united in one common effort to secure for themselves the largest amount of interest on their small specie capital, would find it for their advantage to expand and contract the currency to attain their object.

Only a few weeks ago (March 30, 1882) Hon. RICHARD WARNER, member of Congress from Tennessee, proved in Congress that the banks, deceitfully styled national, have made out of the people the enormous sum of \$1,848,930,000 within the last sixteen years, leaving the national debt at the present time nearly as large as it was at the close of our terrible war for the nation's life.

For one, I have the most fearful forebodings of the consequences that must grow out of a recharter of these grasping institutions, which are even litigating to be exempted from local taxes! The American people are beginning to realize that a national debt is not a blessing, as claimed by selfish monopolists, but a national curse, which a wise and parental government should dread as we would a pestilence.

I have lately learned that a secret organization has grown up in our country, which is known as the Knights of Labor, and that they already number 150,000, and are daily increasing from the strikes that extend over the States. They are under the guidance of able and talented leaders, who have the wisdom and courage to tell their working brothers what they must do to save themselves and their families from the enslavement of a national debt that enriches monopolists and non-producers. They caution them against strikes for higher wages, and advise them to continue work and use their money to buy for each organized company a Gatling gun, with one hundred and fifty rounds of ammunition, and three months' provisions for their families; then they may like honest and prudent men demand, obtain, and maintain their "inalienable right to life, liberty, and the pursuit of happiness," as mentioned in the Declaration of Independence.

Such a body of industrious men, with such leaders, will not allow idle tramps as members of their order. If our bankers would act wisely and prudently they would adopt the language of the late John Earl Williams, for many years the honored president of the Metropolitan Bank of New York, who said:

"I would suggest that Congress assume at once the inherent sovereign prerogative of a government and exercise it by furnishing all the inhabitants of the United States with a uniform national currency. Surely the people, and the people only, have a natural right to all the advantages, emoluments, or income that may inure from the issue of either \$1,000 bonds with interest or \$10 notes without, based on the faith and credit of the nation!

"This principle, simple, clear, and undeniable, ought to be recognized as fundamental and the only safe and proper basis on which may securely rest all the circulating medium of the country for the sole benefit of all the people, and not, as now, for the profit of a class of stockholders, however deserving they may be in all other respects.

"To carry into effect this principle—to substitute United States notes for bank notes—take away as soon as practicable and forever all circulation from banks.

"They would do a strictly legitimate business as banks of discount and deposit, knowing that whatever leads to the prosperity of the whole people must be beneficial to the banks; but leaving the right where it belongs, to the United States Government, to supply the whole circulating medium of the country.

"In this connection, we must remember that banks are the creatures of law. The laws which created them may, by virtue of rights reserved, be amended, altered, or repealed.

"To those who are disposed to complain of the change as a hardship, one is tempted to ask what natural right a dozen stockholders have to receive notes from Government to circulate that any other dozen men do not possess?"

As this gentleman was an eminent banker, his opinion must have weight.

Some ideas and advice from the founders of this country and from patriotic financiers will not be out of place here and now:

Franklin says: "Paper money, well founded, has great advantages over gold and silver, being light and convenient for handling large sums, and not likely to have its volume reduced by demands for exportation. On the whole no method has hitherto been formed to establish a medium of trade equal in all its advantages to bills of credit, made a general legal tender."

Jefferson: "Treasury bills, bottomed on taxes, will take the place of so much gold or silver, which last, when crowded, will find an efflux into other countries, and thus keep the quantum or medium at its salutary level.

"Treasury notes bearing or not bearing interest, as the case may be, is the only fund on which the Government can rely for loans; it is the only resource that cannot fail them, and it is an abundant one for every necessary purpose."

In 1813 Jefferson declared: "Bank notes must be suppressed and the circulation restored to the nation, to whom it belongs."

Madison, in his message of December 3, 1816, said: "But for the interests of the community at large, as well as for the purpose of the Treasury, it is essential that the nation should possess a currency of equal value, credit, and use wherever it may circulate. The Constitution has intrusted Congress exclusively with the power of creating and regulating a currency of that description."

Jackson: "I submit to the wisdom of the Legislature, whether a national one [currency] founded upon the credit of the Government and its resources, might not be devised, which would obviate all constitutional difficulties and at the same time secure all advantages to the Government and the country, that were expected to result from the present bank."

Calhoun: "It appears to me, after bestowing the best reflection that I can give the subject, that no convertible paper—that is, no paper whose credit rests on the promise to pay coin—is suitable for a currency. No one can doubt but that the Government credit is better than that of any bank—more stable and more safe."

* * * Bank paper is cheap to those who make it, but dear, very dear, to those

who use it. On the other hand the credit of the Government, while it would greatly facilitate its financial operations, would cost nothing or next to nothing, both to it and the people."

Webster: "When all our paper money is made payable in specie on demand it will prove the most certain means that can be used to fertilize the rich man's field by the sweat of the poor man's brow."

"The producing cause of all prosperity is labor! labor! labor! The Government was made to protect this industry and to give it both encouragement and security. To this very end, and with this precise object in view, power was given to Congress over the money of the country."

"He predicted that conditions which permitted the rapid accumulation of property in the hands of a few, remitting the masses to poverty, would soon destroy free institutions."

Benton: "The Government ought not to delegate this power if it could. It was too great a power to be trusted to any banking company whatever, or to any authority but to the highest and most responsible which was known to our form of government. The Government itself ceases to be independent, it ceases to be safe when the national currency is at the will of a company. The Government can undertake no great enterprise, neither of war nor peace, without the consent and co-operation of that company; it cannot count its revenues for six months ahead without referring to the action of that company, its friendship or its enmity, its concurrence or its opposition, and see how far that company will permit money to be scarce or to be plentiful, how far it will let the money system go on regularly or throw it into disorder, how far it will suit the interest or policy of that company to create a tempest or suffer a calm in the moneyed ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy to put up and put down prices, to make and to break fortunes, to bring the whole community upon its knees to the Neptune who preside over the flux and reflux of paper. All property is at their mercy."

F. E. Spinner, fifteen years United States Treasurer, during our late war said: "I had made up my mind that when I left the Treasury never again to meddle with or even think of politics, or of anything in any way connected therewith, and to seek that peace and quiet of mind and bodily rest that a man at the age of seventy-three, who has been so actively engaged, mind and body, for more than half a century, so much needs. But it now seems to be somewhat doubtful whether I will be able to carry out that resolve. * * * Educated as I was in the hard-money school, I have had hard work to unlearn what I was taught as being truisms in political economy and to rid my mind from preconceived and, as I now believe, erroneous ideas."

"My experience in the Treasury has been to me a very practical school, and I must have been blind not to have seen the errors of the popular theories that have been so long accepted as settled truths by the various commercial people of the world. * * * I hope to live yet long enough to see Congress make a beginning in the right direction by passing an act authorizing the issue of a bond bearing a low rate of interest that can, at the will of the owner, be at any time convertible into a legal-tender Government note, and the note, in a like manner, convertible into such a bond. * * * Such a currency would at all times adjust itself to the exact business wants of the country, and therefore a commercial revolution would be next to impossible."

"This once accomplished and working, as you and I believe it will work, for the benefit of the whole people, other important and beneficial reforms would soon follow. The Shylocks force all this, hence their fierce opposition." This letter speaks volumes in favor of Treasury notes.

Senator Jones: "We cannot, we dare not, avoid speedy action on the subject. Not only do reason, justice, and authority unite in urging us to retrace our steps, but the organic law commands us to do so; and the presence of peril enjoins what the law commands. By interfering with the standards of the country, Congress has led the country away from the realms of prosperity and thrust it beyond the bounds of safety. To refuse to replace it upon its former vantage ground would be to incur a responsibility and a deserved reproach greater than that which men have ever before felt themselves able to bear. The present is the acceptable time to undo the unwitting and blundering work of 1873, and to render our legislation on the subject of money consistent with the facts concerning the stock and supply of the precious metals throughout the world, and conformable to the Constitution of our country."

Hon. RICHARD WARNER, M. C., observed in his able and comprehensive speech on our national finances:

"You have about twenty-two hundred banking corporations knocking at the doors of Congress to recharter them for a period of twenty or thirty years, as the case may be, and leaving a law in existence which will permit the chartering of as many more if desired, asking to allow the control of the currency to be continued in corporate bodies. I would favor the repeal of the laws allowing the charter of national banks, refuse to re-enact them, and pass a law winding up national banks as soon as their charters expired, taking from them the power and control of the currency, placing it back in Congress, where the Constitution fixes it. The Constitution creates but one legislative body, and vests in that body the sole and exclusive legislative power. There is no clause in the Constitution that gives Congress the power to delegate legislative power to any other body. It alone can exercise such power. If Congress has the power to give or delegate to banking corporations power and control over the currency to the exclusion of itself, by parity of reasoning could they not delegate and give to railroad corporations the power and control over commerce?"

In spite of these warnings, uttered and written by sages, statesmen, and financiers from Franklin, Jefferson, and Webster to Senator Jones, president John Earl Williams, and Treasurer Spinner; in spite of the seven and ten yearly periodic panics that impoverished our farmers, manufacturers, mechanics, and laborers, and enriched the banks and capitalists, Secretary Folger and Comptroller Knox seem now inclined to advise the rechartering of these banks, deceitfully called national. I wish these two financiers could see as clearly as Treasurer Spinner before it is too late.

The charter of these banks, deceitfully styled national, was granted February 25, 1863, under the pretext of a war measure. In 1864 they circulated but \$31,235,270 of notes furnished and guaranteed by the United States Treasury; in 1865 they circulated \$145,137,800, which, from that date to 1880, increased to \$343,834,167. On these millions the people's Treasury has paid them interest in gold ever since, while laborers and producers had to take their wages in paper. Thus did the one hundred and twenty bankers, who were members of Congress, manage to legislate for their interests. Now their first charter being about to expire, they apply for a recharter in a time of profound peace, when there can be no pretext for a war measure. Such a power in the hands of heartless corporations is not only dangerous to our liberties and persons but to our daily comforts; because, when they see fit, they contract their circulation and refuse accommodation to manufacturers and employers, who are consequently obliged to stop work and discharge the men and women in their employ, thus causing panics, poverty, misery, and ruin. Soon such contractions will reach farms, houses, and stocks, which these favored banks and their friends can buy for one-half or one-quarter of their cost, because the honest owners cannot pay the interest and taxes thereon, all of which makes the rich richer and the poor poorer, as happened from 1837 to 1841, from 1847 to 1850, from 1857 to 1863, and from 1873 to 1878, when the laboring and producing classes were impoverished by special legislation, that enabled bankers and monopolists to deceive the people, and bribe such as stood in their way. A passage from some patriot and philanthropist, I cannot remember, will be appropriate here and now: "Corporations are fast becoming the curse of modern life. They usurp the

powers that belong of right to the community and its government, and actually threaten the liberties of the people. The individual capitalist is often, if not generally, a benefit to the community. He respects public opinion. He cares for the approval and regard of his fellow-citizens. He has human sympathies and a conscience. He generally uses his wealth for the public benefit in indirect, if not in direct ways. But, when he combines with other capitalists in forming a corporation for special objects, and puts his money in it, the thing he helps create is utterly destitute of personal or human qualities, and is often managed in absolute disregard of the rights, the interests, the welfare of everybody but the men who own and operate it. Every individual who has a hand in controlling the machine feels absolved from moral responsibility in its conduct. If it robs other people, ruins their business, injures their estates, it is none of his concern and he washes his hands of personal guilt. Americans rejoice that they have got rid of kings and lords. But they have saddled themselves with corporations which are proving to be harder task-masters, and more grinding and heartless despots than any of the Old World tyrants."

There was a somewhat plausible reason in 1863 to charter banks, deceitfully styled national—this reason was called war measure; but now, 1882, our country and the world are at peace; there is not even a war-cloud. Why, then, recharter these banks against the letter and the spirit of the Constitution, which contains no clause or word that authorizes Congress to delegate the money power to anybody? Allow me to cite again Senator Jones's emphatic language:

"By interfering with the standards of the country Congress has led the country away from the realms of prosperity and thrust it beyond the bounds of safety. To refuse to replace it upon its former vantage-ground would be to incur a responsibility and a deserved reproach, greater than that which men have ever before felt themselves able to bear. We cannot, we dare not, avoid speedy action on the subject. Not only does reason, justice, and authority unite in urging us to retrace our steps, but the organic law commands us to do so; and the presence of peril enjoins what the law commands."

May our Congress pass no more laws giving away immense tracts of land to heartless corporations, thus creating land monopolies like those that now curse the British Isles—and grant no charters to banks that can contract and expand the people's medium of exchange at their pleasure—for such legislation favors the few at the expense of the many, causes discontent among the masses, and produces Nihilists, Guitaens, and men who commit acts like the one just perpetrated in Dublin, May 7, 1882, which disgraces the civilization of the nineteenth century.

As previously stated, I am now in the ninety-second year of my age, and have the satisfaction of knowing that I have given to my country the best efforts of a long, laborious life. In the course of my endeavors I have written and printed more than a million of documents, which I have sent to Congress, to the President, and members of the Cabinet, and to all parts of our common country.

The burden of my theme has been to show that the Constitution has made it the imperative duty of Congress to take and hold the entire control of all that should ever be allowed or used as the money of the nation. If the plan, set forth in a petition to Congress, to the President and his Cabinet on the 14th of December, 1862—in which I showed that my ideas of finance were based on the opinions of such men as Franklin, Jefferson, Madison, Calhoun, Webster, &c., whose words and warnings I quoted, as I do in this document—had been adopted, the Government would have had all the means it wanted in Treasury notes, and we should not have an enormous bonded debt in 1882.

Most respectfully,

PETER COOPER.

Department of Agriculture.

SPEECH

OF

HON. CHARLES G. WILLIAMS,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1882.

The House having under consideration the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture—

Mr. WILLIAMS, of Wisconsin, said:

Mr. SPEAKER: I am obliged to my friend from Ohio [Mr. UPDEGRAFF] for his courtesy. It has been my design to prepare some remarks which should be worthy of a subject so important as the one now under discussion, but I have been engaged in other duties and did not expect to speak to-day. I can now only outline in the most general manner what I wish to say.

Mr. Speaker, if this were merely a question of whether the present Department of Agriculture should remain as it is or be represented in the Cabinet the change would be of very little consequence; but in my judgment it means vastly more.

It is the future possibilities implied in this bill, as well as what it contains, that should commend it to support. England's prestige is on the sea; America's on the land. England has as much or more capital invested in manufactures than all the rest of Europe. She has her coal and iron, but her supplies of raw material come largely from abroad, as do her meat and bread. She is the great workshop of the world, but her markets are abroad. The United States could live within herself, England could not. Her water-ways must be traversed at any cost, whether by subsidies or otherwise. Hence England builds ships, while America builds railroads. We hear much of the ocean-borne commerce of England, yet while in round numbers she has invested in all her ocean trade \$500,000,000 capital, America has \$700,000,000 in locomotives and rail cars.

I have often thought that whenever the trade of the sea demanded American capital and gave it better profits than the land, American capital would be forthcoming. Surely if \$700,000,000 can be found to put into railroad equipments alone, \$5,000,000 could be gathered to start a steamship line if the demands and profits warranted it.

Hence I say the bulk of commerce in this country is, and in our generation probably is to be, on the land. If so, what are its source and life? That question recent statistics, official and authentic, have answered—it is agriculture. As late as the 19th of April just past the Superintendent of Census sends tables here showing that of the 50,000,000 of our population 25,000,000 are employed in agriculture; and of the value of domestic merchandise exported in the year 1881, amounting to \$883,925,947, agriculture furnished \$729,650,016, or 82.55 per cent. The estimate of the average yearly crop of Indian corn being \$500,000,000 equals the entire capital of Great Britain invested in her ocean commerce! The hogs slaughtered in Chicago in the year 1880 reached a value equal to the capital invested in shipping of France and Germany combined. These facts are but finger-boards pointing the way to the possible developments of agriculture in America. Only one-seventh of her arable land has yet been brought under cultivation. The application of machinery, steam, and electricity to the useful arts and to agriculture is but in its infancy. Does it require a prophet to foretell that these are soon to unlock the stored-up forces of nature and release human muscle, in a large degree, from the drudgery of agriculture, and that brain rather than brawn will thenceforth run the farm? Every wheel, every lever, every physical appliance that releases a human muscle, wakes up the brain and gives it a chance. Compare the farmer's home to-day with what it was when we were boys. Look not only at the literature in farm-houses but test the plans of the prosperous farmer as to crops, and markets, and stock, and business.

Now, the question before us is whether an interest, based on the facts and possibilities just stated, is entitled to be recognized in a government founded and built upon it? I repeat, if this meant only that a Commissioner of Agriculture should have a seat in the Cabinet it would be a matter of small consequence, worthy and capable as our present Commissioner is. The specialties now recognized in that department might probably be carried forward as well there as elsewhere. But, sir, this means more than seeds, insects, or scientific analyses, though these are by no means to be lightly spoken of. They have already returned and will continue to return in actual wealth fourfold all the department has cost.

The bill provides that the secretary of agriculture shall be a "practical agriculturist;" so far so good, provided all other things are equal. But if the effect of this were to send into the Cabinet "a specialist" only, I care not whether he be farmer, lawyer, merchant, or doctor, I should doubt the soundness of it. This Cabinet minister should not only be an agriculturist but a political economist and practical statesman of the highest order. He should sit at the council board not as a mendicant begging special favors for special interests but as a peer, representing the grandest interests in the grandest nation of the world, and his presence and influence should be felt accordingly in matters of practical administration.

To say that this position is to be a political sinecure to anybody is to insult the intelligence of the hour.

The secretary of agriculture should not only understand all that pertains to that but its relations to commerce, manufactures, and labor as well; the cost of raw materials the amount and value of labor bestowed, where transportation begins and where it ends; and what value it has imparted, what mercantile skill and capital were necessary in finding the best market at the best time, and what the relations of all these are to each other and the measure of fair returns and equitable distribution; and having found these, then what legislation is most practical and likely to secure it. Mere production is but the A in the alphabet of possibilities of the future of the American farmer.

Released from hand drudgery the head will solve some of these other problems, and, like the master of chess, will look not only in one direction but in all, and with hard, practical sense will weigh all the averages of the situation. That the American farmer or American laborer is going to be content with the old ratio of allotment from the proceeds of the joint efforts and contributions while others reap all the advantages which invention and science give no thoughtful man believes. There must and there will be a recast of these ratios. But it must come, if it come at all, like the growth of the crops, through intelligent appliances and common-sense methods. Miracles cannot be wrought, and spasmodic complaints accomplish little.

As military science now martials all the devilish enginery of war, and individual valor is less conspicuous than of old in the winning of victories, so organization and the slow yet sure movement of the forces which command results must bring relief from current evils. Both the blessings and evils of new-born forces are now upon us, and in their development the agriculturist must mingle. He is a part of them, and must study his true relations to this new order of things. It is in this light, Mr. Speaker, that the measure so easily ridiculed and scoffed at as the work of demagogues in my judgment rises up to the full level of importance with any measure before the present Congress.

Properly organized and rightly directed there is no power so potent on this floor to-day as the agricultural interest. Let this minister be identified with it; let him study all these problems; let him mingle with the people; let him explain to them and to us what is practical

and what is not; let him develop and carefully scan all this class of legislation; let him furnish the official data on which it should stand, and then let his recommendation come to us backed by the dignity and standing of a high Cabinet officer; and let the people study them as they will, and we shall then have begun methodically to shape legislation pertaining to this vast subject. Let this bill become a law, and your Department of Agriculture will cease to be sneered at as a seed store, but will be given at once the dignity and influence which even under present methods its worthy and able Commissioner is so rapidly imparting to it.

No lawyer need apologize for zeal manifested on this question. It is easy and cheap to refer to the "lawyer" farmers here. Call the roll to-day and you will find that three-fourths of the lawyers in this body were raised on farms. They know the struggles of farm-life, and the memories and associations of early life are strongest of all. Whether your Congress shall be made up largely of farmers, lawyers, merchants, or business men, drawn from American firesides, I repeat, that rightly organized and wisely directed, there is no force more potent in shaping legislation than that which comes from the American farmer. But "organization" is more than a word. It means, among other things, associations and libraries in every county, town, and school district. It means discussions and lectures in each of these. Into these libraries should go one copy of every document published by the order of Congress. It should go there free under the frank of the member; a copy of the record of Congressional debates, of every report, of all collections of official statistics, and at least of all the works, pertaining not only to agriculture but commerce, manufacture, and labor as well. It should be an exhaustless fountain of official and authentic information at which the farmer and his boy may freely drink. These things are published and paid for now by the tax-payer; why should they not be distributed upon some common-sense method and system? What a convenience to members in the distribution of public documents? Where now, from the inadequate number published in comparison with the whole population, one man is served where a hundred are slighted, all could then have free access on equal terms. With this kind of information at hand pertaining to lands, mines, crops, commerce, ships, finance, banking, the statutes and land laws, domestic industries, home and foreign production, inventions, patents, and all things coming within the range of legislation at home or abroad, the farmer would become skilled in his knowledge, and would be prepared to meet any demagogue who chanced to come that way, and be no longer compelled to listen to every hobby forced upon his attention.

Through these library stations the department could gather full and accurate weekly reports on matters of crops and other things of interest, while at them might be displayed daily weather bulletins warning the farmer as the storm-signals now warn the mariner. A simple system of telegraphic signals displayed in any neighborhood denoting "fair," "foul," or "threatening," would enable each farmer in his field to read from these the weather for the coming day far more accurately than he reads it from the sky. These, sir, are but mere snatches and hints of the possibilities wrapped up in this legislation. Let the bill pass, let it be amended and perfected as necessity or wisdom shall require, and through this department of Government agriculture in all its varied relations shall be justly recognized in the halls of legislation.

Geneva Award.

SPEECH

OF

HON. WALDO HUTCHINS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1882.

The House having under consideration the bill re-establishing the court of commissioners of Alabama claims, and for the distribution of the unappropriated money of the Geneva award—

Mr. HUTCHINS said:

Mr. SPEAKER: At the close of the war of the rebellion the people of the United States regarded the conduct of England during its progress as being in violation of the comity of nations. Confederate cruisers, apparently with her approval, had sailed out of her ports and preyed upon our commerce. The number of American vessels captured whereof damages were claimed was one hundred and twenty-nine. With a view to arrange preliminary questions and establish the basis of a settlement, two international conventions were held, without favorable results, to consider claims against Great Britain, the one November 10, 1868, and the other January 14, 1869. The correspondence, negotiations, and arrangements preliminary to a precise understanding of matters growing out of these captures

occupied largely the attention of our statesmen from the close of the war until June 27, 1871, when what is called the treaty of Washington was formally ratified. This treaty contained on the part of England an apology for her want of regard for neutral rights and embraced the proposition for the international tribunal of arbitration to meet in Geneva, which was to serve as an international court. This high tribunal was composed of the following arbitrators from countries at peace with England and the United States: Switzerland named her eminent citizen, M. Jacques Staempf; Italy, Count Frederic Sclopis; Brazil, Vicomte d'Itajuba; England, Sir Alexander James Edmund Cockburn, and the United States Charles Francis Adams. The court composed of these gentlemen assembled at Geneva, Switzerland, December 15, 1871, but adjourned the next day until June, 1872. As a result of the action of this court, \$15,500,000 was awarded in a gross sum to the United States in a full, perfect, and final settlement of all claims, individual or national, growing out of the war. This judgment was signed and dated September 14, 1872, and Great Britain paid the amount September 9, 1873. This sum is what is known in history as the Geneva award, and the distribution of which has engaged so much of the time of Congress during the past ten years.

All the claims of American citizens sent by their agents for adjudication before the international tribunal of arbitration were classified under the following heads:

First. Claims for direct losses growing out of the destruction of vessels and their cargoes by the insurgent cruisers.

Second. The national expenditures in the pursuit of those cruisers.

Third. The loss in the transfer of the American commercial marine to the British flag.

Fourth. The enhanced payment of insurance.

Fifth. The prolongation of the war and the addition of a large sum to the cost of the war and the suppression of the rebellion.

By the unanimous decision of this high court all these claims, excepting those enumerated under the first head, were rejected. Upon this definite understanding the court proceeded to examine the claims before them as presented by the agent of the United States and arrived at a valuation of the destroyed property. Direct losses only were admitted, and claims for interest. The schedules of the insurance companies afforded the only reliable data for the valuation of the destroyed property.

With a view to equitably adjust the claims of American citizens the Forty-third Congress, June 23, 1874, passed an act, chapter 459, constituting the court of commissioners of Alabama claims, and limited the authority of this court to acting only upon claims for direct damages caused by the inculpatory cruisers. Thus this act was intended to settle those claims only about which there was no dispute. It was understood then that further legislation must provide for claims not recognized by this act. Under this law \$9,316,120 were distributed, and there remained of the fund principal and interest March 31, 1877, \$9,553,800, since which time it has drawn no interest; and that amount now remains in the Treasury.

The question before the House for its consideration is the distribution of this unappropriated balance of the Geneva award. We are told that we are sitting as a court, as the highest court in the land, in adjudicating upon this matter. It certainly is to be presumed, if we are sitting as such court, that we will give the most careful attention to the proceeding before we consent to take ten millions of dollars out of the Treasury and appropriate it for the benefit of anybody; that no member will vote on that question without giving it the consideration it deserves, and without a full understanding of the subject.

I must say that my opinion has entirely changed in relation to this matter upon a careful examination of it. I had heretofore supposed that the reports which have been made by committees having the matter in charge by both branches of Congress were correct, and that this money should be appropriated as they had recommended. But I am compelled to say that a full examination of the question has led me to believe that either this fund should be disposed of under the terms and for the reasons for which it was awarded, or else it should be returned to England.

I was somewhat surprised at the argument of the gentleman from Maine, the chairman of the Committee on the Judiciary, [Mr. REED.] He spoke of this amount of \$15,500,000 as a sum awarded to the nation for the injury which had been done it by England during our civil war. Why, sir, fifty times fifteen millions would not pay for that injury, if the matter had been settled on that consideration.

When the war commenced we had the carrying trade of the world; when it closed we had lost it. I aver that England was the aider and abettor of that war, and without the assistance which she gave it would not, in my judgment, have lasted six months.

I was not one of those who thought that Mr. Seward, statesman and philosopher as he was, was far out of the way when he predicted that the war would not last sixty days. But he could not have taken into consideration the fact subsequently developed that within thirty days from the time Fort Sumter was fired upon England would grant belligerent rights to those in rebellion against this Government.

England, in pursuing this course, did directly and indirectly all that she could to perpetuate the war of the rebellion. She permitted cruisers to be built and manned in her ports, and to escape therefrom. She gave assistance to France, so far as she could, to impose

upon Mexico an imperial form of government; and she accomplished the purpose she had in view from the beginning, to become the carrying nation of the world.

The war being closed, a claim was made for damages on the part of the United States on claims which during the war had been certified to our Government on the part of those who had suffered losses by the destruction of ships, for reclamation and for damages. These claims were never enforced. We were willing to have them remain as they stood at the close of the war, and to accept the position which had been taken by England, that what she had done in reference to the rebel cruisers was not a breach of neutrality. We could have afforded to stand on that ground. If we had decided to maintain that attitude we should have had England at a great disadvantage. What followed? When in 1866 the conflict occurred between Prussia and Austria, England, with all her sympathies in favor of Austria, was compelled to stand still and allow her in less than six months to lose her prestige as one of the first powers of Europe. England could do nothing. She sat chafing—chained to her ocean isle. During the war between Prussia and France what occurred? France had a right to look to England for assistance in her struggles. She had a right to expect such assistance. But all that England could do was to look on and see the Prussian soldiers march into Paris and impose such terms upon the conquered as they pleased. England was powerless under the circumstances to render any assistance.

Early in 1869 I had the pleasure of meeting a member of the English cabinet, with whom I had a conversation in reference to this matter. I said to him that if I had my way England should pay \$1,000,000,000 as damages for the course she had pursued toward our country during our civil war. He did not seem surprised at the suggestion, but replied: "Why, England could not afford to pay more than half that amount." I answered that I would not accept half that amount; that England, by the course she had pursued, had gained the carrying trade of the world, which we had lost, and she ought to indemnify us. Then he said to me: "I know what you mean, but we care nothing about affairs on the Continent; we care no more about them than does the State of Massachusetts." In one year from that time war broke out between France and Prussia. Then it was that England did begin to care about affairs on the Continent. The time had come when she could defer the settlement of our claims no longer. She insisted through her agents in Washington and throughout the country that this question of national liability which had existed between England and the United States should be settled.

I speak of this because of a suggestion made in the report of the majority of the committee, that "when this matter was settled by the Geneva tribunal we did not wish to obtain as large an indemnity as possible, because the claim must be based on principles which might intolerably enlarge our duties and obligations as neutrals in the future." I deny that position. If that was the case, why did we make any treaty at all? I ask the majority of the committee to answer—why did we enter into a treaty at all? The law, as settled by England, was that her acts were not in violation of neutrality. She so declares in the very treaty under which the Geneva tribunal was constituted. She commences by a disavowal of her liability. Why did we not accept that and stand upon it, and say, "If you do not consider the fitting out of cruisers in your ports to prey upon the commerce of a nation with whom you are at peace as a violation of the law of neutrality we can stand upon that principle, and we desire no treaty."

When our representatives went to Geneva to present the claims of the American Government, they went there under such circumstances that if they had understood and availed themselves of the advantage of their position they could have made almost any such treaty as they had chosen to write. What did they do? Certain claims had been filed during the war against the British Government—claims alleged on the part of those who filed them to have grown out of the violation of the obligation of neutrality on the part of Great Britain. Those claims were all filed on the part of the insurance companies; and it was never thought or dreamed of that any other parties had any claims against Great Britain in consequence of losses arising from the violation of her neutrality so far as our citizens were concerned, except those direct losses which had occurred from the destruction of ships by rebel cruisers. And such was the international law that no indirect claims could have been allowed. That was international law at the time, as everybody knew who knew anything about what the law was.

These claims having been submitted, our Government, in order to settle them, because that is what the tribunal was to do, presented five different classes of claims, which have been set forth heretofore, but which it is unnecessary for me to recite again in detail. All claims presented, including all claims of a national character, were disallowed by the commission excepting claims for direct losses. Claims for direct losses included claims of those whose ships had been destroyed by the rebel cruisers, and also, it was decided by the tribunal, the claims of the insurance companies which had paid ship-owners the full amount of their losses and by assignment to them by the ship-owners had become subrogated to their rights. There is no dispute about this; it is admitted; and if these claims had not been there to be acted on by that arbitration, there would have been no damages allowed against the British Government. It was be-

cause of the diligence of the insurance companies in presenting their claims, in advocating them before the tribunal, in making popular sentiment in favor of them, which led to any award whatever being made.

The award which was made was based entirely upon losses for ships and their cargoes destroyed by the rebel cruisers Alabama, Florida, and Shenandoah. The amounts paid by insurance companies to those who had insured ships which were destroyed were allowed. That fund being in the hands of the Government, and there being to-day the sum of about \$10,000,000 undisposed of, a bill is reported to divide that amount between those who lost by reason of their ships being destroyed by what are called the exculpated cruisers and the war-premium men.

It is known to all the members of this House that at the Geneva tribunal but three rebel cruisers were taken into consideration, and for the damages done by which these sums were awarded, namely, the Alabama, the Florida, and the Shenandoah, and it was on the ground they were the only steamers which had escaped from, been manned in, and supplied with munitions of war in British ports.

This sum having been awarded to the insurance companies, they being entitled to it by being subrogated to the rights of those to whom they had paid the insurance, I will not detain the House by entering into that question of law, because it will be conceded, as laid down by Webster, Story, and Kent in the cases decided, that the insurance companies or underwriters are subrogated to the rights of the persons insured where they pay for a total loss, including, as Webster and Kent say in two cases which have been cited, the claims against a foreign government on the part of a citizen of the United States.

Now, we come to the question of what we ought to do. I am not here to advocate the claim of the insurance companies. The bill which is reported on the part of the minority does not propose to pay it to the insurance companies. I have noticed that each of the speakers who have addressed the House in advocacy of the report of the majority attacks the insurance companies. Their argument is that while it is true this fund was awarded to the insurance companies by the tribunal at Geneva, while it is true that each one of the arbitrators of that tribunal stated it was awarded as claimed on the part of the insurance companies, and while it is true the counsel stated the same thing, as well as the agents of the Government present at that trial, yet notwithstanding all that it is contended that it is not to be paid to the insurance companies because, forsooth, during the war the insurance companies on the whole made more money than they paid out; that having been successful in their business the award should not be paid to them.

Concede this, if you please. Admit that it ought not to be paid to the insurance companies, then to whom should it go? If it was recovered by the Government as a national fund; as a claim by the United States against England, with which the claims of individuals have nothing to do; if, as claimed, the amount declared by insurance companies to be due them was merely a mode of ascertaining the amount of damages done by the British Government, and for which because of its neglect it was responsible; if that is the case, and it belongs to the Government, why is it not in the Treasury like every other dollar there, to be disbursed as we may deem wise and proper?

Let me read two or three passages from the majority report on this point:

The truth is, the questions are not questions of logic or precedent but questions of sound judgment, resting in that high discretion which appertains to the tribunal of the largest jurisdiction known to the Constitution, the Congress of the United States.

These empty seats that I see around me are most eloquent reminders of what this tribunal is expected to do in the consideration of a case of this kind. We are here to vote away nearly \$10,000,000, and how long, I ask gentlemen, could any court in this land exist by the consent of this body if it voted away \$10,000,000 with as little ceremony as we propose to do it here? How are the absent members to learn about a great question like this, which is to be determined by this body; which alone, according to the judgment of the gentleman from Maine, can deal with it? How can they learn except from the "wings of the wind" or from somebody outside? This question involves something of principle, and I demand if we are to sit here as a court that we ought to understand it. But, says the gentleman from Maine, no court in this land can deal with this question. I do not misconstrue him. I will read his exact words:

No court established to try the ordinary affairs between man and man is competent to deal with this subject. Courts of this kind—

That is, courts competent to deal with the subject, and the Supreme Court of the United States is not competent to deal with the subject according to this judgment of the gentleman from Maine, but courts of this kind that are competent to deal with it are governed—how?

By general rules which do justice in the great majority of cases, but injustice in many.

Now, are we a tribunal that never does injustice to anybody—never? We have subjects here that we cannot cope with. If we want to amend the tariff, which is a mere matter of facts and figures, adding up and subtracting from, this House has declared itself in-

competent to do it. My friend from Maine thinks so. But when it comes to a matter of dividing a fund now in the Treasury of the United States which, if it shall be divided at all, should be distributed only upon legal principles and precedents, he comes in and presents a report which is to go down to posterity as the legal results that that gentleman has reached—"that no court established to try the ordinary affairs between man and man is competent to deal with this subject." I deny the statement. I say that this is a case that should be referred to the courts. Now, let us see what the gentleman says further:

We are well aware that the proposition has been gilded by the words justice and equity.

These words, Mr. Speaker, gild any subject. Whenever we can do justice and equity we shall receive our reward, but whenever, sneering at equity and justice, we do injustice and iniquity, we ought to be condemned. And the gentleman goes on:

But those words in this case are beguiling. When these things are talked of before Congress, justice and equity mean—

What?

a comprehensive justice and equity.

What does the gentleman mean by comprehensive justice and equity? Why, of course, we should interpret it that comprehensive justice and equity which courts alone can determine. But he adds that courts cannot do it.

No courts, governed by logic, by precedents, by rules, ought to be intrusted with this subject, says the gentleman, and it ought to go before Congress who can administer it alone in the most comprehensive manner, and in a spirit of "justice and equity."

The language of the report is that it is claimed that the only fair thing is to leave this matter to the courts and let every one have just the legal rights which belong to him. The trouble about that is that nobody has any legal rights to this money at all.

Mr. REED. And I emphasize that.

Mr. HUTCHINS. Oh, yes; you have italicized it. You have told the House emphatically that nobody has any legal rights to that fund.

The gentleman does not want these cases to go to the courts. And why? Because those whose claims he advocates have no legal standing there. Because they have no legal right to the fund. Why, then, do you propose to take the money out of the Treasury and give it to those who, according to your own admission, have no legal right to it? Are they paupers? Is there any reason they should receive the fund in preference to others? What have they done to deserve it?

Take the war-premium men, and if this fund is to go to any of these people, I want to ask the attention of the House to the matter, because I think they do not understand it. Do you mean to allow the war-premium men to get any of this fund when they have already been overpaid? Have they not already received their money back? I will show you how they got it. A man insured against a capture, we will say on his goods during the war. What did the man do? He went to the insurance companies and got them insured. He made out a statement of the cost of the goods, of the freight, and added what he paid, and when his goods were destroyed he received the whole amount back again, war premium and all. That is verily true. The gentleman from Maine must admit it. Now, what right has that man to come here and demand payment of his war premium?

Mr. REED. He does not come here; he is not included in this bill.

Mr. HUTCHINS. The war-premium man is included in your bill.

Mr. REED. The war-premium man you describe is not included in the bill. The last part of section 5 excludes him expressly.

Mr. HUTCHINS. He is not excluded by the language of your bill.

Mr. REED. I hope the gentleman will take the trouble to look at the bill and ascertain the fact for himself.

Mr. HUTCHINS. We now come to another matter. You exclude the insurance companies. Why? The argument of the gentleman in his speech yesterday was that no one has any legal right to this fund. It is true he says this money was recovered from the British Government to pay these insurance companies, but they ought not to receive it. And why? Because—

The history of these insurance companies shows beyond dispute that they charged to those who went to them for war risks (and mind you the war risks were kept distinct and separate from the others) such a sum as would not only enable them to recoup every dollar they paid out but to make from 35 to 40 per cent. dividend besides. And now they ask us to pay the very amount of money in consideration of which they actually obtained 35 per cent. dividend.

I would like to know from the gentleman what company made 40 or 35 per cent. during the war. He cannot name one.

Mr. REED. I name the Atlantic Mutual. And now let me tell the gentleman—

Mr. HUTCHINS. I do not yield for a speech.

Mr. REED. As the gentleman has asked me the question let me tell him he will find in a speech made by my colleague now in the Senate, Mr. FRYE, detailed figures showing exactly that fact and showing it in regard to a large number of companies. That was a statement in a speech made openly here on the floor of the House and which has never been contradicted to this day.

Mr. HUTCHINS. I contradict it now; and if the gentleman had

taken care to get at the facts correctly he would have contradicted it himself.

Mr. RAY. The figures are taken from their own reports.

Mr. CONVERSE. If my friend from New York [Mr. HUTCHINS] desires the figures I will give them to him, as to that company.

Mr. HUTCHINS. Mr. Speaker, I do not want to have my time taken up in this way.

Mr. REED. I do not think the gentleman from New York should be interrupted. When he has got through we can answer him.

Mr. CONVERSE. Shall I give the gentleman the figures?

Mr. HUTCHINS. Your figures are right; but I want to tell you they do not prove the allegation that 35 or 40 per cent. dividends were paid. [Laughter.] Here is a mutual company. Does the gentleman from Maine know what a mutual company is?

Mr. REED. You may safely proceed on the assumption that I do.

Mr. HUTCHINS. It may be a pretty violent presumption to judge from the character of your report.

Mr. REED. I guess not.

Mr. HUTCHINS. One hundred men club together to insure themselves. They want to insure, we will say, \$10,000 each. That is a million of dollars for one hundred men. They give their premium notes payable to the order of the company for this amount; and when these notes become due they pay them. They are made payable in one year, and are paid in cash into the treasury of the company. In the mean time each one of these one hundred men insures his ships and the premium is charged against him; so much of the total of such premiums as is received by the company and not expended for the losses of that year is returned to the policy holders *pro rata* in certificates bearing interest and payable at the will of the company. It is these certificates which represent the portion of the \$10,000 note not expended for losses which my friend from Maine speaks of as being 30 or 40 per cent. dividends.

Mr. CHACE. I would ask the gentleman a question simply for information, whether the Atlantic Insurance Company does not do two classes of business?

Mr. HUTCHINS. They do not. Now, let us look on the other side. My friend from Maine, for example, has friends in that State, one of whom may be the owner of one hundred ships. This owner of one hundred ships decides that he will be his own insurer. If he does not lose more than 10 per cent. of them in any one year he saves money, because it would cost him more to insure his one hundred ships than the value of those lost. Thus he becomes sole insurer of his own ships on the mutual plan. That is done in many cases, as the gentleman from Rhode Island [Mr. CHACE] knows. The Atlantic Mutual Insurance Company is nothing more than copartnership of parties for the purpose of dividing their marine losses. It has no stockholders and declares no dividends.

Now, tell me why these parties doing business on the mutual principle should be precluded from receiving the portion of this award allowed them by the Geneva tribunal?

As I have demonstrated, they have not made a cent. It was not a stock company at all. They might lose the whole amount of their subscription or premium notes in a year. There have been years when the Atlantic Insurance Company policy holders have been compelled to pay the full amount of their premium notes. They saved nothing. Some years they saved one-third, some years one-quarter, and some years one-half; but it was a saving, not a dividend.

Take the war-premium men; I want to call the attention of the House to them. We have got to this point, now mark you—do not forget it—that no one has a legal right to this fund; that is the report of the committee before us. Then, why should the war-premium men receive any portion of it?

Suppose that the result of all the transactions by a war-premium man was that he had made money and become a millionaire during the war. Why should he have this money which belongs, as is alleged in the majority report, to the Government? He has no legal right to it. Why should it go to him? It was not given to him by the tribunal of arbitration, and why should he receive it? My friend knows that the millionaires of this country are the war-premium men. Why should you give it to them?

It has been said by the gentleman from Michigan [Mr. WILLITS] that no claim was made by the war-premium men until 1871, six years after the losses were incurred. It is a remarkable fact that while the insurance companies were claiming damages against Great Britain for every loss made at the time it took place, the war-premium men should have made no claim until years after the close of the war. Three hundred and forty-one persons make claims for war premiums. There are four persons or firms in the city of Providence claiming \$30,630.13; four persons or firms in three different places in Connecticut (one for over half being in fact from New York) claiming \$113,469.84; eleven persons or firms, described as of Concord and Portsmouth, New Hampshire, claiming \$107,137.43; seventy-seven persons or firms, described as of different places in Maine, claiming \$397,168.99, and one hundred and five persons or firms, described as of different places in Massachusetts, chiefly Boston, New Bedford, and Salem, claiming \$2,948,675.41. Thus there are two hundred and one persons or firms who claim \$3,597,082.10 of this fund now in the Treasury; claiming it as due them for war premiums paid during the war.

One hundred and twenty-eight persons or firms of New York claim \$2,400,646.18; two persons in Philadelphia, two in Baltimore, and eight in California claim \$247,655.11; three hundred and forty-one persons or firms thus claim \$6,245,383.39, or an average claim of \$18,341. It is in behalf of these war-premium claimants that the claims of the insurance companies are opposed. The revised list of claims shows that David Ogden, J. Nickerson, and Barling & Davis, of New York, and W. W. Crapo and Bradford & Folger, of New England, were the principal agents to get up and forward these claims. The amounts represented by them are shown to be as follows:

D. Ogden.....	\$971,559 74
J. Nickerson.....	354,496 58
Barling & Davis.....	271,636 87
W. W. Crapo.....	726,553 68
Bradford & Folger.....	1,364,913 06
Total.....	3,689,159 93

The total amount claimed by these parties, these poor sufferers, who come knocking at the doors of the Treasury, is \$3,689,159.93. And it is said they ought to receive this amount because they are so poor and deserving. Now, if there is anybody in the country more deserving than they are, then the money should go to them. These people have no legal right to come here and make this claim.

In 1874 parties working up these claims sent to a firm in New York well-known in this country, Grinnell, Minturn & Co., who had paid some \$150,000 for war premiums, making application to collect these war premiums. The firm replied as follows:

DEAR SIR: We have your letter of 30th ultimo, and would say in reply to its first paragraph that we have no recollection of receiving from the Atlantic Insurance Company a letter or certificate of the amount of war premiums paid by our firm. To the direct questions you ask we reply that we are not now taking any active steps for the maintenance or enforcement of claims for the amount of the war premiums, and that we have not executed any assignment of our claims, but did make a bargain with W. W. Crapo, C. A. Tucker, and George O. Crocker, of New Bedford, for allowing to them and their associates or assigns a percentage upon what might be received from these claims, and at the same time gave them an irrevocable power of attorney, dated December 27, 1871, to prosecute, secure, collect, and receive our claims arising out of the payment of extra insurance premiums during the war of rebellion.

The SPEAKER *pro tempore*, (Mr. PAYSON.) The time of the gentleman has expired.

Mr. HOOKER. I hope the time of the gentleman will be extended.

Mr. REED. I am obliged to object.

Mr. HOOKER. This is a very important matter, and we think on this side that we are instructed by the argument of the gentleman now speaking.

Mr. HUTCHINS. I only ask for ten minutes more; that is only one minute for each million of dollars involved.

Mr. REED. I hope the gentleman will not ask for it.

Mr. CONVERSE. I will take the floor and yield ten minutes of my time.

The SPEAKER *pro tempore*. The gentleman from New York [Mr. HUTCHINS] will proceed for ten minutes longer.

Mr. HUTCHINS. I thank the gentleman from Ohio for his courtesy.

Recollect that these gentlemen, Grinnell, Minturn & Co., had a claim for war premiums paid. See what they say to this application to collect their claim:

After the decision of the Geneva board of arbitration, disallowing the claims for war premiums, we supposed that all chance of our recovering anything for these claims was ended, and the idea of making an allowance to claimants of this character, by means of taking away from the insurance companies the amounts allowed by the Geneva board in satisfaction of their direct claims for losses of ships and cargoes vested in them as assignees, by abandonment or otherwise of the claims of the original parties, is an idea which certainly never would have occurred to us.

Here was a firm that had paid \$150,000 for war premiums, and for six years after the close of the war it never occurred to them that they had any valid claim against any one for their repayment; no one had ever suggested it to them; and the idea would not have entered their heads if a lot of claim agents had not come around and said: "Here! you turn this into a pool and we will collect it for you." Then they wrote the letter to which I have referred, and which, it seems to me, should prevent any member of this Congress voting this money into their pockets or into the possession of their agents in the face of their avowal that they did not think after the Geneva court of arbitration had disallowed all claims for war premiums they had any chance of recovering anything.

You are asked to take out of the Treasury between six and seven millions of dollars (for that is the amount of these claims) and pay it to these war-premium men upon the ground that they are equitably entitled to it, for it is admitted that they have no legal right. Why should they have it? I will not name gentlemen, though I might name them by the score, who made money out of the war, notwithstanding they paid the war premiums. Almost everybody, as we know, made money during the war. These men paid the war premiums, but they got their goods in and sold them at high prices. They came out rich; and you propose now to give them this money. Why? Because they are poor men and are in equity entitled to it! Why, gentlemen, if you are to pay any of these men you ought to pay only those who on their business lost money in consequence of

the payment of war premiums; you should not make payments indiscriminately. Remember this is a matter of equity. We are not in a court of justice, but in a court of equity. This Congress is the court.

How much of this money will go to the war-premium men and how much to other parties? Let us ascertain about that. Would you pay hundreds of thousands of dollars to men who have assignments of these claims and are pressing them here?

Mr. Speaker, this subject is too important to be discussed in three-quarters of an hour. By voting away this money blindly we may establish a principle which will be most disastrous to the Government. If you pay this money to those who suffered losses by reason of exculpated cruisers, or as war-premium men, you establish a principle upon which you will be in honor bound to pay every man, whether his name appears in this list of claimants or whether he is an outsider who never before has made claim, if he was subjected to like losses during the war. And when you have thus drawn up your anchors and drifted out to sea, without chart or compass, who can tell where you will land?

To meet the questions presented in this case the minority of the committee have reported a bill which they propose as a substitute for that of the majority. I hope gentlemen will give me their attention for a moment while I show the propriety, justice, and equity of this bill, which it does seem to me this House would pass unanimously if carefully considered. The bill provides—

That all persons and corporations claiming any portions of the moneys now under the control of the United States, which were received from the Government of Great Britain in payment of the Geneva award, or as interest thereon, be, and they are hereby, authorized to sue for the same in the United States court of claims, at any time within one year from the passage of this act, in the same manner in which other claims are sued in said court; and the said court—

Listen to the language—

and the said court shall render judgment for each claimant for such amount only as in their opinion he shall be justly entitled to recover under said treaty and award—

Not under the treaty alone, but—

under said treaty and award, according to the principles of justice, equity, and the law of nations.

What more could be asked? The proposition is to refer this matter to a court where proof may be taken, and where, if the court thinks a man or a corporation entitled in equity to receive a portion of this fund, it will be paid. The court is not restricted or limited in any degree, but if this bill be passed, will occupy the position which we occupy here to-day, with the additional advantage of hearing proof and knowing that when they render judgment they do equity in the case. Besides the bill provides for an appeal to the Supreme Court of the United States as the court of last resort, where every claimant on the fund will be amply protected.

Mr. Speaker, I hope that we shall not sit here and attempt to dispose of this money ourselves arbitrarily and willfully without regard to equity and justice. As a nation we cannot afford to do so. If the court decides that we are not entitled to this money we can send it back. The amount of money is trifling as compared with the honor of the country. If we cannot do equity here, if we do not recognize ourselves as bound by the decision made at Geneva, if we determine that none of the claimants have any legal right to this fund, then let us act justly and return it, thus keeping our own record and the national name and honor untarnished.

In conclusion, I will say that any attempt on the part of Congress to defeat the plain intention of the international tribunal of arbitration, to substitute for the direct claimants a class known as war-premium claimants, is certainly in entire violation of every principle of equity and justice. The intent of the Geneva arbitrators, and the basis of settlement used by them in arriving at the award proves it, that they gave the United States a sum of money to disburse to those only who had suffered direct losses by the confederate cruisers. The agent of the United States in his statement made to the tribunal said:

The object of the treaty is to indemnify the United States for all the losses suffered by their own citizens.

In his report to his Government, September 21, 1872, the same agent said:

We, therefore, devoted our energies toward securing such a sum as should be practically an indemnity to the sufferers.

And the same agent, when he presented the claims of American citizens to the tribunal, including those of the insurance companies, duly verified, concludes his address in the following language:

It thus appears that these computations show the entire extent of all private losses which the results of the adjudication of this tribunal ought to enable the United States to make a computation for.

Inasmuch as the pretensions of the war-premium claimants were unanimously rejected by the high court of arbitration, and no modification of their legal status is contemplated in the act of Congress under which one-half of the award was distributed, and no argument has since been advanced giving the shadow of a plausibility to their fictitious claims, I earnestly protest against a recognition of the same at this time. Justice, consistency, and the rights of those in whose behalf the award was actually made, all demand that we hesitate before consummating this wrong.

Geneva Award.

SPEECH

OF

HON. GEORGE L. CONVERSE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1882.

The House having under consideration the bill re-establishing the court of commissioners of Alabama claims, and for the distribution of the unappropriated moneys of the Geneva award—

Mr. CONVERSE said:

Mr. SPEAKER: The gentleman who has just taken his seat [Mr. HUTCHINS] speaks of this body as a court sitting to determine the questions presented in the pending bill, and suggests that there are too many empty seats now in the House for the intelligent and careful disposal of the subject. He forgets for the moment that this question of distribution has been pending before the American Congress and the American people for nearly nine years. He forgets that so many years have elapsed since the fund, \$15,500,000 in gold, was paid by Great Britain to the State Department and thence into the Treasury of the United States. He forgets that the subject of the proper distribution of this fund has been discussed *pro* and *con*, in Congress and out of Congress, in the newspapers and periodicals and in private conversations from one end of the country to the other for so many years.

And that reminds me that I do not expect to throw any new light or present any new thoughts on this subject, but hope simply in the few minutes I shall occupy the attention of the House to notice a few points which have been heretofore presented, and answer one or two arguments presented by the opponents of this measure. About half of the fund was distributed under the act of 1874, and the bill before the House provides for the distribution of the remainder, or so much thereof as may be necessary to pay their actual losses, to two classes of claimants. The first class of claims is for destruction of property by what are termed exculpated cruisers, and the second class are claims for the return of the war premiums paid by merchants and owners of vessels in consequence of the presence of the confederate cruisers upon the high seas. The claims known as exculpated-cruiser claims are those where vessels were destroyed by the confederate cruisers before notice is supposed to have been served on England as to the hostile character of the particular cruiser which did the mischief. For example, the confederate cruiser *Shenandoah* was a British merchant-vessel named the *Sea King*, and manned by British sailors enlisted in the confederate service; she left the city of London and proceeded to a point near the Madeira Islands, where she was transformed into a confederate cruiser, receiving her armament of British guns and ammunition and her supply of British coal from the *Laurel*, another English steamer; thence under her new name, *Shenandoah*, she proceeded to Melbourne, and on the route destroyed a large number of American vessels.

At Melbourne, another British port, she increased her force by a new enlistment of men and the purchase of supplies, and England then received formal notice of the hostile character of the vessel, and yet permitted her even to be repaired on a government dock and depart. From the time the *Shenandoah* left Melbourne she has been denominated and termed an inculpated cruiser, while up to that time she has been denominated and termed an exculpated cruiser. The claims for vessels destroyed and damages done by her to person and property after she left the Islands of Madeira and before she reached Melbourne are called exculpated-cruiser claims, while claims for like destruction and damage committed by her on the high seas after she sailed from Melbourne are called inculpated-cruiser claims. All of the latter class of claims have already been paid in full for actual losses out of the fund under the act of 1874, amounting in round numbers to nine and a half millions of dollars, including accrued interest.

There are three classes of claims still unpaid: the exculpated-cruiser claims, amounting to about a million and a quarter; secondly, the war-premium claims, which it is supposed, with the exculpated-cruiser claims, would about exhaust the fund if paid. The third class consists of the insurance companies' claims, and they alone are believed to be large enough to exhaust the fund.

The bill before the House provides for a finding before a court of three judges learned in the law, and then for a payment, first, to those who have suffered losses from exculpated cruisers, and second, to the war-premium men. If the fund is not exhausted thereby, what remains shall be subject to the future action of Congress. The insurance companies claim the entire fund, and between these several claimants Congress must decide.

It has been said that the entire question of distribution should be sent to the courts and that the courts should determine the classes of claimants to be paid, as well as the amount to each. The courts can determine nothing in relation to this fund or the several claim-

ants except as authorized by legislative enactment similar to this bill, determining the classes of claimants to whom the fund shall be distributed. I do not care to repeat the able arguments of the chairman of the Judiciary Committee on this point, showing that none of the claimants have a legal right to any portion of the fund. If any one of them have such he can now enforce it in the Court of Claims without additional legislation. It is because of the absence of such legal rights that legislation becomes necessary. This bill refers all the questions to the courts, but it determines the class of claimants who shall go there to have their claims examined, and who, if they are just, may receive compensation for losses.

It has been said, but most probably in a spasm of public virtue, that the remainder of the fund now in the Treasury should in good faith be returned to England. Let us examine that suggestion and see if it is sound.

Where did this fund originate? In September, 1873, fifteen and a half million dollars were placed in the Treasury of the United States as an indemnity for wrongs committed and duties omitted upon and to the United States and her citizens by Great Britain as a neutral power during our late war.

Let us go back for one minute to that hour and call to mind the situation and surrounding circumstances. England was the first naval power on the face of the earth. America, counting her merchant marine, was the second. Rivalry existed between these two great nations. England remembered the fact and the manner in which our fathers with the help of God and France won their independence. She remembered the later struggle of 1812 and its ending at New Orleans. She had seen the enterprising laborers of Europe, her own included, flocking by the million to our shores, developing and enriching the country under free republican government. She had seen our commerce grow from almost nothing until the Stars and Stripes floated on every sea and at every port, and when the dread blast of war swept over this land, when one-half of the States of this Union were arrayed against the other half, England saw her opportunity.

With indecent haste, without even consulting or notifying our minister, she recognized the Confederate States as belligerents. She was not prompted in this act by love to one part of the United States, but was prompted by rivalry and hatred to the whole. The States in rebellion did not own a ship or have a ship-yard in which to build one. Ocean warfare between the Government of the United States and the Confederate States was impossible. Our commerce was as safe on the bosom of the mighty deep as if there had been no rebellion and no war between the States.

In that condition of affairs English ships were by Englishmen converted into cruisers, supplied with English arms, ammunition, fuel, and provisions, manned by English subjects enlisted in English ports for that purpose, and left English ports to prey upon our peaceful commerce upon the ocean, under the false pretense of lawful and honorable warfare on the part of those who engaged in it.

It is a singular fact that no naval battle was fought during that long war except the battle between the Kearsarge and Alabama, in which the Alabama was sunk.

The English rather than confederate cruisers were not engaged in fighting, but in preying upon and destroying during all those years unarmed, peaceful, and helpless ships and their cargoes, belonging to citizens of the United States, with which the Government of England was at peace, and professing friendship and neutrality.

The result was that our commerce was almost paralyzed. It has been stated on the floor here in debate that more than a thousand vessels belonging to citizens of the United States were sold at great sacrifice to citizens of other nations. Those patriotic and plucky owners, who continued to fly the American flag, did so at great risk and expense. England was really responsible for all the mischief.

After the war was over and union and harmony once more prevailed, both the North and the South were ready to demand of England reparation for the wrong, and the payment of the \$15,500,000 into the Treasury in 1873 by Great Britain was the result of a diplomatic triumph, a bloodless victory, which added luster to the period in which it was accomplished.

England is still reaping the reward of her treachery to her neutral position. She is monopolizing the carrying business of the world. I am told she has earned over \$70,000,000 during the last year in carrying American produce and merchandise. She could have paid us ten times as much damages as she did and still have been the gainer. Before the war American produce was carried by American vessels. Where is the man who is willing, in view of the facts, to advocate before the American people a return of the residue of the fund to England? In the payments out of the fund already made the Congress of the United States has established a basis or policy upon which future payments should be made. The Government has paid thus far only those who sustained actual loss on account of ocean warfare—if it can be called warfare at all—first deducting all advancements or partial payments from whatever source received. None others than actual losers have ever received a dollar up to this time of the fund. This bill now proposes to pay only to those who suffered actual loss by reason of the ocean warfare.

There are two classes of persons opposed to the bill. One party claim that the fund should remain in the Treasury the property of the United States; the other believes it should be paid to the insurance companies. It is a sufficient answer to the first to say that such

an appropriation of this fund, acquired in the manner this was, would hardly comport with the honor and dignity of the Republic. Our children would think less of us if we did such a thing as that. The other class of opponents, believing that the insurance companies ought to receive the money, are of opinion and argue that the Government of the United States was a simple trustee representing the interest of individual claimants before the Geneva tribunal, and that having received the money it is bound in honor to pay it to the persons on account of whose claims the award was made. I will not go into the argument upon this proposition. Its lack of foundation in either fact or reason has been sufficiently illustrated already. But I desire to call attention to one or two facts in addition to those presented by the chairman of the Committee on the Judiciary and other gentlemen who have spoken upon the question. In the first place, what claims were submitted to arbitration? They were claims for damages arising from England's guilty negligence, to use a mild term, in letting the cruisers loose. It was in the nature of a claim for unliquidated damages, and a case in which exemplary damages might have been allowed. Gentlemen say it was the insurance companies presenting their claims for losses incurred on policies of insurance that enabled the Government of the United States to recover at Geneva. There is not a word of truth in the statement.

The insurance claims were presented there for the purpose of showing in some sense the value of the vessels and property destroyed by the cruisers. It was not even legal evidence on questions of value. The amount of insurance may have been either above or below the actual value of the property insured. It was only persuasive evidence at best, and was so received and considered. There was no recovery for insurance at Geneva. The recovery was simply for the actual value of the vessels and cargoes destroyed, and not a dollar was allowed beyond that value. No allowance was made as exemplary damages. The only reason, I repeat, why the insurance claims were allowed representation there was because it was supposed that they might in some sense give the arbitrators an approximate idea of the value of the property destroyed, and for no other reason or purpose on earth.

Gentlemen say that no payments should be made out of the fund except to those who presented claims which were considered good and allowed in the award? It is too late now to make that argument. We have passed beyond it already. More than five hundred claims have been allowed and paid by the judgment of the court out of this fund under the act of 1874 that were never submitted to the tribunal at Geneva.

Mr. HOOKER. Will the gentleman permit me to ask him a question? Suppose that the owner of a vessel which had been lost had received the value from the insurance company; would not the insurance company be subrogated to the right of the loser of the property and take his place in the award?

Mr. CONVERSE. That doctrine does not arise in the determination of the pending question.

Mr. HOOKER. Why?

Mr. CONVERSE. Because the fund is to be distributed to those who suffered actual losses on account of allowing the cruisers to leave English ports.

Mr. HUTCHINS. Where does that appear?

Mr. CONVERSE. I will show the gentleman before I get through. I will proceed now, Mr. Speaker, as I had intended to proceed before interruption. I assert that the argument cannot now be brought forward limiting payments from this fund to claims which were specifically considered and allowed by the Geneva tribunal. What is the proof? Article 1 of the treaty of Washington provides for the submission of all complaints and claims on the part of the United States growing out of depredations committed by the cruisers to an arbitration composed of one representative from England, one from the United States, one from Switzerland, one from Italy, and one from Brazil, to meet at Geneva. Article 7 provides for the award and payment of a sum in gross; and article 11 reads as follows:

The high contracting parties engage to consider the result of the proceedings of the tribunal of arbitration, and of the board of assessors should such board be appointed, as a full, perfect, and final settlement of all the claims hereinbefore referred to, and further agree that every such claim, whether the same may or may not have been presented to the notice of, made, preferred, or laid before the tribunal or board shall, from and after the conclusion of the proceedings of the tribunal or board, be considered and treated as finally settled, barred, and thenceforth inadmissible.

Gentlemen will observe, first, that all claims were to be submitted; second, that the payment was to be of a sum in gross, and third, that all claims were to be considered as settled whether they were brought to the notice of the tribunal or not.

I will now cite gentlemen who argue for a submission of all questions in the premises to the courts without legislation, and who are fond of court decisions, always abiding the result of judicial opinion, to two or three decisions bearing upon this point.

I read from the case of *Williams vs. The United States* before the Alabama claims commission, composed of five eminent judges of the United States. The questions were argued on one side by McMassters for complainant and Mr. Creswell for respondent. The court in that case say, Judge Porter delivering the opinion:

Let not the proper attitude of the claimant to the fund for distribution be misunderstood. Whatever his loss may have been he had not the power to obtain compensation from Great Britain by his own act. Her army and navy would have

proved uncomfortable obstacles in his way to her treasury. Just here the Government of the United States took up his case and by the exercise of its powers as a sovereign, after years of patient labor, by the highest skill in diplomacy, without the loss of blood or treasure, obtained the whole amount due for the depredations complained of, thus achieving a triumph which may, in the progress of civilization, take a higher rank than the most profound achievements in arms. How the amount of the award obtained at Geneva was made up, what precise species of losses it was intended to cover, or even how the interest was computed is not now known, and a careful study of the opinions of the several arbitrators has shown us that it was not intended to be known outside of the tribunal itself. The Government of the United States accepted the sum awarded in full settlement of all the claims comprehended in the terms of the treaty, &c.

The same court, in the case of Butman, Matthews, *et al. vs. The United States*, say:

It has been more than once remarked in opinions heretofore delivered that the United States declined to receive the money due by Great Britain encumbered with any obligation to pay it to any class of claimants, but reserved the right to dispose of every part of it according to its own sovereign pleasure. When Congress entered upon the legislation necessary for a distribution of the money that body was untrammelled by any agreement express or implied in regard to the kind and mode of distribution. " " " It is true that claims of this nature are not to be found in the schedules presented to the arbitrators at Geneva, but this is of little importance. Congress did not direct us to determine what claims were presented at Geneva. If this had been the object of the act much trouble might have been saved to the claimants and to the court. We have allowed many claims never preferred at Geneva. We have excluded some, and reduced the amount of many more which were there presented.

Mr. HUTCHINS. Is not the gentleman from Ohio aware of the fact that an exhibit was made of the demands of the claimants and the amount of the American claims, and the amount of the British allowance of the claims, upon which the amount of the arbitration was determined?

Mr. CONVERSE. I am showing the fact that claims which were never presented to the tribunal at Geneva have been allowed and paid under the act of 1874.

Mr. HUTCHINS. But I ask the gentleman if he does not know that such an exhibit was made comprehending the claims which he says were not presented?

Mr. CONVERSE. If the gentleman will permit me to proceed in my own way—I prefer not to answer questions which divert me from the line of my argument.

Mr. HUTCHINS. The gentleman has read a decision of the court, however, in which the court have referred to subjects outside of the case, and expressed their opinion *ultra vires*, namely, that they did not see how the amount of the award was made up. Now, I ask the gentleman again if he is not aware of the fact that the award was made upon a special exhibit of names and amounts putting the sum down in dollars and cents belonging to each of these individuals to which the United States was added?

Mr. CONVERSE. That is not the case. The facts do not establish any such view or theory.

Mr. HUTCHINS. But I ask the gentleman if the award was not made up in that way?

Mr. CONVERSE. No, sir; it was not. I have the best authority—that of Mr. Caleb Cushing, who represented our Government as attorney at the Geneva conference—that it was not made up in that way. On the contrary he says (protocol No. 29) that the tribunal in making up their award expressly excluded the idea of definite assessment and allowed a sum in gross incompatible with assessment by taking the American estimate of supposed damages of \$14,437,000, and the English estimate of supposed damages of \$7,074,000, and splitting the difference so as to arrive at the arbitrary sum of \$10,905,000 as the capital, which with interest added makes the \$15,500,000 of the award. He further says, (protocol No. 26:)

The United States at Geneva laid before the tribunal all the claims of citizens of the United States which had been presented to the Government without vouching for the validity of any of them, but insisted that the United States were not bound by the printed schedules, but only by the description of the treaty, "all the said claims growing out of acts committed by the aforesaid vessels and generically known as the Alabama claims."

Mr. HUTCHINS. Then I will say the claim was filed and the award was made; one of the arbitrators retired for three months to make it up; and here it is in detail. I will add it to my speech as an appendix.

Mr. CONVERSE. The gentleman may add as an appendix to his speech anything that he pleases.

Mr. HUTCHINS. I will put it in side by side with the speech of the gentleman from Ohio.

Mr. CONVERSE. I object to your putting it in my speech. I do not propose the gentleman shall further divert me from my line of argument by putting any such questions, nor do I agree that he shall intrude into my speech any such matter as he proposes to present.

Mr. HUTCHINS. I will put it into my own speech.

Mr. CONVERSE. To that I do not object.

I now read from the opinion of the court in the case of Rhind's Executor *vs. The United States*:

The Government of the United States was not obliged to claim from Great Britain payment of the loss, but acted in that regard according to its sovereign pleasure. It did not succeed in obtaining payment of the whole of the claims presented, and the most careful investigation of the proceedings at Geneva has failed to show what claims were included in the award and what excluded therefrom. The award was made in favor of the Government and not in favor of the claimants. The Government thus vindicated the national honor, but it did not assume to pay any particular class of claimants or any particular claim. Having obtained the money by its own act and at its own cost, it had the right to prescribe the terms on which

the distribution should be made. It certainly had the power to exclude certain and to include others less meritorious. In the act now before us (act of 1874) claimants are excluded who believe themselves justly entitled to a part of the fund, but they have no power to assert their right to it. Under the powers committed to us we have in some instances rejected altogether claims presented at Geneva, and in many more instances we have largely reduced such claims in amount.

In the case of Robeson, Secretary of the Navy, *vs. The United States*, which was referred to in the debate to-day by some gentleman, the court decided against the Government. Mr. Robeson presented the claim of the Government for the destruction of two vessels. The trial was had in the ordinary way before the court, and this is what the court says on this subject:

It is well known that all claims for compensation for loss of public property of the United States were either abandoned voluntarily by the counsel of the United States before the arbitrators at Geneva, or were absolutely rejected by the tribunal itself, and the only damages awarded were for private vessels or property destroyed. The fund out of which our judgments are paid represents the estimated value of the private property alone.

Gentlemen will observe that it was not the value of insurance policies paid by insurance companies, but it was the value, says the court, of the private property destroyed.

And does not include anything based upon the value of public property destroyed. Reclamation upon Great Britain was made by our Government in its capacity of sovereign, and not as a mere representative of private interests, and the indemnity received has been paid to the United States as a government. The fund is now in the Treasury entirely under the control of Congress, invested as directed by Congress, and was so when the act constituting this court was passed. Congress might have refused to pass any act providing for the indemnification of citizens. It might have retained the whole fund, &c.

I have not time to read further, though there are other authorities bearing on the same point. It is clear from the opinions of the court which I have read, and from the statement of the eminent counsel at Geneva—Caleb Cushing—as well as the treaty itself, that the insurance company claims were not allowed at Geneva, and that the Government of the United States was not the mere trustee of the insurance companies for the collection of this money from England; on the contrary, the Republic as a sovereign demanded and received damages for the gross carelessness and negligence of England toward us as a nation, with authority to do with the money as it pleased, but in honor and conscience bound, as every good government is, to deal justly and equitably by persons who have claims upon any fund in its hands, whether there be any rule of strict law requiring their payment or not.

My friend from Michigan [Mr. WILLITS] suggested that the insurance companies ought in justice to have this money; and his reasoning was most remarkable. As I understand one of his positions, he claims the insurance companies to be entitled to the fund by a right of discovery. He puts it upon the ground that the insurance companies presented the first claim for damages as far back as 1861; while the war-premium claimants did not present any claims till seven or eight years later. He thinks the insurance companies would have gotten the fund had it not been for some lawyers who years later induced the war-premium men to claim it. That argument is about as sound as any argument presented in favor of the insurance companies' claims. Of course the insurance companies have never employed any lawyers in this business.

But my friend from New Jersey [Mr. HILL] presents quite another argument in favor of the insurance companies. He seems to think that the insurance companies, although they did pretty well at one time, are now in failing circumstances; and, therefore, on account of their present poverty, on the score of public charity I suppose, Congress ought to give them this fund of ten millions. Title by right of discovery is rather weak, and the Government must be just before she can afford to be generous.

The insurance companies never had any claims allowed by the Geneva tribunal; only claims for destruction of property by the cruisers were allowed. If specific or individual claims were allowed by the Geneva tribunal, as claimed by the gentleman from New York, [Mr. HUTCHINS,] why was not the money paid by England direct to the claimants without going into the Treasury of the United States? In such case there was no necessity for the money to go into the vaults of the Treasury, nor for legislation, nor the establishment of a court to pass upon claims which had already been allowed. On the other hand, the question may be asked why the proceeds of the award were not paid to the owners of the vessels and property destroyed according to value. The answer is at hand, and discloses the general policy of the Republic in such matters. Because damages were paid in gross to the United States as a nation, and because some of the owners of the vessels and cargoes had already received money from the insurance companies in part payment and in some cases in full payment of the value of the property destroyed, and therefore the owners had sustained only partial loss, or no loss, as the case might be, and under the policy of the Government to pay money only to those who had sustained loss they could not get in and thus receive pay twice for the same thing. Why shall we not pay it then to the insurance companies? Because the insurance companies have sustained no loss. They got every dollar of the money that they paid out on those risks from the war-premium men, and made a handsome profit besides. The very money paid out by the insurance companies for losses they had before then received from the war-premium men, and therefore they sustained no actual loss.

The argument stands thus: if no war premiums had been paid, then there would have been no policies of insurance on vessels or cargoes for war risks. If there had been no insurance policies issued, of course no insurance money would have been paid to the owners, and in that event the owners would have gotten the full value of the property destroyed, and the fund would have been exhausted. Therefore the remaining fund in the Treasury mainly represents the money paid as war premiums, and the persons who paid the war premiums are equitably entitled to it.

The value of the vessels and property destroyed was neither increased nor diminished by reason of this multiplicity of claims.

Mr. HOOKER. Will the gentleman answer a question?

Mr. CONVERSE. I will answer it if I can.

Mr. HOOKER. Suppose that the insurance companies had paid all the losses sustained by private individuals for the destruction of their vessels and cargoes. Then, according to the argument of the gentleman, the persons owning the vessels and cargoes could not receive any of this fund, and the insurance companies could receive nothing, and therefore the money ought to go back to England.

Mr. CONVERSE. No, sir; it ought to go to the men who paid the war premiums, because they furnished the money to the insurance companies out of which the insurance policies were paid and the insurance companies lost nothing in the transaction. The insurance companies which were actual losers, that is, paid out on policies more than they received in premiums, have already had the loss made good under the act of 1874.

While on this point I desire to read the figures which I wanted to read to my friend from New York [Mr. HUTCHINS] while he was speaking to-day—in relation to the Atlantic Mutual Insurance Company. In their report, dated December 31, 1864, the assets of the company are given as amounting to \$11,810,963.96, the liabilities of every kind (including \$4,808,405.20 of scrip dividends deliverable to policyholders) were \$3,050,747.14, leaving \$3,760,216.82, in which all possible interest of the former mutual dealers had then ceased, and which belonged to the permanent owners of the insurance company. Will the people sustain us in increasing that amount, when to do so we must turn away honest claimants who lost every dollar's worth of property they had in the world by the confederate cruisers?

I desire to call the attention of the House to some of these claims which have been paid and which were not represented at Geneva. If the argument on the opposite side is worth anything, then it amounts to this: the Government having received this fund in trust for the particular persons who demanded it, it is now bound to pay the exact amount which the Government received to those identical persons for whose claims it received it.

According to that argument the Government had no right to receive \$100 on account of John Jones and then pay him \$200; or to receive \$500 on account of John Smith and then pay him only \$200 out of the fund. The Government must pay out the exact amount which it received to each one, as a just and honorable discharge of the trust.

But the Government has already established and practiced a different policy. It has paid claims which were never presented at Geneva; it has increased claims that were presented there; and it has refused to pay claims which were presented there, thus repudiating the idea of a trust, and exercising the right of ownership.

The judgments of the court of commissioners of Alabama claims were based exclusively upon proof of undemnified loss within its jurisdiction. They did not depend at all, as regards either allowance or amount, upon the claims having been presented or allowed at Geneva.

As illustrations, ship Commonwealth sailed from New York for San Francisco with general cargo. She was burned by the Florida. Many claims were presented by her owners and the owners of the cargo to the Department of State, and were included in the list of claims presented as evidence to the tribunal at Geneva. Several claims for loss of cargo were not so presented at all, and appear for the first time in petitions before the court of Alabama claims.

The court rejected several claims which were presented, gave judgments for many that were not presented, reduced the amount of many and increased the amount of some. N. P. Mann & Co.'s claim was before the Department of State and at Geneva for one-fourth of the vessel and freight, \$22,250; they received judgment for \$25,920.55. Murphy, Grant & Co.'s claim was presented for loss on cargo, \$24,847.87; they received judgment for \$15,120.29. E. & J. Rosenfield claimed \$18,741.96, and received judgment for just the same amount. Coffin, Reddington & Co. claimed \$3,342.63, but failed to get judgment for anything. Leopold Morse got just what he claimed, \$2,121.07. Samuel S. Innes & Co. made no claim at all to the Department of State, and their claim did not appear at Geneva; but they received judgment for \$3,152.65.

Not less than fifteen other owners of cargo on this ship, whose claims did not appear at Geneva at all, received judgments for their losses averaging more than \$1,000 each.

The ship Electric Spark, on a voyage from New York to New Orleans, with general cargo belonging to a great number of persons, was also destroyed by the Florida. The owners' claim for vessel and freight was filed with the Department of State and at Geneva for \$166,000. The court of Alabama claims gave them judgment for only \$52,550. About fifty claims were filed with the Department of

State by owners of the cargo, and were in the list of claims at Geneva. About one hundred claims for cargo never appeared anywhere until petitions for them were presented in the court of Alabama claims. All were treated alike by the court. Judgments to the extent of net loss proved were given on all. Any claimant who failed to prove undemnified net loss failed to get judgment. More than seventy-five claims which did not appear at all at Geneva, amounting to more than \$120,000, exclusive of interest, were allowed by the court on this one ship; seven of them for more than \$5,000 each, and one for \$10,000.

The following judgments, among others, were given for loss of merchandise on Electric Spark, for which no claims had been presented to the Department of State or at Geneva:

R. S. Williams.....	\$5,543 46
Joseph Levoir.....	6,333 21
Van Nordon & Co.....	1,227 54
F. Hollander.....	8,812 93
F. Van Benthuyzen.....	3,159 23

* Dismissed.

Ship Commonwealth sailed from New York for San Francisco with general cargo and Government stores. Burned by the Florida.

Judgments were given for the following claims, none of which were in the list of claims or presented at Geneva, for merchandise:

Edward S. Jones & Co.....	\$3,152 65
Henry C. Hyde.....	2,107 60
L. & A. King.....	1,672 67
William P. Fuller.....	229 31
C. P. Huntington & Co.....	1,880 54
J. S. Adams.....	2,197 90
G. H. Gray.....	550 87
N. F. Cabot & Co.....	1,241 29
T. H. Selby.....	1,857 15
W. Schomberg.....	341 50
A. J. Hall.....	1,981 93
George D. Crary.....	1,113 15
Waterhouse.....	300 00
Bidwell.....	111 20
D. & J. Saddlier.....	449 82

I have thus given as an example of the manner in which the business has been done only a partial statement of the losses sustained in the destruction of a few ships; but I assert that hundreds of thousands of dollars under the law of 1874, and under the policy of paying only those who have suffered actual losses rather than constructive losses, by reason of the ocean warfare, have been paid to

persons who never made any claim at Geneva, and to persons who presented claims at Geneva but recovered in court more than the amount so presented; while in other cases, to the amount of hundreds of thousands of dollars, the court diminished the amount as originally presented at Geneva, or rejected the claims entirely. How can gentlemen who argue for the payment of the claims of the insurance companies, founded upon constructive not actual losses, account for this or explain away these facts? The court says that it was not intended that anybody should know how the claims were made up; that the Government was to divide the award at its own sovereign pleasure. If it was not intended that anybody should know how the award was made up, let me ask how it could possibly be distributed as made up? The Government has seen fit to give it only to those who suffered losses, and it has given to those who never were represented at Geneva. The facts I have presented settle the question of specific claims allowed at Geneva to individual claimants, as well as the policy of the Government in the distribution of the fund. The question has been asked, where is the equity that entitles those persons who have lost by exculpated cruisers to payments out of this fund? Let us go back again to the hour when their claims arose and ascertain the facts and circumstances surrounding them.

The armed cruisers, as I have already mentioned, the Alabama, the Florida, the Georgia, and the Shenandoah, were built, armed, manned, and provisioned by Englishmen; were let loose from English ports to prey upon our peaceful commerce. The American flag floated from the masthead on every sea and at nearly every harbor in the world; and the owners and officers of American vessels pursued their peaceful avocation, secure in the protection which the graceful emblem of this Republic floating over their heads afforded. They had no notice of the armed monsters which, like beasts of prey, lay in wait for them along the trackless pathway of the deep; and so they fell easy and unresisting victims to the selfish greed of England wherever found. Fifty-eight vessels were reported as destroyed by the Shenandoah before she reached Melbourne and by the other exculpated cruisers, involving a net uninsured loss of about \$1,200,000. The Government owed those fifty-eight vessels protection on the high seas in return for their fealty, floating the American flag, and their American registry, which protection the Government could not or did not give.

The claims for damages on account of the destruction of those fifty-eight vessels were by the Washington treaty with England settled at Geneva, and the Government of the United States now holds in the vaults of its Treasury, received in the award of that very treaty settlement of these and all other Alabama claims, a fund more than sufficient to pay for the destruction of those vessels. Will she not pay for them? Justice and equity demand their immediate payment out of the fund. For nine years the owners of the vessels so destroyed have been begging and pleading for their money, and during all that time the Republic has kept and held the money and denied this justice to her citizens. The bare statement of the case carries with it conviction of the justice and equity of this class of claims. The war-premium men admit it and recognize their equity as superior to their own, and are therefore willing to have them paid first. The insurance companies object and want all of the funds themselves.

A citizen of my own State lost nearly everything he had in the world in the destruction of his vessel, the Delphine, by the Shenandoah before she reached Melbourne, and for nine years he has year after year sought payment of his claim from the Congress of the United States. The bill before the House allows interest only to 1877, so that even if he gets his pay under it he must lose seven or more years of interest. It is twenty years since he suffered the loss.

How can gentlemen as against such claimants defend their position in supporting the claims of insurance companies who were able to divide among their stockholders over \$3,000,000 of profits. They went into the market and made money because of England's fraud upon us. They would not have made such profits or any profits at all out of war risks if England had not been criminally derelict in her duty. Shall they profit by the loss which others suffered? They have already made profits of 30 or 40 per cent. Shall they now add this fund of \$10,000,000 to their enormous gains? Every fact in the case appeals to the better nature of men to give a portion of the fund to those who lost their vessels by the exculpated cruisers. I am sure the heart of every man on this floor must respond favorably to their appeal for payment.

The only other class of claimants provided for in the bill is the war-premium men. How came they to invest their millions in war premiums? According to my understanding the case is not as my friend from New York [Mr. HUTCHINS] states it, namely, that marine and war insurance were combined. These war premiums were paid upon a separate and distinct policy from the ordinary policy for marine insurance. At all events the war insurance and marine insurance were kept separate. The policy was an insurance against loss or damage by war. In other words, it was an insurance against the very cruisers which escaped from British ports by the connivance of England. The war-insurance policies are still in existence, and the amounts of such premiums, where paid, to whom paid, when and by whom paid, can be easily and correctly ascertained. Why did these parties pay war premiums? Why did they not ship their goods in British bottoms—in vessels carrying the English flag? They would not then have been under the necessity of paying one dollar as war

premiums, for the cruisers never fired on British vessels. The English flag was as much a protection against the cruisers as the confederate flag itself would have been.

The American merchants and ship-owners (all honor to their names!) had the courage and the patriotism to pay their war premiums and ship their goods and sail their vessels under the American flag, defying all opposition on the ocean. Their patriotism, their love of country, that energy which American merchantmen and American sailors have everywhere displayed, kept our flag upon the ocean in that dark hour. [Applause.] Shall we now say to them, "You shall not have back your war-insurance money; you kept the flag afloat upon the ocean; you shipped your goods in American bottoms; you did a patriotic deed; we thank you for it, but when it comes to paying you money we compelled England to pay to us, we answer, Oh, no! we will give it to the insurance companies that made money out of your misfortunes and the misfortunes of your country."

On three several occasions the American Congress has passed upon this proposition, and every time the decision of the House of Representatives has been in favor of the exculpated-cruiser and war-premium claims. On each occasion the House has rejected the claims of the insurance companies. The insurance companies probably do not expect to get anything from this Congress; but if they can defeat present action and postpone the distribution till some future occasion, when this subject shall have grown old, (corporations never die,) this fund will be a sweet morsel for them. Ten or twenty years from now when these claimants, some of whom have already been waiting in poverty for twenty years, shall have gone to their graves, and the proofs of their respective claims shall have been lost or destroyed, then the insurance companies may come in and demand and receive the fund. While it would be unjust to give the fund to the insurance companies, it would not comport with the dignity and honor of this great Republic to receive into its Treasury a fund like this and then decline to distribute it to those who have actually suffered by reason of the wrongs which England perpetrated upon our commerce, for which wrongs England paid this fund as indemnity. [Applause.]

Mr. HOOKER. I always listen to my friend from Ohio with pleasure, and knowing him to be a good lawyer, I wish to ask him a single question.

Mr. CONVERSE. I will yield for that purpose.

Mr. HOOKER. I ask the gentleman whether the men who paid the war premiums added that war premium to the price of the goods they sold, and got their money back in that way? Is there any justice, therefore, or equity, in paying them rather than the men who paid and suffered the loss?

Mr. CONVERSE. I am obliged to my friend from Mississippi for putting the inquiry to me, as it is a point I ought to have noticed. The merchants who paid the war premiums were obliged to compete with those in the market who shipped their goods in British bottoms, and were thus relieved of the payment of war premiums. War premiums were not added to the price of the merchandise and so paid by consumers. In many instances the ship-owners themselves were obliged to pay the war premium not only on their own vessels but on the goods which they carried, in order to get something to carry, rather than lie and rot at the wharves in the ports of the country.

Mr. CAMP. And then to carry at a less rate.

Mr. CONVERSE. Yes; our merchant vessels were obliged to carry at a less rate than their British competitors, in addition to paying war premiums, because of risk of capture, delays in collecting insurance, undervaluation of goods by insurers, and sometimes litigation, all of which were avoided when goods were shipped in British vessels.

Mr. MORSE. I know that from my own personal experience.

National-Bank Charters.

SPEECH

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1882.

The House having under consideration the bill to enable national banking associations to extend their corporate existence—

Mr. BRUMM said:

Mr. SPEAKER: Before proceeding with my remarks, I ask permission to modify one of the substitutes which I offered for the pending bill by striking out, in line 13, the words "thirty days" and inserting "twelve months." I do this after consultation with Mr. Knox, Comptroller of the Currency. I think this modification may perhaps meet objections which the opponents of the substitute might be disposed to raise.

The SPEAKER *pro tempore*. The modification as stated by the gentleman will be published in the RECORD.

Mr. BRUMM. Mr. Speaker, we live in a remarkable period, one in which there has been greater advances in arts and sciences, greater social, intellectual, and moral development than in any previous age. We have progressed from the Conestoga wagon to the locomotive, from the primitive sailer to the mighty steamer, from communication by foot to electricity, by which the dying whisper may be wafted from the death-bed to the four quarters of the world in the twinkling of an eye. We are living in an age that has reduced time and space, brought mankind together from the remotest regions of the earth, and utilized and subordinated the elements to the use of man, thus enabling us to increase our productions and ease our burdens a hundred to a thousand fold.

We have advanced and progressed in everything except finance, *i. e.*, we have multiplied our commodities or resources a thousand fold, but have not advanced the system of distributing or interchanging these commodities or resources one jot. We are still adhering to the barbarous system of barter, namely, intrinsic value for value, varied only by a postponement of the delivery of the intrinsic value commodity by a promise to pay or deliver that commodity in future, and this promise made by individuals or corporations the creatures of the Government, instead of reserving to the sovereign the exercise and use of one of its most vital functions, and by controlling the currency or the circulating medium to exert practically a control of the interchange of every commodity that man creates or can utilize. We thus give to individuals the exercise of that sovereign power of government which enables them to control everything that money can buy. To this great question the tariff, transportation, and wages are but incidents, monopolies are subordinate, the social problem contingent, and the moral and intelligent status dependent.

In discussing this question I propose not only to separate bank functions from the Government, as suggested by my friend from Ohio, [Mr. BUTTERWORTH,] but also to separate all Government functions from banks. What does this bill contemplate? I contend that it contemplates the continuation of the issuing function of the banks, the discount function, the deposit function, and the function of exchange and transmission of money.

The only one that we war upon is the issuing function of the national banks. Therefore when gentlemen take up time by the hour in discussing the other functions and the evil that may perchance come if you interfere with the deposit, the discount, and the transmission functions of the banks, they are consuming time for nothing. There is no war at present upon any of these three functions, but simply upon the issuing of money. This is not a banking function; it is a right that belongs exclusively to the sovereign power of a government. I will say that if we are to have banks at all I would rather have the present national banks than any I ever knew of.

I say here frankly that the national banking system is the best banking system of any we have ever had, and while I say this I also say that the worst system we have ever had was the wild-cat State banking system.

Now, sir, the great trouble in the discussion of this question has been that gentlemen who urge the continuance of the issuing function of the national banks measure all their advantages and virtues by their comparison with the old rotten State banks. I say that is unfair. No man on this side of the House, that I know of at least, is in favor of the old State banking system. We only oppose at this time, so far as I know, the national banks in their issuing functions. We are not fighting bankers nor their profession. The occupation of a banker is an honorable one. I say, if I were not a lawyer I would wish to be a banker, and whatever I may say hereafter will not be a reflection on the individual banker, but a reflection on the system.

Now, to consider this question intelligently it becomes necessary for us to ask ourselves, first, what is money? I contend, sir, that money is a creature of law, that it can only exist by virtue of the law; and that money has certain purposes, which is to facilitate the interchange of commodities by furnishing a substitute for barter, so that when I wish to sell two cows and buy a horse I need not take my two cows to market and hunt for a man that wants to swap a horse for two cows, but need only sell my cows to the best advantage, (singly or together,) not for a horse but for that which represents the value of the two cows, and for which I can buy a horse, and that which will do this is what I call money. For money is a creature of law created only as a medium to facilitate the interchange of commodities, and therefore should not be a commodity itself, but only a representative of the value of commodities.

But to do this it must have one essential function or attribute, which can only be imparted to it by the highest power known to man, namely, the sovereign power of the nation; and that is the function of legal tender for the payment of all debts.

And this does not conflict with the rights of States to control contracts between individuals, as suggested by my colleague on the committee from Missouri [Mr. BUCKNER] for a legal tender, or the power of a legal tender, is simply this: when John owes money to Jake and John makes him a tender of that which the Government has said is a legal tender and Jake refuses to take it, then Jake cannot go into the courts established by authority of law and say

that the State must take hold of John and put its hands into his pocket or levy upon his goods and take from him that which will pay the debt in kind. But if I make a contract to barter, trade, or swap one commodity for another, then the interchange must be made in kind; *e. g.*, if I agree to furnish labor for potatoes, when my labor is performed the legal-tender act will not prohibit the man who is to pay me for my labor from making a tender to me in the potatoes agreed upon. The legal-tender act has nothing to do with it. It is only when I agree to do a certain thing or to sell a certain commodity for money that then I must carry out that contract in good faith, so that when that money which the Government has established in its sovereign capacity is tendered, then I must either accept that money, or that tender will be a good plea in bar. That is the whole sum and substance of legal tender and its effect.

Gentlemen tell us that we must have money which will pass current in England and the rest of the world. I ask any man here to show me or tell me if he has ever seen the money of the world, whether he has ever seen or ever heard of money that will pass current and is a tender anywhere except within the jurisdiction of the sovereign that has issued it, be he prince, potentate, or fifty million freemen. There is no money of the world. Whenever you go within the border of England or any other nation you settle your balances there, not with money, even if it is your legal-tender eagle or dollar, whether gold or silver. They will not count them; they weigh them. They but take the faith of the Government from the stamp on it, as to its fineness, and in that way they will make their calculation and receive it, not as money, but as commodity, merchandise, or bullion.

Gold is not money; neither is money gold. Money is only that that is so created by law, whether made of gold, silver, nickel, copper, brass, iron, or paper. Gentlemen have a great deal to say about fiat money. Now, I ask you in all sincerity, and I want gentlemen to answer the question if they can, did any of you ever see a dollar of money that was not fiat money? I pause for a reply; and I challenge you to show me a dollar of money that is not fiat money. I care not whether it be made of gold or silver or nickel or copper, or whether it be made of paper. Why, sir, you may take your subsidiary coin, and how much of that has intrinsic value, and how much is fiat? Take the Bland dollar, which is worth in the market some twenty cents more than the trade-dollar. One is a legal-tender dollar, while the other has a superabundance of commodity, but no legal tender; and yet it is worth twenty cents less. Take your copper and nickel coin; it does not contain near the commodity value of gold or silver, and yet to the extent that it is legal tender it will buy as much as any other money, and always serves the purpose contemplated within the jurisdiction of the government that utters it. What are your bank bills? Are they money? No. Take the act that has created them, take the bill itself and read it, and you will find that they are promises to pay money, and not money at all. When gentlemen talk about continental paper money, French *assignats*, and confederate scrip as repudiated and worthless money, they talk of that which never existed. There never was continental paper money; there never was confederate paper money. They were mere promises to pay money. The French *assignats* were never money; they were mere promises to pay land.

Gentlemen talk also of the standard of value; and my friend from Ohio who has just taken his seat said he wanted a standard of value, and that the standard of value he wanted shall be gold or silver, or both, because the value is there in the commodity before it is uttered; and also that that value was based or depended upon the amount of labor or the cost of production. I deny the whole proposition. The cost of labor and the cost of production have nothing to do with the value of any commodity. The question of value rests exclusively upon the matter of supply and demand.

I might illustrate this by hard seasons of winter that freeze the ice thick, at which time ice may be housed with comparatively little labor and cost; and there might be a hot summer and the supply of ice housed with little labor meets a great demand created by the hot summer, hence the price of the ice is graded by the demand thus created. But reverse the proposition. The ice may be housed in a winter when it is thin and when it will take five times the labor to house it that is required when it is thick. The summer may be a cold one and little demand for ice. Now, notwithstanding the fact that the ice cost five times as much as it did to house it when it was thick, yet it will not bring within 50 per cent. as much as it brought the preceding summer, when the demand was excessive. Take an acre of ground on Broadway, New York; cost nothing to create; its worth millions. Take an acre on a mountain top; cost the same; worth nothing. Build an ocean steamer on the mountain top; it costs more money and labor than to build it at the ship-yard, yet it is worthless. Build it where there is a demand or use for it, and it is worth millions. All the gold on the ship was not worth as much to Robinson Crusoe as a needle. There was no demand for gold; there was use for a needle. Therefore, what nonsense it is for any gentleman to attempt to establish the proposition that you can fix a standard of value. The value of all things depends exclusively upon their usefulness. Take it upon your own proposition. Even if the value depends upon the price of production there can be no standard, for the price of production will depend upon the demand and supply.

Value is ever-shifting. It has no permanence. Specific gravity, distance, bulk, &c., can be fixed, but values are as shifting as the winds, and have no maximum nor minimum.

When, therefore, gentlemen talk of the standard of value they talk of that which cannot exist and which never existed. You may have a unit by which you may measure values, and that is the closest you can possibly come to it; and when you adopt that unit you may make it a dollar, or you may call it a pound, or you may call it a franc, or whatever you will, but it is still the unit established by the government, and by that unit men may measure the value relatively of one article with another, and that is all the use there is in money so far as the question of value is concerned.

Mr. BAYNE. May I ask the gentleman a question?

Mr. BRUMM. Certainly.

Mr. BAYNE. Do you believe that the law of supply and demand applies to the amount of currency that shall be in circulation?

Mr. BRUMM. No, sir; the law of supply—as to volume?

Mr. BAYNE. Yes, sir.

Mr. BRUMM. That is beyond question.

Mr. BAYNE. Then does not the gentleman think that the distinguishing difference between the national banking system and the issuance of money by the Government itself or between those who would issue Treasury notes, that the national banking system enables the amount of the supply to correspond with the business wants of the community, while the Treasury-note system would vest the arbitrary power in Congress to fix the amount of circulation as it saw fit?

Mr. BRUMM. I understand the gentleman, and would have answered that hereafter; but since he has asked the question now, I will answer it here. The question of supply and demand as to money is a question of judgment. There is no standard for that. There is nothing that you can fix it by. It is a matter of judgment, and I contend that the best scale by which you can ascertain it is the price of money, namely, interest.

Mr. BAYNE. Is the quantity of ice to be consumed a matter of judgment—

Mr. BRUMM. No.

Mr. BAYNE. Or a matter of necessity?

Mr. BRUMM. There it is a question of supply and demand in a commodity. But money is different; and that is what I am trying to get through your heads. Money is a matter you cannot fix; you must take money just in proportion as it may be wanted by a community; and that can only be fixed, I believe, by the price of that money. Money, however, if you allow the Government to issue it, will not hang for the want of supply, because the Government will be able to issue it in unlimited amounts if necessary; and therefore the question of supply and demand does not apply. Human beings cannot control winters; nor can they control summers; but governments can control the supply of money, and I say to a great extent the demand for money. At any rate it may control entirely the supply of money if you only let it exercise that function which it has a right to exercise and not limit it to any specific commodity, such as gold and silver.

But I have said this is only a matter of judgment and there paused. The only difference between my friends and myself on that proposition is, that they want to have judgment of a part and I want to have the judgment of the whole. I want the judgment of fifty millions of freemen. They want the judgment of directly interested and soulless corporations, responsible to no God for their acts, responsible to no penal code, responsible to nothing but to the extent of their assets in a civil sense; while man, responsible to God, to his neighbor, to his family, penally and civilly, would be the better, the more disinterested judge than these corporations, whose existence and prosperity depend, not as my friend says, on their being able to see that there is a stability in the currency, but, as the experience of ages shows, on their being able to see that there is anything else but a stability in the volume of the currency. In that sense, having the avarice of humanity at least, they control it in their own interest, asking no questions as to what the effect of it will be on the rest of mankind. Therefore I again repeat that the question of volume shall be left to the people. They will be better able to take care of themselves than the bankers will be to take care of them. Besides, when the bankers control the volume they keep it hovering between universal bankruptcy and the highest possible interest that can be squeezed out of business, for the lower the volume the higher the interest. Therefore the bankers always keep the volume as close to the brink of bankruptcy as possible, with the margin so small that the slightest flurry brings on a crisis; for, mark you, the banker makes more money with one dollar out at 6 per cent. than he does with two dollars out at 3 per cent.; besides he requires only half the capital, runs less risk, and requires less work. When interest is six cents on one dollar the purchasing power of those six cents is much greater than when the interest is six cents on two dollars.

I know it is often said, "Why, you contend that by the Government putting its fiat under the law upon a piece of paper that will make that paper worth a dollar;" and they tell us, "But you cannot legislate a value out of nothing;" they tell us, "You cannot make that dollar worth a dollar, because it is not issued upon value." Just at this point let me tell you, sir, that you are wrong. Value depends entirely upon utility; everything is valuable only according to its

usefulness. Anything that is of no use is of no value; hence if by legislation we can grant a franchise, extend a privilege, create a function, prevent an evil, or establish anything that will do good or be of use, we are by such legislation creating value just to the extent of that usefulness; and here, if you will bear with me, I will illustrate to you the difference between this fiat dollar and that which you call the dollar, the bank note. I here first say that a bank note is never issued. No man can show me a bank note that ever was issued. Banks do not issue money. What do they do? They loan money out. They give their promissory note for the individual's promissory note, always taking care to pay the individual nothing for his promissory note, but demanding of the individual interest for the promissory note of the bank, and the result is there is not a dollar of bank money out to-day, and never was, that is not drawing interest by day and by night, on week days and Sundays, on holidays and work days; and labor has to make up that interest.

How is it with the Government issue? There never was a dollar of Government money put out that was not put out for value received. I want to repeat that, for I wish you to remember it. There never was a dollar of Government paper money put out, or gold or silver money, that was not put out for value received. Governments do not loan money out; governments pay money out, and they pay it for value received.

Will gentlemen tell us that when this Government called its 75,000 boys in blue, and then its 300,000 more, and repeated it from call to call, and paid these soldiers in the greenback dollar, the Government did not get value received? When these men sacrificed their right arms or their legs, shed their blood, laid down their lives, that the nation might live, will gentlemen say that the Government did not get value received? And if it did, those greenbacks still represent that value.

But they say, how are you going to redeem it? Sir, if ever there was a holy redemption the redemption of the greenback by the sacrifice of the soldiers of this country was as holy a redemption as any since the advent of the Son of God. Do you ask me how it was redeemed from the hands of the soldier? Why, when that soldier sent his greenback home to his wife and little ones, and when that wife and those little ones ate the bread they bought with it from the baker, that greenback was redeemed in bread. And when the baker paid for his flour that greenback was redeemed again. So when you start money out right, you start it out for value received, and every time it passes from hand to hand it is redeemed. In that very passage it is its own redeemer, and when it comes back to the Government in the shape of taxes or dues it comes to its fountain source, as the rain which rises from the ocean gets back to the spring and trickles down the mountain and waters the valley and again finds its outlet into its mother ocean. So would we have the Government money, not based upon gold, not based upon silver, not based upon any one or two commodities, but by the Government's power of taxation based upon every commodity that the American people can create; based upon the whole wealth of the nation, based upon the entire credit, the honor, the integrity, the patriotism, and the intelligence of the American people; paid out for value, and not like the bank note, loaned out on interest.

Mr. SMITH, of Illinois. Will it disturb the gentleman for me to interrupt him?

Mr. BRUMM. Not a bit.

Mr. SMITH, of Illinois. I understand the gentleman to say that he wants all the currency of the country to be issued directly by the Government. I would like him to state who is to determine the limits of the amount of currency to be issued?

Mr. BRUMM. That question was asked me before by my friend from Pennsylvania, [Mr. BAYNE,] and I answered him that it was a question of judgment as to the amount of currency. The difference between the banks determining the amount of currency and the Government determining the amount of it was that in one instance the banks were made the judge, and in the other fifty millions of freemen were made the judge. Now, if the gentleman wants something more specific—

Mr. SMITH, of Illinois. I do.

Mr. BRUMM. I will state that I believe with my friend from Ohio [Mr. BUTTERWORTH] that a postal system of deposits is a healthy one. I believe that by such a system of deposits we could absorb the plethora of money, and by that system the amount of circulation could be gauged, because it would gauge the rate of interest. I do not know but that the introduction of one of the functions of the Bank of England might be a good one in connection with the postal system of deposits. That is, that a commission established by the Government shall, upon due notice to the holders of the certificates of deposits, raise or lower the rates of interest just as money may become plethoric or scarce in the business of the country. The amount of circulation could be regulated in that way, for when money would be scarce the rate of interest could be lowered and men would draw their money from deposit, and when there was a plethora of money the rate of interest could be raised and men would put the money on deposit. In that way you would have an automatic system within the control of the Government by the people and for the people, not by the banks and for the banks. That is but one scheme, and there are others, but I cannot now take the time to state them all.

Mr. SMITH, of Illinois. I understand the gentleman to say that Congress should determine the amount of circulation.

Mr. BRUMM. Congress might determine it in that way by creating a postal system of deposits, and then as long as there was a demand for the currency the Treasury might have the unlimited right to issue currency equal to the demand, the amount to be regulated by the price it is fetching in the market and by the amount invested in the postal deposits or the amount withdrawn. That would be an automatic system, and would answer all the purposes of regulating the currency.

Mr. SMITH, of Illinois. I understand the gentleman to say that the Treasury should be authorized to issue promises to pay for all debts of the Government.

Mr. BRUMM. No, sir; oh, no! I would never have the Government or any one issue promises to pay, but would have them pay at once.

Mr. SMITH, of Illinois. Issue currency?

Mr. BRUMM. Yes, currency. Issue fiat dollars to pay the debts of the Government under its sovereign power and exclusive jurisdiction over the subject-matter, and not postpone the payment of its honest debts by issuing promises, especially when those promises are burdened with interest.

Mr. HARDENBERGH. Would they not be promises to pay?

Mr. BRUMM. No; they would be the same as coin. Your gold dollar and your silver dollar is not a promise to pay. You cannot go to the Government and ask it to redeem this half-dollar [holding one in his hand] or a gold eagle. The Government would tell you that they had nothing to do with that; that you might pay it to the Government for a debt and that would be all. Even then if it were worn or short in weight, the Government would not receive it for as much in value as it was worth when it was issued. It would not receive it as money at all, but would receive it according to weight as a commodity or bullion for recoinage only, while it will receive its paper dollar for full value at all times. As my colleague on the Committee on Banking and Currency, the gentleman from Massachusetts, [Mr. CRAPO,] says, the currency of the country should rest upon the prudence as well as upon the power of the Government.

That brings me back again to the original proposition. You must not issue too much money. We understand very well what inflation means, and we do not ask for anything of the kind. But we do ask that you keep the issuing function, even though it be gold, silver, fiat paper money, or Government promises to pay, under the exclusive control of the Government, and let it be regulated by any scheme or plan that will establish a proper bulk or quantity of currency.

Mr. SMITH, of Illinois. What part of the Government is to determine the amount to be issued?

Mr. BRUMM. I said that I would recommend the election of a commission, under control of Congress, or would have it under direct control of Congress. We might by act of Congress give the Treasury unlimited power to issue fiat or full legal-tender paper money (which is the same thing) as long as money fetches more than 3 per cent. interest. Whenever it gets down to that point I would have it stop the issue; if it should go up again, then I would have it issue more. But you never need contract currency that is properly issued.

I agree with my friend from Ohio [Mr. BUTTERWORTH] that of all the evils of currency that of contraction and expansion is the greatest. The laborer is the last to feel the effects of inflation and the first to feel the effects of contraction. Therefore I would put it where there would be no amount issued that would ever need to be contracted, except by natural results, such as loss and destruction. If the Government keeps within the bounds of wisdom, as it can, and in my judgment will, as soon as the issuing function is forever taken from the banks, it never need contract the currency.

Gentlemen may tell us that during the war it would not have done to have issued an unlimited amount of paper currency. I answer no; but as the Government issued the currency it could draw it back by taxation and thus keep the volume at a healthy point at all times. During the war, when we had an immense Army, the Government could do this. In time of peace I grant you the Government cannot do it so easily; but in such a time there is no necessity for a superabundance of issue, and therefore of course there is no occasion for absorbing it by taxation. But in time of war the Government can set a limit upon the issue by the exercise of the power of taxation, drawing back the currency and keeping it at all times in a healthy condition.

Mr. HARDENBERGH. I would like to ask my friend a question. He says that the issuance of money should be by Congress or by a commission.

Mr. BRUMM. I say that its issue should be regulated by Congress, as it is now under the Constitution, but should never be delegated to banks.

Mr. HARDENBERGH. How are you going to get that money out, and how are you going to restrict or regulate the issue? Suppose you have an extravagant Congress or commission that issues more money than is required, so that people throughout the country refuse to take it. You then establish a gold basis, a silver basis, and what you call your Treasury-note basis. Confidence is gone, and the people suffer.

Mr. BRUMM. No, I propose to establish nothing of the kind.

We would get this money out just as the people want it by always paying and receiving for value. When there is a Government issue you cannot get more money out than the Government can receive value for. I might have stated this in my answer to my friend from Illinois, [Mr. SMITH.] The amount of money in circulation is thus limited at all times. If after the debt is paid the amount of currency in circulation should not be sufficient, our friends from the South are asking us to educate their people. In the North, too, we have ignoramus enough that ought to be educated, and I would recommend that the Government issue its fiat money and educate the people, if perchance there should be no other way of getting money in circulation. Internal improvements would be another method. Thus you enable the Government to be master of the situation at all times. Neither would there ever be a lack of confidence, for confidence is only lost when you make a lot of promises in shape of bank notes, &c., that you cannot redeem, whereas if you have cash legal-tender money based on the power and wisdom of the whole nation you have the very essence of confidence itself.

Mr. HARDENBERGH. I would like to ask my friend what volume of currency under his system he would issue? Would he pay every bond and obligation of the United States now out by this fiat money, as he calls it?

Mr. BRUMM. No, sir; not at once, but as fast as they mature and as rapidly as consistent with financial stability. I am unable to state the exact amount which would be proper for the volume of currency; and no other man in the world is able to do it. But I can do so just as well as the banker can. No man can tell beforehand the amount of currency required for a country like ours. Experience as the money is out will settle the question; and nothing else under the sun can.

The gentleman from Massachusetts, [Mr. CRAPO,] my colleague on the committee, remarked in regard to the banks that "the necessities of their creation have not been forgotten." He also speaks of their past "patriotic services." What did the gentleman mean? Did he mean to corroborate my other colleague on the committee, [Mr. HARDENBERGH,] who said that the bank note paid the soldier and carried us through the war? If he did, I deny the proposition. I say that no soldier ever received one dollar of national-bank-note money. Why, sir, your bank charters do not expire until next February—February, 1883; then the banks will have only been in existence twenty years. Hence they could not have been in existence before 1863. Yet men will undertake to make people believe that the war was fought out by this national-bank money. What is the fact as to this? I read from Judge Martin:

The war commenced early in 1861. There was not one national-bank note issued until 1864.

Why, sir, Vicksburgh had fallen then; Gettysburgh, the turning point of the war, had been won. Our soldiers were marching triumphantly, crushing the shell of the late rebellion. Confidence had been restored; the danger of foreign intervention had passed; and the war was practically over. The battle had been fought and the victory won. Then these national banks came in and said: "Now we want you to let us control the currency."

Mr. HARDENBERGH. They were forced to do it.

Mr. BRUMM. The gentleman says they were forced to do it. Ay, sir, their avarice forced them to do it.

Mr. HARDENBERGH. The Government forced them to do it.

Mr. BRUMM. The Government did not force them to do it. Wall street came here to Congress. In the language of the old commoner, Thad. Stevens, "a wail came up from the caverns of Wall street," and insisted upon an amendment in the Senate to the House bill reported by him as chairman of the Committee on Ways and Means, putting in a clause that repudiated the greenback and became the basis of the national-bank system. It was done at the bidding of Wall street. Yet gentlemen tell us that the banks were forced to take control of the currency. The Government did say to the State banks, "we will tax you 10 per cent. on your circulation;" but did that force anybody to establish national banks?

Mr. HARDENBERGH. Certainly it did.

Mr. BRUMM. No; it simply got rid of the wild-cat State system of bank notes.

Mr. HARDENBERGH. Was not the primal evidence that Mr. Chase "wiped out" the State banks by putting the tax of 10 per cent. on their circulation and forcing the national banks to take bonds whether they wanted to do so or not?

Mr. BRUMM. I do not care what the primal idea of Mr. Chase or any other man was. The fact is the Government issued these Treasury notes. He made the bankers receive these Treasury notes; he made them receive the first \$60,000,000 for debts, although it had not been put in the original act, but was rather left to his discretion.

Mr. CRAPO. My colleague on the committee seems to have forgotten that part of the history of the country when the Government had a large amount of 7.30 bonds and when the question of funding the public debt was an intricate and doubtful one, and when the banks did come forward and aid the Government in the funding process, converting the 7.30 bonds into those of a lower rate of interest.

Mr. BRUMM. Yes, they did come and refund the debt; that is, they so refunded it that instead of the Government owing the debt to the bondholders, to the contractors, and to the soldiers whose pay

was far in arrears, they made it over to the bankers at 40 cents on the dollar. They came and helped to refund the debt, which was the cause of the crisis of 1873. They did come and aided the Government to do that which brought on the greatest calamity this nation ever had save alone the last rebellion. They did come and make the Government refund this debt by contracting the currency so rapidly that labor lay prostrate, and men, women, and children were starving throughout the length and breadth of the land.

While on this point, Mr. Speaker, let me say that gentlemen here are fond of throwing into the teeth of the "Greenbackers" the fact that we prophesied the Government never could resume specie payment under your refunding system. I insist that we were right when we said that, for, sir, you have not resumed to-day. Under your original refunding act and resumption policy you changed your policy. You were going to cut down every dollar of greenbacks. You had demonetized silver, and when the greenback prophecy was proved to be only too true you changed your policy and you remonetized silver, stopped the destruction of the greenback and made it a full legal tender except for the payment of the public debt.

What is the result to-day? You boast of resumption. I deny it. You have not resumption, and especially of specie payment on demand for national-bank notes. To resume is to get back to where you started. This you have not done. You have a new idea of redeeming the national-bank note by a redeemer for which we on this side of the House are denounced.

After you call in the entire \$350,000,000 bank notes and redeem them in greenbacks, you may resume by taking a fixed sum, not less than \$50, pay the expense, and run the risk of getting it to and from New York City, and then put it in a little bit of a hole in that city and have it redeemed. That is what you gentlemen boast of as your resumption policy.

Mr. TOWNSHEND, of Illinois. Who does the gentleman allude to when he says you propose to retire the greenbacks and demonetize silver?

Mr. BRUMM. The gentleman from Ohio is one, and there are a number of others. I believe there are several gentlemen on the other side.

Mr. TOWNSHEND, of Illinois. Who are they?

Mr. BRUMM. One is the gentleman from North Carolina, [Mr. DOWD.] There are a number on both sides of the House.

Mr. TOWNSHEND, of Illinois. I know no Democrat.

Mr. BRUMM. Yes, the gentleman I have already named; the gentleman from North Carolina, [Mr. Dowd,] and many others.

Mr. TOWNSHEND, of Illinois. As I understood the gentleman's statement it was that somebody was to demonetize silver. To whom does he refer? None in the Democratic party.

Mr. BRUMM. I say those opposed to issuing greenbacks, Democrats or Republicans.

Mr. TOWNSHEND, of Illinois. Does the gentleman assert that any Democrat ever voted to demonetize silver?

Mr. BRUMM. Yes, sir.

Mr. TOWNSHEND, of Illinois. Does the gentleman from Pennsylvania mean to assert that any Democrat voted in favor of the demonetization of silver?

Mr. BRUMM. I am unable to answer the gentleman's question, except to say that I do not believe that 50 per cent. on either side of the House who voted on that question knew what they were doing.

Mr. TOWNSHEND, of Illinois. Does not the gentleman know that the silver dollar was demonetized by the Republican party, in a Republican House and a Republican Senate, and signed by a Republican President?

Mr. BRUMM. The bill was passed; a large majority of Democrats and Republicans both voted for it, and as I have said they did not know what they were doing. I believe that it got through the House by a trick and that they voted blindly upon it.

Mr. DINGLEY. If the gentleman from Pennsylvania will permit me—

Mr. BRUMM. Certainly.

Mr. DINGLEY. I desire to ask the gentleman from Illinois if he stated that no Democrat voted for the act of 1873?

Mr. TOWNSHEND, of Illinois. The act demonetizing silver?

Mr. DINGLEY. Yes, sir.

Mr. TOWNSHEND, of Illinois. I say it was passed by a Republican House and a Republican Senate, and signed by a Republican President; and no Democrat of either House favored it.

Mr. DINGLEY. I am sorry to say the gentleman labors under an error.

Mr. CANNON. I will state to the gentleman from Illinois, upon the same authority and on the same evidence that he uses, that not one Republican voted for the act. The record of that vote was not taken by yeas and nays, and there is nothing to show that any Republican voted for it.

Mr. TOWNSHEND, of Illinois. But my friend cannot ignore the fact that both the House and Senate were Republican; that it was a Republican Congress out and out, and that it was signed by a Republican President.

Mr. CANNON. And does not my friend know that no objection was made upon either the Republican or Democratic side of the House at that time?

Mr. TOWNSHEND, of Illinois. Certainly, I will admit that, for it passed both Houses under false colors and by a trick. But it was signed by a Republican President who had his eyes open and knew well what he was doing.

Mr. CANNON. Afterward he said he did not.

Mr. TOWNSHEND, of Illinois. And let me call my friend's attention to the fact that when the Democratic party was restored to power in the House it restored the old silver dollar.

Mr. ROBINSON, of Massachusetts. The Democratic party is evidently safe now, according to the statement of the gentleman from Illinois, and I hope we will proceed with the bank bill.

The SPEAKER *pro tempore*. The gentleman from Pennsylvania is entitled to the floor.

Mr. ROBINSON, of Massachusetts. I am referring to the gentleman on the other side of the House.

Mr. CANNON. I only want to call attention to the fact that the remonetization of silver took place during the time when the Democrats were in the majority, as the gentleman says; and both Republicans and Democrats voted to pass it over the President's veto, while some Republicans and some Democrats voted against it.

Mr. TOWNSHEND, of Illinois. I admit that there are some good, honest men on that side of the House.

Mr. BRUMM. I now ask the Clerk to read in this connection what I have marked in this pamphlet entitled, National Banks and Legal-tender Notes, by Warwick Martin.

The Clerk read as follows:

But we allege that from the beginning to the close of the war not one dollar of national-bank paper was paid to the Army or Navy. Most payments were made in demand notes issued by the Government, or in legal-tender notes, also issued by the same great power.

The war commenced early in 1861. There was not one national-bank note issued until 1864. The soldiers could not, therefore, have been paid in them, if they had preferred them. But demand Treasury notes, to the amount of \$60,000,000, were issued early in 1861, and legal-tender notes were issued in 1862, 1863, and 1864, and with these notes the expenses of the war were paid. This is an interesting portion of our history. We give it with the particulars.

At the commencement of the war the President and the Cabinet supposed, and published to the world, that it would be of short duration. From sixty to ninety days were all the time then allotted to its existence. To obtain money for this short war, the Secretary of the Treasury relied upon loans from State banks, then professing to pay coin. Fifty millions of dollars were borrowed from the New York banks to end the war and preserve the Union. They loaned this sum to the Government upon the condition that the sub-treasury act of 1846, which excluded all bank notes from the Treasury and imposed fines and penalties upon all Government officers who deposited any money in banks, should be repealed, so that the banks might be able to furnish the circulation for the United States in their own notes, and also receive and keep the public deposits. Congress complied with this request, passing such a law as the banks demanded. The \$50,000,000 were loaned by the banks, and bonds of the United States bearing 6 per cent. interest were received by the banks therefor, at \$80 on the one hundred. This loan was made by the banks and paid to the Treasury in the notes of the banks—not in coin. Think of it, laboring-men, the Government of the United States gives its bonds at 6 per cent. interest for the notes of banks at \$80 on the one hundred. The notes were par. The bonds were 20 per cent. discount. These are a portion of the bonds now maturing or becoming redeemable.

We cannot do this subject justice without speaking of the exception clause in the legal-tender act of February 25, 1862, which excluded these notes from the custom-house. The House passed this act without this clause, making the notes full legal tender for everything. It was sent to the Senate for concurrence. Congratulations poured in upon the House from all directions—North, East, and West. But an army from the money centers, especially from New York, surrounded the Senate. The bank presidents and cashiers assured Congress that if these notes were made legal tender for everything all banks of issue would be compelled to wind up. This argument was too strong for a majority of the Senate. They placed the exception clause in the law, thus insuring a discount upon the notes from the beginning. The bill as thus amended was sent back to the House. The friends of the original bill fought the amendment manfully. But the Shylocks were around the House also, and they succeeded in effecting enough changes of votes to carry the bill as amended by the Senate. Thus the foundation was laid in the law for all the discount ever suffered by the people upon these notes of the Government. A blacker act is not recorded upon the pages of our history than this one. It was treason against the United States. Had these notes been made full legal tender, \$1,000,000,000 could have been kept in circulation at par with gold, and this amount would have been ample for the demands of the war and of the business of the country, and not one bond need to have been issued. But the discount upon the notes was intended to form, and it did form, the pretext for selling bonds, borrowing money, and establishing national banks.

The 25th of February, 1863, (12 Statutes, page 665.) This was the first act authorizing the present national banks. It will be seen that it was passed just one year to a day after the approval of the act authorizing the legal-tender notes. The object of the law as expressed by Mr. SHEPHERD, in his speech upon the bill, was to have the notes of these banks supersede the legal-tender notes and the demand notes, the former of which had been used for paying the Army for nearly two years, and the latter for just one year. But no banks went into operation under this act. The State banks made a decided stand against national banks. They held public meetings upon the subject in New York and elsewhere, and protested against the national-bank scheme. Something had to be done to reduce further the value of legal-tender notes, so that Shylocks and stockholders of State banks might see it to their interest to purchase bonds and commence national banking.

On the 3d of March, 1863, just six days after the passage of the first national-bank act, (12 Statutes, page 709,) the act of this date was passed, providing that legal-tender notes should be received for bonds, according to the law of their creation and the notes themselves, until July 1, but not after that time. This was done to force the legal-tender notes out of the hands of the people and into bonds, that national-bank notes might be issued thereon. It alarmed the holders of legal-tender notes. They supposed the Government was about to repudiate them. Under the law, and the statement that the notes were all to be redeemed and the notes of national banks substituted for them, they went in 1864 to \$285 of notes for \$100 of gold. Notwithstanding this law, Shylocks and bankers were allowed to purchase bonds with legal-tender notes which they had purchased with coin at \$40 to \$100. For these bonds thus purchased they were willing to receive \$90 in national-bank notes on every \$100. But to give further inducements to the purchase of bonds and the starting of national banks therewith, a law was passed in March, 1864, providing that the interest on bonds, which was payable in gold, should be anticipated one year with or without rebate. This was commenced in

1864 and continued for five years. The bankers were now ready for banking, but the law had to be changed.

The law of February 25, 1863, was repealed, and the act of June 13, 1864, (13 Statutes, page 99,) was passed authorizing State banks to be converted into national banks, and making other changes satisfactory to the bankers. Thus far no national-bank notes had been issued.

Mr. BRUMM. Now, my colleague, the chairman of the Committee on Banking and Currency, says that banks are not large moneyed monopolies. For the purpose of showing the power of the national banks, I ask the Clerk to read a small extract from the secretary's report of the proceedings of the National Bankers' Association, held at Saratoga in 1879.

The Clerk read as follows:

Bank managers are the most apathetic business people that I have ever come in contact with; an earthquake will hardly induce them to move out of their easy-chairs. They need not be suppliants. They want justice and not favors. Did they but realize their strength, and, acting together, exert it as do other great interests, they would have to ask but once, and any proper request would be granted. The banks represent the entire commerce of the country, the mining, the iron, the manufacturing, the agricultural, even the whisky and tobacco interests are dependent upon and are tributary to the banks, and the banks in turn to them. Suppose banks and bankers should stop discounting for any one of these interests for thirty or forty days; nay, suppose the banks should cease making discounts to all of these interests at the same time, would not chaos come again? The movable capital of the entire commercial public of the country is in the banks.

There are over 6,000 banks and bankers in the United States, wielding of capital and deposits over \$3,000,000,000. They have only to move along the lines and retire from business and let the windy demagogues supply their place with money and credits, if they can. They will soon be told by the farmers that they want something besides words for their wheat, and so also will the manufacturers and other producers for their productions. Nothing is so timid as capital, nothing so easily scared as one million, unless it be two millions.

Mr. BRUMM. Here is an acknowledgment that two of the most dangerous elements to republican institutions are incident to your banks, namely, unlimited power and unmitigated cowardice.

And for the purpose of showing that they are banded together, that they act, work, and operate as though they were one, I shall have printed as appendix A and B with my remarks two private circulars issued from the National Bankers' Association, showing that they work together in harmony with each other and that they move like one man. I had intended reviewing the different points made by my worthy colleague, the chairman of the committee, and also some of the remarks of my colleague on the committee, [Mr. SMITH,] but time will prevent me.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. HARDENBERGH. I will yield fifteen minutes of my time to the gentleman from Pennsylvania.

Mr. BRUMM. I am very much obliged to the gentleman, but fifteen minutes will hardly suffice for what I desire to say.

The SPEAKER *pro tempore*. The gentleman from New Jersey cannot be recognized to yield the floor at this time.

Mr. BRUMM. He is a member of the committee and will be entitled to an hour.

The SPEAKER *pro tempore*. The gentleman from Missouri [Mr. FORD] is entitled to the floor.

Mr. FORD. I yield to the gentleman from Pennsylvania all my time.

Mr. BRUMM. Thanks. Now, Mr. Speaker, I want to ask our national-bank friends what redeeming feature has the national-bank note that the greenback note has not? What advantage to the people of the country, to the business interests of the country, has the national-bank note that the national Treasury legal-tender note does not possess?

Do you say that it is current all over the Union? I say amen; but so is the greenback. Do you say it has the confidence of the people? I say amen, for that confidence is based on the people themselves, that confidence is based on the Government, and on its redeemer and savior, the greenback dollar. Do you say it will surely be redeemed? I again say amen; it will be redeemed, but by the greenback dollar.

And now let me ask another question. Let me ask the gentleman what advantage has the greenback that the national-bank note has not got? We claim that it has a number of advantages that your national-bank note has not got. In the first place, it saves the interest on the bond upon which the bank note is based, whatever that may be, great or small. In the second place, it saves the discount paid the broker or the banker; I have illustrated that heretofore; that is, the national-bank note goes out for interest and interest must be paid; hence the Government pays interest first on the bond, then the man who receives the discount pays interest on the bill, both of which are wiped out the moment you allow the Government to issue this money in the first instance. Then, sir, it does not bridge the chasm between the creditor and the debtor, as has been said by both my colleagues on the committee, the gentleman from Massachusetts [Mr. CRAPO] and the gentleman from Illinois, [Mr. SMITH.] The national-bank note does not bridge the chasm; it widens the chasm; because it makes the holder of the note pay double interest. It leaves the volume to the people and prevents the concentration of power in the hands of the few. I wish I had time to illustrate the damning and blighting effect of this concentration of power by the moneyed men of the country in the hands of perhaps a few dozen men practically in the city of New York. Any system of issuing banks fosters this centralization of power.

Again, there is a centralization of power in this, that whenever you take from the Government at large any of its functions, any of its rights, and give them to a portion of that Government you take it from the aggregate and give it to a few, and they in their selfishness would always use it and utilize it to their own interest. Functions that are sovereign should be held sacred by the Government, and not delegated to the few under any circumstances. You change it from an interest-bearing to a non-interest-bearing debt; and let me ask gentlemen who are so solicitous about the redemption of the greenback, is it not easier to redeem a debt, even if it is to be redeemed in kind, is it not easier to redeem a debt bearing no interest than it is to redeem a debt bearing interest? If you wipe out the interest of the bonds, cut them up into small denominations, make them legal tenders and serve the purposes of money; when the time comes for redemption the Government will be better able to redeem them if you do not charge interest than it will be if you compel it to pay interest for twenty-five or one hundred years.

Again, when you liquidate the Government debt by the issue of greenbacks you take the Government out of the money market. To-day the Government is one of the greatest if not the greatest competitor in the money market for loans. The Government is practically a bidder against any man who wants to borrow money. The Government is a borrower of money under a national-bank system and a competitor in the business market for the money of the country, whereas it ought to stand back and be a helpmeet, rather than to draw that money.

There will be no currency suspension as there was of the national banks in 1873. The national currency will redeem the bonds. Do gentlemen ask me, do I want to repudiate? I say no; I say I want the debt paid, dollar for dollar, according to the contract; coin, since it says so; gold, if the Government makes it so; blood, if the necessity requires it. I want it paid according to the contract. But I say that the national Treasury note will pay this bond without repudiating a dollar or a penny.

Senator SHERMAN said that some six hundred millions of the national debt was redeemed and paid in the national Treasury note; not because the Government said it must be, but because the holder of the bond said: "I do not want your gold and silver; I would rather take the national Treasury note, and let the Government take of its surplus at any time and call in so much of the debt as there is surplus." There will scarcely be one man that will say, "I want gold or silver." If they do say so, the Treasurer can easily tell them to back up their cart and take the silver that is now in the Treasury; and as they take it out, it will come back in the twinkling of an eye, and then it can say, in the language of the barber, "Next; back up your cart and we will give you your silver again;" and it can keep this up till the national debt is paid. I would not pay it off so quickly as to bring on any calamity. There must be wisdom as well as honesty, and the Government will act in a truly wise and judicious manner if you only give it a chance.

There will be no currency suspension. The Government need never be troubled about suspending specie payments under that system. The only reason that specie payments are in danger to-day is because under your banking system you allow the banks of the country districts to deposit their money in the city banks. They deposit all their surplus and the banks in the city loan it to stock speculators and gamblers. In the country they would rather put it out on call loans at 3 per cent. than on a permanent loan at 6 or 7, because their deposits are on call. In the city they keep it in a spasmodic condition, loaning it constantly to stock-jobbers and speculators, and hence when in 1873 stocks fell and could not be sold, a demand was made suddenly upon the banks for this money, and then it was that banks suspended not only specie payments, and honoring their own notes, but closed their doors, and refused to honor the drafts and checks of their depositors; then it was that they suspended all payments, and the result was the crisis of 1873.

And then it was that the Government was compelled to bridge over the chasm by loaning these very banks \$26,000,000 of legal-tender notes. Therefore, not only during the war did you rely upon your Treasury notes, but in time of profound peace, in times of crises you have always called upon your savior to come to your relief in all emergencies.

But again, the most important element of the system is in the fact that it will prevent the contraction and expansion of the currency. It will keep it on a permanent basis, not subject to the double fluctuations of gold and silver as commodities, and as coin, nor to the whim, caprice, and avarice of biased individuals or interested corporations. It will be on a permanent basis, for the money will never be issued beyond the amount that is wanted, and will be contracted only in a wholesome degree. Now, as to the merits of this bill and of the several amendments, I would ask what do gentlemen really expect to accomplish by the passage of this bill?

Mr. DOWD. I have been informed that the gentleman has said that I advocated the demonetization of silver.

Mr. BRUMM. No, sir; I said you opposed the issue of greenbacks and advocated State-bank notes.

Mr. DOWD. No; I did not even do that.

Mr. BRUMM. I understood you to do so yesterday.

Mr. DOWD. The gentleman is mistaken.

Mr. BRUMM. Then we are still without a substitute for this sys-

tem, and I want gentlemen to come forward and tell us what they do want. You come down now to the proposition that you must either have a perpetual national debt or the days of the national banks are numbered. Either one or the other of these horns of the dilemma you must take. You must either say that you want to mortgage our children and their posterity indefinitely or that national banks must give up their issue. Now, since the days of the issuing function of national banks are numbered, and since you do not propose any substitute for it, let me ask if we had not better begin now to let them down easy, to let them down gradually? You say they have lived for nineteen years and that you want them to have twenty years more of existence. If you give that to them, then at the end of that time you must either give them twenty years more or else let the bottom drop out all of a sudden.

Now, I do not want anything of the kind. I am more generous toward the national banks than that. I want them to start now and prepare for the day of judgment. The time is at hand, and their days are numbered. I only ask them to prepare now, that they may meet their judgment when it comes upon them, and not inflict another crisis upon this country like that which they have heretofore inflicted.

Now, what does this bill contemplate? You say that under the present law the banks may be continued. Yes, they may. But you say that you do not want the issuing functions to be disturbed in the least; you do not want the banks to pay up the amount of the lost or destroyed notes, which have been lost or destroyed during the twenty years of their existence?

Do you say you want that done? Oh, yes, for in the sixth section of your bill you say that whenever the amount shall be reduced to 5 per cent, then the banks must pay the balance in current coins.

Now, if the experience in regard to national-bank notes is anything like the experience in regard to the loss and destruction of fractional currency you never will get to the 5 per cent. limit. In all honor and candor, why cannot you fix a specified time and not resort to the subterfuge of a 5 per cent. limit?

I have fixed the time in my bill at one year. I had it fixed at thirty days; but the Comptroller of the Currency thought that was too short a time, and so I have fixed it at one year. I only ask that at the end of that one year they shall redeem their notes and receive other notes for them if they please; and for those that cannot be redeemed, whether 5 per cent. or 50 per cent., they must pay in current funds.

They have had this privilege now for twenty years, and they knew that the day of settlement would come. As honest men they ought to be willing to pay to the Government that amount of money, and let the Government turn it around and liquidate and redeem that amount of interest-bearing debt.

Mr. CRAPO. Is not the gentleman aware that so far as banks have gone into liquidation already, and their circulation has been called in, the amount of lost and destroyed bank bills is less than 1 per cent.?

Mr. BRUMM. Yes, I will grant that it is so stated.

Mr. CRAPO. That is from the official figures.

Mr. BRUMM. I know it must be so if the gentleman says so. But it is only a presumption. Take those banks which have gone into liquidation; they may have been fortunate, or rather unfortunate for them; and it may be the amount is only 1 per cent. But statistics are very slippery things to stand on. While that may be the case with some, it may not be with others.

But even if that is the case, so much stronger then the argument why they should pay that 1 per cent. honestly. Why place the limit at 5 per cent.? I want some argument for it, some reason. Why do you want the limit at 5 per cent., and say that only when it gets down to that point shall they liquidate their liabilities by paying currency to the Government?

Let there be no limit of per cent. Do you know that banks may agree among themselves that they will not let the notes of their brother bankers get below 5 per cent.? They may say, let us keep that amount; and a five-dollar bill held by each one on this or that bank would make up the amount, and in that way they will thwart the object you have in view.

Therefore I say again, what harm, if you are honest, can there be in fixing a time rather than the amount, and say that they shall have a year, and if they do not redeem every dollar of the money which they have to redeem in that time, then they must pay current funds for it?

Do you tell me that a crisis will be the result when a year's time will be allowed for the payment of only 1 per cent.? If so, then I pray God that the national banks may be wiped out before I die and that my children need not fight so weak and corrupt an institution. If such a measure as this is to produce a crisis, then we should devise some plan by which we can get rid of the incubus that cannot stand even 1 per cent., with a whole year's time in which to raise it.

What are the provisions of my substitute? One of the propositions I have submitted I have no hopes of having passed; there are not Greenbackers enough here for that. But I have submitted a compromise measure which does all that is contemplated by the Crapo bill except that it provides for the contingency of a crisis, in this, that as

the national-bank notes are wiped out we shall substitute therefor the Treasury notes—legal-tenders—just as they are to-day. Besides, this substitute fixes twelve months as the time for the final payment or liquidation of those national-bank notes that are lost or destroyed. Those are the only two substantial propositions as to which my substitute differs from the measure proposed by the gentleman from Massachusetts. This proposition of mine must meet the views of any gentleman here who is anxious to have the national banks continue by reason of their discount function, their deposit function, their transmission function. This substitute simply says to the national banks that they must be honest in their issuing function. This is all that my substitute contemplates. I ask for it the careful attention of every member on this floor. I ask any one to point out wherein it differs substantially from the Crapo bill except as above stated.

Gentlemen talk about giving banks the right to issue money because the Government cannot do it. How can bankers do it? To what extent can they do it? To the full extent of the national debt, less 10 per cent. Now, gentlemen, if you are honest in claiming that the Government should not issue money, but that creatures of the Government should issue it, I ask why do you not offer a proposition something like this, that any individual may go to the Secretary of the Treasury with a bond of not less than \$100, and not exceeding \$1,000, and receive not bank notes, but individual notes, if you please? What objection is there to allowing an individual the same privilege which you allow to a corporation? What is the difference?

John Smith, a business man in my county, has \$20,000. He wants to go into manufacturing business. He finds that it will take \$18,000 to build his factory. He says: "Here is a banking corporation with \$25,000 capital that can go to the United States Treasury and by depositing bonds get money for them to the full amount of the bonds, less 10 per cent., and shave the people with it. Why should I not do the same thing? I will go to the Secretary of the Treasury, and say to him: 'Here are \$20,000 of Government bonds; give me \$18,000 in notes.' I will take these notes home—not for the purpose of shaving my neighbors, not to draw sweat and blood from them by usury. I will use them in erecting my factory, in giving employment to my neighbors, in building up the industries of the country. I will not loan out this money to draw the blood from the man who wants to build a factory. I will build the factory myself. I only ask the Government to do for me what it is doing for the national banks." He says to the Secretary of the Treasury: "Give me money upon the same terms on which you give it to this soulless corporation." The Secretary says: "No, no; you are a creature of God; you are a being of flesh and bone and blood; a responsible creature; I cannot give you this money. Besides, you want this money to use it as a blessing to your neighbors; that is against our policy."

What does John Smith do? He goes home and gets several of his neighbors to join with him. They say we will apply to the Secretary of the Treasury; and it will no longer be the application of John Smith; it will be the First National Bank of Hookstown. They go to the Secretary of the Treasury, and he says: "Oh, I see; you are not here as a responsible creature, a creature of God—a mortal man, with soul immortal; you are an immortal creature without a soul. Deposit your \$25,000 of bonds, and I will give you \$22,500 in money. You may then go home—not to erect factories, not to give employment to your neighbors, not to build railroads and other improvements, but to shave your fellow-citizens, to draw from them their life-blood."

Mr. CANNON. May I ask the gentleman a question?

Mr. BRUMM. Certainly.

Mr. CANNON. Will the gentleman vote with me for an amendment to allow these banks to carry on the banking business without taking circulation, or to reduce the amount of their bonds deposited to a nominal sum, for the reason that at the present premium upon 4 per cent. bonds and on the basis of 8 per cent. interest upon loans there is absolutely no profit in circulation? I desire to see an amendment of that kind adopted, and I have such a proposition now pending. I personally know that most of the country banks at least would be glad to have it adopted.

Mr. BRUMM. If I understand the question right, it means simply, will I vote for an amendment continuing the national banks as they are, excepting their issuing functions? Is that the question?

Mr. CANNON. Certainly.

Mr. BRUMM. Then I answer yes, with all my heart. Give us your banks of deposit, your banks of discount, your banks for transmission of money, but let the people say what the circulating medium shall be.

Mr. CANNON. Does not the gentleman think it would be a good thing for the banks to have that privilege instead of going out of business, instead of paying 123 for the 4 per cent. bonds as soon as the three-and-a-halves are called, which will be during the present year?

Mr. BRUMM. Whenever it pays the banker to give 123 per cent. he will do it. When it does not, he will throw his money on the country and not ask any questions as to what is to become of the people.

Mr. CANNON. The gentleman wishes to be fair, I know. Now,

in my State of Illinois, and in some of the other States, there is a constitutional provision which prohibits the incorporation of any bank of circulation or discount. The alternative is presented to the national banks to take circulation at a loss or go out of business and bank under the form of copartnership.

Mr. BRUMM. I have already said I will, if that provision be adopted, be willing to provide that whenever they want to go out as a bank of issue we will substitute for every bank note a Treasury legal tender. That would keep the volume of circulation at the present amount, or rather it would increase it to the extent of the circulation of the banks which went out of existence. The banks will all renew, and that question is answered in that proposition. I do not want to interfere with that now. I have my own views about that proposition, but it is not a question at issue. I say I do not wish to interfere with any other function of the national banks at this time except the issuing function. I say I will oppose any State bank of deposit, or any State bank of discount. I believe that no corporation of a State, no creature of a State, has a right to deal in money as money created by the sovereign power of the Government. I believe the function of discount and deposit, and exchange even, belongs or ought to belong to individuals or to corporations created by the National Government alone.

Mr. HAZELTON. The General Government would not have authority to bank.

Mr. BRUMM. The General Government never does bank.

Mr. HAZELTON. As a bank of issue?

Mr. BRUMM. Issuing is no banking function. It never was, and there is where you make your mistake. You constantly confound the idea of a bank note with an actual dollar. You constantly confound a promissory note with a fiat dollar. You constantly confound a promise to pay a dollar with a gold, silver, or other legal dollar made by the sovereign power of the country.

Mr. HAZELTON. Does the gentleman hold—

Mr. CRAPO. Let me ask my colleague on the committee from Pennsylvania whether the greenback is a promise to pay?

Mr. BRUMM. And let me say right here in reply to the gentleman from Massachusetts that the greenback on its face is a promise to pay. It is not the money I want, but it comes nearest to what I want and what I can get under the present circumstances.

I will go further, Mr. Speaker, and will say that on its face it is a promise to pay, but by the act creating it it does not promise to pay. Under the act which created it, it is provided that it shall be receivable in payment of dues, and may be convertible into bonds. The bankers of Wall street are those who put this character upon the greenbacks. Under the act creating the greenback it is not redeemable either in gold or silver. You will not find it anywhere in the act by which the greenback was created that it is redeemable either in gold or silver.

Mr. HAZELTON. Can the Government issue any other form than that which is a promise to pay?

Mr. BRUMM. Is that the whole of your question?

Mr. HAZELTON. Certainly.

Mr. BRUMM. Very well; I will now answer it. The Government has no right to issue a promise to pay.

Mr. HAZELTON. It has not?

Mr. BRUMM. It has not.

Mr. HAZELTON. Once more. Would you obey a decision of the Supreme Court of the United States?

Mr. BRUMM. I will obey all decisions of every court so long as they stand, but I reserve the right to reverse their decision by the proper processes.

Mr. HAZELTON. Has not the Supreme Court decided that you can issue nothing except a promise to pay in gold or silver dollars, and that there is no such idea as a fiat dollar, or a paper dollar, under our Government? If so, how are you to get around it?

Mr. BRUMM. There never can be a dollar that is not a fiat dollar.

Mr. HAZELTON. Have they not so decided?

Mr. BRUMM. The Supreme Court have gone so far as to say that the Government Treasury note is a legal tender, first; and here let me say that the first money that the Government issued or created was a paper dollar—a promise to pay, a Treasury note. It issued Treasury notes before it ever issued coin of any kind, or before it ever coined a silver dollar, or a gold dollar, or a copper coin. The next money coined was copper; the next was silver, and the last was that gold of which my friend from Missouri talks so much. The men who framed the Constitution knew what they intended to do, and they passed an act establishing a Government national bank, with a right to issue legal tenders to the Government, I grant you, not to individuals; and they then issued Treasury notes—the very men who sat in the constitutional convention. Now, the Supreme Court has gone further; Chief-Justice Chase deciding that our greenback note is a legal tender for every debt, public and private, except those reserved in the act.

The Supreme Court, lacking two of being full, when it was filled went further, went beyond and up to that point that my friend, Judge BUCKNER, is so much afraid of, that is that they are legal tender for the payment of antecedent debts. We do not ask you to go that far. We are willing to stand by the first decision of the court. We do not ask

you to go as far as Judge Strong went when he rendered the opinion of the court. We only ask you to make your notes legal tender, not to the Government alone, but to the individual as well.

Mr. HAZELTON. But the gentleman has not yet answered my question. If I do not interrupt him I would like to have an answer.

Mr. BRUMM. I do not care about the interruption; but I do not want to lose the time.

Mr. HAZELTON. Suppose you had a piece of paper and the Government said "this is a dollar," would that be good money under your construction?

Mr. BRUMM. Yes, sir.

Mr. HAZELTON. That is all I want to know. The Supreme Court decided that it would not be money.

Mr. BRUMM. I, in the first place, do not know that the Supreme Court has so decided.

Mr. HAZELTON. They so decided in the legal-tender cases.

Mr. BRUMM. I beg the gentleman's pardon; that question was not presented at that time. I say the Government has a right to make this a dollar, and it will be a dollar, if the Government so declares, regardless of its intrinsic value.

Mr. HAZELTON. Well, now, again on that same point, if the Government says this seat is a dollar, according to that construction it will be a dollar, won't it?

Mr. BRUMM. No, sir; it will not.

Mr. HAZELTON. Why not, then?

Mr. BRUMM. It would be a dollar, so far as it goes, but it could not be utilized.

Mr. HAZELTON. In other words, you cannot pass it around.

Mr. BRUMM. No. But the Government is presumed, as my friend [Mr. CRAPO] says, to have wisdom; and it would not be the part of wisdom, nor would it be within the bounds of common sense, to say that a seat would be a legal-tender dollar.

Mr. HAZELTON. But the Supreme Court decided that you cannot make the seat a dollar, or a piece of paper a dollar, or anything but a promise to pay in coin.

Mr. BRUMM. I have never seen that decision, and would thank the gentleman to give it to me. But in contradiction of the statement that that is the decision of the court and in opposition to the fact, the Constitution mentions nothing, as the gentleman from Wisconsin knows, except gold and silver in that connection.

Mr. HAZELTON. That is it exactly. It does not mention seats, does it?

Mr. BRUMM. Now, I hope the gentleman will allow me to proceed.

Mr. HAZELTON. But that is the point I want the gentleman to come to.

Mr. BRUMM. The Constitution only mentions gold and silver.

Mr. HAZELTON. It does not mention seats or old boots.

Mr. BRUMM. I am aware of that; nor shad. [Laughter.]

Mr. HAZELTON. You are correct.

Mr. BRUMM. And I will touch on that subject of the Constitution. Now, the Constitution says that nothing but gold or silver; it does not mention coin, but it says the States shall make nothing but gold and silver a legal tender. Now, mark you upon this proposition. The State or the colony had always power to coin money before the Constitution was framed. They did coin money. The colonies before they became States coined money; but when the Constitution was framed they gave up that right. Who got it? The banks? No. Individuals? No. The Government got it. There was no reservation on the part of the States of this power when the Constitution was framed, even by implication.

The Constitution says in so many words that Congress shall coin money and regulate the value thereof, and foreign exchange, and that the State shall issue no letters of credit nor make anything but gold and silver a legal tender. In answer, now, to the gentleman's proposition, when the Government coins gold and silver and issues what it calls a gold dollar it does not issue a pure gold coin, or when it issues a silver dollar it does not issue a pure silver coin. They are all alloyed, and if you stick to your construction of the Constitution and say that it means gold and silver, and nothing else, how will you justify the alloying of the gold and silver? How will you justify the coinage of the copper, of a small penny like this, and say that it shall be the one-hundredth part of a dollar?

The Constitution contemplates the idea that the Government through Congress shall coin money and regulate the value thereof, and they shall say just how much and out of what material they shall coin it. And that is Judge Strong's decision.

The gentleman from Ohio [Mr. BUTTERWORTH] said he wants a dollar that is an honest dollar, that has a hundred cents to the dollar. Will the gentleman, or will anybody else, a friend of his, show me a dollar that has not a hundred cents? Did you ever see any? Did you ever know a dollar that has not a hundred cents and is not worth a dollar? When I ask you what is a dollar, what do you tell me? If you ask me, I tell you it is a hundred cents, or a unit fixed by the Government by which you may measure value. That is all you can say. You may make this dollar of gold, or part gold, and can put a certain kind and quantity of gold in it. And so you may of silver, of nickel, of copper, or of paper. That is all there is in that. The constitutional right of the Government is to coin money and regu-

late the value thereof, and to save itself, and to do all that is necessary and incident to the exercise of any sovereign power.

Now, then, as to seats and old boots, and shad. I have heard that thing spoken of before. They say, suppose you take a block of wood, and the Government puts its stamp on it and says, "This is a shad," and you throw it into the Potomac and a fisherman down the river fishes it up, and when he looks, he reads, "by the authority of the United States this is a shad;" then says "but I do not believe anything of the kind; I would not want to eat it, and, of course, it is not a shad."

Let me illustrate. These questions are asked by the money-changers, just as the tempter asked Jesus Christ when he said, "To whom shall we pay tribute?" Christ said, "Show me your token, your tribute-money." The tempter showed him a token, a penny-token, I believe. Christ said, "Whose superscription is that?" The tempter said, "Caesar's superscription." Christ said, "Render unto Caesar that which is Caesar's and unto God that which is God's." And so I say to my friend, when you talk of the coining of money, it is a function of Caesar, of the Government; therefore render unto that Government, that Caesar, that which is Caesar's. When you talk of making shad, that is a function of the Deity, and therefore render unto God that which is God's. When you talk of seats, boots, &c., they are functions of individuals; therefore render to the carpenter and shoemaker their functions. Do not attempt to rob God Almighty and the poor carpenter and shoemaker of their functions, simply for the purpose of justifying your attempt at robbing the Government of one of its most sacred functions.

Now, for the benefit of those Americans who are determined to follow England, I want to read from the last October number of Blackwood's Magazine an extract from an article which is entitled "The threatened abolition of bank notes." The writer says:

One thing made manifest in this correspondence is, that Mr. Gladstone has reached a new stage in his views upon this great question, and that he is now resolved to proceed to work in his long-cherished idea of abolishing bank notes—in other words, abolishing banks of issue altogether, and establishing a state-issued paper money for the entire kingdom; and that he is resolved to put every possible pressure upon the existing banks in order to tempt or force them into compliance with his will and purpose.

Further on he says:

For themselves the banks have nothing to fear from the proposals of the government. The dearer money is made and the higher the rate of interest the better for banks; but the hardship would fall upon the people.

This is pertinent to another of my propositions, and tends to establish its verity.

So the article goes on in support of the determination of the premier of England, showing that the British Government has at length opened its eyes and is determined to get rid of the banks of issue, returning to the doctrine of Thomas Jefferson, who said that "banks of issue must be suppressed and the issue of currency restored to the Government, where it properly belongs."

Here I wish to put a question to my worthy friend from Massachusetts, [Mr. CRAPO,] the chairman of our committee. How does this bill prevent the contraction of bank currency, if the banks wish to surrender their notes? This bill provides no substitute for the currency thus withdrawn from circulation; it provides for no contingency. Gentlemen may talk about rechartering the banks and extending their right to issue money; but if the bonds are paid upon which they rest, these banks may say, like Shylock of old—

You take my house when you do take the prop
That doth sustain my house: you take my life
When you do take the means whereby I live.

If the Secretary of the Treasury calls in the bonds upon which the circulation of these banks is based, (and that he must call in a certain number of them there is no question,) the banks fall; the currency is contracted to that extent. What remedy is there in this bill, not for a contingency, but for this absolute certainty?

Gentlemen are horrified at the idea of a possible temporary contraction of the currency, pending the change from the old charters to the new. But while they are horrified at this temporary contraction of the currency, they exhibit no concern at all in regard to the permanent contraction of the currency that must come, no matter what they may do, if this bill passes in the shape in which it is now before the House.

Mr. CRAPO. Would not that contraction be still greater if nothing be done whatever? Suppose this bill fails and Congress takes no action at all, would not the evil the gentleman speaks of be intensified?

Mr. BRUMM. I say it would. The gentleman is certainly correct on that point. You would have the double evil—the contingency in the first place, and the certainty in the second place. To meet that difficulty I have offered my substitute, which does not interfere at all with the three functions of the banks of which I have spoken, but only requires them to settle up to the extent of 1 per cent. in twelve months. This provides a remedy for the certainty of the contraction of the currency; and I say again I cannot understand why gentlemen on this side of the House will not at once either accept this substitute or bring in something better if they can, instead of insisting on the bill before the House. That bill is inadequate to meet the needs of the case; it will not cover the ground.

It simply provides for a contingency, and leaves open the door for a certainty that must happen, to the injury not only of the banks but the people at large.

The only reason that I can imagine why bankers oppose such a proposition as mine is that they are determined to have either national-bank notes or force us back into the old wild-cat State-bank notes, and for that reason will not allow us to issue any more legal-tender Treasury notes. Yet I submit that unless some substitute be provided we cannot escape a contraction of the currency, which must necessarily bring about another crisis very soon; hence the only question is, shall that substitute be the pure legal-tender greenback or shall it be the thirty-eight species of State-bank vermin to poison our issue, or shall it be the Democratic mongrel Treasury note, not a legal tender, as contemplated by the Bland-Buckner substitutes? And here let me say that I would rather vote for the Crapo bill a thousand times than vote for this Democratic wolf in sheep's clothing. Though the Crapo bill makes us bear the ills we have, the Buckner-Bland frauds drive us to others we know not of. By the Crapo bill we are at a stand-still; by the others we drift back to the State wild-cat system, and rivet it with multiplied horrors more firmly than ever upon our body-politic. Sir, you issue Treasury notes now not a legal tender; you deny by implication the right of the Government to issue a full legal tender in time of peace; and thus you force the final withdrawal of the greenback, and substitute for it your half-breed apology. Then you throw yourself, soul and body, into the clutches of bankers, money-changers, and monopolists, and allow them to repudiate your issue by refusing to receive them in payment of commercial paper or any other debt, and by declaring that they are not current funds force them below par. And thus you make them repugnant to the people, and create a clamor against any national issue of money; and when the people are in that temper we will again fall an easy prey to the demands of the money-sharks for the restoration of State banks. Thus you cheat the people by making them believe that you are Simon Pure Greenbackers, and by diverting their attention from the true doctrine you become our most dangerous enemies.

In fighting a righteous cause it is an easy thing to subdue an open enemy, for then we can give blow for blow, but it is hard to fight guerrilla skulkers and dodgers who steal into our camp under the guise of friendship and attempt to cut the legal-tender heart out of us; and then because we will not tamely submit to their butchery, and allow them to sail under false colors, they denounce us and say they are better Greenbackers than we are, and by thus robbing the livery of Greenbackism to serve the Democracy they put us on the defensive, and compel us to combat all the ridiculous heresies preached by these hypocrites.

Gold, silver, bank notes, and Democratic mongrels may do for financial dress parade, but in the heat and brunt of battle and in every crisis, you must resort to the nation's credit. The bankers always urge the necessity of their assistance in time of peace and prosperity, but leave the nation to its fate in time of war. "A friend in need is a friend indeed." The money that could bear the terrible strain of the rebellion, spurned, mutilated, and crushed as it was by Wall street, will always be strong enough to resist every shock or crisis in peace. Even now they are the support of the national-bank note. Wall street and my friend BUTTERWORTH agree that during the war legal tenders were constitutional, that is, the legal-tender clause is only a war measure. But why? Because then Wall street & Co. shrank and, coward-like, refused their aid. When this nation was struck by the leprosy of rebellion, we were too loathsome to be treated by these doctors of finance. When England and our other very friendly neighbors across the pond left us to our fate, and joined the enemy, these professors of materia monetaria medica were the first to desert from our camp with their physis. When the martyred Lincoln called for seventy-five thousand men and then for three hundred thousand more, the youth and bloom of our country promptly responded with the best blood of our land. But when he called for the money to pay them to keep their wives and little ones from starving at home these currency scientists could make no sacrifice for such a holy cause. When defeat followed disaster, foreign intervention was threatened, our armies driven back, our soldiers slaughtered by the thousands, and the darkest cloud of rebellion hung over us, there was no succor from Wall street. When the loyal heart was bursting with anguish, its gaunt arm extended, begging for help, the mighty North with all its powers and resources lying prostrate at the feet of Wall street, naked, hungry, sick, and sore, these frozen blood physicians refused all nourishment, not even encouragement or honest medical advice. They had nothing to offer but second-hand porous-plasters in shape of wild-cat bank bills. No sooner did the patient convalesce under the nourishment of the greenback, when this ungrateful and unblushing quack again intrudes himself upon our forgetful and forgiving nation, and acknowledges that while we are sick, weak, and in great distress, the best thing to strengthen and cure us is that greenback which produced a good and healthy circulation, and that during the war we were right in using the national legal-tender panacea, for then it seemed to agree with our Constitution, and really saved our life and made us the greatest nation of the earth. But now that we are so strong and vigorous they don't think that our Constitution will bear any more of this national legal-tender nourishment, that is, it

is not good to be too healthy; our Constitution requires that in time of peace we should have some financial poison to stagnate our circulation. Then you know we will be so fashionable, and like our royal English neighbors we can get an occasional financial fit or spasm, and sometimes faint away and get downright sick. Then these financial mountebanks will take the best care of us, for they are so well posted in the anatomy of finance, and the physiology of political economy, that they alone are fit to take charge of our system, especially our circulation, as they still believe in the old practice of phlebotomy, and therefore will draw our blood until our commercial heart almost ceases to beat, when they must again resort to the greenback nourishment, even in time of peace, as they did in the financial plague of 1873.

APPENDIX A.

President: ALEXANDER MITCHELL, president Wisconsin Marine and Fire Insurance Company Bank, Milwaukee, Wisconsin.
Chairman Executive Council: GEORGE S. COE, president American Exchange National Bank, New York.
Treasurer: GEORGE F. BAKER, president First National Bank, New York.
Secretary: EDMUND D. RANDOLPH, president Continental National Bank, New York.
Corresponding Secretary: GEORGE MARSLAND, editor, 247 Broadway, New York.

THE AMERICAN BANKERS' ASSOCIATION,
(No. 247 Broadway, Room No. 4.)
New York, December 14, 1880.
(Private.)

DEAR SIR: Many favorable circumstances suggest that we must redouble our efforts during the present session at Washington. Please to write immediately to your friends in Congress. Urge them to vote and work for the bill relieving the banking business from the ruinous taxation imposed upon it to the great injury of commerce and trade throughout the country. You will be pleased to see that Secretary Sherman, in his report, has just given his sanction to our claims so far as to recommend the repeal of the taxation on bank capital and bank deposits. The recommendation of the Secretary to Congress to grant this relief is now given for the first time, and cannot fail to have great influence. The Comptroller of the Currency and the Commissioner of Internal Revenue have also supported the claim of the banks for relief by convincing facts and statistics. In the present condition of the United States Treasury, the repeal of the mischievous taxes on the banks can and should be granted without delay. Bills for this purpose have been introduced and referred, and are now in the hands of the sub-committee of the Committee of Ways and Means, consisting of Messrs. Carlisle, Morrison, Felton, Dunsell and Conger, whose friends we hope will urge them to make a favorable and early report.

Below we send you a list of the names of all the members of the Committee of Ways and Means of the House of Representatives, and of the Finance Committee of the Senate. Please to write to these gentlemen, or ask your Congressmen to see them personally, and to urge on their favorable consideration the bill repealing the war taxes on the business of banking. Do not fail to do this at once, and let us know at your early convenience what has been done, and what course your Congressmen and friends are disposed to adopt.

Yours, truly,

FOR THE TAX COMMITTEE OF THE EXECUTIVE COUNCIL,
GEORGE MARSLAND,
Corresponding Secretary.

APPENDIX B.

Members of the Finance Committee of the United States Senate.

THOMAS F. BAYARD, of Delaware, chairman.
FRANCIS KERNAN, of New York. JUSTIN S. MORRILL, of Vermont.
WILLIAM A. WALLACE, of Pennsylvania. THOMAS W. FERRY, of Michigan.
D. W. VOORHEES, of Indiana. JOHN P. JONES, of Nevada.
JAMES B. BECK, of Kentucky. WILLIAM B. ALLISON, of Iowa.

Members of the Committee of Ways and Means of the House of Representatives.

FERNANDO WOOD, of New York, chairman.
J. RANDOLPH TUCKER, of Virginia. W. H. FELTON, of Georgia.
RANDALL L. GIBSON, of Louisiana. WILLIAM D. KELLEY, of Pennsylvania.
JAMES PHELPS, of Connecticut. OMAR D. CONGER, of Michigan.

ROGER Q. MILLS, of Texas. MARK H. DUNNELL, of Minnesota.
JOHN G. CARLISLE, of Kentucky.

AMERICAN BANKERS' ASSOCIATION.

Resolution of executive council, passed at their first meeting for the year 1880-'81, at Saratoga, New York, August 12, 1880.

Resolved, That in order to defray the expenses of the coming year for carrying on the work of the association, in accordance with the constitution, article 5, section 1, the treasurer be, and he is hereby, directed to request all banks and bankers in the United States to remit the sum of their annual dues, and to invite all to unite with us in a renewed effort not only to avert additional taxes or other burdens from being imposed, but to relieve the banking business from some part at least of those now placed upon it. We also deem this a proper occasion to urge the banking interest throughout the country to consider that one of the purposes for which this association was organized was to obtain such relief. It has steadily directed its efforts to this end, and will continue the same work in the future as in the past; and we hope that all banks and bankers will esteem it a privilege as well as a duty to become members of the association and aid it by their personal efforts so far as possible. The annual dues for membership asked for from each bank are very small, while the object aimed at is large, whether it be to avert new burdens or to get relief in part from those now existing.

No. H. Duplicate 2.]

AMERICAN BANKERS' ASSOCIATION,
New York, August 16, 1880.

In accordance with the above resolution of the executive council, please remit in the inclosed envelope draft to the order of this association for the sum of five dollars, (or return this voucher.)

Respectfully yours,

GEO. F. BAKER, Treasurer.

A Department of Agriculture.

SPEECH

OF

HON. J. T. UPDEGRAFF,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1882.

The House having under consideration the bill (H. R. No. 4429) to enlarge the powers and duties of the Department of Agriculture—

Mr. UPDEGRAFF, of Ohio, said:

Mr. SPEAKER: The bill now before the House is the unanimous report of the sub-committee of which I am a member, and comes here now as the unanimous report of the Committee on Agriculture. It is a modification of the bill for the elevation of the Department of Agriculture offered by me in the House at the opening of this session. This bill is designed to meet a long-felt need of the country and is a moderate and just demand of its greatest and most indispensable industry. I do not believe any measure has been before this Congress half so important to the interests of the people and the development of our resources.

It is a worthy official recognition of agriculture as the fundamental, underlying source of our wealth and prosperity. For years its delay or denial has been a wrong to that interest, and consequently a damage to all the great associated interests. The time has fully come when American agriculture should receive this long-deferred recognition. Having discussed the question of the establishment of a full department of agriculture in the early part of the Forty-sixth Congress, I will quote the following passage from the remarks I made at that time as equally applicable now:

The great fact of modern history is the creation of value by the development of natural resources. The great problem of wise government is the just recognition and fostering care of these productive forces, for material development is itself an important element of civilization. Millions of dollars of our national wealth have been created by what meager aid our Government has given to the enlargement of our agricultural productions. Millions have been lost by the utter inadequacy of the appropriations which have been doled out to this immense industry. And yet the Department of Agriculture, weaker in working force than most of the bureaus in other Departments, stunted in its endowments, and hampered by hostility and disparagement, has been of incalculable value not only to the agricultural interests but to our marvelous material development. Every year these facts are becoming more generally appreciated not only by farmers but by progressive men in all ranks of activities.

This bill simply proposes an act of long-deferred justice. It elevates this department to the full rank of other Executive Departments, with all their rights and dignities. Why shall it not be? It is the direct representative of more than one-half of the people of the whole country. They constitute largely the productive element of our population. No class can justly claim any superiority over them as intelligent, patriotic, useful citizens. Their industrious habits and conservative virtues are no small factors in the strength and security of our institutions. However trade may enrich and art may adorn our progress, the nation dwells largely in the cottages and farm-houses of the country.

More and more every year is this true. The farm has become a progressive American institution, and agriculture is rapidly coming to the dignity of a science, and yet this branch of our productive forces has been ignored or recognized in a grudging, half-hearted way. Indeed it would seem as if the Government was half ashamed of that industry which is the bed-rock of its wealth and power. Indeed in this House its claims and needs receive less neglect or ridicule only as its political strength becomes more obvious and formidable.

This bill would give it full rank and power. The substitute of the gentleman from West Virginia [Mr. KENNA] seeks to make it a "division" of a department. This is to reduce its present inadequate rank and powers. What is this great industry which it is proposed to crowd into a division of a department? It is the productive force which sums up a grand annual total of nine thousand million dollars' worth of products, which in 1880 furnished 83 per cent. of our exports of eight hundred and twenty-four million dollars' worth. It is that industry which restores plenty and heals the waste of war and panic. Within the last few years, when commerce was stagnant, when our manufactures were prostrate and pulseless, when our great financial fabrics went down, burying fortunes and enterprise in their ruins, then this great and enduring productive force displayed its full measure of beneficent power, and came with the measureless affluence of its varied resources to bring back prosperity and to fortify the nation's credit with the bounty of the nation's surest wealth.

Our immense production in this line is the marvel of the age. To develop and guide this broadest and most varied of all our industries our Agricultural Department with its present scope and powers is a mockery of the vast interests involved.

Since the foundation of our Government the wisest men who have guided it—from Washington to Garfield—have aimed at some better organization and wider powers for the development and elevation of our agricultural interests. In his first message, and in his last,

Washington urged it upon the attention of Congress and the country. He said:

In proportion as nations advance in population and other circumstances of maturity, the truth (the primary importance of agriculture) becomes more apparent and renders the cultivation of the soil more and more an object of public patronage.

When Lincoln came into power amid the tumult of civil strife he did not fail to notice and point out the meager and inadequate provision for agriculture. He said:

Agriculture, confessedly the largest interest in the nation, has not a department, nor a bureau, but a clerkship only, assigned to it by the Government.

It still has but little more than the clerkship to which the President then alluded.

Something has been done, but nothing in proportion either to its needs or the benefits which would result from ample appropriation and full power.

In this we are behind every leading nation. No country on earth has an agricultural interest or product to compare with ours, yet in all the leading nations of Europe it receives such consideration as has been denied it here in the American Congress. In France, in Russia, in Spain, in Italy, in Austro-Hungary, it has an executive department, and its head is a minister of state. One of the first acts of Gambetta, the brilliant prime minister of France, was to secure a decree separating the department of agriculture from that of commerce. At this time not one of the great powers of Continental Europe forms its cabinet without a minister of agriculture.

France has nine executive departments, and with only two-thirds of our population, that country appropriated last year to her agricultural department \$7,250,000—more than one-third the amount which our Agricultural Department has obtained since its establishment in 1862.

Little Italy, with less than one-half the population of this country, appropriates to this interest through her minister of agriculture vastly more than our Government.

Austria has seven executive departments, and one of these is the ministry of agriculture. Its duties there include stock-raising, irrigation, fruit culture, statistics, forestry, and agricultural education. Last year its appropriation to this department was \$5,000,000.

Prussia has about half the population of this country, with eight executive secretaries, one of which is a secretary of agriculture. Last year its appropriation to this department was \$4,052,800, though its agriculture is insignificant compared with that of the United States. But the prosperity and progress of that country is attributed by its wisest statesman in large degree to its special care and encouragement of its agriculture under this department, which has been in existence in Prussia for the last thirty-four years.

The Government of Brazil has established as a part of its ministry a secretaryship of agriculture. That industry is rapidly advancing within the bounds of that great empire, and a wise development of our own sugar-producing resources may yet save to our country the immense tribute we now pay it yearly for what our own soil can easily produce.

In connection with this statement let me call the attention of the House to the surprising fact that during the fiscal year ending June 30, 1881, the United States imported of various agricultural products to the amount of no less than \$285,681,008! Of this vast sum \$10,000,000 was paid for wool, \$21,000,000 for tea, \$56,784,391 for coffee, and \$12,365,529 for fruits and nuts. Nearly every dollar's worth of this vast importation should have been produced on American soil. Only the uncertainty of just protection makes the use of a pound of foreign wool possible in the United States. Our varied climate, soil, and pasturage afford us facilities for the production of every grade of wool known in the commerce of the world. The meager experiments already made by our Agricultural Department have gone far toward demonstrating the fact that with proper care we shall soon be able to grow on American soil our supply both of tea and coffee.

During the same year the United States paid for sugar and molasses imported \$93,393,322. To supply ourselves with this we have only to utilize our own resources. That whole supply we could easily produce either from the sugar-beet, the cane, and sorghum, or from a small part of the wasted corn-stalks, which yield our vast crop of 1,754,861,535 bushels of Indian corn.

More than a hundred years ago the great German chemist, Marggraf, discovered sugar in beets, and in his report to the Berlin Academy of Sciences predicted its influence on European industry. But it was only by the aid of the French Government under the first Napoleon that it developed into a great basis of national supply and wealth. The 36,000,000 population of France are now supplied with sugar from that source, and in that country and the rest of continental Europe one-third of the world's sugar supply is produced from beets. The great Napoleon in his later years wisely placed his successful efforts to encourage and establish the beet-sugar industry in his country above all the other achievements of his great career. One yielded only fading laurels; the other shall for ages bring employment and home comforts to honest, toiling millions.

Now, what is this industry which now asks this moderate recognition from the Government? It is that business which to-day engages the attention and makes the employment of nearly 28,000,000

of our people. It is pre-eminently our national industry. It is the basis of our growth and prosperity. But agriculture is not only our foundation industry but it is the safety of our social organism and the strength of our civil system.

What does it ask? Merely that in our political system it shall be recognized as an important part of our productive forces. What are its assets? It has 5,000,000 farms. It furnished last year \$729,650,016 worth of our exports out of the \$883,925,947 which the United States exported. By the census of 1880 there are in the United States 10,357,981 horses, 1,812,932 mules and asses, 993,970 working oxen, 12,443,593 milch-cows, 22,448,590 other cattle, 35,191,656 sheep, 47,683,951 swine, making the entire value of the live stock \$1,500,503,807.

We often point with pride to the wealth of precious metals taken from our mines. During the decade from 1850 to 1860 California yielded \$1,100,000,000 in gold and silver, but that vast total is hundreds of millions less than the value of the live stock now in the country, and insignificant compared with the annual agricultural products of the country. The last census shows that while California is still yielding vast sums from her mines, still her wheat product is much greater, as shown by the following table compiled from the census report:

Product and value of wheat in California, 1871 to 1880, against the value of her gold and silver mines for same time.

Years.	Bushels.	Value.	Value of gold and silver produced in California.
1871	16,757,000	\$23,627,370	\$20,000,000
1872	25,600,000	28,416,000	19,049,098
1873	21,504,000	28,385,280	20,300,000
1874	28,380,000	28,096,200	17,753,151
1875	23,800,000	28,084,000	17,300,000
1876	30,000,000	34,200,000	16,000,000
1877	22,000,000	28,600,000	17,634,000
1878	41,990,000	43,249,700	20,000,000
1879	35,000,000	43,050,000	18,600,000
1880	33,877,600	32,522,496	19,870,000
Total		318,231,046	186,506,249

For a large part of the two last decades the United States has been sending out of the country a yearly average of more than \$57,000,000 to pay for balances on our imports. But for the years 1878, 1879, and 1880 our agricultural exports were \$2,239,137,595, giving us a balance of trade in our favor for those three years of \$650,159,810. Last year our agricultural exports brought into the country in payment \$91,160,000 in gold after paying for our imports of \$642,664,628.

The rapid growth and importance of the agricultural products of the country are strikingly shown by the following table, which gives the amount of some of the principal agricultural products at each census from 1850. It shows that with wise development and care our national resources contain possibilities of expansion and wealth almost beyond the dreams of avarice:

Comparative statement of aggregates for the United States, from the Census of Agriculture.

	1880.	1870.	1860.	1850.

The value of products of agriculture has not yet been computed, nor the value of the hay crop of 1879. The wool does not include that on public lands and ranches, nor in hands of butchers, &c., 100,000,000 pounds.

J. R. DODGE.

Special Agent, Tenth Census, for Collection Statistics of Agriculture.

MAY 6, 1882.

But it is objected that this would be an innovation on our present system. I answer that the present system of our Executive Depart-

ments has gradually grown up as circumstances demanded. And on this very question we have precedent and authority as old as the convention which framed our Constitution, but to which, so far as I know, reference had never been made until I called attention to it in discussing this subject in the Forty-sixth Congress. In that convention various outlines of plans for the basis of the Constitution were proposed. On the 20th of August, 1787, a plan was offered by Mr. Morris, of Pennsylvania, and seconded by General Pinckney, of South Carolina, providing for "a council of state composed of the following officers: 1. Chief-Justice of the Supreme Court. 2. The secretary of domestic affairs, whose duty shall be to attend to matters of general police, the state of agriculture and manufactures, the opening of roads and navigation, and the facilitating communication through the United States. 3. Secretary of commerce and finance. 4. Secretary of foreign affairs. 5. Secretary of war. 6. Secretary of the marine."

This plan, with the others, was "referred to the committee of detail," and no Cabinet officers were provided for in the Constitution. But it is a significant fact that in this detailed plan of a constitution, brought forward by two of the ablest men in that august body, the first Cabinet officer named was one whose duties would be such as to make him substantially a secretary of "agriculture and manufactures." And such first place for that first industry of our country was in exact conformity with the consideration in which it was held by these founders of our Government.

In further proof of this it may be mentioned that Washington in his first message to Congress brings this subject to its attention very forcibly in saying, "The advancement of agriculture, manufactures, and commerce, by all proper means, will not, I trust, need recommendation."

THE GRADUAL GROWTH OF THE CABINET.

In September, 1789, six months after the inauguration of Washington, three Executive Departments were created by statute, and to them special duties were assigned. These were the Departments of State, of the Treasury, and War. The several heads of these alone composed the Cabinet, which sat in council with Washington. In 1795 a Navy Department was organized by law, and its first Secretary, Benjamin Stoddard, took his seat in the Cabinet of John Adams with Pickens, Wolcott, and McHenry. The Constitution authorizes Congress "to establish post-offices and post-roads," but that Department was never by statute elevated into a full Executive Department. That was done by the edict of Jackson, who, in March, 1829, appointed John McLean, of Ohio, Postmaster-General, and called him to a seat in his Cabinet with Van Buren, Ingham, Eaton, and Branch. In 1849 the Department of the Interior was created, and its first Secretary, Thomas Ewing, became a member of the Cabinet. The Attorney-General, of course, was a member of the Cabinet also, though he had no Executive Department until 1870, when Congress by law established the Department of Justice. Thus the Cabinet has been enlarged from time to time as the new demands and needs of our rapidly progressive development indicated the wisdom of such change. We have an Army of only 25,000 soldiers, but a Secretary of War in full cabinet rank. We have no navy worthy of the name, but the Secretary of that Department sits at the council of the President. The Secretary who supervises mail contracts, and the Secretary who has charge of the Indians and of the wild lands of the Government, each, by virtue of his office, belongs to the President's council.

Twenty-eight millions of our population are directly interested in agriculture, and all the rest indirectly. The capital invested in it is estimated at more than \$14,000,000,000, equal to full one-third of all our property. It is furnishing direct from the farms more than four-fifths of our immense exports. When commerce was stagnant; when our manufactures, overwhelmed by the late panic, were prostrate and pulseless; when our great financial fabrics went down, burying fortunes and enterprise in their ruins, when this great and enduring productive force displayed its full measure of beneficent power and came, with the measureless affluence of its varied resources, to bring back prosperity and to fortify the nation's credit with the bounty of the nation's surest wealth. Why shall it still be condemned to secondary rank? This injustice involves not only the wrong and indignity to this greatest and most necessary of all human industries but by limiting its benefits and neglecting its grand possibilities the loss falls on all other industries of which it is either the primal source or the indispensable reliance.

It is asked, what can be done more for the interest of agriculture, if it was a full executive department, than now is. I am sure much more, first, by the justice of the recognition, but if it were to be merely a title, it is worthless. But the importance of the vast interests demand that they should be under the special and watchful guardianship of a Cabinet minister, who shall sit at the council board of the President, and fully represent every interest of more than half the whole population of the country. For years the stock-raising interest of the country has lost millions by the lack of any fully equipped and independent authority to deal with contagious diseases among our stock, and still more to treat with foreign nations, which have unjustly, and to our great loss, excluded our hogs and cattle from their ports.

One of the pressing needs of our country is a division of forestry under the control of an executive department of agriculture. To

rescue and preserve what is yet left our great forests need the full powers and authority of executive supervision. This has become a question of national importance. The sweeping destruction of our forests and the criminal waste of these resources have become matters of general concern. It has now been brought forcibly to the attention of the country by the forestry bulletins of Professor Sargent, issued by the Census Office. New England and New York have squandered their pine, and now we are wasting the final reserve. Professor Sargent estimates that only eighty-two billion feet of merchantable pine remains standing, and that the amount cut during the last census year, ending May 31, 1880, was seven billion feet. If no conservative policy is adopted by the States and the General Government the ax and the forest fires will soon finish our forests, which with wise protection would, for an indefinite time, yield a rich annual harvest. It should be kept in mind that the money loss is the smallest evil attending this destruction. It is now fully proven that health, soil, and climate alike pay the penalty whenever the relative amount of forest is reduced below certain limits. The droughts and floods of our country both attest that we have passed the danger line.

European governments make this question a matter of special care. France has 3,000,000 acres in "state forests," which yield an annual revenue of more than \$5,000,000. These are carefully preserved, while the export of lumber is \$6,000,000, and the import amounts to \$44,000,000.

Germany has 35,000,000 acres in forests, of which 20,000,000 acres are in Prussia, where \$500,000 are annually spent on replanting. Nearly one-third of the whole forests of Germany belongs to the state, and is made subject to special care by law, and instead of being wasted is kept on the increase. The import of timber exceeds the export annually by 20,000,000 tons.

In this country our vast forest resources should be preserved not only as a measure of financial wisdom but as a matter of great national importance to health and agricultural production. Under the control of the Agricultural Department it would naturally receive the care which its magnitude justifies.

This department since it first received in 1839 an appropriation of \$1,000 has rapidly grown not only in public favor but in benefits to the country. The introduction and dissemination of a single variety of seed or plant has again and again repaid to the country all which this department has received since its foundation. The introduction of sorghum alone has been worth millions of dollars to the country. Within a few years the introduction and propagation of the Bahia orange from Brazil, sent out from this department now bids fair to revolutionize the orange trade of California and the South and be of great value to the country.

Since 1870 the increase of the value of wheat and oats on the same acreage is no less than \$62,760,246 in the United States, and no small part of this increase is fairly attributable to improved seeds disseminated by this department. This is but a hint of what can be done in this vast domain of productive forces by research, experiment, improved methods, patient labor, and intelligent progress. Less than one-eighth of our great domain has yet been subjected to cultivation, so that with our immense production our country is still only at the beginning of its wonderful capacity as the food-field of the world.

But it is said that the real agriculturists of the country are not in favor of this measure to elevate this division into an executive department. It was so declared on this floor by a dainty city lawyer in the discussion of the question during the last Congress—a city lawyer who for political reasons had been made chairman of the Committee on Agriculture. It was so said the other day by a city editor, a cynical dyspeptic who runs a feeble daily near the world's "Hub," who says this measure is "bucolic buncombe." The source of such assertions is reckless ignorance. Within a few years Congress has received petitions in its favor with the names of scores of thousands of the foremost agriculturists of the country. In this Congress and in the Forty-sixth I have presented petitions for this object bearing the names of thousands of farmers as intelligent and as practical as any class of men in the country, and far less prone to "buncombe" than either a city lawyer or a Boston editor. Farmers' institutes, local, State, and national granges have given their voices to the same effect, and modestly, but emphatically, claimed for agriculture this just recognition and this practical benefit. The agricultural journals with great unanimity have indorsed the measure.

Three years ago I advocated it in an address delivered before the National Dairy Fair Association in session in New York City, and the association heartily indorsed the proposition, and it then received the approval of many of the leading agricultural journals of the country. A year ago the New England Agricultural Society strongly indorsed the measure, believing, as it said, that it would enable that department "to attain a broader usefulness and more securely reach the standard contemplated in its original construction." Now, of course, a Boston editor, if he had not been densely unconscious of the facts, whatever else he might ignore, could not repudiate the official voice of the New England Agricultural Society on agriculture. Among the farmers of the country there is an almost uniform approval of the measure. Agriculture is daily advancing in the scope of its powers and the magnitude of its results, and those engaged in it believe that it will obtain practical advantage from enlargement of the scope and powers of that department.

The present position of that department and the wide confidence of the agriculturists of the country in the ability, fitness, and rare qualifications of the present Commissioner for all the high duties of his office, tend to increase the desire of that class to see so fit a representative of the grandest interest of the country at the nation's council board the peer of the foremost, an agriculturist always, but scholar, political economist and practical statesman none the less. Thus the time, the circumstances, and the state of public sentiment, are all auspicious for this measure of wise improvement. Development is the spirit of our system. Obeying this impulse and yet preserving the symmetry of its design our country has grown from a little colony to a mighty nation. If it goes on safely in its present career it must gather its wealth from its own wonderful resources and find its strength in the harmony and development of its material and moral interests.

Among these the broadest and grandest is agriculture. Let it then be no longer cramped in a bureau or set aside, as Lincoln said, "with a clerkship," but give it, as this bill provides, the scope, the dignity, the authority commensurate with its mighty possibilities. Ample will it return the bounty of the Government, aid in solving impending questions of labor, revenue, debt, and social economy, and go on evolving wealth by the creation of real values and laying the foundations of our country's growth and prosperity deep and strong on the safest basis of intelligent labor, American homes, and independent and self-supplying progress. [Applause.]

Mississippi River—Protection of its Valley.

SPEECH

OF

HON. EDWARD W. ROBERTSON,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 18, 1882,

On the President's message to Congress concerning the improvement of the Mississippi River and the protection of its valley.

Mr. ROBERTSON said:

Mr. SPEAKER: No great material question has been so misunderstood by the press and public and even in the Halls of Congress as the improvement of the Mississippi River and the protection of its valley. In 1879, after years and years of conflict between rival plans and theories, we provided for the appointment of a board of skilled engineers to review the whole subject and bring order out of chaos. This board was called "the Mississippi River commission," and the organic act creating it specified several duties, the chief of which were to consider and mature a plan to "improve and give safety and ease to the navigation thereof," and to "prevent destructive floods." These were the two fundamental ideas of the act. They were inserted, after mature deliberation and for the purpose of subsequently sustaining them, in the annual appropriations. In solving the problem the commission were instructed to report upon "the various plans known as the jetty system, the levee system, and the outlet system, as well as upon such others as they deem necessary." One branch of the subject, the improvement of navigation, has been fully discussed and almost unanimously decided in the affirmative by our votes and the voice of the country. It is, as we say in court, *res adjudicata*, except the amount of the annual appropriations needed in the completion of the works of improvement. I will therefore upon this occasion confine my remarks to the other branch of the subject, the protection of the valley from destructive floods.

RECLAMATION DISCLAIMED—PROTECTION SOUGHT.

Both the title and text of the act were clothed in clear and distinct language, nevertheless, for a year or more after its passage, the commission was, by the public press, particularly that of the North, very generally termed the levee commission. This misnomer was even used in debate upon this floor, inadvertently of course, by a distinguished member from New England. But the wrong use of terms had an effect upon the public mind—left it muddled and prejudiced. It conveyed a false idea, and kept alive the old bugbear of reclamation of alluvial lands. Now, I wish it distinctly understood by this House, the press, and public, and particularly by those opponents of the spirit of the organic act, who would restrict it by provisos, that we of the Lower Mississippi Valley do not ask for the reclamation of our lands at the expense of the Federal Treasury. We are both able and willing to do our own farming, and do not advocate so absurd and paternal a theory of government. It is true that several bills have been introduced here by members from the lower valley in which the word "reclamation" was inadvertently and carelessly used, but the idea they meant to convey was simply "protection," and that term should have been used. In the act creating the commission, however, correct language was employed,

and nowhere can the misleading, objectionable, and unpopular term "reclamation" be found. I made this disclaimer upon the floor of this House as early as January, 1879, in a speech advocating the passage of the commission bill, and used the following language upon that occasion:

It contemplates the improvement of the chief avenue of transportation of a great commercial nation. It also seeks to protect from floods and pestilence over twenty-six million acres of the most fertile and productive lands upon the face of the earth. It does not, as is so often alleged, aim at the reclamation of those lands, or seek to perform work which properly belongs to the individual citizen. The word "reclamation" is not used in the bill. It is well that we understand the distinction at the outset of this discussion, for the wrong use and confusion of terms have given the opponents of river improvement an opportunity to misinterpret, and therefore misrepresent, the object we seek to accomplish. The word reclamation has furnished them with the key-note of unjust criticism. We simply ask protection from the frequent ravages of this great river, over which no power but the General Government has legal control, in order that we who possess lands along its course may have an opportunity to reclaim and cultivate them at our own expense. The protection we ask is similar in principle to that furnished by the General Government, through its Army and at national expense, against a warlike and dangerous enemy who would drive its citizens away from their legitimate and peaceful avocations. We ask protection from an enemy which we, as individuals and States, are powerless to oppose. We invoke the aid of that power whose fundamental principle is the protection of its citizens.

I wish to repeat and emphasize this disclaimer, and ask that we of the lower valley, who have already been cruelly subjected to the ravages of the floods, be justly dealt with, and not slandered and libeled by the careless use of false terms. So much for the word "reclamation." We disavow it. Protection is what we ask.

PROTECTION OF WHAT AND WHOM.

Protection of what and whom? Here again we are misjudged by the press and public and in the Halls of Congress; here again the public mind is misinformed. It attributes to us simply one idea—the protection of alluvial lands. I challenge any one to find the words "alluvial lands" in the act creating the commission. We ask for protection from destructive floods not only of alluvial lands, for that is but one item out of many, but our lives, our health, our buildings, farm improvements, livestock, our great commercial towns and cities; not only our agricultural but our manufacturing industries and commerce; not only protection for the capitalist owning the plantation but for the laborer; not only parts of one State but parts of several; not only Democratic States but parts of the great Republican State of Illinois; not only the property of our own citizens but railway property and telegraph lines owned largely in the North; not only railways in the delta itself but the transcontinental lines of travel and commerce which have to cross the valley in going from the Southern cities and States to the west and southwest, the Pacific slope, and Mexico. These lines of intercommunication between the east and west of nearly half the nation are periodically broken by the floods. The delta has a length north and south of about eight hundred miles, and an average width east and west of about sixty miles. The railways that cross it from east to west must do so upon high embankments, or trestle-works. These works, being at right angles with the current of the river and its floods, form a dam which creates a back rise. The rise calls for a higher embankment, and the higher embankment produces a still greater rise, and so on indefinitely, until the force of the waters breaks the road-bed and sweeps it down stream. A marked illustration of this danger occurred recently in the construction of the New Orleans and Pacific Railroad across the Choctaw basin. The engineers, to make assurance double sure, constructed the embankments higher than the highest high-water mark to be found upon the neighboring trees. This embankment acted as a dam, and the result was a higher rise than ever known before and the collapse of the road-bed constructed at enormous cost. This illustration may be applied with equal force to all other roads crossing the delta. These interruptions, and the consequent enormous inconvenience and damage, falls not only upon the railway corporations and the people of the region inundated but upon all dwelling below the latitude of Cairo, from the Atlantic to the Pacific coast, who are interested in transcontinental travel and commerce. We have at a cost of about one hundred and fifty million acres of public lands, and a guarantee of bonds to the value of \$64,000,000, helped build transcontinental railways across the Rocky Mountains. Is it not just as national and constitutional to help protect transcontinental roads across the Mississippi Delta, particularly when it can be done at comparatively trifling cost?

We ask protection not only for private property but the postal routes of the Government itself. The postal service is one of the objects covered by the commission act. It was made their duty to report upon a plan which would facilitate and promote this service. They have so reported, and in the following terms:

A levee system aids and facilitates the postal service by protecting from injury and destruction by freshets and floods the various common roads and railways upon which that service is conducted to and from the river bank.

That clause of the act has been termed a mere incident. Is it a mere incident? What are the facts? There are in round numbers ten thousand miles of postal routes—railways, steamer routes, and star routes—within the alluvial or overflowed district. The railway postal service has been interrupted and delayed in many places. The service upon the river and lower tributaries has been subjected to similar delays and interruptions, and to much greater danger. The star-route service has not only been interrupted but annihilated

for weeks and months. In Northern Louisiana a novel spectacle was presented. A star route was so deeply submerged for miles and miles that a steamer was put upon the road, and was piloted along its course by observing the opening through the tops of the trees, which were above water. Now, let me ask the advocates of provisos, those who would change the spirit and letter of the commission act, how they would like a similar drowning out of their own postal routes? Would they then be so eager to construe the Constitution as an authority against protection at Government expense? Suppose for instance the Connecticut River intersected or bordered all six of the New England States, and that its periodical floods submerged all their postal routes for months at a time, would any New England member rise upon this floor and object to protection at Government expense, because forsooth it would benefit some land-owner, merchant, or manufacturer? Would he not rather invoke the aid and power and purse of the Federal Government in behalf of his section? And would not the New England delegation, regardless of party, act as a unit in urging such legislation? Of course they would, and we of the Lower Mississippi Valley, whose overflowed postal routes are spread over an area nearly the size of all New England, would, regardless of party, unite with them in voting appropriations for their protection from an enemy which they, as individual States, were powerless to oppose. Would our early education as strict constructionists of the Constitution, and our habitual observance of that theory of government prevent us from such friendly co-operation? I speak not only for myself but for the great majority of my people when I reply that our construction of the Constitution would not be a bar in this respect. It says in clear and unmistakable terms that Congress has power "to establish post-offices and post-roads." We have done so in both the East and West at the cost of many million dollars. May we not then protect them? Will any member deny this constitutional right? The proposition is too plain for discussion.

We ask for protection; not for one race only, but for two. According to the census of 1880 the total population of the overflowed district in the three States, Arkansas, Louisiana, and Mississippi, alone is approximately as follows:

Colored.....	814, 000
Whites.....	670, 000
Total.....	1, 484, 000

or about 54 per cent. colored. It is then the "wards of the nation," as the people of the North are accustomed to call the colored race, who are the chief sufferers from the periodical floods. It would be well for those friends of the colored race who are opposed to the protection of the valley to bear this point in mind.

We ask for the protection of the cotton industry. Is that unreasonable? On the contrary, we think it just as much the duty of the Federal Government to protect it from the destructive overflows of a national highway as it is to protect the grain of the North and Northwest from the monopoly of railway corporations by improving the river channel, and thereby supplying cheap transportation to the seaboard.

In brief, we ask the protection not simply of alluvial lands but agriculture in a broad and national sense; not only agriculture but manufactures, commerce, the postal service, and the people themselves of the lower valley, an alluvial area embracing 41,000 square miles, or nearly as large as all New England—three times the area of the celebrated valley of the Nile, formerly the granary of the oriental world—and eighteen times the size of Holland. A magnificent empire in its extent and resources.

PROTECTION FROM WHAT.

From what do we ask protection? From the overflows of a great national sewer, filled with the drainage of twenty-eight States and Territories; from the overflow of a great national highway of commerce, the trunk-line of forty-two navigable tributaries which supply water transportation to twenty-two States and Territories; from the overflow of a Government postal-route, a river subject to the admiralty and maritime jurisdiction of the United States; from an enemy in whose clutches a single State is as powerless as a little child in the deadly grasp of the octopus; from a river which in itself and in its relations to the nation is exceptional. This principle has been recognized time and time again in the councils of state. John C. Calhoun, as early as 1845, termed it an "inland sea." In a speech delivered in Memphis he said:

The invention of Fulton has in reality, for all practical purposes, converted the Mississippi with all its tributaries into an inland sea. Regarding it as such, I am prepared to place it on the same footing with the Gulf and Atlantic coasts, the Chesapeake and Delaware Bays, and the lakes in reference to the superintendence of the General Government over its navigation. It is manifest that it is far beyond the power of individuals or of separate States to supervise it.

President Garfield, in his letter of acceptance, expressed the same opinion, namely:

The Mississippi River with its great tributaries is of such vital importance to so many millions of people that the safety of its navigation requires exceptional consideration.

President Arthur in his first message to Congress said:

The necessity of improving the navigation of the Mississippi River justifies a special allusion to that subject.

The resolutions adopted at the great river convention at Saint Louis in October last called for separate appropriations for the Mississippi. The passage of the act creating the commission, by an almost unanimous vote, was itself an emphatic recognition of this same principle, that the river is exceptional and entitled to exceptional consideration. Its alluvial delta is also exceptional in extent, fertility, and production. For these reasons and many others which might be enumerated the treatment of the Mississippi should not, as is so often done upon this floor, be contrasted with that of little rivers wholly within a single State. It is because the Mississippi is national in extent and importance that exceptional consideration is claimed and recognized. This mighty river and its tributaries are, as General Garfield forcibly said upon the floor of this House, "the most gigantic single natural feature of our continent." To subject the "Father of Waters" to the rules that govern some of the little trout streams whose improvement is sought at Government expense is like comparing the Atlantic Ocean to a mill-pond.

PROTECTION BY WHOM.

By whom shall protection from this great and exceptional river be afforded? Common sense as well as law and public policy require that it be done by the nation. The Mississippi is one thing or the other—a State or Federal highway. It is not local in its terrors and national in benefits, or the reverse of the same. It is all one thing or the other. I insist that it is national in all respects; that the duty of restraining it from overflow belongs to the General Government as much as the admitted duty of improving its navigation. The advocates of the restrictive proviso say let the front proprietor, the local authority, or the State protect themselves. I reply they are, both in law and in fact, powerless to do so. Let me illustrate. Take for instance Vidalia, in Louisiana on the west bank of the Mississippi. Its citizens can, of course, build a levee in front of the town, but will this protect them? Far from it. To accomplish this end they would have to continue building levees not only throughout the whole State of Louisiana but into the adjoining State of Arkansas, for the floods from Arkansas sweep down through Louisiana in the rear of any local earthwork which the town might build on its river-front. Does any one upon this floor claim that Vidalia has jurisdiction in another State? Does any one deny the force and fairness of this argument; its truth in fact or soundness in law?

Again, what are the facts about the front proprietors so often mentioned by our opponents as the persons who should construct the levees? They are but a drop in the bucket compared with the hundreds of land-owners, merchants, manufacturers, and others in the rear who would share the protection. You reply, then let the back proprietors join with those dwelling upon the river front in the expense of the improvement. But suppose the front proprietor is indifferent and will not co-operate. You have, then, to resort to State power. Suppose next the State power is insufficient, what then? Let me present another illustration. On the west bank of the Mississippi there was built a continuous line of levee extending from Louisiana into Arkansas. For about fifteen years past the levee has been broken for several miles above and below the boundary line dividing the two States. Arkansas, for some reason, is indifferent to repairs at this particular place. The result is that the floods which sweep through the gap in Arkansas continue down through Louisiana in the rear of her system of levees, thereby nullifying all the efforts of the latter State to secure protection. Does any one contend that Louisiana has jurisdiction over Arkansas? The two States cannot even make a binding agreement on the subject of protection, for the Constitution expressly denies their right to enter into treaties between themselves. It is, then, worse than idle to tell us of the lower valley to protect ourselves. You know we cannot do it, and you simply add insult to our calamities when you tell us to do it. You claim the right to improve the channel even if the improvement makes a back rise and causes an overflow. Let me illustrate. In contracting the river at certain places for the purpose of deepening the channel and improving the navigation a temporary back rise and overflow will be the inevitable result.

This principle is admitted by the commission. Their plan of improvement contemplates the contraction of the channel at various reaches of the river in order to concentrate the power of the current and scour out the bars, namely: New Madrid, 40 miles; Plum Point, 38 miles; Memphis, 16 miles; Helena, 30 miles; Choctaw Bend, 35 miles; and Lake Providence, 35 miles. These are the initial works. The contractions will create a back rise which will continue until the shoals are cut away. How long this back rise will continue neither the commission nor any one else can say, for the time required for scouring out the channel at these points depends upon the tenacity of the bed of the river. Humphreys and Abbot, in their report on the hydraulics of the Mississippi, say that the bed is composed of a tenacious blue clay, much like marble.

If their opinion is correct the cutting out of the channel will be a comparatively slow process, and the back rise will continue until the channel is deepened within the whole line of contractions along the designated reaches. To further illustrate the danger from temporary back rise I quote from a letter to me in 1878 by a distinguished engineer, now a member of the river commission:

I presume that a complete, comprehensive, and permanent plan of improvement extending from Commerce to the Gulf is contemplated. Therefore the increase of velocity must be general. For since the existing velocity is not sufficient to main-

tain a navigable channel throughout, a merely local increase would be effected at the expense of other points and under the risk of developing new obstructions. The cause of flow in water is an inequality in the elevation of its surface. The propelling power is the weight of a column of water equal in height to this difference of level. The retarding forces are the irregularities of its bed, the adhesion with its bed, and the cohesion between its particles. The velocity can only be accelerated by an increase of this difference of level or slope, or by removing the obstructions. But it is conceded that the obstructions are to be removed by increasing the velocity. Now, the increase of velocity or the cause must precede the removal of obstructions or the effect, and the increase of slope, as the cause, must precede the increase of velocity.

Ellet says:

It is to be observed that the scouring force of the river cannot be increased until after the surface has been raised, and, therefore, after the damage has been done.

Now, you claim the constitutional right to make these contractions and improvements, but at the same time deny the constitutional right to close the gaps in the levees to protect us from the terrible consequences of your own act. I say your position is absurd and unjust. Strange to say, the majority of those opposed to protection from the floods by the General Government have heretofore been the most strenuous opponents of State rights. Judging their theories of government from their acts, they would deny to the people of the South local and State rights, but admit and advocate local and State overflows, responsibilities, suffering, and ruin.

The advocates of restrictive provisos also raise the technical objection that the General Government cannot go into States to build levees on the banks of the river. I deny this proposition. It was settled in 1875 by the Supreme Court in the case of *Kohl et al. vs. The United States*, that the General Government has the right of eminent domain, the right to condemn private property through the instrumentality of its own courts regardless of permission from any State. The law is clear and distinct upon this point.

The Government has already made free use of the banks and even the levees of the river in the establishment of beacon-lights as a measure of security to commerce and navigation.

Now, is there fear that in exercising this right of eminent domain the Federal Treasury will be drained to compensate the front proprietor for the use of his land? On the contrary the front proprietor will be most happy to give all the land the Government needs for any such protective works. He has never claimed compensation from the State for its use of the banks; nor will the States deny this right of eminent domain, for their interests are emphatically the other way. My own State in its present constitution adopted a clause of welcome in this respect to the Federal Government, and I have no doubt all other States of the lower valley will hasten to do the same if there are any technical objections to be met.

PROTECTION IN WHAT WAY.

In what way shall protection be afforded? It seems to be thought by our opponents that we of the South advocate levees as a sort of religion, as something desirable in themselves. Far from it. Our people are divided on this subject, some favoring outlets. The great majority, however, urge levees as the best means of protection, not as something good in themselves, but as good in their effect. We urge this particular plan of protection because an impartial board of engineers—the Mississippi River commission—say it is the best and only plan for protection from destructive floods. In their first report, in February, 1880, they say:

It is obvious that levees are, upon a large portion of the river, essential to prevent destruction to life and property by overflow.

In their second report, submitted November, 1881, they are still more emphatic, and say:

The utility of levees as a means to prevent destructive floods, which is one of the ends enumerated in the act creating the commission, is too obvious to require comment.

This is why we urge levees. They are the fences which protect our farms and cattle, our property and lives, from destruction by a national highway, just as do the fences along railways in the North, which the laws require to be built and maintained to prevent destruction to property and life by passing trains. It is a universal custom in well-settled and civilized states and countries to require railways to be fenced in. A failure to do so would subject the owners of the road to liability for all damages caused by the neglect. As I said in my report to this House in 1878—

The laws of the various States, particularly those which are the oldest and best settled, are very much alike in their requirements of railway corporations on the subject of damages and fences to protect adjoining property-holders from damage. To illustrate the spirit of the statute laws in this respect, we quote as follows from the laws of Connecticut:

"Every railroad company which has been incorporated since the first Wednesday of May, 1850, or which shall be hereafter incorporated, shall erect and maintain good and sufficient fences on both sides of its railroad throughout its whole extent, except at such places as, in the opinion of the railroad commissioners, the erection and maintenance of the same shall be inexpedient or unnecessary."

The statutes of this State further provide for the construction by the railway companies of "suitable cattle-guards in the form of culverts or pits, at all places where its railroad shall cross public highways or passways." It is true that nature, instead of the United States, constructed the river highways. But is that a sufficient reason why the General Government, which controls this navigable water-way should not protect the adjoining property-holders from damage?

PROTECTION TO WHAT EXTENT.

No part of the river problem is more misunderstood by the press and public than the cost of protection by levees from destructive

floods. They will doubtless be surprised when I assert that all the aid we seek for protection alone is but about \$3,000,000, or only one-tenth of the thirty millions estimated as needed for the improvement of navigation. Yet such is the fact, as I will presently demonstrate. Let me first explain why it is this popular misunderstanding exists. Several years ago Congress provided for a report on the subject of alluvial lands by the Army engineers; I refer to the report of Humphreys and Abbot. They recommended, not repairs to the levees then existing, but an entirely new line of levees, at an estimated cost of \$26,000,000.

Again, in 1874, a board was appointed under act of Congress to investigate and report upon a plan of "reclaiming" the alluvial delta, ignoring the subject of improvement of navigation. They estimated the cost at \$46,000,000. The public seem to think this is the kind of improvement we now seek. Not at all. Now, what are the facts, and what is the actual and present protection sought by the people of the lower valley? It is simply the closing of gaps and strengthening of the existing levees in connection with the plan of channel improvement recommended by the river commission. There are already in existence about 2,000 miles of levees along the banks of the lower river, which were constructed by the front proprietors, the parishes, and the States, at a total cost of about \$40,000,000. Only about one hundred miles of this levee fence is down in gaps, and the closing of these breaks and some trifling additions or repairs in other places is all that is needed to make a continuous and unbroken protective earth-work all the way from Illinois to the Gulf.

PROTECTION WHEN.

We ask this protection now, for now is the time of danger. I mean by this that the danger of overflow will be greater during the coming few years until the commission plan of improvement is consummated than it will be thereafter. It is claimed by the commission that the plan adopted will ultimately scour out and deepen the channel possibly to such a degree that no levees will be needed. It is probably safe to assert that under our system of small annual appropriations for public works the permanent improvement of the river will not be completed within less than ten years. It is, then, to protect our lives and property from present danger that we invoke the aid of the Government. The plan of distributing the cost of certain public works, like new buildings, channel improvements, &c., does not work well in protecting from immediate and present danger. Here the total appropriation should be in one lump and the works speedily constructed. It is just as absurd to fight a hostile river by annual appropriations and piecemeal as it would be for Congress in case of war with a foreign and invading enemy to provide a small appropriation for fighting simply one regiment at a time. While closing one gap the floods will pour through the other breaks and carry terror and destruction in their course.

GENERAL POLICY OF THE GOVERNMENT ON THE SUBJECT OF PROTECTION.

The question now arises, what is and what has been the general policy in this country on the subject of protection? Unquestionably it has been in favor of this doctrine. Look at our tariff laws. They have been so shaped as to afford protection to our industries. By whom have they been the most strenuously supported? By the very people who deny us in the States subject to overflow protection for our property, health, and lives. If the principle is good in the one case, is it not in the other? Is it not as national and constitutional to protect the cotton-growers of the Mississippi Delta as the cotton manufacturers of New England? Is it not as legitimate to protect the sugar industry of the South from overflow as the sugar refiners of New York City? Is it not as humane to protect life from the floods of the Mississippi as to maintain a life-saving service on the shores of the Atlantic Ocean? Is it not as sound in law and public policy to protect the health of the people dwelling in the alluvial district of the valley from the miasmas and epidemics created by overflows and consequent rank vegetation festering in the marshes as it is to establish quarantine stations and hospitals to protect from imported epidemics?

Now, what has been the past policy of the General Government on the protection of the valley? The record of our legislation for the past thirty-three years shows that it is by many precedents committed in favor of protection from destructive floods. Some of these precedents make use of the unfortunate word "reclamation," but protection is what was meant. They are as follows:

The act of March 2, 1849, provides "that to aid the State of Louisiana in constructing the necessary levees and drains to reclaim the swamp and overflowed lands therein, the whole of those swamp and overflowed lands which may be or are found unfit for cultivation shall be, and the same are hereby, granted to that State."

The act of September 20, 1850, provides "that to enable the State of Arkansas to construct the necessary levees and drains to reclaim the swamp and overflowed lands therein, the whole of those swamp and overflowed lands made unfit thereby for cultivation, which shall remain unsold at the passage of this act, shall be, and the same are hereby, granted to said State."

Another section of this act extends its provisions and the grant of swamp lands to the other States of the valley and the Union.

The act of September 30, 1850, provides "for the topographical and hydrographical survey of the delta of the Mississippi, with such investigations as may lead to determine the most practicable plan for securing it from inundation, and the best mode of so deepening the passes at the mouth of the river as to allow ships of twenty feet draught to enter the same, \$50,000."

The act of August 31, 1852, provides "for continuing the topographical and hydrographical survey of the delta of the Mississippi, with such investigations as

may lead to determine the most practicable plan for securing it from inundation, \$50,000."

The act of March 12, 1860, provides "that the provisions of the act of Congress entitled 'An act to enable the State of Arkansas and other States to reclaim the swamp lands within their limits,' approved September 28, 1850, be, and the same are hereby, extended to the States of Minnesota and Oregon."

The act of June 22, 1874, provides "that the President be, and he is hereby, authorized and directed to assign three officers of the Corps of Army Engineers, United States Army, and to appoint two civil engineers, eminent in their profession, and who are acquainted with the alluvial basin of the Mississippi River," &c. * * * "It shall be the duty of said commission to make a full report to the President of the best system for the permanent reclamation and redemption of said alluvial basin from inundation."

The total number of acres selected under the provisions of these various acts was, in round numbers, 67,000,000, of which the States intersected by the Mississippi and its forty-two navigable tributaries received 43,000,000 acres, and of which latter area the larger portion was received by the alluvial States. In addition to these recognitions by the General Government of the claims of the delta, we created, in 1871, a select committee on the subject of levees, the sole object of which was protection. In 1875 it was changed to a standing committee. In 1877 its name and jurisdiction were increased to Levees and Improvement of the Mississippi; in other words, to cover a double purpose, the protection of the valley and the improvement of navigation. The committee, as thus constituted, matured, perfected, and reported the Mississippi River commission bill, which was also expressly committed to two fundamental objects—protection and navigation.

Now, it is coolly proposed at the very time of the greatest and most disastrous overflow to abandon the original object of our legislation, the protection of the property, health, and lives of the people of the lower valley. I for one will never consent to suicidal provisos of this kind. It is a proposition which should not be entertained for one moment. It is more appropriate for the dark ages than for the humane civilization of to-day.

What, Mr. Speaker, is the object of government? I always supposed it was chiefly intended to protect its own citizens. Two objects of our present Government, as expressed in the preamble to the Constitution, are to "provide for the common defense" and "promote the general welfare." Section 8 of article I says "Congress shall have power to provide for the common defense and general welfare," "to regulate commerce with foreign nations and among the several States," "to establish post-offices and post-roads," and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." Now, what is meant by "common defense?" It means defense from an enemy too great and powerful for a state. I can see no constitutional distinction in public enemies. Defense from one is as imperative as from another, whether it be a foreign enemy or a national river which is making war upon our citizens. Can States combine to accomplish this protection, "to provide for the common defense and general welfare?" Not at all, for they are expressly prohibited by section 10 of the same article, which says:

No State shall enter into any treaty, alliance, or confederation.

How, then, can the States of the lower valley agree upon a uniform plan of protection from their common enemy, the great and national Mississippi in flood-time? They cannot. They are powerless. They are helpless and subject to the mercy of the floods.

They invoke, then, the aid of that Federal power whose fundamental object is the protection of its own citizens and its own States. The government that protects its own people becomes strong in their affections, and will in turn be supported and protected by them. It is both unwise and impolitic to allow one section of a common country to feel that its most important and vital interest is of no concern to the nation. The people of the Lower Mississippi Valley have, during years and years of suffering from the floods, felt the sting of this neglect. In 1879, however, when the commission bill passed this House by an almost unanimous vote, a ray of sunshine broke in upon the darkness of their sufferings. I will never forget the closing event of the debate on that important question.

As chairman of the Committee on the Mississippi I had charge of the bill and the time allowed for debate. General Garfield, then a member of the House, sent a page across the Hall to my desk with the request that I yield him ten minutes' time in support of the bill, which I was most happy to do, because of his great influence with the Republican side of the House and his liberal and broad-gauge statesmanship on all great material questions. He closed the debate with one of his masterly speeches, which carried conviction with every sentence. He said:

I rejoice in any occasion which enables representatives from the North and from the South to unite in an unpartisan effort to promote a great national interest. Such an occasion is good for us both. And when we can do it without the sacrifice of our convictions, and can benefit millions of our fellow-citizens and can thereby strengthen the bonds of the Union, we ought to do it with rejoicing, for in doing so we inspire our people with larger and more generous views and help to confirm for them, and for our children to the latest generation, the indissoluble union and the permanent grandeur of this Republic.

These liberal sentiments, so eloquently expressed, were loudly applauded by both sides of the House, and resounded from one end to the other of the valley of the Mississippi. They endeared him to all dwelling in the many States intersected by its waters. When, a year later, in his letter accepting the nomination for the Presidency, he said, "The wisdom of Congress should be invoked to devise some

plan by which that great river shall cease to be a terror to those who dwell upon its banks, and by which its shipping may safely carry the industrial products of twenty-five millions of people," he strengthened the hopes of my people and raised their expectations of deliverance from years of floods and pestilence.

When recently President Arthur made the protection of the valley the subject of a special message to Congress, the rejoicing was unbounded, and the name Federal Government received in the minds and affections of my people a new significance. It became the synonym of protection. I shall reprint this message as an appendix to my remarks and hope all dwelling in the great valley will have it framed and hung by their firesides as a model of liberal and progressive statesmanship—as the mark of a new era of good feeling between the two sections of a common country.

APPENDIX.

PRESIDENT ARTHUR'S MESSAGE ON THE PROTECTION OF THE VALLEY.

To the Senate and House of Representatives:

I transmit herewith a letter dated the 29th ultimo, from the Secretary of War, inclosing copy of a communication from the Mississippi River commission, in which the commission recommends that an appropriation may be made of \$1,010,000 for "closing existing gaps in levees," in addition to the like sum for which an estimate has already been submitted.

The subject is one of such importance that I deem it proper to recommend early and favorable consideration of the recommendation of the commission. Having possession of and jurisdiction over the river, Congress, with a view of improving its navigation and protecting the people of the valley from floods, has for years caused surveys of the river to be made for the purpose of acquiring knowledge of the laws that control it, and of its phenomena. By act approved June 28, 1870, the Mississippi River commission was created, composed of able engineers. Section 4 of the act provides that "it shall be the duty of said commission to take into consideration and mature such plan or plans and estimates as will correct permanently, locate, and deepen the channel and protect the banks of the Mississippi River, improve and give safety and ease to the navigation thereof, prevent destructive floods, promote and facilitate commerce, trade, and the postal service."

The constitutionality of a law making appropriations in aid of these objects cannot be questioned. While the report of the commission submitted and the plans proposed for the river's improvement seem justified as well on scientific principles as by experience and the approval of the people most interested, I desire to leave it to the judgment of Congress to decide upon the best plan for the permanent and complete improvement of the navigation of the river and for the protection of the valley.

The immense losses and the widespread suffering of the people dwelling near the river induce me to urge upon Congress the propriety of not only making an appropriation to close the gaps in the levees occasioned by the recent floods, as recommended by the commission, but that Congress should inaugurate measures for the permanent improvement of the navigation of the river and security of the valley. It may be that such a system of improvement would as it progressed require the appropriation of twenty or thirty millions of dollars. Even such an expenditure, extending as it must over several years, cannot be regarded as extravagant in view of the immense interests involved. The safe and convenient navigation of the Mississippi is a matter of concern to all sections of the country, but to the Northwest, with its immense harvests needing cheap transportation to the sea, and to the inhabitants of the river valley whose lives and property depend upon the proper construction of the safeguards which protect them from the floods, it is of vital importance that a well-matured and comprehensive plan for improvement should be put into operation with as little delay as possible. The cotton product of the region subject to the devastating floods is a source of wealth to the nation and of great importance in keeping the balances of trade in our favor.

It may not be inopportune to mention that this Government has imposed and collected some seventy millions of dollars by a tax on cotton, in the production of which the population of the Lower Mississippi is largely engaged, and it does not seem inequitable to return a portion of this tax to those who contributed it, particularly as such an action will also result in an important gain to the country at large, and especially so to the great and rich States of the Northwest and the Mississippi Valley.

CHESTER A. ARTHUR.

EXECUTIVE MANSION, April 17, 1882.

Protecting Innocent Purchasers and Users of Patented Articles from Actions for Damages.

SPEECH

OF

HON. WALPOLE G. COLERICK,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1882,

On the bill (H. R. No. 6018) to amend section 4919 of the Revised Statutes, relating to the recovery of damages for the infringement of patents.

Mr. COLERICK said:

Mr. SPEAKER: The bill now under consideration provides "that no action for damages or proceeding in equity shall be sustained, nor shall the party be held liable under sections 4919 or 4921 of the Revised Statutes of the United States, for the use of any patented article or device when it shall appear on the trial that the defendant in such action or proceeding purchased said article for a valuable consideration in open market." The committee who reported this bill deserve and will receive the gratitude of the people. I regard it as one of the most important and meritorious measures presented to this Congress for our consideration. It is a bill in the interest and

for the protection of the people, especially the farmers of the country, who have been for many years grievously wronged and sorely oppressed by unjust prosecutions instituted and threatened against them in the Federal courts, which have exclusive jurisdiction therein, by persons to whom patents have been issued for innumerable articles and devices invented by them, and which are actually required by those engaged in agricultural pursuits in the improvement, cultivation, and enjoyment of their farms. These actions are commenced and threatened for the purpose of exacting and extorting money from farmers as pretended damages for alleged violations of the patent laws in using on their farms patented articles and devices purchased by them innocently and in good faith, in open market, and for full value.

Under such circumstances the farmer who purchases the article or device and uses it is rendered liable, under the harsh and unjust provisions of the existing laws relating to patents, regardless of the fact that at the time of its purchase and use he was entirely ignorant of the existence of a patent thereon. The presumption which usually applies and exists with reference to property, that possession implies ownership, is ignored, and the farmer, although deprived of all available means of ascertaining whether the person who offers the article for sale has authority to sell the same, and under the unreasonable provisions of the law as it now exists, he makes the purchase at his peril, and this renders it extremely dangerous for him to purchase, even in open market, articles needed on his farm, and creates in his mind constant apprehension that he may, by reason of the purchase and use of a patented article afterward render himself liable to pay damages to some unknown patentee who has stood by and permitted the article to be sold. This is an annoyance, peril, and hardship to which he ought not to be subjected.

By the statute, as it now exists, it is an infringement of the rights secured to the patentee by his patent for any other person to manufacture, vend, or use without the license or permission of the patentee an article or device covered by the patent, and he may by reason of such acts, at his option, sue either the manufacturer, vendor, or user, or all of them, at his pleasure, for damages; and, strange as it may appear, he in suing almost invariably ignores the manufacturer, who made the article, and the vendor, who sold it, and selects as his victim to bear the burdens of the wrongs of others the farmer who innocently purchased and used the article so manufactured and sold. It is to correct this great and flagrant wrong and protect the innocent purchaser that this bill has been reported.

Often persons to whom patents have been issued permit the manufacture of articles and devices covered by their patents; and after they are sold to innocent purchasers by persons who for that purpose traverse the country in the capacity of agents, openly and publicly offering the articles for sale, without any effort to conceal their vocation or mission, and payment has been made, another swarm of agents in the interest of the patentees are sent forth in the character of spies and detectives to discover the articles so sold and the names of the purchasers; and, upon this discovery being made, demands on the innocent purchasers swiftly follow to pay a certain sum as damages for using the article so purchased by them, and that unless the sum so arbitrarily fixed and demanded is paid within a specified time that actions for damages will be instituted against them in the Federal courts, which are usually held at places far distant from their homes, where, in order to defend these actions, they must attend in person and employ counsel and secure the attendance of witnesses, thereby incurring an expense far greater than the sum demanded from them by the agents of the patentees; and in order to avoid the vexation and expense of such actions they are compelled to and do accept the offer of compromise and pay the amount of damages so unjustly fixed and determined.

Although they keenly feel and fully realize the injustice of the demand, yet deeming "discretion the better part of valor" they submit to the wrongs which are perpetrated upon them, and these shameful outrages are sanctioned by the law, which is often spoken of as the perfection of human wisdom and the embodiment of justice. Sir, this system of oppression has become so merciless and odious, and is pursued so extensively and relentlessly as to excite not only the wrath of the victims, but the compassion of the people for those thus oppressed. Not a day has passed since the commencement of this Congress that petitions, signed by thousands of farmers, asking for speedy and effective relief from such oppressions and injustice, have not been presented to us. We cannot close our ears or deaden our hearts to these appeals, which come from every section of the country. We are here as the Representatives of the people, and we must listen to their voice, and by our action execute their will. Shall we hesitate in performing our duty, which is clear and plain? We must reach forth our strong and protecting arms to those who are thus unjustly oppressed, and save them from the infliction of such wrongs, by declaring in language which cannot be misunderstood that actions of this nature shall not be maintained against them.

The objection which has been urged against this bill by those who oppose its passage, that it will do injustice to inventors who have devoted their lives and fortunes to the discovery and perfection of labor-saving and useful articles and devices, is untenable and without merit. While it is true that much is due to those who have, by the fruits of their inventive genius, contributed so largely to the

wealth and prosperity of the country, yet we must remember that their interests, after the passage of this bill, will remain carefully guarded and protected; so if their rights are assailed or their privileges invaded they will have an ample and complete remedy against those who make or sell, without their license, articles covered by their patents.

The farmers of Indiana have been sorely afflicted by the oppressions to which I have referred, and their voice has resounded loudly in the form of petitions and otherwise in favor of the relief granted by this bill. One of the first bills presented by me as a member of this House was one to protect innocent purchasers and users of patented articles from actions for damages, and I have been ever since then active and assiduous in my efforts to secure legislation on the subject. It affords me extreme pleasure and gratification to know that the bill now under consideration substantially embraces the provisions of the bill introduced by me, and one sufficiently broad to afford to the innocent purchaser ample protection and complete immunity against such actions, and I hope that it will be promptly passed.

National Banks and Monopoly.

SPEECH

OF

HON. WILLIAM S. HOLMAN,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1882.

The House having under consideration the bill to enable national banking associations to extend their corporate existence—

Mr. HOLMAN said:

Mr. SPEAKER: The encomiums pronounced upon the national-bank system have exhausted the eloquence of honorable gentlemen. They contemplate the system with fervent enthusiasm, and assure us that it is the most perfect agency for regulating the monetary affairs of a great people that human wisdom can devise. I concede that so far as the element of safety in the currency issued by the national banks is concerned no system could possibly be safer. The issues of the national banks are necessarily absolutely secure in the absence of fraud while the credit of the Government remains unimpaired. This currency is as secure as the Government. Why should it not be perfectly safe when guaranteed by the wealth and labor and energy of fifty millions of prosperous people? Beyond this element of safety for its issues I have never been able to understand how it can be claimed that the national banking system is the best as yet devised. In all else these banking associations stand on the same footing with multitudes of corporations, State and national, that have been formed in this country and subject, as I shall attempt to show, to the same frailties. The only element of absolute safety they possess lies in the integrity, the solidity, and the wealth of the country.

Mr. BURROWS, of Missouri. I would like to ask the gentleman a question.

Mr. HOLMAN. I yield for a question.

Mr. BURROWS, of Missouri. Does the national-bank note contain one redeemable feature that is not possessed by the legal tender?

Mr. HOLMAN. Certainly not.

Mr. BURROWS, of Missouri. Does the greenback not possess some that the bank note does not?

Mr. HOLMAN. Certainly; it possesses a very important element of value beyond the national-bank paper. But it seems to me remarkable that so candid and sincere gentlemen as my friend from Massachusetts, [Mr. CRAPO,] who honors me with his attention, and as the gentleman from New York, [Mr. HEWITT,] who addressed the House to-day, dwell with emphasis upon the peculiar excellence of this system on account of the absolute safety of its issues.

Why of course currency issued by the United States and guaranteed by the Government of the United States, while the Government remains as it is inexhaustible in its resources and the integrity and energy of its people, must be perfectly safe and absolutely secure. I am not aware of any feature of this national banking system independent of that feature which it borrows from the Government which entitles it to any peculiar encomium. As to the depositor, except in the case of the Government where the deposits are required by law to be secured by Government bonds, I am not aware of any special superiority of this system over those of the unfortunate days which have happily gone by when the people were periodically plundered by local banks.

The loss by depositors in national banks is no new fact. Eighty-four of them have failed with the loss of millions to the people. Two of them have failed since the 1st day of last November—one in Boston, the other in Newark, New Jersey, the latter with a capital of

\$500,000, an alleged surplus fund of \$400,000, and \$2,500,000 of deposits. The failure of the bank of course does not in the least degree affect the value of the currency of the bank. That value does not depend on the solvency of the bank, but on the solvency of the Treasury of the United States. Not so with the depositor, for he must look to the bank for the payment of his deposit with the limited liability of the stockholder, but when the crash comes experience demonstrates that generally the solid men have disappeared, leaving the unfortunate depositor to look to an insolvent bank and to insolvent stockholders for the fruits of his labor. These failures have occurred, and that, too, at a period of general prosperity, notwithstanding the alleged severe examinations to which these banks are subjected by experts with ample salaries, and notwithstanding the important fact that as the Government guarantees the payment of the bank notes the banks are exempt from runs upon them, in the hour of panic, by the holders of their notes, which was the peril of the old system of banking.

I have not seen, therefore, in this national-bank system any feature pertaining to itself that elevates it above other banking systems that have been known to this country. It has furnished us a perfectly good currency. But it has done it simply as the distributing agent of the Federal Government. Even the old system of banking which robbed and plundered the people of this country for more than half a century would scarcely furnish a more striking example of frailty and dishonesty in banking than the Mechanics' National Bank of Newark, New Jersey, to which I have referred, with its capital of \$500,000, its surplus of \$400,000, (showing its extraordinary gains,) and its deposits of over \$2,500,000. I quote the exact words of the Comptroller of the Currency:

The Mechanics' National Bank of Newark was placed in the hands of a receiver on November 2 last. It had a capital of \$500,000, a surplus of \$400,000, and deposits of over \$2,500,000. The capital and surplus are lost through the criminal conduct of the cashier.

The Comptroller proceeds in his statement as follows:

This bank was many times examined by skilled accountants of great experience, but it cannot be denied that some of them were misled by the criminal cashier, who, through his apparently high character and standing, so long deceived not only the directors but every one with whom he had business relations.

When the vaults of the bank are finally opened they are found empty. The Government is safe, for it holds the bonds to secure the circulation. The holders of the notes are safe, for the notes are paid at your Treasury. But what of this \$2,500,000 deposited in this bank by a great multitude of depositors? Who can say how many of them were laboring men and women who had deposited in this bank the earnings they had scrimped themselves and families of, even the bare necessities of life to save, in the confidence inspired by the daily laudations of this perfect system of banking? Oh, they must look to the stockholders. Yes; and unless aided by the accident of good fortune they will look until deferred hope will make the heart sick. So this most perfect system, watched over by "skilled accountants of great experience," with ample salaries, depends for its solvency on the integrity of its cashiers, whose virtues are everlastingly tempted by the selfish rapacity which inspires the system.

The greenback is absolutely assured to the holder. So is the national-bank note upon exactly the same ground—the national guarantee. Nor, sir, am I able to agree with my friend from Massachusetts [Mr. CRAPO] touching the patriotic origin of the national-bank system. It did not spring up at the first tocsin of alarm, at the first cry of national peril. There was no suggestion of the national bank until long after the financial peril to which the rebellion exposed this Government had measurably passed by. Indeed, sir, the idea that this system of banking was devised as a mode of securing the sale of the national bonds and aiding the national credit is a very modern suggestion. The bonds were not put into circulation through the national banks. When the first national bank was organized in Boston not only the currency of the country, though greatly depreciated by the scarcity of coin, was reasonably well assured, but the solvency and the permanency of it was a fixed fact in the minds of the men here who were guiding the course of events, and more important still, of the great body of the people of the loyal States of the Union. The national bank was not the agent through whom the bonds reached the country, although they did ultimately become the holders of the great body of the 5.20 per cent. gold interest bonds into which the 7.30 bonds and other public securities were funded.

The 7.30 bonds were issued as part of the general system; they were legal tenders at their face value, and were paid out as money, paid out to your Army through your paymasters in the years of the war when the Government was most pressed for means. When upon this floor I offered a resolution calling on the Secretary of the Treasury to inform the House why payment to the Army was so long delayed, the answer was the sending of paymasters to the front with 7.30 bonds, as well as greenbacks, to pay to the Army. It was through the instrumentality of your people, the men who furnished supplies and munitions of war, and your Army that your bonds obtained their circulation; and they were cheerfully, promptly, and readily accepted by your Army and your people. I do not think we have got so far away from the current history of that period as to justify or excuse a misrepresentation of the facts. It was only as the interest began to accumulate on those bonds that they arrested the attention of capitalists and drifted to your commercial centers.

Mr. CRAPO. Does the gentleman recollect the length of time those 7.30 bonds ran?

Mr. HOLMAN. Yes, sir; three years.

Mr. CRAPO. And when the three years came around—

Mr. HOLMAN. They were fundable in the five-twenties.

Mr. CRAPO. Yes; and in the original banking act a provision was made that no bank would be organized unless it had at least one-third of its capital in Government bonds, whether it had circulation or no circulation.

Mr. HOLMAN. That is true; but it was not a necessary or an important feature, as they could be withdrawn with a reduction of the currency.

Mr. CRAPO. What was the purpose of that feature?

Mr. HOLMAN. Mr. Hooper, then a member of the House from Massachusetts, whom I regard as the most prominent member of the House in getting up this system, could not have had any reference to the sale of the bonds by that provision, for no other purpose was contemplated in the organization of this system but the issue of notes and banking on Government deposits. Every provision of the original act of February 25, 1863, and especially of the amended act of June 3, 1864, which is the real bank law, concerning bonds, is also a provision concerning bank notes for circulation, for the bonds could be withdrawn as the currency issued by the bank was decreased.

You have been discussing this subject as though there was a want of faith in our securities during the years 1863 and 1864. I know of no part of the loyal States where, during those years or afterward, any doubt existed as to the absolute security of every form of indebtedness issued by the Government. The soldiers in the Army, the dealers in all forms of certificates of indebtedness, the contractors for supplying the munitions of war, merchants, and people, in 1863, and ever after, gladly received the greenback, though greatly depreciated, and still more gladly all forms of interest-bearing securities.

The first national banks were organized long after the 25th of February, 1863, and had deposited with the Treasury, to secure circulation, only \$3,925,275 on the 1st day of October, 1863, two years and a half after the commencement of the war. Why organize banks to sell Government bonds? The 7.30 bonds were fundable at par in five-twenties, and they were never under par and the Government was never in default an hour in the payment of the interest, and the bonds on the basis on which they were issued were the most valuable that capitalists ever held. The national banks came upon the stage when the rebellion was "toppling to its fall," but in time to make an unexampled profit from the financial errors and mistakes inevitable in a great war and a disordered currency. No, sir; the Government did not owe its financial safety to the capitalists of that period nor to the financiers of the country. It owed its triumph in finances as well as in the field to the absolute confidence reposed by the people of the loyal States, from one ocean to the other, in the ultimate triumph of the Union and the good faith of their Government. Either one of the financial systems proposed at the beginning of the war would have achieved success, upheld as it would have been by the confidence of the people. It was the great uprising of the masses, the rising up of the whole people of the loyal States which not only put down the rebellion and saved the Union but gave strength to your financial system and credit to your securities. The plain people, as expressed by President Lincoln, gave credit to your financial system and success to your armies.

Mr. HARDENBERGH. Will the gentleman permit me to ask him a question?

Mr. HOLMAN. Certainly.

Mr. HARDENBERGH. It is all very well after the horse has been stolen to lock the stable-door. But I would inquire of the gentleman in what year was this immense confidence felt? Was it when greenbacks went down to fifty or sixty cents on the dollar; or was it after the surrender at Appomattox, when the rebellion was known to be at an end?

Mr. HOLMAN. It was felt from the beginning. That man who shall write the history of the war, and who shall speak of the uprising of the loyal people of this country everywhere, in city, towns, villages, and country, to maintain the integrity of the Union, with a spirit that faltered at no defeat, and does not at the same time speak of the triumph of your financial system as the outgrowth of the same spirit which upheld your flag upon the field of battle, will falsify history and ignore the real power which saved the Republic.

There never has been a great contest in the history of mankind where the people were so completely entitled to the credit not only of maintaining by arms the integrity and honor of a nation but of maintaining a financial system necessary to its complete triumph.

Therefore, the claim that the wealth of the country—the wealth which organized and took hold of your national-bank system and with infinite skill crystallized the mass of your public securities into imperial private fortunes to an extent and with a promptness unexampled in history—are entitled to the credit of having organized that system through patriotic considerations and for the purpose of promoting the interests of the country and rescue its finances from utter ruin cannot go as a truth into history, whatever gentlemen interested in the perpetuation of a great monetary power may now claim for its advantage.

Patriotism! It is not easy to perceive any high degree of patriot-

ism in the ingenious methods by which paper money and paper securities, depreciated 50 or 60 per cent., were converted into bonds drawing 6 per cent. interest in gold, payable half-yearly, and still more difficult to perceive it in the method by which those bonds were made payable both principal and interest in gold. There was no great sacrifice or self-denial in that, and that could have been done even without national banks. Nor is it easy to see a purely patriotic motive in depositing these bonds with the Secretary of the Treasury, untaxed and still drawing gold interest upon them at 6 per cent. half-yearly, and in addition receiving national-bank paper printed and prepared at the expense of the Government to the amount of 90 per cent. of the bonds deposited, at an interest of 1 per cent. per annum. One is the more bewildered in the search for patriotic motive in all this when it is borne in mind that the exceedingly satisfactory and profitable form into which the paper money and paper securities depreciated 50 or 60 per cent. were converted, when it is borne in mind that the enormous loss resulting from these financial methods is borne by the whole people, and especially by the gallant Army whose valor upheld the Union and gave solidity to the financial system, and that the enormous profits accrued to the banks.

I am not willing to undervalue the services of any men or class of men in the Army or out of the Army who aided the Government in its hour of peril, but this claim of patriotism for a system which so directed your disordered finances and public debt as to amass imperial fortunes, and forever overthrow the general equality in the material wealth of our people, which had been the glory of the Republic for so many years, is too preposterous for debate.

Mr. Speaker, I have consumed a great deal more time than I had intended in these preliminary remarks; gentlemen have led me from my purpose. While I concede that the notes of the national banks are assured to the note-holders against danger of loss and are unquestionably a good currency, it is also equally true of the greenback money, and for exactly the same reason; both have the same guarantee of solvency. I am not able, never have been, to understand why a body of gentlemen, no matter how respectable, organized into national banks are a safer instrument through which to issue paper money than the Government. I have heard the argument used (and it had some plausibility at any rate) that there was danger of fraud in overissue and the like being perpetrated in your Treasury Department in the performance of so important and delicate a task as that of preparing for issue and actually issuing a large body of paper money; but as a matter of fact the Treasury Department has often in former years issued Treasury notes, and twenty-one years has been issuing the greenback money, and for eighteen years has printed and prepared for issue and delivered to the banks ready to be issued the national-bank notes, and all of these notes are finally canceled at the Treasury, and yet up to this time, so far as I am informed, no suspicion of fraud or misconduct touching the issue of currency or the preparation of currency for issue has been suggested, while grave charges have been made against the Treasury about almost everything else under its control.

But even the pending bill contemplates the printing and preparation of the bank notes by the Treasury, and at the expense of the Treasury, and in the same Bureau of Printing where the greenbacks are printed; so up to this time it can hardly be said that the objection named has much force.

Many of us thought thirty years ago, in view of the wide-spread ruin the banks of former days were inflicting upon the country, that coined money—only gold or silver—should be recognized as money; but now all men, of all shades of financial opinion, agree that paper money, readily convertible into coin, is indispensable, and all men agree that the paper money shall be issued on the faith of the United States, so that whether banks are honest or dishonest the holders of the notes shall suffer no loss; so that, in fact, there are but two points of difference between the bank and anti-bank men. Who shall determine the amount of paper money that shall be issued—the banks or the Government? Who shall have the profits of issuing this paper money—the banks or the whole people?

The banks claim the right to determine the amount that shall be issued and the profits of issuing it. I do not agree with them.

Why should not the Government have the profit on the paper money issued upon its credit and at its expense? Gentlemen, in answer to this inquiry, say that this system is not specially profitable. The report of the Comptroller shows that the earnings of the banks as a system on both capital and surplus fund was 9.20 per cent. during the past year, and that the banks besides making annual dividends have laid by a surplus fund (undivided profits) of \$128,140,680. And this, too, after taxes, salaries, and incidentals are all paid. What other business pays such a profit? But the question I have asked admits of but one answer. Common justice would give the profits of issuing paper money to the whole people.

Then the question comes up, who can most safely determine what shall be the volume of paper money to be issued from time to time in connection with your gold and silver coin—the national banks or the whole people as represented in Congress?

It is very clear, sir, that the volume of paper money required by a commercial people must be considered in connection with and determined by the volume of coin. It must be readily convertible into coin. Gold and silver coin, the common representatives of value throughout the world, must determine the volume of paper. These

metals are seldom of exactly the same value; sometimes one and sometimes the other is the most valuable. A few years ago it was silver, now it is gold; but the general equality in value of these metals through all the past ages has been such that notwithstanding the occasional fluctuations in their relative value they can, by the common judgment of mankind, be safely relied upon as measures of value. Neither gold, silver, nor paper can be made an exact standard of value, except as regulated by law, in the world of commerce and affairs. It is all-sufficient if the one is readily exchangeable into the other, paper into gold or silver coin. It has been demonstrated during recent years, since, by abundant crops in our own country and failure of the crops in Europe, the balance of trade is with us and our revived industries have been restored to their normal condition, that with \$346,000,000 in legal-tender notes, \$323,000,000 to \$360,000,000 in national-bank notes, and the gradual increase in the silver certificates from \$413,360 on the 1st day of January, 1879, to \$58,838,770 on the 1st day of November, 1881, all readily convertible into coin, our monetary system is perfectly sound and up to the commercial demands of the country. If this system is maintained there will be a moderate increase of the silver certificates annually. Now, with this state of facts, will any fair-minded man say that it is safer to trust the banks, which only a little more than a year ago surrendered \$18,764,438 of the currency in the attempt to create a panic to defeat the bill which required them to deposit 3 per cent. bonds to secure their currency, and actually secured a veto of the bill—I say it is safer to trust these banks to regulate your currency than your Government?

Those patriotic institutions which gentlemen are so anxious to invest with the absolute control of your currency—the life-blood of your business and prosperity—were perfectly willing to overturn your admirable monetary system, disorder your industries, and throw multitudes of men out of employment to defeat an ordinary and proper act of legislation affecting them about 1 per cent. on their bonds when you were furnishing them \$343,000,000 of paper at your expense with Government indorsement at 1 per cent. per annum.

These banks are making a steady and persistent war on your greenback money, silver certificates, and the silver dollar, and are already supported by high officers of the Government. Does any gentleman on this floor doubt that if the system is permanently established by the passage of this bill, that at no remote day, at the demand of these banks, your greenback money and silver certificates will be retired and national-bank notes substituted in their place? Their system is well defined and simple gold coin the only standard of value, national-bank notes the only paper money, and no taxation by the Government, even the 1 per cent. they pay you for their circulation to be removed. The Comptroller of the Currency, the representative of the system, in his last report, page 52, says:

The Comptroller again respectfully repeats his recommendation for the repeal of the law imposing a tax upon bank capital and deposits and the 2 per cent. stamp upon bank checks.

And on page 58 of the report urges that Congress shall limit the States in taxing the shares of stock, and yet during the last year there was paid out of your Treasury as the expense of the Comptroller's Office alone for the benefit of the banks \$214,118.50.

Have great capital interests been so mindful of the welfare of the people that you can safely trust your currency to their keeping? If so, when has it been displayed? I remember very well when a distinguished capitalist of Massachusetts rose on this floor to ask for the passage of the bill to reorganize the Mint, (an event so often mentioned here.) I remember very well the incident, the questions and the answers that accompanied the passage of that innocently-titled bill through the House which struck from your coinage the silver dollar, and did it, too, on the very eve of the period when the coinage of the silver dollar was to be vital to the public welfare.

I would rather indulge the belief that the distinguished gentleman was not fully conscious of the measure under his control, and of which I believe he was not the author, but I am confident that no man can carefully consider the events of that period, and the men who were then at this Capitol, and recall events transpiring in Europe, and the state of our public debt, and the fact that the debts of the nations then exceeded in volume any example in history, without being impressed with the belief that that measure was not a mere incident of ordinary legislation, but a part of a conspiracy of great capitalists against the labor of mankind.

No, sir; the banks will use their power as they have done in this country from the beginning to advance their own fortunes, and not for the public weal. In a disordered state of finance, in contractions and expansions, they will find as they have always found their chief profits. You say you will not permit them to retire their currency. Can you prevent them from alarming the country by locking their currency in their own vaults? No, sir; I sincerely trust the people of this country will not become charmed with a system in which a few wealthy gentlemen, who meet annually at Saratoga, have it in their power to strike down for the time every hope of labor and coin new fortunes out of the public grief. Is it wise to trust such a power in the hands of any body of men? Does not experience demonstrate that periods are constantly occurring when the interests of large aggregations of wealth are not in harmony with the interests of labor and of productive industries?

For the reasons I have mentioned, and for others still more impor-

tant, if possible, than those I have named and to which I will refer briefly hereafter, I do not believe that it is safe, necessary, or expedient that the issuing of our currency should be placed under the control of banks.

A great statesman, in discussing the currency question recently, said that the qualities that should be considered in the currency of a country were "its safety, convenience, and cheapness, and that the profits of issuing it accrued to the nation." You have now three forms of money, greenbacks, national-bank notes, and silver certificates. The latter form of paper money is steadily but moderately increasing, while the two former are stationary in volume except that from time to time national banks issue new currency or retire their currency and take up their bonds. You will observe, gentlemen, that the action of the banks in increasing the currency or in diminishing the currency, running through a range of many millions, has no reference whatever to the public convenience or the public necessity, but to the convenience and profit of the banks alone. Now, sir, can any gentleman point out a valid reason why the Government could not, with perfect safety, as the bank notes come, as they do daily, into the Treasury to be canceled and renewed, issue Treasury notes in their stead and apply them from time to time in payment of the public debt, and permit the banks to take up their bonds? Is there danger of inflation? Why, would not the volume of currency remain unchanged, except more steady in amount? The question has been asked a thousand times, and that, too, by sincere men seeking for the truth, and the only answer I have ever heard is after the order of the views expressed by the gentleman from New York [Mr. HEWITT] in discussing this bill, in which he said:

My answer to that is that we have had during the refunding operations and since the war an experience of the dangers of confiding power over the currency to public officers, however capable and however honest. The fact is that to put the control of the currency into individual hands is to put the whole property of the country at the mercy of the men who control the currency. The power is too great not only for human knowledge but for human character.

Yes, it is true that the banks overreached the public officers or conspired with them in the funding operations and defrauded the people out of many millions of dollars. The profits of one bank alone were five times its capital stock, and the logic, I suppose, is that you must distrust your public officers, but that it is perfectly safe to trust the banks. You cannot of course safely put the currency under the control of individuals, but as bankers are immaculate it is perfectly safe to intrust this tremendous power to them. The power is too great for human knowledge or human character, but as banks are not human it is perfectly safe to trust them with the control of your currency and to repeat the funding operations! This is a modest bank view of the subject, but it does not answer my question.

In issuing any form of paper money, inasmuch as it is all prepared in the Treasury, the danger is of fraud in its overissue, and that is to continue under this bill. The Treasury will prepare for issue and ready for issue every dollar of paper money, whether issued for the benefit of the Government or the benefit of the banks, and this state of things will continue; for it is absolutely certain that with the widespread intelligence of our people on questions of finance and currency this country will never again be afflicted with a paper money issued by local banks. Your Government will issue and prepare for issue the paper money, and your Government or the banks will get the profits.

We have had now an experience of twenty-one years in the issue of the greenback currency, and of eighteen years of the national-bank paper; and I believe my friend from Massachusetts [Mr. CRAPO] has not had occasion to point out that the issue of one form of money or the other through the Treasury, with its valuable and complicated system of checks, has developed an instance of fraud in that respect within the Treasury or without it. Indeed, it is one of the most interesting facts of our financial history that while all these millions in the form of greenback money and national-bank paper have been issued through the direct instrumentality of the Government, there has not been up to this time, so far as I am aware, even a public scandal raised in connection with a solitary transaction. If any such fraud has been committed it has not reached the public eye.

If this be true does not the argument that it is unsafe for the Government to become a great banker disappear? The Government is no more a banker in the issue of greenback money or certificates in any form to circulate as money than in passing over to the national banks the paper that is circulated by them. In both cases the Government exercises the same power, operates through the same agents, employs the same precautions.

But, sir, it is urged that in case of a financial panic the Government would be greatly embarrassed, but is not the Government the guarantor of every dollar of paper money issued, whether issued for the benefit of the people or the benefit of the banks? The old idea of banking, both State and Federal, was that if the bank broke, which of course it did sooner or later, the people lost the money. The new and more rational theory is that if Government authorizes the issue of paper money, when the bank breaks the Government shall redeem its notes. The bankers claim that they alone can be trusted to regulate the volume of paper money. I would not trust them with any such power. I think the whole people of this country, through their representatives, are a much safer depository of that power. Whoever controls that power controls the nation. But I think I see in the

silver certificates a perfectly safe regulator of the volume of paper money. When coin is required the silver certificates which constitute a part of the paper money will be retired and the coin increased; when the convenience of increased paper money is demanded coin is retired and silver certificates increase the currency. The application of the same rule to gold coin as heretofore would increase the facility. Coin never has and never will remain in the vaults of a bank, judging from our past experience, if withdrawing it would be profitable to the bank.

Our silver certificate is not a new idea. I think I have read that the Dutch suggested the idea. The frugal burgomasters of Amsterdam perceived the convenience of paper money a long time ago and organized a bank. The only law of that bank was that when a paper dollar was issued a silver dollar should be put in the vaults to pay it when it came back.

I have entire faith in this system of silver certificates, and believe that they will play an important and most valuable part in your currency system. But the audacious and persistent war made upon the legal-tender notes, the silver dollar, and the silver certificate by the great bankers ought to inform our people that in the early future there will be no divided control of your currency. The Government will issue all forms of currency for the common benefit of the people, or the national banks will issue it all on the credit and at the expense of the Government for the benefit of the banks.

The present state of the money and currency of the country is well presented in the report of the Comptroller of the Currency in the following table:

Currency.	January 1, 1879.	November 1, 1879.	November 1, 1880.	November 1, 1881.
Gold coin.....	\$278, 310, 126	\$355, 681, 532	\$453, 882, 692	\$562, 568, 971
Silver coin.....	106, 573, 803	126, 009, 537	158, 320, 911	186, 037, 365
Legal-tender notes.....	346, 681, 016	346, 681, 016	346, 681, 016	346, 681, 016
National-bank notes.....	323, 791, 674	337, 181, 418	243, 834, 107	360, 344, 250
Totals.....	1, 055, 356, 619	1, 165, 553, 503	1, 302, 718, 726	1, 455, 631, 602

The gold and silver coin as presented in the table includes the gold and silver coin in the Treasury for the redemption of the gold and silver certificates. Most of the gold certificates have been retired, but the Comptroller makes the following statement as to the steady increase of the silver certificates:

The silver certificates in the hands of the people and the banks, at dates corresponding with those given in the preceding tables, were as follows:

January 1, 1879.....	\$413, 360
November 1, 1879.....	1, 604, 370
November 1, 1880.....	19, 780, 240
November 1, 1881.....	58, 838, 770

It will be seen that the amount of these certificates in circulation has increased \$39,058,530 during the past year. Of the \$58,838,770 circulating on November 1, 1881, a large portion are constantly in the hands of the people, being paid out by the banks in preference to gold coin or legal-tender notes.

The total amount of silver dollars coined up to November 1, 1881, was \$100,672,705, of which, as stated in one of the foregoing tables, \$66,576,378 was then in the Treasury, although an amount equal to \$58,838,769 was represented by certificates in the hands of the people and the banks, leaving only \$7,737,609 actually belonging to the Treasury.

Thus it will be seen that in spite of the clamor of the banks against the silver dollar all of that coinage is in circulation either in coin or certificates except \$7,737,609 held by the Treasury. The silver certificate is not a legal tender, but the dollar behind it is.

Mr. Speaker, I plead for a perfectly sound monetary system, in which the paper money shall be readily exchangeable into gold and silver coin. While the interchangeable quality is maintained there is no danger of a redundant circulation. I prefer trusting to the conservative judgment and intelligence of the whole people as represented in Congress notwithstanding the blind and unreasoning spirit of party which sometimes afflicts the country, to determine the amount of currency and on the regulating power of your coin certificates rather than rely on the cool, calculating methods of your masters of finance who contemplate with composure, and in many instances have organized, the financial panics which take from "the mouth of labor the bread it has earned" and make the general loss a source of speculation and profit.

But your national-bank system rests upon the public debt. The final extinguishment of this debt is of the highest moment to this country. The presence of \$145,031,850.20 "available cash" in your Treasury renders economy in your Government out of the question. With an overflowing Treasury and the holders of the public securities seeking to postpone payment, schemes for personal aggrandizement, organized and fraudulent raids upon the Treasury, and public enterprises of questionable expediency, spring up like mushrooms in a too fertile soil, while the corridors of your Capitol are filled with a feverish, jostling, and clamorous multitude intent on public plunder. The lobby becomes an audacious and recognized power, scandalizing and, more than that, corrupting the public service. Such are the natural fruits of an overflowing Treasury. The magnitude of your revenues, even if promptly applied to the public debt, militate against frugal and honest government. In the presence of your enormous revenues the member of House or Senate who counsels moderation in expenditure or resists the countless brilliant schemes of national em-

bellishment is accounted too plebeian of spirit to represent so great a country. Yes, sir, an overflowing Treasury is a constant peril; its presence is fatal to frugal, honest, and republican government, and yet your revenues will be great and your Treasury at least at times overflowing until your public debt is extinguished, and then and not till then this nation can, and I trust in God will, return to the old path of safety. The bonded debt of the Government on the first day of this month was as follows:

Bonds at 3½ per cent.....	\$490,697,050
Bonds at 4½ per cent.....	250,000,000
Bonds at 4 per cent.....	738,854,800
	1,479,551,850
To which should be added the bonds issued for the benefit of the Union Pacific Railroads.....	64,623,512
	1,544,175,362

Of these bonds the \$490,697,050 at 3½ per cent. are now payable at the pleasure of the Government. The banks have on deposit to secure their circulation \$369,608,500 in bonds, and \$241,376,150 of these bonds are 3½ percents, which the Government has a right to pay at any time; and with \$145,031,850.20 available cash in the Treasury, at the present rate of taxation every dollar of this \$241,376,150 of 3½ per cent. bonds now held by the Treasury to secure circulation can be paid, and ought to be paid, within one year from this date, thus extinguishing nearly two-thirds of the bonds on which the bank circulation rests. The money to pay largely more than half of them is lying idle in the Treasury, and yet we are paying the banks 3½ per cent. on their bonds. Now, sir, what is to be the result of all this? The banks say they cannot afford to buy the 4 and 4½ and 6 per cent. bonds on account of the high premium, which now averages more than 20 per cent.

It has been already proposed on this floor that the national banks shall only be required to secure a certain per cent. of their issues by bonds. If this is done, the old robbery of the people by irredeemable and dishonored paper money will begin. And will the people tolerate the spectacle of vast sums of money drawn from their labor by taxation lying idle in the Treasury under the sinking-fund law that the banks may have the benefit of bonds which could be paid; or the other spectacle of the Government paying the banks 3½ per cent. interest on bonds with money lying idle which ought to be applied to their payment and at the same time at the expense of the people, and on faith of the Government, furnishing the banks money to loan to the people at profitable rates of interest? We will see the result; but I am very confident that if you pass this bill and make this national-bank system perpetual, and this bill means that and nothing less, and perhaps nothing more, the issue will not be to the disadvantage of the banks or to the profit of the people.

But, sir, there is an objection to making this national-bank system perpetual much more serious than its control of your currency. I allude to the incidental and yet inevitable power it will exert over your free institutions.

There is no country where corporations exercise as tremendous a power as in our own. It is true that incorporated companies exist in Great Britain and to a limited extent in the nations of continental Europe. There are ninety banks in France, with thirty-seven millions of people; but in all those nations corporations are hedged in and restricted by wholesome laws and are made subordinate to the public good, except where they have been organized for the express purpose of giving strength to monarchical power, and then they have been made subordinate to government even if organized to oppress the people.

But in the United States, both in State and National Governments, gigantic corporations with gigantic powers, in numbers and with resources unexampled in the history of the world, have been organized. Every enterprise involving any considerable amount of capital seeks the shelter of an incorporation. But the great corporations which have in recent years been created by States and the Federal Government, or enlarged by the consolidation of corporate powers granted by several States, like the great interstate railroad systems, have been created with such utter disregard of wholesome limitations, and with such enormous and irresponsible powers, that even now, almost in their infancy, they put your governments, State and Federal, at defiance. You have invested them with powers which belong to the whole people in organized government, the right of eminent domain, on the theory that they were public agents organized for public purposes and for the public good, and to be subject to public control; but armed with perpetual existence and entrenched behind the Dartmouth College case they aspire to an absolute independence of government, both in the courts of justice and in the halls of legislation, seeking to control the very agencies which should restrict their power. The four corporations organized by Congress within the last twenty years to construct railroads between the Mississippi River and the Pacific Ocean are absolutely imperial not only in their franchises but in the vast public domain you have placed under their exclusive control.

Many States which will take their places in our Union of States at an early period are being formed and molded by those corporations, and how are they molding those embryo States? When you hear of farms of fifty thousand acres, and even of one hundred thousand acres, and see a few men become, under these imperial

grants, the owners of millions of acres of fertile land and remember that these grants almost exhaust the agricultural lands of your once magnificent public domain, you begin to see the accursed fruits of monopoly which ripen into princely estates and a land filled with tenants and wretchedness. And yet only twenty years ago it was the pride and glory of our country that its wealth was generally diffused and every citizen was an independent freeholder or a freehold in the soil of his country was within his reach. All this rapidly recedes, and a large portion of the once princely inheritance of the American people, transformed by the deadly glance of monopoly, is threatened with the system which filled for centuries all Europe with a hopeless people, a system which a century of revolutions has only modified and under which the son of the Green Isle, in spite of his high courage and ever-springing hope, still suffers the agony of despair. And these corporations are to mold the systems of policy of the coming States of the American Union! Land monopoly reduced labor in all Europe into servitude for centuries. Is land monopoly and the railroad monopoly, and above all the monopoly of the power to control the currency, likely to be more merciful in America?

It is true that corporate franchises and combined resources were apparently necessary to develop the railroad system, and that development was inevitable, no matter what changes it might produce in the existing relations of men and their industries. Here I admit the apparent argument of necessity; but there is no such argument in behalf of corporations to control your currency. But where government authorizes the organization of a great power it is bound by every obligation that can rest upon a government to regulate that power by proper and wholesome safeguards and limitations and protect the people and their industries from the oppressive and extortionate demands of that power, but I hold that no motive of national progress or pretense of opening up the country could have justified or excused the vast grants of lands made to the Pacific Railroad corporations rendering imperial estates in lands inevitable. In my judgment those imperial grants were an irreparable wrong to the landless people of this and of the coming ages—a crime against humanity itself. And I hold that it was a national crime to permit the extraordinary consolidation of the rail systems and leave the productive industries at their mercy.

The tendency of monopoly is to the ceaseless concentration and consolidation of power. Your vast body of railroads between the Atlantic and the Mississippi and onward, with the four great lines I have named, to the Pacific, are already so combined and consolidated that a number of men so small that you count them on your fingers absolutely control the entire system, and hold at their mercy the fortunes of every industry in the United States. Will this handful of gentlemen who control this vast system be unmindful of the value of judges and legislators? Why talk about the rotten-borough system, once the disgrace of England? Can any man indulge even the hope the power that organizes States, that holds the industries of the country in its grasp, will have no voice in House or Senate? Has power ever been so forbearing as this?

Let us see how monopolies sustain each other. A citizen already the owner of an overgrown estate, the fruits of monopoly, by a simple resolution of his board of directors increases the capital stock of a great railroad and levies increased taxes on the labor of the people to support the increased volume of stock and keep it up to par, and with the proceeds of new stock purchases at par \$40,000,000 of your 4 per cent. bonds. The value of controlling your currency is so great that as the volume of your bonds decrease the premium of your four percents advances to 20 per cent., as it is now, and adds almost at once \$3,000,000 to his wealth. But suppose the New York millionaire, finding your national-bank monopoly made perpetual, prefers to invest his forty millions in your banking system; he deposits them, and the Government becomes responsible until they become payable in 1907 for their safe keeping, and then the Secretary at your expense will pay him over the sum of \$36,000,000; you pay him on his forty millions 4 per cent., he pays you on your \$36,000,000 the pittance of 1 per cent., and that only on that part of the \$36,000,000 he keeps in circulation, and if he should co-operate with other banks to reduce the price of the farmer's produce or the value of stocks, for the purpose of speculation, and calls in his \$36,000,000, he does not even pay that pittance of 1 per cent. while the money lays in his vaults. And so under the auspices of the two great monopolies the "skillful financier," to whom in the eyes of the champions of this bank system it is so much safer to intrust your currency than to the representatives of the people, by the watering of stock, increased exactions for transportation, and through your national-bank system gathers in from the earnings of the people \$76,000,000. And can any mortal tell how many homes were scrimped even in the bare necessities of life, how many men lost hope and sunk into despair while the iron forces of the accursed principle of monopoly were drawing together through countless channels this imperial estate? Is there any other country where the laws open up such opportunities to the skillful and the unscrupulous or give such advantages to wealth?

I have said that even now in their comparative infancy these corporations measure strength with your Government. It was only after a contest of years and after repeated failures the measure was finally carried through Congress to require the combination known as the Union Pacific Railroad Company to provide even a small sink-

ing fund to meet the \$64,623,512 of 6 per cent. bonds you issued for their benefit on which the Government has paid \$37,909,124.94, not a dollar of which has been refunded, and even that funding act is being steadily evaded. The people of all sections of the Union have by countless petitions called upon Congress to pass a law regulating the interstate railroad business, preventing unjust discriminations, and prohibiting extortionate charges; but the railroad lobby has appeared in force and the measure fails. But more than all, the skillful gentlemen who obtained from Congress the imperial grants of land now hold over seventy millions of acres clearly forfeited to the United States by the lapse of the time within which the laws making the grants required their roads to be constructed, and with only an act declaring the forfeiture necessary to restore these fertile lands to the public domain for free homes for the people; but the act cannot be passed, and monopoly still holds those lands in its deadly grasp. The national banks have transformed a vast bonded debt payable in paper money into a debt payable in coin, and then into a debt payable in gold coin, and now asks that a twenty-year charter shall be made perpetual, and Congress hastens to do the work. But why enumerate? When has great power animated by the spirit of insatiable avarice been moderate in its demands?

Thus, sir, we enter upon our second century with this vast body of concentrated wealth, armed with perpetual corporate franchises, to contest supremacy with the people. It was Bacon who said:

In the infancy of states men mold institutions; in their maturity institutions mold men.

Can any patriot indulge the hope that these powerful institutions which the Government now cherishes and refuses even to put under wholesome restraints will not, imperceptibly it may be, but steadily aspire to political power, change the character of our institutions, and mold them into harmony with their own interests? Will not the natural timidity of wealth, especially wealth consolidated, seek new guarantees as well as new powers? With vast facilities for absorbing the fruits of the labor of our people, will not these institutions reproduce on this new theater of human aspirations the deadly evil of the old, splendid estates, an impoverished people?

Scarcely a generation has gone by since, as mentioned to-day by the gentleman from New York, [Mr. HEWITT,] John Quincy Adams, before entering this Capitol as a Representative of the people, entered in his diary these memorable words:

I have sold my stock in the Bank of the United States, lest it might be supposed that my action in the House might be influenced by the ownership of bank property.

Is this illustrious example of the old-time conception of public virtue and honor likely to be imitated in a Government where the citizen is lost sight of and a favored class invested with special privileges and perpetual franchises control the avenues to wealth and sway the councils of the state?

The Roman maxim, "Never despair of the republic," is an inspiring sentiment now as of old, but no friend of our free institutions can fail to apprehend that unless the American people, reanimated by the spirit of their fathers, shall compel a return to the old path of safety, where the common and equal rights of the citizen rose superior to the demands of wealth, in spite of the universality of intelligence, the just, plain, and frugal government which excites the admiration of the world will steadily, as power shall move from the many to the few, fall into decay, and a splendid government supported by "powerful monopolies and aristocratical establishments," will take its place. A splendid government, princely estates, an impoverished people!

Contested Election—Lowe vs. Wheeler.

SPEECH

OF

HON. WILLIAM M. LOWE,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1882,

On the contested-election case from the State of Alabama of Lowe vs. Wheeler.

Mr. LOWE (contestant) said:

Mr. SPEAKER: I am glad that the time has come at last when I may speak for myself, and not only for myself, but for the disfranchised people of my district. I am glad, sir, that I have an opportunity to be heard before a body which is the sole judge of the elections, returns, and qualifications of its members, and which is bound by public interest and private conscience to do justice in the cause.

It is true, sir, that I entered upon this contest with reluctance. More than eighteen months ago I was elected by the people. More than eighteen months ago I was counted out by the inspectors. More than eighteen months ago, upon a minority of votes, the contestee

achieved the certificate; and since then, while I have endured "the law's delay and the insolence of office," he has enjoyed the rights and privileges that are honestly and legally mine. I was reluctant to make the contest, because I fully appreciated from the first its gravity and significance. My life-long Democratic record must vouch for the sincerity of this sentiment. Born and reared in the South, identified with its people in war and peace, I naturally shrank from the invidious attitude of exposing to the House and to the country the faults and follies of any of the public men and methods of that section.

I hated, moreover, to antagonize that dominant minority in our politics which finds its definition in Bourbonism and makes its last intrenchment in the solid South. I hated to arouse that fell spirit which guards its despotism. I hated to invoke upon myself and friends that bitter and proscriptive feeling of personal and political hostility which characterizes its savage warfare. And aside, sir, from these considerations, I was still more disinclined to make this exposure, however necessary and unavoidable, because I feared that in other sections the unwise or the uncharitable might misunderstand or misuse it to prejudice the business interests and material prosperity of the South. I feared that foreign capital and skilled labor, beholding merely these evils from a distance, and not appreciating the meritorious character of the struggle against them, might turn away for a time the tide of immigration and adventure to other and less favored localities.

But I remembered, sir, that there can be no genuine prosperity in the South without order and peace, no stability in society without law and justice, and nothing worth having in government without honest and pure elections. I remembered that I owed a duty in that behalf to my friends and to myself to speak the truth and the whole truth. I remembered that I was under great obligations to the generous and good people of my district and of my State. Indeed, I felt that in spite of the clouds and darkness that for twenty years have obscured to a great degree the relations between the South and other sections, that nevertheless we are all citizens of the United States, living for better or for worse in a common country, and making a common struggle for free government under a common constitution. I felt, sir, that I was engaged in a fight for a free vote and a fair count, and that whenever an issue of this fundamental nature is involved it was not a local fight and could not and should not be determined by local or personal considerations.

I feel, therefore, that it is my duty, however disagreeable and difficult, I hold it my privilege, however exacting and ungracious, to expose, and by exposure to defeat, if possible, the men and methods which have overthrown or which threaten to overthrow throughout the South the most sacred franchises and muniments of the Constitution. I am sure, sir, that this is not my cause alone. It is the cause of the people of my district, the cause of the State of Alabama, the cause of the South, the cause, indeed, of the whole country. I shall therefore lay before the House frankly and fully my real sentiments and feelings in this contest, and if, in the course of my remarks, it becomes necessary for me to reflect upon the motives as well as the conduct of the Bourbon party in my district; if I, having nothing to conceal, shall feel called upon to expose their frauds and outrages to the whole world, I trust that whatever temporary injury or discredit may thereby result to the political or material interest of my section will not be set down to myself and friends, but will be righteously visited upon the men whose lawless conduct led to this contest and made this exposure necessary.

In my notice of contest, Mr. Speaker, I made certain definite and distinct charges of fraud and irregularities in the election, and I stand here to-day backed by the whole testimony to vindicate these charges. Indeed, the report of the committee verifies, in law and in fact, every substantial and necessary part of them. In speaking, therefore, to the resolution before the House, I shall not go behind the report into the details of the evidence. I shall direct myself mainly to certain general observations upon the whole matter, both before and since the contest. I shall frankly present it to the House as it presents itself to my judgment and conscience. And, in order that I may not be misunderstood, I repeat the original charges in my notice of contest, that the contestee and his partisans were engaged during the canvass in an overt conspiracy against a free vote and a fair count, and that they now appear here solely in that behalf, and in proof thereof I beg the House to follow me in the application of the following tests:

By the constitution and laws of Alabama.

By the statutes of the United States.

By political considerations.

By reason and common sense.

The constitution of Alabama, I take pride in saying, is the freest, the most democratic on the subject of suffrage of any State in the Union. It provides that all popular elections shall be by ballot; that no educational or property test for suffrage or office shall ever be imposed; and that the Legislature shall protect the ballot by adequate penalties, &c. What is a ballot in the meaning of the Constitution? It has the same meaning in law as in the common acceptance of the people. It is a piece of paper or other suitable material with the name of the person or persons voted for written or printed thereon together with the office for which each person so named is intended to be chosen. (Cooley's Constitutional Limitations, 760.)

The evidence shows that in the election last November when the polls closed 13,456 ballots had been duly cast for me for Congress, against 12,609 ballots for the contestee for the same office. The evidence further shows that after these ballots had been duly deposited for me by qualified voters, in the ballot-boxes provided by law, a large number of them—over 500—were rejected and thrown out by the inspectors "after the polls were closed and the election over." The evidence further shows that this rejection of my ballots was deliberately done in compliance with instructions from a secret circular—"Exhibit B"—addressed to partisans of the contestee at various points in the district, with the words, "To be shown only to very discreet friends," written with pen and ink on the back thereof, and signed by the chairman and secretary of the Democratic district committee, of which the following is a copy:

DEAR SIR: As soon as the polls are closed, inform the inspectors of the election that the Lowe tickets with Hancock electors on them are illegal. They contain the figures 1st, 2d, &c., designating the district. These are marks or figures which are prohibited by the election laws; see acts 1878-9, page 72; and all such tickets should be rejected when the votes are counted, after the polls are closed.

To be shown only to very discreet friends.

The evidence further shows that these rejected ballots, as part of the election, were never returned by the inspectors to their respective county seats, nor computed by the county officers in their returns to the secretary of state, nor regarded by the secretary of state in his certificate to the contestee in this case. It is these rejected ballots, sir, with the remarkable circumstances attending their rejection, that I am now asking the House to consider and pass upon.

(Form of rejected ballot.)

FOR ELECTORS FOR PRESIDENT AND VICE-PRESIDENT:

STATE AT LARGE.

JAMES M. PICKENS.

OLIVER S. BEERS.

DISTRICT ELECTORS.

1st District—C. C. McCALL.

2d District—J. B. TOWNSEND.

3d District—A. B. GRIFFIN.

4th District—HILLIARD M. JUDGE.

5th District—THEODORE NUNN.

6th District—J. B. SHIELDS.

7th District—H. R. MCCOY.

8th District—JAMES H. COWAN.

FOR CONGRESS—EIGHTH DISTRICT.

WILLIAM M. LOWE.

In my notice of contest I held that the construction put upon the statute by the contestee was an affront to law and common sense. The rejected ballots contain no "marks, figures, rulings, characters, or embellishments," which render them obnoxious in any just and proper sense to the laws of Alabama. They represent no distinguishing feature or device by which the secrecy of the ballot, the avowed object of the statute, was or could have been violated. If the law is really such as is set forth by the contestee in the "yellow circular," it could not be executed. It would be impracticable. It would defeat itself. It would prevent rather than facilitate elections by ballot. The contestee's own ballots, 126, voted at the Huntsville box, in words and figures, to wit: "For Representative in Forty-seventh Congress of the United States, eighth Congressional district, Joseph Wheeler," would be technically illegal and have to be rejected. It would be hard indeed, sir, to frame a strictly legal ballot, a ballot against which no flimsy or fraudulent objection could be raised. If "figures" mean numerals, if "characters" mean letters, if "marks" mean punctuation marks, if "rulings" mean printers' rules, if "embellishments" mean the art of penmanship or the graces of job-work, it would be difficult if not impossible, to write or print a ballot which would not technically offend against the letter of the statute. But, sir, this is not the proper construction of the law. It is the construction of school-boys and school-books, not of lawyers and courts. Never could it be said with more truth and emphasis than of such a construction that "the letter killeth but the spirit maketh alive."

Provisions of constitutions are often so plain and simple as to execute themselves. They may be said to be self-executing when they supply a sufficient rule by which the right given may be reasonably

understood and enjoyed. What is the right given? To vote by ballot. Does it need any act of the Legislature to enable an elector to vote by ballot? No. The people of Alabama voted by ballot for sixty years without any such act. Would not an act of the Legislature providing a different manner of voting be unconstitutional and void? Is there any need of legislation to define the meaning of ballot? Is it not a word of common use and meaning? Can the Legislature change its character or its popular significance? No, sir; the right to vote and the right to vote by ballot and the right to have both rights protected by law are provisions in the Alabama constitution so plain and simple as to be self-executing by their own unaided and intrinsic force.

But, sir, the law does not prohibit ballots from being so printed that illiterate persons shall be able, from figures, signs, or characters on the face of the ballot to distinguish the tickets of one party from another. The constitution of Alabama prohibits an educational test for suffrage, and the statute cannot do by indirection what is directly prohibited by the constitution. The statute nowhere uses the terms "distinguishing features or devices," showing that it was not directed against those things inside of the ballot which enable the ignorant or unlearned to know what persons or which party they are voting for, but only against such things on the outside of the ballot as might enable persons to ascertain the character and contents of the ballot after it is folded. Any other construction would establish in the statute an educational test for suffrage in the teeth of the constitution.

If, however, under certain circumstances, special legislation may be desirable to provide convenient remedies for the protection and enjoyment of the right of suffrage; if statutory enactments are needed in some cases to secure or regulate its exercise so that its exact nature may be understood, all such legislation must be essentially protective in character and subordinate to the constitution. It must be in furtherance of constitutional provisions, and must not seek in any way, directly or indirectly, to narrow or embarrass them. There can be no honest rule to fit "the flexible adaptability" of election laws to the exigencies of a party. In election cases, sir, to be in doubt as to receiving a ballot is to be resolved in its favor. While laws in derogation of common right must be strictly construed, laws in favor of common right must be liberally construed, especially when common right is the right of the whole people in a popular election. The Alabama constitution will override and nullify any legislation which limits, restricts, impairs, or denies the right of suffrage.

The supreme court of Alabama (2 Stewart, 239) declares that no department of the government, nor all of them combined, have the power to divest an individual of his constitutional right of suffrage. Regulations in regard to the ballot must not have for their object, directly or indirectly, to abridge the constitutional right to vote, or unnecessarily to impede or restrain its exercise. If they do they must be held void. Now, sir, I submit that the acts of 1878-79, in regard to the style of the ballot, construed as they are by the contestee to be mandatory and not directory merely, are unconstitutional and void, because they tend to limit, restrict, and embarrass the right of suffrage by ballot. They say, first, that you shall not vote by ballot unless the ballot is written or printed on a certain kind of paper; second, it must have a certain shape and size; third, it must have no marks, characters, figures, &c., thereon.

These are things over which the voter generally has no control. But under the constitution if I print or write my own ballot, I can print or write it on any kind of paper of any reasonable size or shape. I can write or print it on white or colored paper, on letter paper or printer's paper, on ruled or unruled paper. I can place the name of the party I intend to vote with at the head of my ticket. These are my constitutional privileges, and as far as they are denied by the statute the statute is void. My ballot, under the constitution, could not be rejected because it is too short or too long, too narrow or too wide; but under the statute, as construed by partisan inspectors, I must go to the polls with a rule and a glass to take the dimensions and scrutinize the character of my ballot or run the risk of its rejection. All these statutory provisions limit and restrict the right of suffrage; they depart from the definition of the constitution and seek to override the franchise conferred by it. The question recurs which shall control, the constitution or the statute.

THE LAWS OF ALABAMA.

I have said, Mr. Speaker, that the constitution of Alabama in regard to suffrage is perhaps the freest in the Union, and I may add that the laws of Alabama, as construed by the contestee, are perhaps the most proscriptive. The laws to which I refer as not in accord with the constitution are the recent amendments to the old election laws of the State. In 1875, at the time of the adoption of the present constitution, the election laws of Alabama were the same laws that had been of force in the State for sixty years. They were the simple and easy provisions under which our fathers held honest and fair elections. The Democratic party of Alabama, having defeated the Republicans, were then in almost undisputed power throughout the whole State; and these were the very laws under which they had regained power. What was the necessity of amending them? What was the use of changing laws that had existed in the State from 1819; that had been tested by experience; that the people had grown

accustomed and attached to? Why were these particular amendments intruded upon us at this particular time? Was it to enforce the solidity of the South? The South was already solid. Was it the Army at the polls? There was not a soldier in the State.

The President had withdrawn the troops from the whole South and sent them two thousand miles away to our distant Indian frontier. Sir, he had done more. He had come among us in person and publicly disavowed the right to use troops at the polls, except under the constitutional call of the States themselves. Representing the North in his personal relations and the whole country in his official character, he had broken our bread and eaten our salt. The issues between the sections and the races were settled in peace. We sat down together as friends in the gateways of the South—"as the days wherein we rested from our enemies." There was no fear, sir, of the Army at the polls. Was it fear of the so-called carpet-baggers? They had left the State never to return; or they had gone into business, building railways or factories or furnaces, or they had sought sanctuary in the Democratic party. As an organization they were politically as dead as the years before the flood. Every Southern community was in the full enjoyment of the absolute right of local self-government under recent constitutions framed by the white people themselves.

What, then, was the matter with Alabama? Was it outside interference? Was it government control? No, Mr. Speaker, nothing of the sort. It was an era of good feeling. The whole administration in Alabama in every department was Democratic and had been so for more than four years. Sir, what hidden motive, then, prompted this legislation? What secret purpose instigated these amendments? Did the people ask for them? No. The people were satisfied with the laws as they existed. Did the press ask for them? No. The press was either silent or hostile to these changes. Indeed, sir, while I will not say that the matter was kept hidden from the people, I do say that no member of the Legislature that made these amendments was elected upon such issue, and certainly no member could have been elected in North Alabama had he avowed such a purpose in advance. I think I know the secret design that instigated these amendments. In 1878-79, while the Republicans had no organization and no ticket in Alabama, there was a general and growing feeling among Democrats of dissatisfaction with the administration of the State government.

This was especially true in the white regions of North Alabama. The men of the mountains showed signs of independence. They chafed under the party harness, and in many cases broke away from the petty restraint of party discipline. They voted for one independent candidate for Congress from North Alabama and sympathized with others in South Alabama. They had been denounced as usual, in the press and on the stump, but without effect. They could not be intimidated or silenced or driven back into the traces. Something must be done or the Bourbon faction might lose office and perhaps be brought to justice. Every old fossil, every broken down political hack in the State, mounted the hustings to shout himself hoarse with the last resort of Bourbonism. The hysterical cries of radical and scalawag rang over the State. They filled the air with denunciations of "renegades and deserters;" but, sir, these heretofore omnipotent methods no longer produced the customary and desired effect. The masses in North Alabama were evidently in sympathy with the Independents. The old guard Democracy fraternized with the anti-Bourbon Greenbackers.

The people were with the movement. They could not be out-voted, they must therefore be out-counted. The next election must be held under conditions that insured success. For this purpose the old election laws of our honest fathers must be abolished and a new system (a cross between the Mississippi and South Carolina plans) must be substituted. The elections must be held after the polls are closed and the result determined, not by the voters, but by the inspectors. Independent opposition must be punished by suppression under the election laws. There must be no new party organized in the State under any name or for any purpose. There must be but one party in Alabama and all contests must be decided inside of its organization. There must be no mutiny against the party and no appeal to the people; and whoever refused to submit to this despotism must be denounced as a renegade in the canvass and counted out as a public enemy at the election.

The Juggernaut of the party must be supreme. The result must be attained, not by force, but by fraud; not by ballots, but by trickery, and through election laws framed in that behalf. Sir, the chief element in this conspiracy against the constitution of the State and the right of the people was the election law itself. The popular will was in this way to be legally and peacefully suppressed by the minority in power.

It is said, sir, that these laws were made with special reference to the black belt by the enterprising politicians of that section, as a labor-saving machine in politics, to guarantee results regardless of the proverbial uncertainty of elections. However this may be, sir, I doubt if their provisions have ever been enforced in South Alabama with that excellence and refinement of fraud which characterizes their enforcement with us. The Bourbons of North Alabama are not reputed to be sticklers for laws, but when a statute is framed for fraud they are sufficiently law-abiding to wish it executed in that spirit.

What, sir, are these laws, and what do they provide? They provide that the ballot, as I have said, shall be printed on plain white paper

of a certain length and breadth, without marks, figures, &c. This provision, if mandatory, as claimed by the contestee, makes all the ballots identical in color, size, design, &c., throughout the State. It establishes in the teeth of the constitution an educational test for suffrage. If it does not disfranchise the illiterate it hinders or prevents him from knowing his party ballot at the polls, and of course from swearing to it in the courts. If he cannot read it he is denied all other means of identification. It operates against the weaker and dependent classes; it works of necessity against those conditions in politics which the so-called "secret circular" (Exhibit D) was directed against. It not only fails to protect the right of suffrage but it facilitates the crime of ballot-box stuffing by swift and easy methods without danger of detection. And where all the inspectors are of the same party, which is often the case, requiring neither skill nor experience, how is the constitutional right of suffrage protected by this provision?

They declare, for the first time in the history of the State, that ballots shall not be numbered. This provision alone would leave the right of suffrage open to almost every fraud without protection. No means are provided to separate the legal from the illegal ballots; no means by which any specific vote can be traced to any specific voter; no means to purge the ballot-box, and therefore no means under any State process by which an election, however fraudulent, can be contested or revised in the courts. How is the constitutional right of suffrage protected by this provision?

They provide that if two or more ballots are found rolled up or folded together so as to induce the belief that the same was done with a fraudulent intent, they must be rejected, otherwise they must be counted. The intent of the voter is here made the sole question, and the inspectors are clothed with judicial power to pass upon it. The intent of course, whether fraudulent or otherwise, is a question purely of fact. But the inspectors, sir, have no means of investigating the fact. They are not allowed to know the voter casting the ballot or to delay the election to receive evidence of his intent. How is the constitutional right of suffrage protected by this provision? The inspectors must blindly count in or blindly "count out" (for this is the mixture of bad grammar and bad faith in the statute) all such ballots thus found rolled up or folded together; (the provision looking to the "count out" of votes refers of course to the opposition.) What an opportunity for party service from partisan inspectors or other ready and willing agents, and how shamefully it has been utilized in our recent elections!

If a majority of the inspectors are of the same party they may reject the votes of the other party while they count their own; and if the inspectors are all of one party no witness from the other party under this law need ever know it, no eye see it, no tongue disclose it. The criminal act is done in the secrecy of the room where the ballots are canvassed; the press maintains a judicious silence, and the party in the courts and in Congress is relieved from the embarrassment of disclosure and the necessity of defense. This provision may help the minority in a strait, but how does it tend to protect the constitutional right of suffrage?

These enactments, to be appreciated, must be looked at, not abstractly or separately, but in the concrete, and in the light of the election itself. The Alabama code provides that the inspectors shall be taken, "if practicable," from "opposing political parties." In many instances this provision was held impracticable by the Bourbon appointing power. In State elections it is often openly violated and in Federal elections it is evaded or ignored. At the last November election, at eight or nine precincts in Madison County, the largest and wealthiest county in North Alabama, all the inspectors were Bourbons of a pronounced type, no Republicans or Greenbackers or Independent of any sort being allowed to serve in that capacity. I do not feel the necessity—I have neither the time nor inclination—to enter into the details of the lawlessness and bad faith of these transactions.

But I refer the House to one notorious instance in the evidence as indicative of the whole. In the cultivated and conservative city of Huntsville, where I reside, where indeed I was born and reared, I was refused all representation at the election. All the inspectors, all the clerks, every State officer at the ballot-box was an out-and-out Bourbon, although a large majority of the good citizens of that community are politically opposed to that faction. It is true, sir, that an illiterate negro (a favorite device of the Bourbons) was originally appointed, in mockery of the Republican party, but he, feeling incompetent to discharge the duties of inspector, being unable to read or write, declined to serve. And the other inspectors, having orders to that effect, immediately filled the vacancy with a so-called "good Democrat." This was systematically done in pursuance of the following Democratic circular:

IMPORTANT.

You are specially designated as a person whose influence and ability can accomplish much in the election.

Second. You are earnestly requested to be at the polls before the voting commences, and if any inspectors or managers of election are absent see that a good Democrat takes his place. This is very important.

By order of the Congressional committee.

A. J. SYKES, Chairman.
E. H. FOSTER, Secretary.

These orders, being imperative as well as "important," were observed in many cases with slavish fidelity. I went, sir, in this instance in person to the inspectors. I demanded representation for myself and for my party. I quoted the familiar statute and insisted upon a compliance with its well-known terms. I appealed to law and justice. The appeal was, of course, in vain. The chairman of the Republican committee in like manner and under like circumstances made a similar demand for his party, and he also was denied. The indignity was consummated; another Bourbon was appointed to fill the vacancy and make the outrage unanimous. At this precinct, sir, the inspectors, although sworn to do me equal justice, distinguished themselves by counting out 68 alleged illegal votes for me while counting in 125 similar tickets for the contestee. The difference was, that one set of tickets had "numerals" on the side, and the other on the tail of the tickets. The inspectors are gentlemen of high standing in the party; but they evidently entertained two opinions about these ballots. They held them to be both legal and illegal—legal for Bourbons but illegal for Greenbackers. "Figures" were absolutely fair in the one case, but foul, most foul, in the other. I would fear, sir, to mention the fact were it not confessed, lest I might

Stifle in my own report
And smell of calumny.

The evidence shows that at Lanier's box all the State officers were well-known Bourbons, and that the ballot-box in the absence of opposition inspectors was duly stuffed in the interest of the contestee. The evidence shows the fact to a moral if not to a legal certainty. The testimony of Hertzler, McDonnell, R. H. Lowe, McDaniel, Toney, Lanier, and others ought, *a priori*, to satisfy any honest doubt on the subject; but, *a fortiori*, while the inspectors return only 57 votes for me, 128 of the voters themselves voluntarily swear that they cast their ballots with my name upon them. The same thing is disclosed at Meridianville. All the officers were Bourbons; I had no friends among them; and the ballot-box was stuffed, of course, by the partisans of the contestee.

The evidence shows how these things were done, and systematically done, by the partisans of the contestee. They called on the United States marshal for deputies at the election, and then denounced him as a usurper for granting their request, and issued a formal proclamation "warning" the people against his authority. They refused in many instances to appoint Republican or Greenback inspectors, but they petitioned the Federal judge far in advance of either party for United States supervisors for themselves, while both before and after their appointment they railed out in the name of State rights against all Federal election officers as the enemies and oppressors of the people. They falsified incessantly in every way from the beginning to the end of the canvass, while they held themselves out to the people as the only friends of decency and truth. They mutilated or stole away the registration lists, and then charged a failure to register upon the opposition. They avowed their devotion to an honest election and a fair count while forging every kind of false and deceptive ballot.

One of their inspectors, a carpenter by trade, brought his tape-line to the polls to measure my ballots while counting them; and another, being a merchant, utilized his yard-stick for the minimum discovery, after the election, of a score or more of my ballots, which he triumphantly declared were from one-sixteenth to one-sixty-fourth of an inch too long or too short. We have all heard of war to the knife, and knife to the hilt, but we now learn of war to the yard-stick and tape-line, and in every instance it is Bourbon war under Bourbon legislation against ballots of the opposite party. Indeed, sir, they were industrious to invent and employ every cunning artifice and secret trick in the election, while busying themselves to conceal their methods, not from us only but from the more scrupulous men in their own ranks. And finally, when some of them are brought to the bar to answer for their offenses, they find many new ways of defeating justice. Whether as witness, party, or juror, they know how to avoid perjury by what we may designate as a "detour of intention," a compromise with conscience, a mental reservation against the constitutionality of the law or the jurisdiction of the court.

These offenses, sir, are more notorious and worse in fact in Madison County than in any part of North Alabama. They began with the election frauds last August and continued through the November elections. They filled the public mind with a cloud of suspicion and distrust. In many instances, I repeat, the inspectors being all of one party, it is a close and secret corporation. Long after the elections are over, no man knows who has been elected or counted in except the inspectors and their coconspirators. The mass of the people, white and black, go to the polls, cast their votes, and return to their homes moody and discontented with the result, without confidence in the officers of the law or respect for the law itself.

That, sir, is the lamentable state of public sentiment in my district to-day. It grows partly out of the notorious fact shown in the record of this case, that the law is violated in the appointment of inspectors; which fact produces a general, almost universal, apprehension of more or less fraud and trickery in our elections. You have seen that at some of the boxes they "counted out" ballots for me that had figures on them, and "counted in" ballots for the contestee that were subject to the same objection. The same men did the counting in and counting out. There was no conceivable pretext

for their conduct, then or now, except a party pretext. In almost every instance the men who did it were Bourbons of the highest character and standing in church and state. Sir, it is useless to palliate or disguise these crimes. It is too late to deny them. Suffrage-stealing is office-stealing, and office-stealing, in its very nature, is revolutionary and treasonable.

But it is said, Mr. Speaker, that these laws were intended to secure the secrecy of the ballot; to prevent the exposure of the will and consequent danger to the freedom of the voter. How is this? The ballots have never before been technically or specifically defined in Alabama. They have always been numbered for over sixty years, since we were in a territorial condition. During all that time they have been subject without objection to all the chances of exposure. But now it suddenly occurs to a Bourbon caucus in Montgomery that the ballot is threatened with danger and needs to be made secret—secret in law, secret in fact, secret when folded by the voter, secret when handed to the inspectors, secret when counted, secret when canvassed. Secret, sir, first and last, from the secret vote at the polls to the secret count-out at the court-house. The bold Kunklux has given place to the stealthy ticket-thief, and the disguise is taken from the horse and rider and put upon the ballot.

It is true, sir, that the secrecy of the ballot, if that alone was the object of the law, could have been and was secured as well under the old laws, when the ballots were numbered, as under the new laws, when the numbering was prohibited. Nobody in Alabama, sir, desired the ballot to be otherwise than secret. It needed especially to be secret from the outside inspection and inside manipulation of Bourbon officials. But there was no need for these amendments to secure that result. If under the old law an election officer revealed a vote at an election he was guilty of a misdemeanor and subject to fine and imprisonment. He was sworn not to compare the ballots with the poll list. Every man could fold his ballot with impunity, and no man without his consent could be made to disclose its contents even in a judicial proceeding. What, then, becomes of this pretext? Is it not a mockery of the truth; a thin disguise to cover up an open outrage? Sir, it was not to secure the secrecy of the ballot but the secrecy of the fraud; the secrecy of the means by which the ballot was to be rejected.

The amendment to section 276 of the code, acts 1878-79, provides that "one of the inspectors must receive the ballot folded from the voter and the same must be passed to each of the inspectors, and then, without being opened or examined, must be deposited in the proper ballot-box." This provision is subject perhaps to two constructions: it either gives opportunity to each inspector to change the ballot and substitute another in its place, or it means that each inspector shall have an opportunity to pass upon the legality of the ballot before it is put into the box. If it means an opportunity for fraud, no honest court will execute it. But every court must presume the fair intention of the Legislature and give the act a reasonable interpretation. With such fair presumption and such reasonable interpretation, Congress must come to but one conclusion, that the Legislature merely intended to have each inspector to pass upon the ballot before it is put into the box; and after it is thus passed upon and put into the box, it cannot be recalled, it cannot be rejected, it must be counted as cast. This view is in accordance with the constitution; it tends to protect the ballot and to preserve the rights of the people.

If we now take the next amendment on the count-out it makes our position perfectly plain—"An act to amend section 286 of the code. In counting out, the returning officer or any one of the inspectors must take the ballots one by one from the box in which they have been deposited, at the same time reading aloud the names of the persons written or printed thereon and the office for which such persons were voted for. They must separately keep a calculation of the number of votes each person receives." &c. What is the authority conferred by this statute? Is it to count the ballots, keep a list of the votes each person receives, and reject the ballots which are found rolled up or folded together so as to induce the belief of fraud? The statute is plain that all the ballots must be taken from the box and counted, except such as are rolled up or folded together. Where do the inspectors get authority from this law to count or reject ballots after the polls are closed? They have only the power conferred by the statute. They must follow its language and obey its mandates. The language is, "the inspectors must take the ballots one by one from the box, at the same time reading aloud the names of the persons written or printed thereon. They must separately keep a calculation of the votes each person receives."

Now, sir, when a ballot is taken from the box, what right have the inspectors to fail or refuse to read aloud the names of the persons written or printed thereon? Are they to obey the law or the so-called yellow circular? What right have the inspectors to reject or count out a ballot from the calculation which the law requires them to keep? Are they sworn to observe the law, or are they bound to follow the dictation of the chairman and secretary of a partisan executive committee? Sir, nowhere in any law, nowhere in any decision of the courts, nowhere except in the "yellow circular" itself, can authority be found for the inspectors to "count out" votes "after the polls are closed and the election over." Construing the statute on style and the statute on the count, according to the liberal construction given in such cases by the courts, we are forced to the conclusion that illegal ballots, unless made illegal by being rolled up or

folded together, must be refused before they are placed in the box, and not, except in the case above stated, rejected afterward. The figures, marks, rulings, characters, &c., on the ballot must be such as would enable the inspector to distinguish and reject the ballot before it goes into the box.

To show, sir, that the so-called "yellow circular" issued by the chairman and secretary of the Bourbon executive committee did not rightly construe the statute when it instructed the inspectors to reject the "Lowe ballots with Hancock electors" as illegal "when the votes are counted and the polls are closed," I beg leave to submit the following amendment, passed by the Alabama Legislature since the rejection of my ballots, as above stated, in the last November election. The following is a copy:

[H. B. 208.]

An Act to amend an act to amend section 274 of code.

SECTION 1. *Be it enacted by the General Assembly of Alabama, That section 1 of an act to amend section 274 of the code of Alabama, approved February 12, 1879, be, and the same is hereby, amended, so as to read as follows:*

SEC. 265. The ballot must be a plain piece of white paper, without any figures, marks, rulings, characters, or embellishments thereon, not less than two and one-half inches nor more than three inches in width, and not less than five nor more than ten inches in length, on which must be written or printed, or partly written and partly printed, only the names of the persons for whom the elector intends to vote, and must designate the office for which each person so named is intended by him to be chosen; and any ballot otherwise than described is illegal, and must be rejected. *Provided*, That no ballot shall be rejected as illegal by reason of the abbreviation of the names of the persons voted for, nor by the use of numerals as abbreviations, nor by reasons of the erasure of one or more names, and the insertion of other names, if what is meant by ballot appear from its face, nor shall any ballot be rejected as illegal by reason of its non-conformity to the prescribed dimensions if it reasonably appear that the elector had no intent to violate the statute.

Approved March 1, 1881.

This amendment, passed immediately after the election in which these notorious abuses had occurred, and with a view doubtless to their correction, may be taken as in the nature of a legislative construction of the statute. It was no doubt so intended by the Legislature. It declares in so many words that "no ballot shall be rejected as illegal by reason of the abbreviation of the names of the persons voted for, nor by the use of numerals as abbreviations," &c. The qualifying phrases that "if what is meant by the ballot appear from its face," and "if it reasonably appear that the elector had no intent to violate the statute," are most timely and significant. They tend to show that the Alabama Legislature has not altogether abandoned the old idea that the ballot was made for the voter and not the voter for the ballot; that however irregular in form and technically illegal in fact any specific ballot may be, yet if it is honestly cast by a duly-qualified voter and is reasonably clear and intelligible it ought not to be rejected; that the victory or defeat of a person or of a party by such means is not to be compared to the calamity involved in the denial to any considerable part of the community of the free and fair enjoyment of the right of suffrage.

UNITED STATES STATUTES.

And this brings me, sir, to the consideration of the broad and liberal statutes of the United States. They provide (section 2012, 2d edition, 1878) that at every election of Representative in Congress the United States circuit judge living in the judicial circuit embracing the Congressional district shall appoint for each voting place in the district two supervisors of elections, "who shall be of different political parties and able to read and write the English language." These supervisors are authorized to attend at all times and places fixed for registering voters and holding elections, to challenge any vote when they see fit and to be present wherever the ballot-boxes are kept from the opening of the polls until every vote has been cast, and to personally inspect and scrutinize the manner in which the voting is done and the method in which the poll books, check books, registry, and tallies are kept under Federal and State laws.

At the November election in my district the circuit judge, (Hon. William B. Woods,) by virtue of the authority conferred in this section, appointed these supervisors, and in every instance a well-known Democrat of the highest standing was named as one of the supervisors; and where from any cause a vacancy occurred it was filled by the appointment of another member of the same party to which it had been originally assigned. The evil example of the contestee and his partisans as to State inspectors was not retaliated upon them as to supervisors; on the contrary, when a Democratic vacancy was reported it was never filled by appointing a Republican or a National in his place, but always filled with a Democrat. Everything in the election done in the name or by authority of the United States was fairly and impartially done, according to the true intent and meaning of the statute.

Sir, I dwell on this fact because there has been an attempt in certain quarters to create distrust and prejudice against these officials, and because the greatest abuses and corruptions in our local elections have arisen out of the fraudulent appointment of local election officers, and because there was not wanting a spirit of resentment among my own friends to suggest some retaliation in kind upon the guilty Bourbons of my district. It was a natural and humane spirit, but I am glad to say it did not control in any respect whatever; on the contrary, it was promptly and emphatically repressed. Under the provisions, sir, requiring the supervisors to be of "different political

parties," it would have been a technical compliance with the statute if a Republican and National, being of "different political parties," had been appointed in every instance, and if, therefore, in every instance a Democrat had been purposely omitted. But inasmuch as the Republicans had no candidate for Congress in that election and were acting with the Nationals, it would not have been a compliance with the intent of the statute. It would have sacrificed the spirit to the letter of the law. It would have been to follow in this respect the bad example of Bourbonism; to keep the statute to the ear perhaps and break it to the hope; to degrade the high character of the Federal judiciary to the low standard of partisan courts and inspectors, set up by the contestee and his friends. In a word it would have been to turn an agency of the law, wisely intended for fairness and impartiality in elections, into an instrument of injustice and wrong. But I am glad to repeat, sir, that neither the evil example set by the Bourbons nor the spirit of retaliation evinced by some of my friends could move any of the Federal officials from their duty. In every instance the supervisors were fairly appointed not only from "different parties" under the Federal law but from "opposing political parties" under the State statute; and in every instance, so far as the evidence shows, they exercised their great powers in an impartial and judicious manner and always in favor of a fair election and an honest count.

The supervisors in the exercise of their powers have duly made their returns according to the statute, and copies of these returns are in the evidence before us. They set forth in full and without doubt the whole number and character of the rejected ballots and the reasons alleged at the time for their rejection. In every instance when they were allowed to do so they have preserved the identical ballots, and in some instances made them exhibits in their returns, and the evidence shows that in some instances the House is indebted to these supervisors not only for preserving these ballots but for preserving the proof that any ballots whatever were rejected. We have these ballots, sir, now in evidence before the House. What were they brought here for? Why was all this machinery of elections, this parade of supervisors, chief supervisors, marshals, and deputy marshals put in the statutes and employed by the Government? Why was this contest authorized in regard to these ballots? Why was this evidence allowed, indeed required, to be taken, if not to prevent their suppression, to keep them as evidence that they might form a part at least of the basis of your judgment?

I will not pause, Mr. Speaker, to discuss the constitutionality of these provisions. In that matter I can safely trust the lawyers of the House, if not indeed every member of it. The Constitution, article 1, section 4, declares that the Congress may "make or alter" State regulations in regard to the times, places, and manner of holding Congressional elections. The Revised Statutes, sections 25 and 27, provide for the time and manner of holding these elections in every State. The time shall be the Tuesday after the first Monday in November biennially. The manner shall be by written or printed ballots. And Congress as well as the Supreme Court have always held that these provisions are fully within the grant of power. The statute provides that I am entitled to every ballot cast for me "whatever may be the indorsement thereon." Every power given to Congress is supreme; State legislation to the contrary is void. Any construction of the State law that produces a conflict should if possible be avoided, but when conflict exists, the State law to that extent is invalid. Congress requires only a written or printed ballot.

If the Alabama Legislature has required more, such requirement is altered by Congress, for Congress declares that every "written or printed ballot must be received, canvassed, and counted." The statutes on this subject are construed, of course, *in pari materia*. In section 2018 we read that the supervisors shall "personally count and canvass each ballot;" and section 27, defining the kinds of ballots to be counted and canvassed, says merely that they must be "written or printed ballots." If the Alabama statute means to say that a Congressional ballot is illegal because it contains figures or numerals on its face, it conflicts with the letter or spirit of the Federal statute, which provides that each candidate "shall have the benefit of every vote for him cast, * * * whatever may be the indorsement thereon." If the local statute is to prevail over the laws of the United States the constitutional provision is reversed; it is Congress that provides regulations for the election of its members, and it is the State Legislature that can alter them.

What, then, sir, if we must vote by ballot—what are these rejected tickets? They are plain, intelligible votes; they reveal the will; they express on their face the purpose of the elector. They are ballots in the meaning of the public jurists and the common people. Sir, are they not ballots in the meaning of the statutes of the United States? There is one plain and universal rule of judicial construction, that when a statute uses a word which has a fixed and definite meaning among the people, it will be held that the Legislature uses the word in its popular significance. Chief-Justice Marshall, rendering the opinion of the court in the celebrated case of *Gibbons vs. Ogden*, declares that the Constitution being one of enumeration and not of definition, it is necessary to settle the meaning of words used in order to ascertain the extent of powers conferred. In law as in common sense, a ballot is a piece of paper with the name of the person and office to be voted for written or printed thereon. If, there-

fore, it is my duty to vote by ballot, it is surely my correlative right to have that ballot received and counted.

The provisions of the national election law which I have quoted were examined by the Supreme Court of the United States, in *Ex parte Siebold*, 10 Otto, 100 United States, 371. The counsel for Siebold did not deny that Congress could assume the entire regulation of the election of Representatives; but they contended that it had no constitutional power to make partial regulations intended to be carried out in conjunction with the regulations made by the States. In holding that these laws were constitutional, the court said, at page 383, "It seems to us that the natural sense of these words is the contrary of that assumed by the counsel for the petitioners." After first authorizing the States to prescribe the regulations it is added, "the Congress may at any time by law make or alter such regulations." Make or alter. What is the plain meaning of such words? There is no declaration that the regulations shall be made either wholly by the State Legislatures or wholly by Congress. If Congress does not interfere of course they may be made wholly by the States; but if Congress chooses to interfere there is nothing in the words to prevent its doing so, either wholly or partially. On the contrary, the necessary implication is that they may do either. It may either make the regulations or it may alter them. If it only alters, leaving, as manifest convenience requires, the general organization of the polls to the State, there results a necessary co-operation of the two governments in regulating the subject. But no repugnance in the system of regulations can arise thence, for the power of Congress, over the subject is paramount. It may be exercised as and when Congress sees fit to exercise it. When exercised, the action of Congress, so far as it extends and conflicts with the regulations of the State, necessarily supersedes them. This is implied in the power to "make or alter."

The objection so often repeated, that such an application of Congressional regulations to those previously made by a State would produce a clashing of jurisdiction and the conflict of rules, loses sight of the fact that the regulations made by Congress are paramount to those made by the State Legislature; and if they conflict therewith the latter, so far as the conflict extends, cease to be operative. Congress in the exercise of this power has legislated upon the subject. The statute referred to (section 27) declares that all votes for Representative in Congress must be by written or printed ballot. If under the Constitution Congress has jurisdiction of the subject, if Congress has exercised that jurisdiction by acts of legislation, where is the power in any State that can override that legislation or add to or take from it? (*Houston vs. Moore*, 5 Wheaton, 543, 544; *Sturgiss vs. Crowningshield*, 5 Wheaton, 122.)

How can a State define the word ballot for Congress? The right of Congress, or any other legislative body, to legislate on a given subject carries with it, necessarily, the right to define and interpret the meaning of its own legislation. And while this is and must be so in the nature of things, we find the power expressly recognized in the right of Congress, ultimately and exclusively, to judge of the election, return, and qualifications of its own members. The grant of a power to Congress is a denial of that power to the States. Congress under the Constitution is the exclusive judge not only of the "qualifications" but of the "returns" of members. The purpose of the statute referred to is, to my mind, clear and unmistakable:

To the end that each candidate for Congress may obtain the benefit of every vote for him cast the supervisors must personally scrutinize, count, and canvass each ballot, whatever may be the indorsement on the ballot, and wherever or in whatever box it may be found.

I ask the House, especially the lawyers of the House, to construe this language in connection with the Constitution and laws on the subject. I wish to know the meaning and purpose of the provision "whatever may be the indorsement on the ballot." I wish to know what force these words may have when construed in connection not only with section 27 of the Revised Statutes but with the general powers of Congress on the subject. The Constitution of the United States (fourteenth amendment) declares that when the right to vote is denied to any male inhabitant of a State or in any way abridged except for crime, such denial or abridgment shall be visited upon the State by reducing *pro tanto* its basis of representation. The constitution of Alabama answers this requirement with universal manhood suffrage. And the Alabama bill of rights, going further than any organic law in ancient or modern times, declares that no educational or property qualification for suffrage or for office shall ever exist in that State. These broad and liberal provisions in behalf of suffrage, and may I not say in behalf of freedom? are met here by the base conditions of a campaign document and denied by the subtleties and trickeries of the so-called yellow circular.

Upon such pleadings we now join issue and put ourselves, as they say in law, upon the country. I have done so with the utmost confidence. Standing firm upon the law and the testimony, I invite the decision. I appeal to the judgment, I invoke the conscience of the House. Sir, I have never faltered in this behalf. In the very hour when the "count-out" was consummated, at the moment when this outrage was temporarily triumphant, I denounced its legality, and in your name I defied its power. Before ten thousand of the indignant freemen of my district, assembled for that purpose, I then summoned the contestee and his coconspirators to judgment here. I

promised, Mr. Speaker, in the name of the ægis under which you sit, that every legal vote should be counted and every honest citizen should be righted.

I said then, as I say now, that "I know not whether, under Bourbon rule, I am a free or a disfranchised citizen of my native State, but I am proud and secure in the fact that I am a citizen of the United States. The flag of our fathers floats over this great popular assemblage and blesses us all with its beneficence and power. We were Democrats, Republicans, Independents, or Greenbackers yesterday, but to-night be of good cheer, thank God we are American citizens. The Constitution and laws of the United States are the supreme law of the land, the follies of the canvass and the frauds of the count-out to the contrary notwithstanding."

POLITICAL CONSIDERATIONS.

And now, Mr. Speaker, having shown by the constitution and laws of Alabama and by the statutes of the United States my right, as I understand it, to a seat in this body, I beg leave to submit in that behalf some further considerations of a purely political character. I am well aware, sir, that considerations of this sort have little to do with the proper business of this contest. I understand how foreign they are to the high, impartial judgment you are called upon to pronounce. I appreciate the bad taste and worse logic involved in their introduction here. But the contestee, first in his answer and last in his brief, has seen fit to intrude them upon the House and the country. I find them already spread out before you in the record of the case.

The contestee brought them here and made himself responsible to public sentiment not only for the illogical and impertinent character of the issue but for whatever abuse of parliamentary privilege may be provoked by the discussion. Sir, in whatever reply it may be necessary for me to make I shall try to keep myself within the rules. Whatever departure I am forced to make in search of the contestee, I beg the House not to visit it upon my defense but upon his attack. The contestee is solely responsible for introducing these matters into this debate. They are the burden of his answer to my notice of contest and are repeated and amplified in his several motions before the committee. He seems to argue that if his conduct and opinions are more in accord with the majority of the House than mine, it goes to my discomfiture in this contest.

If that be true, sir, I have yet to learn or unlearn much as to the character of our institutions. I have yet to discover that the title to a seat in this body depends not upon the choice of the people at the polls but upon the relative strength of party majorities in the House. What, sir, is this a question of party? Is this a mere matter of numbers, or is it a grave issue of law and fact, appealing to the judgment and conscience of members? Did the people elect one of us, or is the election yet to be had in this House, to be decided by partisan appeals and political considerations? Sir, the question is not who shall receive the most favor in this House but who has received the majority of votes from the people.

Nevertheless, sir, I do not shrink from this assault, however improper and unwarranted. I meet it with confidence, I repel it with scorn. I challenge comparison between my character, conduct, and opinions, and those of the contestee throughout this whole business. Political considerations, indeed! I am a better Democrat than he, because I stand by the principles rather than the machine of the party. I am a better Southern man than he, because I hold that a man can be a good Southerner without being a bad American; because I find no foes, I invite no jealousies, for my people. I involve them in no false and foolish warfare upon other sections of the Union or the general interests of the country.

Sir, I affect no special sentiment on this subject. I look upon the Union with a practical sense of self-interest. But, sir, while I profess no special sentiment on the subject I do declare that in my opinion the Southern man, the ex-confederate, serves the South best, most honorably, and most truly who makes her opinions and interest not the shuttlecock and battledoor of sectional politics but seeks to place them in high and harmonious accord with the sentiments and interests of the whole country.

But to return, Mr. Speaker. What are the political considerations which are said to be involved in this contest? In the contestee's canvass they are one thing, in his contest they are another. In the first he charges the Greenbackers with being Radicals and scalawags, and in the last with being communists and repudiators. What decency, what force, what moral power, lies behind these accusations, I am unable to ascertain. He organized his race in the outset upon a basis of calumny and detraction, of imputation of motives, and assault upon character. He made the canvass upon one batch of slanderous epithets, and he makes the contest upon another. In the campaign document signed "Joseph Wheeler" which I hold in my hand, and which can be found on page 58 of the record, I am denounced in the most dramatic manner because I chanced to sit in this House on the left of the Speaker. In the best phraseology of Bourbonism, he charges this sinister fact upon me; and like Mr. Sapsea, the auctioneer, he is as "tragic in the sale of a ribbon as of a Raphael." He says, "You chose a seat in Congress on the Radical side of the House where your forty nearest associates were thirty-eight Radicals, and mostly, if not all, hard-money, high-tariff Radicals, and," what is still

more terrible to relate, "two Southern scalawags," (meaning FORD of Missouri and Russell of North Carolina,) "men despised," he undertakes to say, "by the Southern people who live in their district." (Record 71.) And

—bad begins, and worse remains behind.

"In every case," he says, I "worked and voted with the solid Radical against the solid Democratic party;" that I "worked and voted with Radicals to keep the soldiers at the polls to control elections," (record, 72;) that I "worked and voted with the solid Radical party against the solid Democratic party, in the Hull-Bisbee contest, in a foul conspiracy to put the Radicals in power in Congress," (record, page 71;) that I am "shown by the records of Congress to have exceeded any Radical in advocating Radical measures and measures for the oppression of the Southern people;" that "Garfield, CONGER, HISCOCK, FRYE, and all other Radical haters of the Southern people seemed for a time to have a satiation of their hate and a willingness to cease for a moment their oppression, but Colonel Lowe had no such scruples," (record, 68;) and, to cap the climax of weakness and folly, that when I "in any way questioned the correctness and accuracy of these terrible charges, he himself has placed the book before me and compelled me to admit them."

I do not of course, Mr. Speaker, intend to take up the time of the House in reply to such drivels, such reckless and absurd misrepresentations. Sir, it is the largest collection of small fallacies ever offered to the American public. Everybody knows, every member of the last House and every intelligent reader of the current literature of the country knows, that I voted with the Democrats when they were right and voted against them when they were wrong. And if during the famous extra session they were so seldom the one way and so often the other; if, with the best intentions in the world, I had little or no opportunity to make a record in their behalf, I am rather to be sympathized with than censured. I was elected, sir, and re-elected as an anti-Bourbon, the best and truest of Democrats, by the best and truest of Democratic constituencies, and it is a calumny upon me and upon my district to intimate the contrary.

But, sir, not only are these charges devoid of every essential element of truth but it is apparent that the contestee himself, if he ever believed, no longer believes them. He has ceased to urge them upon the consideration of the House. They cut no figure in his answer or in his brief; although everything in the election, they are nothing in the contest. Why is this? What change has come over the spirit of his dreams? Why does he no longer warn the House as he warned the people against the man who "exceeded any Radical in advocating Radical measures and measures for the oppression of the Southern people?" Where is the army at the polls to control elections?

What has become of the Hull-Bisbee conspiracy to radicalize the House? Where are the United States marshals, arresting and outraging the people? Where, sir, where are these mighty issues? They have passed away like the baseless fabric of a vision, to leave not a rack behind. The contestee has been here in my seat for nearly six months and has done nothing to save us from these wrongs; nothing toward abolishing the Army at the polls; nothing toward deradicalizing the House; nothing toward restraining United States marshals from arresting and oppressing Southern people. He has done nothing even toward repealing "the tax on the farmer's leaf tobacco and on brandy made from apples and peaches."

But I would have you observe, Mr. Speaker, that while the contestee abandons his charges he does not forego his purpose. He still seeks my office. He still contends that I must not be allowed a seat in this House, or any of the rights conferred on me by the people; not, indeed, because I might sit on the left of the Speaker among "Radical sinners" and "Greenback scalawags;" not because I might vote and work with the solid Radical and against the solid Democratic party, but upon other and far different considerations. In the canvass I was a hard-money Radical of the deepest dye, but now I am a communistic Greenbacker of the worst description. I was then a friend, I am now the enemy, of banks and corporations. What has the accidental majority in this House to do with this sudden change of front? Is it a confession? Did the contestee appeal to Bourbon passions in Alabama? And does he appeal to Republican prejudices here? But, sir, I forbear. I know that the line of remark indulged in by the contestee against his political opponents has a bitter flavor and a rather depressing effect upon the spirits. I refrain from enlarging upon the subject. But, sir, when we turn to what the contestee has to say of himself, we feel, I am sure, a corresponding exaltation. We come from the shadow into the sunshine; from bitterness and abuse into flattery and adulation. The following campaign circular, written, I believe, by the contestee himself, is the document in question. It shows that the contestee is as good at buncombe as at billingsgate; as happy in praising himself as in calumniating others.

I take it, sir, that this document was written by the contestee himself; first, because it sounds like him; second, because it bears internal evidence of other work known to be his; third, because he said the same things in very much the same way in other documents under his own signature during the canvass; and further and finally, because he is the only man in the district, or in the world, perhaps, that ever entertained the very exalted opinion of "General Joseph

Wheeler" expressed in this document. It is a work of art, a triumph of the aesthetic. It is commonly called the "Masonic circular." It is looked upon by us in Alabama as a political comedy, the farce of our canvass. The following is an original copy:

GEN. JOS. WHEELER.

WHAT THE PEOPLE AND PRESS SAY OF HIM.

He is Active, Vigilant, and Enterprising.

He is a good Mason, a Knight of Honor.
He is the friend of the people.
He was a brave soldier. He was loved by his soldiers.
He slept on the same blanket with his soldiers. He ate the same food.
He endured the same hardships. He wore the same clothing.
He always led them in the very front of battle.
He dared to lead where any dared to follow.
He was loved and admired by such men as Generals Lee, Johnston, Bragg, Hood, and Beauregard.
Such men as Sherman, Buell, Rosecrans, and Grant admired his skill and gallantry.
He has a great national reputation.
Hancock loves him and has thanked him for his work in securing his nomination.
Hancock will help General Wheeler to get us good laws which will make the South prosper.
With Hancock's aid and the aid of a Democratic Congress General Wheeler will procure the passage of laws to give us financial relief.
General Wheeler will repeal all laws which oppress our people.
He will have laws repealed which tax a farmer on his leaf tobacco or on brandy made from apples and peaches.
He will restore the South to prosperity.
Let every man who wants the South to prosper vote and work for General Wheeler.
His character cannot be assailed.
His honor, and reputation, and record is spotless and perfect.

And this, forsooth, is what is said of contestee by the "people and the press." The press, indeed! It is true, sir, that God in his mysterious providence has appointed with few exceptions a lot of asses to edit the Bourbon newspapers in my district. But I must say in justice even to them, that this curiosity of literature excels anything in that line they have ever been able to invent. Did anybody ever hear the like of it? "He is a good Mason," but he drags the sacred name of this ancient and noble charity and the very mystery of their obligations into the mud and mire of partisan politics. "He is a Knight of Honor," (an insurance company, and a very worthy one,) but, not satisfied with his knightly dividends, he seeks further investments in political futures.

Thrifty little man! Well might Edmund Burke exclaim, "Alas! the age of chivalry is gone." That of economists and calculators has succeeded, and the glory not only of Europe but of the eighth district of Alabama is extinguished forever. "He always led them in the very front of battle." "He dared to lead where any dared to follow." Mr. Speaker, in these piping times of peace it becomes a citizen to be circumspect in order to be safe in talking about such a leading and warlike character. But I may be allowed to suggest that in the last canvass in my district "he dared to lead" where a large majority of the voters dared not or cared not to follow; his campaign seemed to look rather to Detroit than to Washington, and to indicate the penitentiary rather than Congress, as its objective point.

But "Hancock loves him, and has thanked him for his work in securing his nomination." Who can doubt it? (Hancock at the head and the contestee at the tail.) But, lest any man may doubt it, he repeats the same thing over and over again in other and different circulars. Indeed, sir, in an open letter to me from Jackson County, (record, 80-81,) published by thousands during the campaign, he reiterates these statements, and in language so similar to the "Masonic circular" that it confirms us not only as to the fact itself but as to the common authorship of both of these rare productions. He says "I worked so hard for the nomination of General Hancock that I have received letters from General Hancock and also from his friends thanking me for my great services in securing his nomination," &c. He does not tell us where these great services were rendered, nor what has become of these apocryphal letters.

Not only Greenbackers but Democrats have doubted if the hero of Gettysburgh ever heard of the little gentleman from Alabama, the political manikin who sought thus to hang on his skirts in the last canvass. It was charitably hoped, indeed, even by the opposition, that Hancock never did. It would only have added the sting of satire to the fact of defeat and annoyed the hero without helping the manikin. But "with Hancock's aid and the aid of a Democratic Congress General Wheeler will give us financial relief. He will repeal all laws which oppress our people. He will have all laws repealed that tax the farmer on leaf tobacco or on brandy made from apples and peaches," &c. In the letter referred to above, known as the "Jackson County letter," he renews these pledges. He assures us "I will have the tax removed from leaf-tobacco and from brandy made from peaches and apples, and I will do all that can be done to bring us prosperity. I will prevent the marshals and their deputies from arresting and oppressing our people. I will have the Muscle Shoals Canal promptly completed," &c. (Record, 81.) These promises are generous, the language identical, and the climax conclusive—

A fine sample, on the whole,
Of rhetoric which the learned call rigmarele.

General Wheeler will do all these things and more if the "count-out" succeeds and the inspectors aided by his "very discreet

friends" shall send him to Congress. He is a good Mason, and with the mystic sheep-skin on his back and the secret circular in his pocket he will ride the greasy goat from the ante-chamber at Wheeler's Station to the inner temple at Washington. He is a "Knight of Honor," but his knighthood does not hinder him from seizing by fraud and holding by false pretense, not the dignities and honors, forsooth, but the fees and perquisites of another man's office.

Indeed, sir, the Bourbons are a law unto themselves; and it is a peculiar law of their own making and construing. By Bourbon, Mr. Speaker, permit me to explain, that I do not wish to be understood as referring to the great body of the Democratic party. I distinctly disclaim it. The Democratic masses in my section are the salt of the earth, and it will be a dark day for the South when that salt shall have wholly lost its savor. Indeed, sir, I mean to exclude the common people, who are always comparatively honest, from inculpation with their Bourbon leaders. Misled they may be as they have been, but never deliberately dishonest.

The term Bourbon, moreover, as commonly used in the South, has no historical reference to that faithful party in France which clung to the Lilies, except perhaps in their common hostility to popular government and democratic institutions. The Bourbons of France were said "never to forget and never to learn anything;" but the Bourbons of the South, the average Alabama Bourbon, is eager to learn anything that will put him in power and prompt to forget anything that will put him out. If there are "ways that are dark and tricks that are vain" that the average Bourbon has not learned the devil never taught it to the children of men. The Southern Bourbon is an organized appetite. His idea of politics is patronage; his sole conception of party is an organization which acquires and distributes the offices. The Bourbons, as Horace Greeley said of the carpet-baggers, whether many or few, "are a mournful fact." They are in one sense the Jesuits of the South, and I mean no disrespect to that venerable order. I speak of them as described in the Provincial Letters. The Jesuits, we are told, propagate doctrines that sap the foundations of religion; the Bourbons indulge in practices that corrupt the fountains of politics. The former, as churchmen, said Boileau, "lengthen the Creed and shorten the Decalogue." The latter, as partisans, magnify the organization and ignore the principles. They both teach that opponents in politics and heretics in religion have no rights that Christians and patriots are bound to respect; they both inculcate the doctrine that the end sanctifies the means, and that any agency, fair or foul, legal or illegal, that makes for the good of their order or their party is just and right.

Indeed, sir, in my personal intercourse with them I have not infrequently heard such sentiments openly avowed by men of character and standing in their party; that whatever is needed to keep virtue and intelligence in office, (meaning themselves,) or to keep ignorance and vice out of office, (meaning the opposition,) is right in fact and good in ethics.

In support of this system of casuistry they favor, if need be, the organization of all the forces of society, the church, and the State, with a syndicate of liars in the press, and a symposium of thieves at the ballot-box!

Sir, I repeat that the Bourbons are a law unto themselves. The contestee is a notable case in point. In order to keep without scruple what he has acquired without law he invents from his own true inwardness a new assortment of pretexts and a new order of epithets. The old fish-wife phrases of "radical and scalawag" must give way to the fresher flings of "communist and repudiator." He must suit his calumnies to the circumstances of his case. It was well enough in the election to charge us with trying to divide the Democracy in order to serve the Republicans, but in the contest it is necessary to place me in a different light; it is necessary to represent me not as dividing one party or faction to please another, not as seeking divisions in politics at all, but as a communist, seeking a division of property—a violent and unlawful division.

Indeed, sir, the contestee in his answer distinctly and solemnly avers that (record, page 20) I "taught the doctrine of the Commune [whatever that is] in flagrant form," &c., and that to such an extent were communistic doctrines advocated by me that many of my followers now insist, since the election, upon a general division of property. I am aware, sir, of the necessity of parties in our Government, of party organization, and party spirit. They are well enough in their place, but they should not teach us to disregard all truth and propriety. They should not ignore every principle of right and justice. These misrepresentations are "gross as a mountain, open, palpable."

It is the first time in the history of the State that, under the foul influence of party spirit, such strange and injurious charges have been cast upon any portion of the citizens of Alabama as that my "followers insist upon a general division of property." If such charges or anything like them were made against me in the canvass, even in the wildest hour of frenzy and falsehood, I have yet to hear of it. If these offensive epithets were printed in any of the innumerable campaign documents, or uttered in any speech on any stump in my district, they wholly escaped the attention of my friends and myself. In fact, sir, at this very moment I feel well assured that they are but the recent and reckless inventions of the contestee himself, for use in this contest. They are new and strange to my section and people. In my deposition upon this point I properly character-

ized these statements as far as they were personal to myself, and I have nothing to add to or take from that deposition.

But, Mr. Speaker, while I scout the idea that my personal opinions or political conduct, whether good or bad, have anything to do with the merits of the contest, I am unwilling to appear by evasion or silence to shrink from the attempt to hold me responsible on that account. I never uttered or entertained an agrarian or communistic sentiment in my life. I never flaunted the communistic red flag or wore the Bourbon red shirt; nor did I ever belong, like the contestee, to a secret political club in Alabama or elsewhere, that proposed to do either. (Record, page 50.) But I will not abate here and now one jot or tittle of the financial or economic views expressed by me before the people of my district. Elected, sir, to represent those opinions, held by the honest yeomanry of my district, I have no moral right to my seat, nor would I hold it for a moment, except upon that commission.

I never uttered or entertained a sentiment of hostility to the rights of property, (and no honest man that knows me pretends that I ever did,) yet I believe also in the full and equal rights of labor—the basis of all property and the hope and guarantee of popular government. Sir, we cannot ignore or disguise the fact that there is a new power that has grown up to dangerous proportions in this country, that threatens every defensive barrier established by our Constitution for the protection of the people. It is the corporate power. Our ancestors had no such enemy to oppose, no such tyrant to withstand. Against everything that was seen, against everything that could be anticipated they did provide, but it did not enter into the minds of those who established the checks and barriers of our system that they would ever have to stand against the unknown and gigantic power of corporations.

I sympathize with the progress and development of the material interests of the country. I rejoice at the triumphs of science in the comforts and convenience of the human race. But I fear, sir, that the forces of government have lost, or are fast losing, control of the forces of society. I fear that the wondrously inventive spirit of the age, aided by modern science, has outrun the philosophy of government and threatens the rights and interests of the people. I am not an enemy to corporations, but I contend that these mighty agencies of civilization should be looked upon in law and fact as the servants and not as the masters of the public. To paraphrase the celebrated Dunning resolution on the prerogative, I hold that "the influence of corporations has increased, is increasing, and ought to be diminished."

But, sir, it would be obviously improper for me to press this matter or to seek to anticipate or forestall the opinions of this body upon questions lugged in here by the contestee which do not properly relate to this contest. My object is not to show my motives but the malice that assails me. I stand only for right and justice. I hold the views of Jefferson and Franklin as to the national debt; the views of Calhoun and Stevens as to the currency, the views of Jackson and Benton on the banking system, and the recent views of Windom and Reagan on the rights of corporations. But, sir, far higher than these, above all questions of expediency or policy, above all issues of parties or factions, I hold the universal views of every honest and patriotic man, in every era of the Republic, in favor of free and fair elections.

Without fear or favor, I declared these views to the passionate and prejudiced Bourbons of Alabama, and I now repeat them to the House and to the country. They are the essence of my faith, the tests of my politics. They were the basis of the open alliance between all the anti-Bourbon elements in my district and the common ground of independent thought and action. These, sir, and not merely economic questions, were the issues in my election, and these are the issues now. They mark the eternal dividing line between the contestee and myself; between the Bourbon and the pessimist on one side, and the independent and liberal on the other. They are the present recognized distinctions between the opposing elements throughout the South. It is this difference, sir, that fills the Bourbon heart with malice and bars the Bourbon tongue with venom against the honest, fearless, and independent free-suffrage party of Alabama.

But who are the people and what is the community which the contestee charges with communism and repudiation, and thus seeks to render odious and despised? They are the oldest and most conservative settlement in Alabama. In every crisis of our local politics they have withstood repudiation and led the party and the people for the credit and honor of the State. They live in the beautiful valley of the Tennessee, fringed around with mountain ranges, in a contiguous district, composed of four counties north and four counties south of the river, and stretching east and west from Georgia to Mississippi. They are a native, homogeneous population of small farmers and tenants, householders, and freeholders, the whites largely outnumbering the negroes, and the census showing less than one-half of one per cent. of foreign-born in a total population of nearly one hundred and seventy thousand. They are a sober, industrious, and frugal population, honest and sincere in their business relations, and noted in public affairs for their national, patriotic, and conservative sentiments. They mainly saved the State's credit under Governor Chapman's administration in the memorable epoch of 1837, and tried in vain to save the Union in 1860. In the latter crisis every county in the district voted against secession, and only at the last moment

allowed themselves to be precipitated by misguided leaders into revolution.

But, sir, like every hardy and resolute people, forced into battle against their judgment, they fought the fact of war without accepting its theories. They sent more men to the army than they had voters at the polls, and for four long years they bore the brunt of the conflict. It came over the borders into their homes and families. It reddened the waters of the river with fire and blood, and made the whole valley, alternately occupied by Northern and Southern troops, like the debatable ground in English and Scottish history, one common widespread scene of ruin, disaster, and death. The people of North Alabama made a famous record as fighting men, and while they never learned to love secession, or conscription, or the tithe tax, or the twenty-slave law, or any of the petty tyranny and injustice of that period, they nevertheless stood by their colors from first to last. They remained true to the confederacy from the frenzy of Fort Sumter to the despair of Appomattox. In the mean time, sir, under every adverse circumstance, they upheld the character of Alabama not only for courage but for honesty and public faith.

During all those dark and bitter years, when the credit and indeed the very life of the State was at issue, they never defaulted or wavered to protest at home or abroad. Sir, in the commercial capitals of the Old World, where the interest on our foreign debt was promptly paid in gold actually run through the blockade, foreign financiers and business men were filled with admiration for the brave and faithful character of our people. And these, sir, are the people whom the contestee would stigmatize with dishonesty, communism, and repudiation. This is the community against which he throws the gutter-mud of Bourbon politics.

But what more? After the war was over, the wearied and worn-out people of North Alabama were more than willing to accept its results and return in peace to their normal relations in the Union. Although impoverished and desolate, they fully recognized their obligations to our foreign and domestic creditors, and under the administration of Governor Patton, of North Alabama, they made prompt and satisfactory arrangements with them all.

And what more? Sir, when the results of the reconstruction overthrew the State government, convulsed the labor and business of the community, and more than doubled the public debt, it was North Alabama that came to the rescue; it was Governor Lindsay, Governor Lewis, and last but not least, Governor Houston, all of North Alabama, and all of my district, that brought order out of chaos, restored confidence to the community, and ultimately settled the finances upon terms satisfactory alike to the creditors and to the people. In these events I myself bore an humble but honorable part in the Legislature. The gentleman from the third district [Mr. OATES] and the gentleman from the sixth district [Mr. HEWITT] could witness, I dare say, for me in that matter. We then acted together, however much we may differ now, and we acted unreservedly for the honor and credit of the State.

And yet the contestee, in revenge for his defeat, or in purblind ignorance of the truth, would cast the slur of vicious and dishonest purposes upon such a people. What estimate, Mr. Speaker, will you put upon the character of a member who makes such offensive and injurious charges against a people or a party without the most substantial and conclusive proof to sustain him? What estimate will you put upon the conduct of the contestee when you learn that, after formally making these charges in his answer, and elaborating them in his contest, he utterly fails and refuses to offer you a single witness or a single particle of evidence to sustain them. You must, you will infer the bad character of his cause from the foul methods used to advance it.

Sir, in vindicating myself as an accredited Representative, twice chosen by the people, I vindicate the people themselves. They would not have selected a man with the sentiments imputed to me, and it is a calumny upon its face to ascribe such sentiments to them, or to any considerable part of them. Their only offense is opposition to the Bourbon faction. They feel the impulses of modern thought and action; they candidly invite an influx of capital and labor. They want our forests of valuable timber turned into money; our water-power utilized by machinery; our treasures of coal and iron developed by steam, and the waste places of our former system filled with the riches and strength of modern civilization. They feel that in order to secure these great results Bourbonism and all that the name implies must be overthrown; that the bitterness and intolerance of the past must be forgotten and forgiven; that new men and new ideas must be encouraged to join us; that honest, equal laws, free thought, free schools, free suffrage, and free government, together with the friendly and patriotic disposition of our people, are all essential to this great result. They realize that in public as well as in private affairs, honesty is the best policy. They feel that all the known forces of civilization, as well as all the unknown powers for good in the universe, are and must be opposed to the bitterness, hypocrisy, and intolerance of Southern Bourbonism. These, sir, are the people and the opinions I represent. There is not an honest, braver, better people in the United States. There is no district, no community in the world with less communistic or agrarian sentiment, or where private property is more respected and secure.

But, sir, what will the House think when it learns the fact that upon financial and economic questions there was no avowed difference in the canvass

between the contestee and myself and no issue between the Greenbackers and the Bourbons?

Yet such is the literal truth. If being a Greenbacker made me a communist, then the contestee was equally guilty with myself. He everywhere confessed it; he openly avowed himself the best of the Greenbackers; he declared on the stump and in the papers that the Democratic party was the true and only national Greenback party, and that there was no need of a new organization to enforce its views on that subject. In proof of the fact, he wrote a public letter to the leading Greenback paper of my district, expressing in unmistakable language his personal and political views in that behalf. The following is a literal copy of that letter:

WHEELER, ALABAMA, June 17, 1880.

DEAR SIR: In your paper of the 16th I observe an editorial which in substance contains the following, namely: that I owe it to myself and to those people in North Alabama to whom I have often asserted that the Democracy was a good enough Greenback party, and that a new Greenback party was not necessary, to state if it is true or false that the committee on resolutions, at any time during the session of the State convention, presented resolutions on the subject of finance which might be called Greenback resolutions. If so, were they passed upon by the convention? If so, how? And why does not the action of the convention appear in the proceedings as published? In reply to the above I will state that such a resolution was introduced and read from the speakers' stand by my eloquent young friend, Colonel Sam Blackwell, to a full representative convention, consisting of five hundred and seventy-five members, nearly every member being in his seat. The resolution was received with great enthusiasm, and was unanimously adopted, not a single objection being made thereto. I think, colonel, that this most abundantly proves my assertion that "a new Greenback party is not necessary"; and I hope and trust you will agree with me, and in future exert your energy and ability in our most glorious cause.

Five hundred and seventy-five representative delegates, including members from every county except Winston, voting in one voice for the resolutions, proves beyond question that the resolution expressed the sentiments of the entire Democratic party of Alabama. I hope this will so impress you that on my return from Cincinnati I will find our entire ticket, State and national, at the head of your columns. * * * Join our columns, colonel; seize one of our banners, and march with us to victory.

With respect, your obedient servant,

JOS. WHEELER.

Colonel A. H. BRITTON, Editor Advocate.

The letter, Mr. Speaker, speaks volumes. It confounds the contestee. It puts to flight the whole of his absurd statements about communism and repudiation. It shows out of his own mouth that whatever may have been my views on the subject or the views of the Advocate, which he styles my organ, he openly and fully shared them. What must the contestee think of his party? What must they think of him to go before the people on Greenback principles and when defeated to come here and, either for spite or for favor, to denounce those very principles as communism and repudiation? What he thinks of his associates, what he admits as to himself is evident to the world. His shame is open and apparent; but what the Bourbons think of him is one of those mysteries which time and circumstances can alone disclose.

But what more? The contestee was not alone among the Bourbons of Alabama in the proclamation of such views. Indeed, as far as I am informed, they all profess to be Greenbackers, Democratic Greenbackers, if you will, but as sound on paper money as Peter Cooper himself. The Hon. W. W. Garth, a gentleman of character and ability, the contestee's predecessor in defeat, his able ally on the stump, and his willing witness in this contest, (willing even to accept the certificate of election and the emoluments of office under such circumstances,) is one of the most magnanimous Greenbackers in the world. He loves fiat money almost as much as the contestee loves fiat votes, and would inflate the one as much as the contestee has inflated the other. You would scarcely believe it, Mr. Speaker, from his course in this House, especially upon the debt, upon the banks, upon railroads, and upon subsidies, &c., but we are sometimes forced to judge the politics of a Bourbon, not by his acts, but by his declarations. Mr. Garth, when last a candidate for Congress, issued the following circular to the people:

In my speech accepting the nomination at the Decatur convention I distinctly put myself upon the financial platform of the Democracy of Ohio and Tennessee, a platform indorsed by the whole Democracy of the whole West and South. I favor:

1. A repeal of all laws which provide that the currency bonds shall be paid in coin.
2. The payment in currency of so much of said bonds as may be found due after deducting the difference between the value of the gold paid and the currency due thereon, according to the contract.
3. A repeal of the resumption act.
4. A repeal of the national bank charters and substitution of greenbacks for national bank notes.
5. The receipt of greenbacks for all Government dues.
6. All Government loans to be raised by the issue of greenbacks.
7. Unlimited coinage of silver.
8. An adoption of some measure to increase the circulation of greenback currency to meet the fullest wants of the people.

Respectfully,

WM. W. GARTH.

ATHENS, ALABAMA, September 20, 1878.

This rare document hardly needs explanation or comment. It shows for itself. The distinguished ex-Congressman would not only "pay the bonds in greenbacks," but he would "deduct the difference" between the value of the "gold already paid" to the bondholder and the "value of the greenbacks due on the contract." He would not only secure the future, but by a back-handed lick he would indemnify the past. He would repeal the resumption act, abolish all bank charters, and give us unlimited coinage of silver

and unrestricted printage of greenbacks. General Wheeler, inspired by the love of Hancock, may "repeal the tax on the farmer's leaf tobacco and on brandy made from apples and peaches," but Mr. Garth, animated by a nobler and broader inspiration, will abolish all taxes or make their collection a technicality and a trifle. He will repeal the resumption act; he will raise all Government loans by the issue of paper money, and increase the circulation to the fullest wants of the people.

Great heavens! what more could General Wheeler or Brick Pomeroy require? If the contestee really believes that my advocacy of rather conservative Greenback principles—conservative in the sense of not being Utopian—makes me a communist and repudiator, what must he think of his enthusiastic friend and fellow-sufferer, Mr. Garth? If he honestly thinks that my Greenback opinions make me an enemy to the rights of property, what must he think of the frantic utterances of his forerunner in fact and in fate, crying aloud in the wilderness and warning the wicked bankers and bloated bondholders to flee from the Greenback wrath to come?

In addition to this, Mr. Speaker, if, indeed, it were necessary to pile Pelion upon Ossa, Hon. L. P. Walker, the confederate ex-secretary of war, and the acknowledged leader of his party in North Alabama, made a carefully prepared speech, which was afterward printed in pamphlet form, used in his canvass for the senate, and circulated as a campaign document throughout the whole State. It is an able and eloquent exposition of the views of the Democratic Greenbackers of my district. General Walker is a Greenbacker among Greenbackers. He invented General Wheeler as a Greenback candidate for Congress, and did everything in his power to make his invention a success. But General Walker will doubtless be surprised to learn from his ungrateful protégé that he also is a communist and repudiator. When he made this speech he evidently was not aware of it. In the most innocent and unsuspecting way in the world he says: "The trouble with us is that we have slavishly adopted the theories and followed the practices of other governments." He insists, however, that "there is no more reason why we should not have an American system of finance than an American system of government." This idea, although caught from Peter Cooper, is enforced by General Walker with great emphasis and ability. "Can it be possible," he asks, "that the European system of finance is adapted to our situation and circumstances? We are yet in our infancy, with unlimited capacity for expansion and growth. We have in the United States nearly two thousand millions of acres of public lands yet to be opened and occupied, vast empires of forests in their primeval royalty, larger than all Europe, excluding Russia."

And the able ex-secretary goes on to show that in such a country there can be no such thing as inflation of paper money, not to mention communism or repudiation. He says:

The framers of the Constitution certainly never contemplated that there should be only so much currency for so much coin. When that instrument was adopted not one dollar of gold or silver was produced in this country. We were wholly dependent for it upon importations. What the Constitution meant then it means now. Not that there should be no other limitations upon the volume of currency than that imposed by the great law of supply and demand, but only that the currency should eventually be redeemable in coin.

What more could any Greenbacker require? The repeal of the resumption act and an expansion of paper money only limited by the demands of the people! Waiving the ultimate promise of coin payment some time this side of the millennium, or, as Brick Pomeroy has it, "the day after the day of judgment," we are assured that the great law of supply and demand is to be the only limit to the Greenback volume. How generous! How magnificent! The demand of the people the limit, the only limit, to the supply of the Government; the exigencies of the confederacy the test of the financial power of the United States. The ex-secretary of war, who, unfortunately, was not in the treasury, declares that "there is no other financial rule that will answer the exceptional necessities of our condition and the vast possibilities of our progress."

It must be kept in mind, Mr. Speaker, in considering these quotations, that the contestee indorsed every word of this at the time, and as far as practicable repeated the same in the canvass. But, says our Greenback orator, "In our condition contraction means what it works, ruin; ruin to agriculture, to the mechanic arts, to all popular industries; ruin to the laborer, the manufacturer, the farmer, the mechanic, the merchant, to all classes excepting the bondholder, who is the great Government usurer;" and then, leaving generals for specials, he demands, "who were these bondholders? Less than two hundred thousand of them are citizens of the United States. A large majority of them are foreigners, exempt from taxation and inimical to our institutions. Most of these bonds were purchased in 1863-'64 and paid for in greenbacks when \$1,000 in greenbacks was equivalent to only \$400 in gold."

"These are the men," he says, rising from statistics to invective, "these are the men who urged contraction, who denounced an income tax as infamous, the remonetization of silver as national dishonor, and the repeal of the resumption act, passed in secrecy and fraud, as repudiation and revolution." And remember, Mr. Speaker, that the contestee avowed all this and more, too, before the people. Whatever General Walker then said, the contestee was quite willing to swear to. General Walker is the Gamaliel of the party in Alabama, makes its platforms and shapes its canvass; at his feet

the contestee humbly sat, with all the acolytes, to be taught "according to the perfect manner of the law of the fathers."

But, sir, the ex-secretary continues, in a bolder tone, "It was under the pressure of this class, with so large a foreign element in it and which dominated Congress, that the Government contracted the currency between January 14, 1875, the date of the resumption act, and December 1, 1877, the vast sum of \$135,462,107, thus retiring in less than two years one-fifth of the entire paper currency issued by the Government. Under such a system," the ex-secretary pathetically observes, "the wonder is not that there should be hard times, general embarrassment, stagnant commerce, idle factories, houseless and starving laborers, suicides, murders, insanities, and general demoralization, but that there is not universal bankruptcy and chaotic ruin of all the industries that have heretofore so prospered and blessed our people."

I wish, sir, I had space for the whole of this remarkable address, but time forces me to pause. But in order to show the House that these declarations from leading representative men are not too much colored by local or temporary or personal feelings, I beg leave to call attention to the Democratic platform itself, unanimously adopted by the party two years ago, and indorsed by the entire Bourbon press throughout my district. Neither the contestee in his letters, nor Mr. Garth in his campaign circular, nor General Walker in his elaborate address, has gone any further, if so far, in the line of Greenback doctrine as the platform in question. I ask the Clerk to read it. Let the House and the country compare them with each other and mark the contrast between the contestee then and the contestee now:

PLATFORM.

Resolutions adopted by the Democratic party of Madison County, in convention, August, 1878.

The committee on resolutions reported as follows, and their report was adopted without dissent:

Whereas throughout our entire country the value of real estate is greatly depreciated, industry paralyzed, trade depressed, enterprise destroyed, unparalleled distress inflicted upon the middle and poorer classes, millions of honest laborers thrown out of employment, reduced to want, and compelled to beg, steal, or starve; the country filled with fraud, bankruptcy, and crime; and

Whereas this state of things has been brought about by legislation in the interest of capitalists, corporations, bankers, and bondholders, who have purchased members of Congress and dictated the legislation of the country, whereby the honest tax-paying people have been defrauded of untold millions, and now desire to perpetuate their fraud and power by reducing the great masses of the people to a state of poverty, ignorance, and slavery; and

Whereas no relief can be given to the suffering millions until this class legislation is repealed and the financial policy of the Government is changed; and

Whereas we believe that the Government was established for the benefit of the people and not exclusively for the capitalists, corporations, bankers, and bondholders; and

Whereas we believe the true principle of Democracy is to adopt measures which bring the greatest good to the greatest number: Therefore,

Be it resolved by the Democratic and Conservative party of Madison County:

1. We reaffirm the time-honored principles of the Democratic party.
2. We demand the immediate and unconditional repeal of the resumption act, the unlimited coinage of silver, and that as a legal tender it be put upon an equal footing with gold.
3. That all national banks be abolished, and a paper currency be issued directly by the Government, which shall be a legal tender for all debts, public and private.
4. There shall be no privileged class of creditors, but official salaries, pensions, bonds, Government dues, and all other obligations, public and private, shall be discharged in the legal money of the United States, strictly according to the stipulations of the laws under which they were incurred.
5. To counteract and remedy the existing evil we demand that the Government shall issue a full legal-tender paper money adequate in volume to the requirements of commerce, the revival of business, employment of labor, and the just distribution of its products.
6. That we do not believe a public debt to be a public blessing, but a great public evil, and we are therefore in favor of the extinction of the public debt as rapidly as may be consistent with the interests of the great masses of the people; and to this end that the Government shall be required to pay the bonds due with greenback currency, wherever the bonds were originally payable in greenbacks, and we regard the substitution of gold bonds for bonds originally payable in greenbacks a violation of the original contract, and a gross fraud, injustice, and oppression perpetrated upon the tax-paying people.

It is evident, sir, from this platform, without comment or proof, that if the Greenbackers of my district are to go to Coventry as communists and repudiators, they go in good Democratic company; unless, perhaps, in Bourbon ethics, it is the practice and not the preaching of Greenback doctrine that constitutes the offense. And here, permit me to remark, sir, that whatever a Bourbon may profess in politics there is always a reasonable doubt in the public mind as to the direction of his intention. He is subject to occasional mental and moral detours according to circumstances. He may conscientiously intend one thing before and another thing after the election and he may entertain both ideas simultaneously. He may choose to be elected as a Greenbacker, or Greenback Democrat, and choose at the same time to serve as a Bourbon and a bullionist. He may propose to run as an anti-monopolist, and at the same time he may cherish a mental reservation in favor of banks, railroads, telegraph companies, and other corporations. The Bourbons, like the Jesuits described by Paschall, are sincerely ambiguous. They have an honest duplicity of character which, however obvious to the philosopher and student, baffles the unlearned and leaves the masses frequently in doubt as to the result. The corporations are generally secure of their men, but the common people must take the chances.

GREENBACK INTIMIDATION AND THE SECRET CIRCULAR.

The contestee in his answer gives conspicuous place to the charge of negro intimidation by the Greenbackers of my district. He undertakes to show that on this account he lost and I gained an indefinite number of votes. He says (record, 19) "the contestee alleges that there are many hundreds of colored people in the district who would vote for people who are identified with them in interest, and who could and would aid in the material growth and prosperity of the country, but they are prevented from so doing by the leaders, (Greenback roughs,) who, as aforesaid, compelled them to vote for such candidates as the leaders dictated, by threats of bodily harm and ostracization, and often the destruction of their homes and property by fire." And again, (record, 27,) "contestee alleges that such system of ostracization and terrorism and alarm is not kept to make colored people vote the Republican ticket. Contestee alleges that with the exception of the Presidential electors there have been but a very few, if any, Republican candidates for office in this district for many years."

"Contestee alleges that such system of ostracization and alarm and terrorism is kept up to compel colored people to vote for Greenback candidates whose principles are utterly opposed to Republican principles, and whose principles approach very nearly and sometimes reach an open advocacy of repudiation and communism," &c., &c. And again, (record, 19,) "contestee further alleges that at said boxes, or voting precincts, mentioned by contestant in Madison and Jackson Counties, a large number of colored people, to wit, 500, were deterred and prevented from voting as they desired by a thoroughly organized system of terrorism, inaugurated and kept up by leaders of the factions opposed to the Democratic party of said counties, said factions being known as Greenbackers; said leaders and roughs who lead and head a system of terrorism so alarm and threaten the colored people that they are afraid to openly vote for persons of their choice, and through terror and fear they are compelled to vote for such persons as these leaders require them to vote for."

These remarkable statements are repeated over and over again in the contestee's answer, as if the "damnable iteration" could give them some color of truth and plausibility. Nothing, however, could be falser and more absurd. Not a single man is sworn to prove that he was intimidated or deterred in any way from voting for the contestee. The evidence upon which the contestee relies is rumor and hearsay; and this is contradicted by the special facts in the case as well as by the whole political history of the country. Everybody knows that there is little or no disturbing or explosive element in the negro race. They never strike for wages, nor are they at all aggressive as to their rights or wrongs. They are amiable and easily led, and sometimes misled, but, unlike the white race, they never seek to dominate in business, society, or government.

Everybody knows, sir, that the negro, left to himself, votes the Republican ticket. It is a matter of course, and with him a matter of conscience. It grows naturally and logically out of his past relations to that party in the freedom and enfranchisement of his race. The negro, left to himself, rarely votes the Democratic ticket. He regards that party as the natural traditional enemy of his race. Indeed, the fault now found with the colored voters of my district only emphasizes the fact that they are too faithful and indiscriminate in their party fealty. But it may well be asked, Why, in the absence of their party ticket, should the negroes want to vote for the contestee? What circumstances in his canvass, what quality in his character, what reasons growing out of the election itself, would tend to change the usual conduct of the negro voter in this respect and give the contestee a preference over me?

Apart from the general impression among all classes, white and black, that the contestee was incompetent for the place, why should the negroes, weak, timid, and in a great minority, choosing between two Southern men of Democratic and Confederate antecedents, prefer a bitter, narrow-minded, and proscriptive Bourbon, to a liberal, friendly, and conservative Greenbacker? Why should the negroes vote for a man who evidently has not forgiven them for being set free; who still wages a guerrilla warfare against the amendments, and against a man who was known to accept in law and honor the legitimate and irrevocable results of the war?

Sir, the testimony of Nich. Davis, esq., (record, 50, 51,) a Democratic inspector at Huntsville and a leader in the party, is a conclusive answer upon this point. It exposes the peculiar methods of the contestee; it lays bare his disingenuous course in the canvass, and sheds a flood of light upon the fact of intimidation in the election. I refer of course to the evidence in regard to "the secret circular," (Exhibit D,) a Bourbon campaign document, denied and disavowed at first, but now admitted to have been adopted, as Mr. Davis informs us, by the Bourbon club at Huntsville, and made the secret basis of their organization throughout the district.

What was the idea of this circular? Upon what theory did it proceed? Its object is plain from its language. Its purpose to employ neighbor against neighbor, wealth against poverty, race against race, is so clearly and insolently stated that comment can scarcely make it clearer. It was intended at first to be secret, secret from all but the contestee and his partisans. It had no paternity, no date, no address, no acknowledged authorship. But a single copy having escaped, it was published in the anti-Bourbon papers, and this publication, de-

stroying its value as a secret and stealthy assault, made its acknowledgment and even its defense a political necessity. I know not, as yet, what Jesuit wrote it, but, whoever he was, Loyola never had a more devoted disciple. The whole document is in evidence and will fully repay perusal. I invite attention at present to the following extracts:

THE WHITE VOTE.

1. Make a list of white voters in each precinct not on the roll of its club.
2. Appoint a committee of one member to wait on each of these and respectfully and cordially invite him to join us. The committee to report at the next meeting of the club.
3. If any one fails to respond to this invitation, send a committee of two other members most likely to influence him, who will urge him by every consideration that can be presented not by lethargy or inaction to desert his kindred and country in this effort of deliverance, and in some cases to tell him that his decision will in the opinion of many of his friends and neighbors determine whether we regard him as friend or foe to our party.

With some persons such extreme expressions would not be advisable, as many gentlemen who do not care to have their names enrolled in clubs are our earnest friends.

THE BLACK VOTE.

1. Make at once a complete list of the qualified negro voters in your precinct, in which shall be set down:
 - First. The name and address of each voter.
 - Second. With whom he works, and whether as a hired hand or tenant.
 - Third. What merchant or other person advances for him.
2. It is deemed preferable that this census be made by regularly appointed census takers or committees, and that the negro voter should know that he is thus enrolled by the club.

5. There are a number of negroes who will not vote with us, but who will promise to stay away from the polls.

To look after these and see that they adhere to their promise, enroll young white men of the precinct under the voting age, before the day of the election, and assign each one to his negro.

1. The Hancock clubs for the election of all Democratic nominees will meet not less than twice a month; oftener when expedient, and in executive session with closed doors.
2. It is desirable that our attention be concentrated upon selected negro voters to secure the majority desired, and that the others be let alone. Those selected for our efforts should be, not party leaders, office seekers, or others who expect to make something out of the Radical party, but,
 - First. Those who have acquired property and pay taxes.
 - Second. Those whose relations to and standing with the whites is best.
 - Third. Those who are poorest and most dependent upon the whites.
 - Fourth. The weaker classes generally.

It is evident from the face of this circular that the partisans of the contestee, in their desperate effort to elect him, resorted to extraordinary means heretofore unknown to the politics of Alabama. Never before in my district did any political party organize clubs which were to send a committee of one, then of two, and finally of three, to invite others to join them, with instructions to notify each person thus invited that if he declined he would be regarded as a "foe to his party" and a "deserter from his kindred and country." Never before in my district was there an organized plan to get legal voters to promise not to vote and then to assign "youths under the voting age each one to his negro" to keep them from the polls. Never before in my district was there a systematic organization intended to secure especially the votes of "those who are poorest and most dependent upon the whites," and to control the suffrage of "the weaker classes generally." Never before in my district was there a systematic effort to find out the "merchant or other person" who advances supplies for the tenants and hired hands of the district in order to use them as political factors in the election. Indeed, sir, this was the first fraud of this sort in my district, and with the help of the House and the moral effects of this exposure we may hope it will prove to be the last. The address of the Greenback committee, (record, page 62,) issued at the time, indignantly criticised these passages. They said:

The Bourbons do not expect to defeat us except by fraud or force, and, therefore, they have resorted to both as part of their plan. This circular contains and recommends every appliance for the clubs that can be devised to defeat the popular will at the ballot-box except absolute counting out, and this is already provided for in the election laws of the State.

These words, Mr. Speaker, were used two months in advance of the frauds, whose inchoate agencies we were then withstanding, but the words were prophetic. Force and fraud both failed and "counting out under the election laws" had to be relied on in the last resort. The Greenback committee not only answered the circular but they boldly denounced it. What more? They issued a counter address, consisting of an exact reprint from the code of Alabama and from the statutes of the United States, of all the provisions on the subject of fraud, bribery, and intimidation in elections. They warned the Greenbackers and Independents not to violate the election laws themselves, nor permit it to be done by others, but honestly and faithfully to observe the laws of the State and the nation.

Indeed, sir, throughout the whole canvass we continued to uphold the constitutional rights of the citizens, white and black, as a shield and bulwark against the lawless and covert assaults of the contestee and his friends. Never was any contrast sharper and better defined; never were the issues more marked and significant than between the partisans of an intolerant and aggressive faction on the one side and the friends of a free vote and fair count on the other.

Sir, there is much, no doubt, in the "secret circular" that might be construed to refer only to the customary work and legitimate duties of a political campaign, but what seems fair and good on the outside is so mixed with what is essentially vicious and degrading that it is

impossible to separate them from each other. They constitute one single monster—a bastard and a nondescript, suggesting that shape of Sin in Milton which guards the gates of Hell, and which

Seemed human to the waist and fair,
But ended foul, in many a scaly fold,
Voluminous and vast.

The idea of this circular, as a whole, was that the negro was the natural enemy of Bourbonism, and that as such each individual voter must be approached, not by reason and argument as other men, but by interested and corrupt considerations. He must be moved by dishonoring motives; he must be voted by rewards, or the hope thereof, or kept from voting by fear, force, or famine. The Bourbons, sir, seem to look alone to the negro's weakness and vices to take him into their party; his love of ease, his dread of power, his hate of hunger and poverty. They count upon his slips and falls in the wear and tear of life to force him into their power; and I admit, sir, that they are not always mistaken. The negroes as a class that join the Bourbons are what might be expected from the character of the invitation and the nature of the inducement.

I cannot recall the name of a negro who has "acquired property and pays taxes" that belongs to the Bourbon faction. Those that join them are "the weaker classes generally." One comes on a mortgaged mule, or with a lien on his crop, or assailed by the grasshopper and boll-worm, and threatened with foreclosure or ejection by "the merchant or other person who advances for him." Some join the Bourbons in order to have bonds made to get out of jail; some for appointment to petty offices; some for employment on the railroad or canal; some from a natural indisposition to work; some from a transmitted tendency, a slavish love of laziness and liquor. "The cankers of a calm world and long peace" that followed Falstaff through Coventry were recruits of the same kidney and operated upon by the same inducements.

The Bourbons have not indeed "unloaded all the gibbets and pressed the dead bodies," but they have set up the prisons and poor-houses as factors in politics, and seek in this way to utilize the weakness, poverty, and vices of the community. The "secret circular" discloses the fact. It leaves room for no excuse or palliation. Yet the contestee prates about "intimidation, insult, and outrage," and raves of "threats of bodily harm and destruction of homes and property by fire." Sir, for every Bourbon negro insulted or injured on account of his Bourbonism I can show you two white men insulted or injured on account of their Independent or Republican or Greenback views; men dismissed from employment, ejected as tenants from their homes, reported to court on frivolous charges, pestered with law suits, and plagued with slanders and persecutions.

It will be observed, sir, that the canvass, taking tone, or want of tone, from the "secret circular," was of a singularly unscrupulous character. The arts of war were brought into the affairs of peace. Secret agencies and secret circulars, like spies and scouts, were employed for the first time in our politics; and all the tricks and stratagems of the partisan ranger were pressed into Bourbon service. In this sense the "secret circular" was directed against the "tenants and renters." When or where did the tenants and renters ever issue such a circular against the landholders, pointing them out as objects of political espionage? Under such circumstances is it strange or unnatural that an honest negro or a self-respecting poor white man should refuse to join this miserable faction, this most undemocratic, this most unrepudicable organization, this conspiracy against popular government itself? The question makes its own answer.

The colored people of my district are admitted to be generally more advanced, intelligent, and progressive than in other parts of the State, but I repeat, sir, that those that join the Bourbons are generally those who care nothing for politics, nothing for citizenship or suffrage. They are indeed, sir, the weaker and dependent classes. But with the Greenbackers it is wholly different. We accept in perfect good faith, without mental reservation, the legal and political rights of all men. Whoever the State of Alabama clothes with the right of suffrage is sacred to us. The humblest colored citizen can join us with as much security to his political rights and with more protection to his person and property than with any other party. We frankly invite his confidence and appeal to his reason and judgment, that as we are to live together in the South we should live together in peace. We talk to him as man to man, face to face, without fear or favor, as citizens of a common country, with common rights and interests.

I admit, sir, that there has been and still is too much feeling, too much bitterness in our politics among both races and in all parties. But I insist that the Bourbon leaders are solely responsible for its continuance. Sir, if any Greenbacker or Republican or Independent attempted to intimidate any negro into voting for me against his consent, I am sorry for it. I know nothing of it. I have never heard of it, and, sir, I do not believe a word of it. But if the contestee can show it, though he fails to make out a single case in the evidence, I hope he will yet show it. The courts, State and Federal, are open to him. Let the wicked Greenbacker intimidating voters be tried, convicted, and sent in company with all the hosts of Bourbon bulldozers and ballot-box thieves to Albany or Detroit.

Ah, sir, God save the Greenbackers of Alabama from the crime of oppressing or the shame of being oppressed! Will the contestee say as much for the Bourbons? Will he mean it? No, he dare not. He

strains at this Greenback gnat, but he does not hesitate to swallow the Bourbon camel. He is but lately come from defending, and even now he palliates, the frauds at Meridianville and Poplar Ridge, the ballot-box stuffing of Lanier's, and the bulldozing of Courtland and Florence. And yet he talks about fraud and intimidation. Why, sir, when the Independents and Greenbackers in my district shall hear of the contestee, or any other Bourbon, as being concerned about the rights of the negro or the poorer white class, they will be filled with amazement. When they read the contestee's ravings here about intimidation and bulldozing, and when they learn that the same man who employed "the secret circular" and "the yellow circular" in Alabama is figuring here as the champion of free suffrage, they will marvel at his effrontery; and, to use the quaint and expressive language of another, they will "thrust the tongue of derision into the cheek of incredulity, and wink the wink of the scorner."

Ten years ago, sir, the right of private judgment in politics among whites or blacks in the South was not so much respected as it is now. That was the era of race and sectional issues. The so-called carpet-baggers had the negroes organized in the loyal leagues, and the Bourbons had the white men in the Ku Klux Klan; the one the chill of death, the other the fever of hell that followed it. But now, sir, we have passed the chill and fever stage in our politics—that day of bigotry, proscription, and intolerance. There is less ethnic prejudice than formerly, and as far as race issues are concerned we have come upon better times. There is more freedom of thought and action in both races. A man in my district can now vote pretty much as he pleases; and where the "yellow circular" fails to reach the inspectors, and in Jackson County, where even the Bourbons are tolerably honest, he can generally manage to get his vote counted as it is cast.

The situation in Alabama, and I hope in the South generally, although not what it should be, has improved and is improving. When I recur, sir, to the bitter politics of ten or twelve years ago; when I recall the savage and lawless days of reconstruction, I am forced to believe that we have advanced greatly in our methods, our tempers, and our ideas. The South moves to the front. Let us thank God and take courage! By the South, I do not mean the Bourbons merely. I do not mean a part only of the community; I mean the whole body of the people, white and black, of all parties. The races have divided and are dividing. Even the contestee himself, in spite of Radical or Greenback intimidation, had negro delegates in his convention, negro orators on his platform, and negro editors advocating his cause. But I submit, sir, to the House and to the country that the "secret circular" under discussion is a step backward and not forward. It is Bourbonism, not progression.

The inquiry of the visiting committee, the census-rolls, and the canvass-books are not the machinery of democratic thought in a free country. The debts, mortgages, liens, and rents of the poor and dependent, the pecuniary troubles of the weaker and debtor classes generally, are not the instruments by which the sanctity of American citizenship is to be secured and transmitted. On the contrary they are the badges and perhaps the relics of a slavery which lowers the tone of our politics, assails the manhood of the voter, corrupts the institutions of the country, and tends ultimately to overthrow the liberties of the people.

REASON AND COMMON SENSE.

In conclusion, Mr. Speaker, I beg the House to test my right to a seat here by reason and common sense. It is admitted, and, if not admitted, it is proved, that I received a large majority of the votes cast at the election. It is also proved that several hundred of these votes were not counted by the inspectors because of alleged non-compliance with the State election law. It is not anywhere claimed that these rejected ballots were cast by illegal voters. On the contrary it is admitted, and if not admitted it is a legal presumption, that they were cast by legal voters, by duly qualified citizens of the State and county.

It is not claimed that these ballots were so indefinite and meaningless that the election officers were unable to see from their face the sense of the ballot and the purpose of the elector. They were plain, ordinary ballots, such as the evidence shows were generally used in elections in Alabama. They expressed in clear, intelligible terms the will of the voter. The sole objection then and now raised to their reception was that they did not technically comply with the precise terms of the statute. They had "figures" upon them. I will not consume time, sir, with the absurdity involved in this objection. The words in the statute must of course be construed *in pari materia*. If "figures" mean numerals then "characters" mean letters and "marks" mean characters, and in this way we may destroy by quibbling every vote on both sides in the election and leave a white waste of blank paper as the only ballot under the law. But this *reductio ad absurdum* shows the fraudulent technicality on which this construction of the statute is based and restores us at once to reason and common sense. Neither the jury of this House nor the larger tribunal of the country, watching the progress of this contest, will be deceived by such paltry considerations.

In elections, sir, the right reading of the law is that which confirms the intention of the voter. The contestee cannot erect an inquisition upon a technicality, nor overthrow the popular will by a sophism. This play upon words, this trick of synonyms, is certainly

the smallest pretense upon which any man ever claimed a certificate for a seat in this body. The political issues between the contestee and myself may divide the opinions of this House as they have divided the people of my district; but surely, sir, upon a matter of fraud, upon an issue of lawlessness and trickery, there can be but one opinion. I appeal to the personal character of the House. I am well aware that not a dozen gentlemen here are in full sympathy with my political views, but there are sentiments of justice between man and man to which even party prejudice cannot wholly blind us.

I ask each gentleman here, upon his honor as a man, whether he really believes that the conduct of the election officers in rejecting my tickets was honest and impartial; whether, under the circumstances, it was the fair result of their unbiased judgment and conscience; whether, if I had been in the contestee's place and the contestee had been in mine, we should have ever heard of such a construction of the law, or been insulted by the mockery of such a contest? No, sir; not even by the worst of men in the worst of times. It will not do to say as an offset to these rejected ballots that unregistered persons voted for me. If registration is a prerequisite for voting in Alabama, which I deny, there is no legal evidence of the fact of non-registration, and even if the fact were necessary and were proved, it would be no answer to the returns of the State and Federal officers, no defense against the frauds by which the majority of votes were cast for one man and counted for another.

Sir, the contestee employed one kind of technicality to get his certificate and another kind to keep it. He got his *prima facie* right to a seat here through the inspectors, by "counting out" one sort of my ballots—those with figures on them; but he now claims his final right through the registrars, by rejecting another and totally different class of voters—those whose ballots were received and counted but whose names do not appear upon his so-called registration lists. In a word, he got in by disfranchising one body of citizens, and he hopes to stay in by disfranchising another. Sir, there was no evidence as to unregistered votes before the inspectors when they rejected the ballots; no such evidence before the county officers when they made their returns; no such evidence before the secretary of state when he issued his certificate; and there is no such evidence now. No evidence, no law, no fact. It is all an after-thought and a make-shift. If the non-registered vote is the strength of the contestee's case, as it has been made the basis of his argument, we should reverse positions.

He and I should change places; he should be the contestant and I should be the contestee. I should hold the office *prima facie* on the basis of a majority of the votes actually cast, while he should be forced to his plea of avoidance, to his proof of alleged unregistered and illegal votes to offset my acknowledged majority. But as the matter stands he holds the certificate by a minority, which he seeks to increase to a majority by allegation and argument. The burden is upon him, but he fails after all said and done to legally show a single unregistered vote cast for me. The law and the fact are both against him. This parade of charges, therefore, against whole precincts, against companies and regiments of voters, especially in an agricultural district, where there is little or no floating vote, carries no legal or moral presumption with it. He is bound to make a clean and decent showing. Allegations without proof are both idle and vicious. Examination will show and has shown that the pretended lists of unregistered voters to which he refers, like the tissue ballots in the minority report, are systematically deceptive.

I beg gentlemen to believe that voting is not simply a matter of printing and paper, not merely an affair of stationery. It is an act of will, preference, conscience. It is the self-assertion of the citizen in the sacred right of private judgment, in the free exercise of the elective franchise. Let us recur, sir, to first principles. What is the elective franchise? It is a right, a privilege, a duty. It is in the first place a right, whether natural or conventional, still a sacred and valuable right. The national Democratic platform declares that "the right to a free ballot is the right preservative of all rights," and that "it must and shall be maintained in every part of the United States." It grows out of the nature of our Government. It is the basis of our civil society and the only recognized vital force in our Constitution. In the second place, it is a duty.

A failure to vote is an offense by the individual against society just as the restraint upon the ballot, except for crime, is an offense by society against the individual. "All governments," in the language of the Declaration of Independence, "derive their just powers from the consent of the governed." In order to invoke the full voice of the people, in order to avoid disorder and violence, it is the duty of the citizen to express himself in his ballot, and in this way to contribute to the mental and moral forces of government. It is, lastly, a privilege, but not in this country a special privilege. It is contrary to the genius of our institutions to restrict it except, I repeat, for crime. Neither the technicalities of local law nor the tricks of force and fraud can create a governing class, can make a privileged or proscribed class, can establish in the few the right to rule the many.

I fully appreciate, sir, the evils of ignorant suffrage, black or white, but it is impracticable to remedy these evils by lawlessness and fraud. It is a monstrous confession of political and moral impotence. Intelligence and virtue! Sir, intelligent and virtuous men should resort only to intelligent and virtuous methods. Errors in the administration cannot be cured by crimes against the government. The

attempt to do so is evidence only of pessimism, infidelity, and despair. It is as illogical as it is immoral. It is behind, it is against the spirit of the age. Stuffed ballot-boxes furnish no substitutes for school-houses, no remedy for illiteracy. The idea is Bourbonism, not progress or civilization. The Homeric image of Sarpedon, borne away by sleep and death, is a striking prototype of the old-time Bourbonism of the South. They, too, are given over to sleep and death, and not Zeus himself, the greatest of all the old gods, could inspire them, like Sarpedon, with new life and thought. They have lived, and they will die within the narrow limits and bitter prejudices of a past day and generation.

Sir, if we of the South, the young men of to-day, have accepted, nay, if we have sworn to the recent constitutional amendments, we must surely keep our oaths and stand by the "golden metewand of the law." Sir, if the South lost all save honor in the war, she cannot afford to lose that now. She must not risk her character for truth, candor, and courage by tricks and frauds in elections. The President in his inaugural, the lamented and gifted Garfield, refers to this idea in the following strong and cogent language:

Bad local government is certainly a great evil which ought to be prevented, but to violate the freedom and sanctities of the suffrage is more than an evil. It is a crime which, if persisted in, will destroy the Government itself. Suicide is not a remedy. If in other lands it be high treason to compass the death of the king, it shall be counted no less a crime here to strangle our sovereign power and stifle its voice. It has been said that unsettled questions have no pity for the repose of nations. It should be said with the utmost emphasis that this question of suffrage will never give repose or safety to the States or to the nation until each within its own jurisdiction makes and keeps the ballot free and pure by the strong sanctions of the law.

General Hancock, in his letter of acceptance, makes the following unqualified statements to the same effect:

It is only by a full vote, a free ballot, a fair count that the people can rule in fact as required by the theory of our Government. Take this foundation away and the whole structure falls.

President Arthur, in his letter accepting the nomination for Vice-President, grasps the whole subject with great clearness and power. He says:

The right and duty to secure honesty and order to popular elections is a matter so vital that it must stand at the front. The authority of the National Government to preserve from fraud and force elections at which its own officers are chosen is a chief point on which the two parties are plainly and intensely opposed. * * * The Republican party has strongly approved the stern refusal of its representatives to suffer the overthrow of statutes believed to be salutary and just. It has always insisted and now insists that the Government of the United States is empowered and in duty bound to effectually protect the elections denoted by the Constitution as national.

More than this, the Republican party holds as a cardinal point in its creed that the Government should by every means known to the Constitution protect all American citizens everywhere in the full enjoyment of their civil and political rights.

Republicans cherish none of the resentment which may have animated them during the actual conflict of arms. They long for a full and real reconciliation between the sections which were needlessly and lamentably at strife. They sincerely offer the hand of good-will; but they ask in return a pledge of good faith. They deeply feel that the party whose career is so illustrious in great and patriotic achievements will not fulfill its destiny until peace and prosperity are established in all the land; nor until liberty of thought, conscience, and action and equality of opportunity shall be not merely cold formalities of statute, but living birthrights, which the humble may confidently claim and the powerful dare not deny.

In the beginning, sir, I spoke of the disfranchised citizens of my district. Disfranchised in what? Disfranchised how? They were disfranchised in being denied the right of suffrage, the right to vote, and the ancillary or related right to have their vote counted as cast. The Greenbackers, I repeat, appreciate as much as any class of the community the evils of ignorant suffrage, white or black, and are doing their duty to remove these evils. But ignorant suffrage, sir, has nothing to do with this case. It cuts no figure in the contest; it offers no pretext for the count-out. The proof shows that the rejected ballots were voted generally by as independent and substantial men as any in the district. These wrongs, sir, were inflicted not alone upon negroes but upon white men; not alone upon so-called "Radicals and scalawags" but upon Greenbackers and Democrats; not alone upon "aliens and carpet-baggers" but upon natives to the soil. I myself am one of the victims, in company with hundreds of the most respected and intelligent gentlemen of the district.

And I feel, therefore, a sense of personal injury as well as a conviction of public wrong, a wrong done not to myself alone but to my party and to my people. It is illogical, it is shameful, Mr. Speaker, to rob even the weakest and poorest men of their rights. It is so shameful that it cannot and will not be endured. Sir, I stand guard upon this line of defense; but I do not stand alone. The people of my district, the people of my State are with me. They turn their anxious, waiting eyes toward this House. Sir, there are multitudes as of old, "multitudes in this valley of decision." What will you say to them? We have decided; we shall never make terms with these men or fail to resist their methods. We have sworn to Heaven never to cease our warfare upon this faction until it ceases its warfare upon honest elections. We invoke the whole people without regard to antecedents; we raise the hue and cry against them; we will never consider any other question with any party or make any other issue than a free vote and a fair count. We will never have a friend or find an enemy in politics except upon the final and rightful settlement of this vital and paramount question.

This right, sir, is the basis of all free government. It is the foun-

dation of popular institutions. It is the true source of all power in the people. It is a right, a privilege, a duty inestimable to freemen and formidable to tyrants, and tyrants only. Its free exercise, its full and fair enjoyment by each and every citizen in every section of the country is the test and guarantee of republican government. Sir, we must and will have honest elections. There is no other way that can or ought to satisfy the people. There is no divine right of king or caucus. Shall we resort, sir, to violence; shall we appeal to arms; shall we force the National Government to interfere; shall we have an oligarchy of partisan inspectors, or shall we wager money on the result and let the longest purse rule by bribery and corruption? No, Mr. Speaker, these things have all been tried in other countries and in other times and they have always failed. If we are to have free government at all we must leave it to the honesty and intelligence of the community, to a majority of the qualified voters. The free ballots of a free people are the fairest, surest, safest test of the majority. The common sense of all is better than the special sense of any. It is the last and only solution. There is nothing else under man's law or God's law but disorder and violence. "The meteor explodes, the comet rushes back to the depth of space, but the loadstar shines constant in summer and winter, at seed-time and at harvest, at the equinox and at the solstice." There is no right rule but the rule of the people. Every other expedient is found to be a temporary and delusive make-shift and involving force or fraud, or both, and ending only in anarchy and despotism.

The order and well-being of a community depend primarily upon its moral sense. The special pleadings, the *suppressio veri* and *suggestio falsi* by which election frauds are either denied or defended, is conclusive proof of a vitiated and demoralized public sentiment. Sir, let us rise above this dry-rot of Bourbonism and look at the Government of our fathers as our fathers made it. There is nothing in this age of progress and civilization which presents a nobler idea of the triumph of the human race than to witness a great, free people in the orderly and peaceful exercise of the right and duty of self-government. Nothing is better fitted to fill our minds and hearts with pride and patriotism.

Behold, sir, the great body of the people in the free exercise, in the undisputed enjoyment of their own sovereignty under laws enacted by themselves, thronging to the polls on the day of election and bringing their ballots as offerings to their country. Who, sir, would technically sacrifice these offerings upon the altar of fraud? Who would dare deny their authority by the use of force? The man or set of men that conspire against the right of suffrage conspire against the character of our institutions and against the liberties of our people. The man or set of men who aim a blow at the ballot-box, who seek to corrupt it by fraud, to overthrow it by force, are the enemies not only of the Government of the United States but of all free government. As the ancient statue of Pallas, with its pike and distaff and spindle, was the palladium of beleaguered Troy, so the ballot-box, guarded by honest and brave men, is the palladium of our civil and political rights.

If prosperity comes to the South, peace and justice must be first established at the ballot-box. Peace and justice; for, sir, the Independents of the South will not long submit in peace to injustice. We will not, we ought not to yield to fraud and wrong. We insist upon our rights; we demand the blessings of free government inherited from our fathers. These blessings, sir, we well know cannot be imported from the outside; they cannot be supplied by government interference; they cannot be brought from afar. They must grow up among our people out of the inherent virtue of our society; they must form a part in the internal forces of our politics and government. And, Mr. Speaker, we feel and know that if we are true to ourselves and to our convictions we cannot be permanently deprived of them. For are we not Americans, and are these things not our birth-right and our inheritance?

Ah, sir! the Liberals, Independents, and Greenbackers of the South have a noble mission intrusted to them. We are to withstand the encroachments of Bourbonism upon the rights of the people. We are to restore free government. We are to relieve that crude and bitter spirit in the South which ignores history and experience; which profits nothing by the past and promises nothing for the future. As Charles James Fox said of the English Whigs in a like crisis, "Instead of narrowing the basis of freedom, we must enlarge it; instead of suppressing, we must infuse and circulate the spirit of liberty." The rights of the majority, the safety of the minority, the consent of the governed, secured by law and enforced by public sentiment, the confidence of the people in their servants and in themselves—these, these, sir, are the very definitions and tests of free government; but these, sir, have ceased to characterize the rule of Bourbonism in Alabama.

The evidence shows that the same faction that made the Alabama election law executed it; the same faction that hid fraud in the statute brought it forth in the canvass; the same faction that organized the opportunity in the law seized upon it in the election, and the same faction is here to-day audaciously appealing to this House through their defeated candidate, invoking your judgment on his fraudulent certificate, and asking not only your pardon for his methods but your participation in them, and even your further aid in their enforcement. He appeals especially to the Democratic side of the House. These offenses being committed in Alabama, in the

name and under the organization of that party, he naturally expects their support for success, or, if he fails, their sympathy in defeat.

Communism, indeed! And the rights of property? What is this? The despairing outcry of defeated fraud. The rights of property on his lips and a false certificate in his pocket! He expected then, he expects now, that the Democratic party of this House will sustain him. I know, sir, that these are bold words; but it is time that the truth should be spoken about these things, and this is the occasion, and I, unfortunately perhaps, am the man to speak it. I know that in a certain sense I am on trial here, but if that could influence me I should despise the suggestion. The Democrats of this House are also on trial. Wherever the majority of the votes is one way and the certificate another the party of the contestee is on trial.

In this case the contestee is here asking you in effect to indorse the Alabama election law, with all its provisions for easy cheating and difficult detection, and the secret circular, the yellow circular, the discreditable conduct of the canvass and the contest, and all the frauds and ballot-box stuffing of the election. You are now asked to make yourselves responsible after the fact. Will you do it? These things were done in the name of the Democratic organization of my district. Will you give them the sanction and indorsement of the Democrats of this House, or will you have the moral courage or, what is rarer, the political courage to refuse to do it? I speak *de bene esse* for the honest Democrats of my district. I do not believe they sustain this count out. Will you undertake to ratify and indorse it? Far above all temporary or personal considerations, I hope, for the credit of the Democratic party and for the good of the country, that you will spurn the proposition.

Sir, I do not wave the so-called "bloody shirt." There is no violence in this case. It never reached that dignity. Its records are foul, not with force but with fraud. The yellow circular, not the bloody shirt, was the contestee's oriflamme of battle—significant fact, as yellow as a hospital flag, and as ominous of corruption and disease. I repeat, sir, that as far as my right to sit here is concerned I am on trial before this House, but the House itself is, in a higher sense, on trial before the whole country; and as far as I am concerned I invoke, I challenge both judgments. What, sir, is the matter with the politics of Alabama? Is it the old plea of Government control? Is it outside interference? No. We are as free and unmolested as any State or section in the Union, in the absolute enjoyment of local self-government.

The trouble with us, sir, is that while our institutions are popular in form they are not popular in fact. There is a one-party despotism that dominates everything. Public opinion is suppressed and irresponsible. There is an oligarchy of inspectors, an inquisition of officials, between the ballot-box and the people. We have the form without the spirit of popular government. Sir, I urge and repeat these views both within and without these walls, because I feel that when a community is sunk or is sinking under apathy and misrule they can only be aroused and saved by a bold and honest recurrence to first principles. I do not altogether agree with the learned and eloquent Mr. Curry, of Richmond, formerly a Representative from Alabama, that he who breaks into a ballot-box will break into a bank, or that the man who steals an office would not hesitate to steal a horse. This may be, and doubtless will be, the ultimate tendency; but at this time the anomalous and alarming fact is otherwise. The officials who commit these election frauds in the South do not belong to the criminal class of the community. They are often gentlemen of personal character and social standing, who would scorn in private affairs to do a dishonest or doubtful act.

This is the wonder, the shame, and the danger of these methods. All observation and experience teach us that public or party crimes are more corrupting than private vices. Even when exposed and punished they lower the general tone of public sentiment, because they lessen the public dignity and self-respect. The crime of ballot stealing, or ballot-box stuffing, is more injurious to the morals of the community than any form of private larceny, however felonious, not only because the public sentiment that tolerates the one will be taught to overlook the other, but because it makes a mockery of law, puts public justice to shame, and brings the sources of government and the very sanctions of society into doubt and disrepute. Sir, I am myself a pained and reluctant witness of the condition of some of the sections in which these offenses are prevalent.

Bourbonism, like a foul disease, infects the atmosphere. It preys like spotted leprosy upon the minds and characters of men. It tends to corrupt the local courts of justice and to degrade the administration of the law. It has already brought some of these fraudulent officials and much of their proceedings into public criticism and contempt. It taints every man that touches it. It degrades not only the officials who profit by it but every trickster that steals a vote or stuffs a ballot-box, that uses fraud or force, or that consents to their use, or that conceals these methods for the sake of his party. Every such man has made terms with Bourbonism; every such man has trifled more or less with his better sense of right and truth, and compromised with his conscience and self-respect.

These things are done, sir, in the name of the Democratic party. They are the fruits of a faction of Bourbons, who are in no sense Democrats, but who influence and in many instances control the Democratic organization. They rejoice in the solemn device, the pious fraud, the sacred artifice by which the grand old Democratic

party can be saved or served, by which wicked combinations between Radicals, Independents, and Greenbackers can be defeated and the virtue and intelligence of the State (meaning always themselves) can be continued in office and power. And these things, I repeat, sir, are shown by the evidence to be done in the name of the Democracy, in the name of Jefferson and Jackson, in the name of a great social movement, that, beginning in the early part of this century and looking to the golden age, made the Sermon on the Mount its inspiration and the Declaration of Independence its platform.

As long, Mr. Speaker, as we have organized fraud in elections, systematized in the election laws themselves, this issue of the ballot-box is, and must be, the top and bottom question not only in Southern politics but in national politics. All other issues are necessarily subordinate to this, because this is the issue of free government itself. The ambitions of men, the purposes of parties, the policies of administrations, either Federal or State, may change their aspect in relation to this issue, but the issue itself remains. I had rather rob the sea of its salt, the air of its oxygen, the sunshine of its vital forces, than hope for good government with free suffrage eliminated. The sweetness, the health, the life of society would be gone. As long, I repeat, as there are systematic frauds in our elections, as long as these frauds are organized in the election laws themselves, as long as the Bourbon leaders connive at and cover them up, the ballot-box must and will be the paramount issue with us.

If necessary, old party organizations will melt away or be developed anew to meet the demand of the free-suffrage sentiment of the country. The Greenbackers may lead, the Republicans may lead, the Independent Democrats may lead in this anti-Bourbon reaction; but under some sort of bold and honest leadership our redemption, sooner or later, must and will come. Sir, it is inevitable. There can be no order in government, no peace in society, without free and fair elections. Men who are born free and remain citizens of a free country will not long submit without resistance to injury and injustice. The Constitution recognizes the right and guards the means of resistance. The love of liberty is the bulwark of our institutions, and nature and law both teach us that resistance to tyranny is obedience to God. I said this in the canvass, and I repeat it now. If this be treason, make the most of it. If this be communism, the framers of the Constitution were communists.

The prevalent idea of a strong government in other countries is the weakest of all governments with us. What is the power of standing armies and the menace of great navies to the desperate purpose of an outraged people? Sir, our ancestors were right. That government is the strongest which rests upon the consent of the governed, which enlists the respect and affection of the largest proportion of its people. The iron despotism of the Czar or the military empire of the Kaiser is the weakest government in the world, because it lacks this vital principle upon which strong and free governments are founded. It lacks this principle, which all experience teaches us cannot be destroyed by force or denied by fraud without assailing the social compact itself. It stands pre-eminent in government and society like the chiefest of all the virtues; "whether there be prophecies they shall fail; whether there be tongues they shall cease; whether there be knowledge it shall vanish away," but the right preservative of all rights will remain. I shall not despair, Mr. Speaker, of free suffrage until I despair of free government itself. It is the sanction by which the House now sits in judgment upon me and the basis of the confidence with which I now address you. It is the glory and safety of our system, as we believe our system is, by the blessing of God, the hope and refuge of the world.

National-Bank Charters.

SPEECH

OF

HON. OSCAR TURNER,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1882.

The House having under consideration the bill to enable national banking associations to extend their corporate existence—

Mr. TURNER said:

Mr. SPEAKER: The gentleman from New Jersey [Mr. HARDENBERGH] has taken me by surprise in yielding me a few minutes of his hour, as I had not expected to say anything to-day upon this question. I thank him, however, for his courtesy, and will briefly give some of the reasons why I shall oppose the bill now under consideration virtually rechartering the national banks.

Mr. Speaker, I have always been opposed to the national banking system, as I have said before on other occasions on this floor. General Jackson vetoed the old United States Bank, upon the ground that it was dangerous to the liberty and welfare of the people, in ad-

dition to constitutional objections. That veto was indorsed and approved by a large majority of the American people. Its principles have been adhered to by the Democratic party, and reiterated in our platforms time and again. All the reasons and philosophy of that veto apply with equal if not more force to the present national banking system. The old United States Bank only had a capital of thirty-five millions. The present national banking system consists at this time of about twenty-two hundred national banks, instead of one, with a capital of three hundred and eighty millions, instead of thirty-five. They are armed with the same destructive and dangerous power, the right to issue currency, and to expand and to contract that currency at their own option.

Thus they have the power to inflate the prices of everything and then to contract the currency and bring on panics and ruin to every industry in the land for their own interest and benefit. Sir, it is a dangerous power, a power that ought not to be intrusted to any corporation or number of corporations. The power to make money is an attribute of sovereignty, and the right to regulate its quantity and volume is a sovereign right; it belongs to the Government of the whole people and ought never to be parted with; it is a power that ought to be exercised alone by the representatives of the people in Congress. That power has been intrusted to these corporations, they have been the pets of the Government, and now, sir, when they are about to pass out of existence, it is proposed by this bill to continue their dangerous power by authorizing the rechartering of them.

Mr. Speaker, we have been told by the advocates of this banking system on this floor that there is no danger of these banking corporations exercising their power against the interest of the people. Sir, this is not true. Banks consult their own interest, and not the interest of the toiling masses of the people. When the funding bill passed Congress at the last session reducing the rate of interest on the United States bonds, upon which these banks are based, to 3 per cent., what then did these banks do? Why, sir, they contracted the currency of this country nineteen millions of dollars, or about that in round numbers, in the short space of thirteen days. Why did they do it? To produce a panic to influence the action of Congress and the President. They did not succeed with Congress; it was Democratic then; but they did succeed in getting a veto from a Republican President, Mr. Hayes. They would have brought disaster and ruin upon the country had it not been for the action of the United States Treasury, which supplied the deficiency in the currency as fast as they made it, and prevented the calamity that these banking corporations would have brought on the country for their own selfish ends. I do not impugn the motives of all bank officers, for some of them I know to be good, patriotic men; but, sir, the great mass of them will disregard the interest of the people, looking alone to their own interests and profits. History proves this to be true, and it is useless for gentlemen on this floor to deny it who are here in the interest of these banks. These corporations can combine at any time their whole power and contract the currency, and thereby depress the price of everything, load themselves and friends with property, and then expand the currency and inflate and enhance the price of everything, thereby adding to their wealth and impoverishing the honest people of the country.

These banks and the bondholders have been the pets of Congress for years; they have controlled its financial legislation in many instances. If these banks were ever necessary as financial agents for the Government and to afford a market for the United States bonds, which I do not admit, that time, thank God, is past. If they have ever rendered service to the Government, they have been amply paid. They have cost the people of this country over fifteen hundred millions of dollars, as has been correctly estimated by Mr. WARNER, of Tennessee, who has given his calculation in detail to this House in his able speech, and which stands uncontradicted by the friends of the national banks on this floor. All of this immense sum could have been saved to the people, and yet they could have had as good and safe a currency as national-bank notes—I mean greenbacks—Treasury notes that would have drawn no interest, as the bonds do upon which the national-bank notes are based.

Mr. Speaker, there never was such favoritism shown in any country as has been shown to these banks, and instead of being the best system, as is contended, it has been the most costly to the tax-payers of the country. These bondholders, who in many instances only paid from forty to sixty cents on the dollar for United States bonds, had nothing to do except deposit their bonds in the quantity required by law with the Comptroller of the Currency, and he issued to them 90 per cent. of the value of the bonds in national-bank notes. Upon this money they run their banks, using these notes profitably, and as they please—getting all the deposits they could, using them also, and getting high interest upon both, and then every six months drawing the interest in gold on the bonds upon which the banks were founded, this interest coming out of the toiling masses of the country—the tax-payers.

Sir, it is time this favoritism for corporations and capital shall stop. What is to become of these national banks when the bonds are paid off? We are paying off the national debt at the rate of one hundred and fifty millions of dollars per annum, and if we use proper economy in the administration of the Government the national debt will soon be extinguished. What, then, is to become of these pet banks that are based on interest-bearing bonds? Why, sir, they

must then go; but the Republican members are trying in every way to perpetuate this debt by extravagance in every department of the Government; by getting up all sorts of schemes that will take money out of the Treasury and prevent the payment of the bonds. Why? So that they can keep up a protective tariff to enrich the manufacturers at the expense of the farmers and consumers, and to perpetuate the bonded debt as a basis for these banks.

Mr. Speaker, sound policy and the interests of the people dictate that the national debt should be paid off as rapidly as possible. A national debt is a curse to any free country. And, sir, I would vote and did vote for an income tax on all incomes over \$5,000, to be added to the revenue to pay off this debt and to make the burden of taxation equal upon the bondholders and capitalist. Why should they be exempt and their millions go untaxed while everything the poor man has is taxed? What meritorious services have these bondholders rendered this Government that their incomes should bear no burden? But, sir, you cannot get the Committee on Ways and Means to bring in a bill to tax incomes. At the last Congress the attempt was made to suspend the rules by Mr. DIBRELL, of Tennessee, and tax the incomes of these bondholders. I voted for it, and a large majority, including the Democratic side of this House, voted for it, but it failed for want of two-thirds.

This ought to have been an instruction to that committee, but, sir, they disregarded it. And no bill, under the rules, can be gotten before this House for action to tax the bondholders and capitalists. There is no time for it in the judgment of the Committee on Ways and Means. They have no time to revise the tariff to lighten the burdens on the farmers and laborers of the country. But, sir, there is ample time for legislation in favor of banks and corporations whenever they want legislation in their interest. Corporations and monopolies are to-day exercising a dangerous influence on the legislation of the country. Look at the bank directors and bank presidents who are members on this floor—one of whom has just preceded me—all advocating a rechartering of these national banks.

Mr. Speaker, I shall vote for every amendment restricting the power of these banks, and shall then vote against the bill.

I want to see the national debt paid off as rapidly as possible. I want to see an end put to the interest-bearing debt. I want to see silver certificates and Treasury notes, or greenbacks, take the place of the national-bank notes. The Treasury notes, or greenbacks, are as good as the national-bank notes. The credit of the Government stands behind both and gives them their value.

I am satisfied, sir, that a large majority of the Democratic side of this House, if they are true to the doctrines taught by Jefferson and Jackson, will vote against this bill. We ought never to trust the power, as I have said, of expansion and contraction of the currency to any corporations.

Mr. Speaker, I shall not go into details in regard to these banks, as I am not a member of the Committee on Banking and Currency, to whom has been allotted nearly all the time for general debate, but content myself with the general reasons I have assigned for my opposition to this bill, and hope it will be defeated.

River and Harbor Bill—Mississippi River.

REMARKS

OF

HON. RANDALL L. GIBSON

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 3, 1882,

On the bill (H. R. 6184) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. GIBSON said:

Mr. SPEAKER: The Committee on Commerce, under orders of the House, have taken into consideration the report, specifications, and estimates of the engineers for the improvement of the rivers and harbors of the country, submitted by the Secretary of War, and after several months of careful and laborious consideration, day after day, hearing not only honorable Senators and Representatives in behalf of the public works in their respective States, but delegations of prominent citizens from cities and commercial bodies, and also the engineer officers of the Government, in order that they might, as far as possible, make themselves acquainted with their plans and methods, and the relative merits of the works, have presented the annual appropriation bill for the same. It will be observed that the estimates of the engineers amounted to nearly \$41,000,000, and that the committee have deemed it necessary, in the interest of a wise and judicious expenditure, to reduce this sum to about seventeen millions.

I must confess, Mr. Speaker, I took service upon this committee with reluctance, for I had been accustomed year after year to hear it reproached as the log-rolling committee of the House, and I had come to feel that there must be some unworthy spirit of jugglery

and jobbery pervading its deliberations. I have been agreeably surprised. I can say conscientiously I have never during my public life been associated with a body of gentlemen who were animated by a broader or higher patriotism or by a firmer purpose to do right, without regard to persons, parties, or sections, or exhibited greater industry. We have had compromises and adjustments, and if gentlemen please log-rolling, but only such as was approved by that ardent patriot, Hon. Robert C. Winthrop, who once adorned the Speakership of this House, and who in discussing this question, many years ago, said:

Mr. Chairman, nothing of real value to this Republic ever has been or ever will be effected without some degree of that sort of combination which is thus stigmatized as log-rolling. Mutual concessions, reciprocal benefits, compensation and compromise, have been the very laws of our existence and progress. Wherever common dangers have been averted, common wrongs redressed, common interests promoted, or common principles vindicated, it has been by a system of log-rolling. It was log-rolling which achieved our independence. It was log-rolling which established our Constitution. And the Union itself is nothing but systematic log-rolling under a more stately name. Doubtless such combinations may sometimes proceed from corrupt or unworthy considerations, but when the objects at which they aim are of such clear and unquestionable importance and of such public and general utility as those which are now before us, these unmannerly imputations upon motives may, I think, well be spared.

The constitutional power of the Government over commerce, its derivation, its extent, and the limitations upon it have been so firmly settled that any discussion of it would be superfluous. In the great struggles illustrated in the careers of John Hampden and George Washington the principles upon which taxation should be levied and trade and commerce regulated were determined. The vital force that sustained both had the same unflinching source in the determination of the people—to set metes and bounds to the manner in which their labor and property should be taxed, their revenues raised, and their commerce promoted, for they knew that the value of labor depends upon the facilities with which its fruits may be exchanged, and that if a man's earnings could be taken from him or his intercourse with his fellow-men regulated in an arbitrary manner there was an end of all liberty and of all happiness.

But after the battle for the independence of the colonies was won each State preserved its own system of taxation and the whole confederation fell into imbecility and confusion from the want of the means to collect revenues to maintain the public credit, to pay the patriot army, or to support an efficient administration. There were as many different systems of revenue as there were States. It was at this juncture that Virginia, on January 21, 1786, appointed commissioners on her own behalf and invited her sister States also to appoint commissioners "to take into consideration the trade of the United States." The se commissioners met at Annapolis, Maryland, September 13, 1786, but seeing that none of the States north of New York were represented, and "not desiring to proceed on their mission under the circumstances of so partial and defective a representation," they completed their labors by suggesting that all the States should appoint commissioners to meet at Philadelphia. This suggestion was adopted, and the convention that assembled in accordance with it, on May 25, 1787, in Philadelphia, framed the Constitution of the United States.

Hence it may be truly said that the necessities of commerce led to the formation of the Federal Government, and that the proper regulation of it is one of its essential and inherent functions. And upon examination of the following provisions of the Constitution it will be perceived that the power over the whole subject-matter is not only full and absolute but exclusive:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises. * * * But all duties, imposts, and excises shall be uniform throughout the United States. To regulate commerce with foreign nations and among the several States and with the Indian tribes. No State shall enter into any treaty, alliance, or confederation. * * * No State shall, without the consent of Congress, lay any imposts or duties on imports or exports. * * * No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State or foreign power. Congress has the power to establish a uniform rule of naturalization. The migration or importation of certain class of persons should not be prohibited until the year 1808, though they might be taxed. No tax or duty shall be levied on articles exported from any State, and no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another.

After the separation of the colonies from the mother country the importations from England were enormous, and goods of American manufacture could not be sold in competition with British, and all importations into the staple States and exportations from them were carried on in British bottoms. Pennsylvania had already protected herself by a tariff for that purpose, and Massachusetts had established a navigation act to protect her large commercial interests; so that no goods could be imported in British ships. The planting States were interested in having free trade with the mother country—the utmost freedom of exchange and free bottoms—but the political benefits and security they derived in other respects from the Union induced them to yield in these respects.

On the 22d March, 1785—

Says George Bancroft in his History of the Constitution, page 187, volume 1—

a bill to protect the manufactures of Pennsylvania by specific or ad valorem duties on more than seventy articles, among them on manufactures of iron and steel, was read in its assembly. On the 29th September, after the bill of the Pennsylvania Legislature had been nearly six months under consideration by the people and after it had been amended by an increase of duties, especially on manufactures of iron and by a discriminating tonnage duty on ships of nations having no treaty of commerce with Congress, it became a law with general acclamation.

Mr. Bancroft says, page 188, volume 1:

On the 10th of May the town of Boston elected its representatives to the General Council, among them Hancock, whose health had not permitted him to be a candidate for the place of governor. Two years before, Boston, in its mandate to the men of its choice, had, in extremelanguage, vindicated the absolute sovereignty of the State; the town, no longer wedded to the pride of independence, instructed its representatives in this wise: peace has not brought back prosperity; foreigners monopolize our commerce; the American carrying-trade and the American finances are threatened with annihilation; the Government should encourage agriculture, protect manufactures, and establish a public revenue; the confederacy is inadequate to its purposes; Congress should be invested with power competent to the wants of the country; the Legislature of Massachusetts should request the Executive to open a correspondence with the governors of all the States; from national unanimity and national exertion we have derived our freedom; the joint action of the several parts of the Union can alone restore happiness and security.

To his friend Bowdoin, John Adams wrote:

Massachusetts has often been wise and able, but she never took a deeper measure than her late navigation act. I hope she will persist in it even though she should be alone. (Page 191.)

But every measure of this character was resisted in the Congress by Richard Henry Lee, of Virginia, in behalf of the Southern States, which were the staple States, declaring that—

Power in Congress to legislate over the trade of the Union would expose the five staple States, from their want of ships and seamen, to a most pernicious and destructive monopoly; that even the purchase, as well as the carrying of their produce, might be at the mercy of the East and the North.

But when the Constitution was finally adopted, as we have seen these powers were granted to the Federal Government.

And hardly was the Government organized and put into operation before a bill was introduced, which became a law July 4, 1789, raising a revenue from commerce, the preamble of which was as follows:

Whereas it is necessary for the support of the Government, for the discharge of the debt of the United States, and the encouragement and protection of manufactures, that duties be laid.

And straightway a navigation act was adopted discriminating in favor of American vessels and securing to them a monopoly of the entire trade and commerce of our ocean-bound empire, and subsequently an act has been adopted prohibiting American citizens absolutely from buying ships abroad for the American trade, or to run under the American flag only vessels built within the United States and belonging wholly to citizens thereof, and vessels captured in war by citizens can be registered and be entitled to the benefit and privileges of registered vessels.

And as early as August 7, 1789, Congress passed an act which was approved by George Washington, entitled "An act for the establishment and support of light-houses, beacons, buoys, and public piers." It is expressly stated in the act that the appropriation is made "for rendering the navigation easy and safe."

This was the first of a series of acts down to the present river and harbor bill, of which in the aggregate more than \$100,000,000 have been appropriated, to give "ease and safety" to navigation and commerce. And this is the precise language employed in the appropriation for the Mississippi River, and it was employed also in the act creating the Mississippi River commission.

The exercise of these powers has not been unchallenged. It was insisted by certain leading statesmen that while Congress might establish commercial regulations there was no power whatever to deal with the commodities of commerce or the vehicles in which they were transported or the channels and highways. Others insisted that all appropriations should be confined to rivers and harbors below ports of entry and to rivers running through two or more States, or which were tidal streams.

But the Supreme Court finally settled the controversy as to certain points in 12 Wheaton, 447, laying down the doctrine that Congress may suspend and prohibit commerce, and may not only authorize importations but may authorize the importer to sell, and that commerce is not merely traffic, but is intercourse and includes navigation. In *The Propeller Genessee Chief et al. vs. Fitzhugh et al.*, Chief Justice Taney says:

The admiralty and maritime jurisdiction granted to the Federal Government by the Constitution of the United States is not limited to tide-waters, but extends to all public navigable lakes or rivers where commerce is carried on between different States and with a foreign nation.

It will be seen from this brief review what were the actual necessities that induced the fathers to incorporate these powers relating to commerce into the Federal Constitution, how they have been exercised by the national Legislature, and how the national Legislature has been sustained by the courts.

Under this legislation we have erected breakwaters and sheltering harbors and buoys and piers, and improved the harbors on our ocean and lake fronts, at an expense of millions of dollars. We constructed the canal around the Des Moines Rapids, and Saint Mary's Canal, uniting Lake Superior with Lake Huron, at an expense of more than \$5,000,000 each.

The lakes and their outlet are the Mississippi of the North, stretching from the heart of the great West to the Atlantic seaboard, around whose shores is growing up in the very center of our country a mighty empire. The great interior basin of the Southwest is called the Mississippi River, but it is really a lake or series of lakes. Where is there such a valley in the known world? Where such a people? The gateway to this valley was first settled and the States of Louisiana, Mis-

issippi, and Arkansas were admitted into the Union. The agricultural interests upon its borders were the supreme interests.

The upper valley was not settled, and the surface remained unbroken. Transportation was chiefly in flats and barges and small steamboats, and the basin was not filled and shallowed by detritus contributed by the spade and plow, subduing an empire. Hence the question of transportation was a subordinate one. The settlers only thought to protect themselves against the annual rises, and a system of levees and dikes was adopted, first by individuals, then by counties or parishes, and finally by single States.

But it soon became apparent that the magnitude and variety of the interest and the character of the protective works would require the supervision and uniform administration of the Federal power, unless the States bordering upon the river could unite in a common league for the exercise of a joint jurisdiction. It was evident that no State, without the concurrence of the adjoining State or States, could protect itself against the floods becoming more disastrous as the upper country was settled. It was seen that when every mile of the front of Louisiana was made secure by levees or dikes that had cost many millions, Louisiana would be overwhelmed by the flood coming through the Arkansas front by reason of the failure on the part of the State of Arkansas, whose river interests were insignificant in comparison with those of the lower State and did not justify the expense of putting up defensive works. Reasons like these and others induced the Federal Government to order surveys of the river, with the view of ascertaining the best plan to protect the people from the floods and to reclaim the immense area subject to annual inundation.

The most celebrated of these surveys was completed after ten years of labor by Humphreys and Abbot, and their report is a monument of industry and learning. Special committees were constituted by Congress, and a bill for constructing levees passed one House of Congress but failed in the other. In 1865 Secretary Stanton ordered the levees to be rebuilt, for they had been destroyed by the war, and he regarded it as an act of humanity to restore these public works essential to the good order of society, and now needed more than ever by a people struggling with poverty amid social and political conditions involving a disruption of traditions and customs and established relations, but it was not done.

Prince Gortchakoff felt called upon during the recent war between Russia and Turkey to give a guarantee to the great powers that Russia would rebuild similar works on the Danube if they should be destroyed.

President Grant appreciated the necessity for action, and a commission was again appointed in 1874, and its recommendations for levees, though urged by him, failed again to become a law.

In the Forty-fourth Congress a permanent committee of this House on levees was for the first time organized in the history of Congress; a bill was framed by this committee after a full hearing and thorough investigation of the subject in favor of rebuilding the levees—a direct appropriation to protect the alluvial region, and all that was in it, from the baleful effects of the floods; and though the effort was made with energy and eloquence, the friends of the measure failed to get one-third of the votes of the House.

Let those who have censured the representatives of the valley, and who still clamor for direct appropriations for levees, review this interesting epoch in the history of legislation on this subject. Fortunately for the cause of good government, just at this time a new and hitherto unfelt element was to appear as a powerful aid and factor in solving the problem of the destiny of the people in the lower valley. An empire had been called into existence in the upper valley, and the whole people of the mighty valley, north and south, were about to unite their voices in demanding justice from their Government.

What the cotton-gin was to the South the railway and reaper were to the Northwest. In less than the life-time of a single generation that unbroken wilderness had been subdued, and the vast region from the Ohio to the Yellowstone and the Red River of the North had been converted into waving grain-fields, filled with busy workshops, and the homes of our industrious, educated, virtuous, and liberty-loving people, possessing the granary not only of America but of the world. They were to feed as the South was to clothe the people of the earth.

But the question puzzling them was transportation. The railways that had contributed so much to build up the country were monopolies and laid a heavy tribute upon their productions. A reduction of two cents a bushel in the cost of transportation to Liverpool, where the price of the food crop is determined, would save the producers in the valley the enormous sum of \$50,000,000 a year in clear profit; and at the present rate of increase, within five years, instead of fifty millions the savings would equal one hundred millions a year. They then turned toward their great river for relief. They found its mouth closed by sandbars. They found navigation impeded throughout its whole length for nearly half the year by shallow water and made perilous by the floods at other seasons of the year. The genius of Eads answered the demand by building jetties at the mouth, that gave deep water so that vessels of the greatest burden may come and go. But it was then asked, why not apply a remedy to remove the obstacles and perils along the entire river if one can be devised, in order that this channel of commerce may be useful at all stages and at all seasons?

The author of the jetties insisted that the laws that controlled the river were well known, that the conditions and phenomena that were found to exist near its mouth prevailed throughout its entire length. He held that by applying the jetty system to the river, confining its waters in their highest stages and contracting the channel where unduly wide and protecting the banks against caving, works wholly practicable and inexpensive, a uniform channel might be obtained affording deep water all the year round for the largest vessels to Saint Louis, and at the same time and by the same means the slope or flood surface would be so lowered as to prevent destructive floods; floods destructive not only to commerce and trade and the vehicles of transportation, to life and property on the river, but destructive of all government, of all industry, of the property, the earnings, the schools, the churches, the very existence of organized society throughout the wide alluvial region.

In order to secure legislation to carry out the views of the great engineer, in whose plan were happily blended the interests of both the upper and lower valley, on April 26, 1876, in the Forty-fourth Congress, a measure was offered for a commission to improve the Mississippi River, to be appointed by the President, and referred to the Committee on Commerce; and Captain Eads, having been invited to appear before the committee in advocacy of the plan, concluded his remarks with these observations:

There can be no doubt of the entire feasibility of so correcting the Mississippi River from Cairo to the Gulf that a channel depth of twenty feet during the low-water seasons can be permanently secured throughout its entire course, and that the alluvial lands on each side of its waters can be made absolutely safe from overflow without levees by such correction. This can be accomplished for a sum entirely within the ability of the Government and one really insignificant when compared with the benefits which would flow from such improvement.

Until such work is accomplished an annual expenditure for the maintenance of the levees is imperative.

That was the fundamental idea which first originated and finally led to the formation of the Mississippi River commission.

For, soon after the meeting of the next (Forty-fifth) Congress the Committee on Levees was changed by resolution to be the Committee on Levees and Improvements of the Mississippi River, in order that it might take jurisdiction of this legislation, and the Speaker of the House, Mr. RANDALL, who had always been the staunch friend of levees and of the improvement of the river, was induced to organize this committee by appointing friends of the river upon it, and a new member [Mr. ROBERTSON] of the Louisiana delegation to be chairman of the committee, as the committee had been originally constituted and its jurisdiction extended on resolutions offered by a member from that State, [Mr. GIBSON.]

Following up the measure offered in the Forty-fourth Congress, many others were now introduced and referred to the Committee on Levees and Improvement of the Mississippi River, in the Forty-fifth Congress, which framed one as a substitute for them all, and it was reported through the chairman of the committee, together with a report in favor of it taken from a map and manuscript of the well-known writer on the Mississippi River, Mr. A. D. Anderson.

Amendments to the commission bill from the committee in the Forty-fifth Congress for a direct appropriation for levees were offered, as the RECORD shows, by three members from Louisiana, Messrs. ROBERTSON, GIBSON, and ELLIS, for they felt that levees should be built in advance of channel treatment or concurrently with it as had been suggested by Captain Eads in the Forty-fourth Congress; that no opportunity should be lost to secure the protection levees would afford to the people they represented. But it was made apparent that such amendments could not be carried, and that insistence upon them might put in peril the commission bill.

Mr. ROBINSON, of Massachusetts, one of the most ardent supporters of the commission bill, declared he regarded them as adverse to and inconsistent with the bill and would vote against the bill if any one of them were adopted. These amendments were withdrawn. The title of the bill read as follows:

A bill to provide for the organization of the Mississippi River improvement commission, and for the correction, permanent location, and deepening of the channel and improvement of the navigation of said river and the protection of its alluvial lands.

In support of this bill Mr. ROBINSON, of Massachusetts, said:

The committee have found these two subjects to be interdependent. They have not seen in the investigation they have given that the one necessarily stands apart from the other. All the writers and all the engineers from whom they have heard declare that in some measure, greater or less, the protection of the lands has also an influence upon the navigable character of the river.

He further said:

This bill is intended to provide a commission to devise a plan for the improvement of the Mississippi River and the protection of the alluvial lands combined. *If as a part of the whole plan for the improvement of the river for the purposes of navigation, and incidental thereto, the lands of the valley may be protected, I am in favor of it.*

Hon. N. P. Banks said:

I have already stated that the improvement of the alluvial lands is incidental to this work. It cannot be separated from it. No declaration or act of Congress can prevent it. *If we make the river what it ought to be we will make forty million acres of the best cotton and sugar lands on the face of the earth in consequence of the necessary improvement of the river—forty million where now only one million exists. It is inseparable from it and incidental to the improvement of the river.*

In supporting this commission bill I ventured to declare that—

A jetty is a levee, in the popular sense of the word, within the bed or channel of the river, while a levee is a jetty on the bank of the stream. This plan rests upon

the theory that in sedimentary rivers, in the Mississippi particularly, as the water is confined its velocity and depth is increased and the surface lowered, and that thus two great objects may be accomplished by one and the same method, namely, "ease and safety" to navigation and protection to the industrious people on the banks from the dreaded floods.

This commission bill failed, falling between the two Houses, for the last session of the Forty-fifth Congress terminated the 4th March, 1879. But an extra session of the Forty-sixth Congress was convened and legislation for the river was pressed vigorously. Several bills were offered for a Mississippi River commission, modeled on the bill from the committee in the Forty-fifth Congress, substantially like it, limiting the commission to Saint Louis, Alton, and Warsaw, on the same day and in the same call, by Messrs. ROBERTSON, Chalmers, and SINGLETON, as will be seen by comparing these bills with one another and the commission bill of the Forty-fifth Congress.

A few days after, another bill was introduced and referred to the committee, different from all these in its title and in the extent of jurisdiction conferred, and in adhering more closely to the commercial idea, and to other bills previously introduced on the same subject by the same person, in the Forty-fifth Congress, as follows:

A bill to provide for the appointment of the Mississippi River commission for the improvement of the said river from the head of the passes, near its mouth, to its headwaters.

After this bill had been under discussion in the Committee on Levees and Improvement of the Mississippi River and certain amendments as to details made and accepted, at the suggestion especially of General Joseph E. Johnston and others, the author, when the hour of adjournment arrived, remained in the committee-room to perfect it so as to introduce it again without delay, and invited Mr. ROBERTSON and Mr. DUNN to remain with him for a few moments, and to assist him in incorporating the amendments and suggestions adopted by the committee and to arrange the order of the phraseology of the fourth section. Valuable aid was freely given by both gentlemen. Mr. DUNN's suggestions as to the arrangement of the phraseology of the fourth section were mainly adopted by the author, and, as thus perfected, the bill was reported the same morning to the House, referred again to the committee, and was adopted without change by the committee at the next meeting, as would naturally follow, from the fact that all changes agreed on in the committee had been embraced in the revision.

This bill constituting the commission became the law, and was approved June 28, 1879, and the members of the commission were appointed and began the work committed to their charge. They have submitted two reports to Congress, with their recommendations, plans, surveys, and estimates.

The last Congress voted one million of dollars to enable them to undertake the execution of their plans. This appropriation was placed in the regular river and harbor bill by the Committee on Commerce at the urgent solicitation of the member who had introduced the bill and carried it through the Committee on Levees and Improvement of the Mississippi River. If the Committee on Commerce had declined to incorporate the appropriation in this annual bill, all our efforts would have failed in the last Congress.

At the opening of the Forty-seventh Congress an energetic effort was made to secure for the Committee on Levees and the Improvement of the Mississippi River—which, under the new rules, had the authority to consider subjects relating to levees only—jurisdiction over questions relating to the improvement of the river, with the power to make appropriations and to report at any time, and we failed. It only remained then for the friends of the river to go, under the orders of the House, before the Committee on Commerce, where it was embraced in the bound volume of estimates, submitted by the Secretary of War with his approval, for the improvement of all the rivers and harbors of the country.

This committee not only considered the report but called before it the members of the Mississippi commission, and after thorough discussion they voted to allow \$4,123,000 to be expended by the Secretary of War in order, as the old acts recite, to afford "ease and safety" to the navigation and commerce of the river, in accordance with the plans and estimates and recommendations of the Mississippi River commission, from the passes to Cairo.

I have entered upon this sketch of the legislation to show the care and circumspection with which it has been conducted. In the Forty-sixth Congress, after the commission had submitted their plans, in order that they might be more fully understood and appreciated by Congress, a resolution was offered and adopted directing a sub-committee to go down the river and to verify for themselves, as far as might be possible, by personal inspection and investigation the plans of the commission, to acquaint themselves with the phenomena of the river. Members from the North who went there incredulous and apprehensive came back enthusiastic advocates. The report of this committee should be read by every member of Congress. It constitutes a valuable addition to our knowledge of the river, and the character of the members who signed it entitles it to great weight and influence.

The plans of the commission are set forth in their last report, and more fully in their testimony before the Committee on Commerce. I desire to call your attention to the testimony.

General Q. A. Gilmore, president of the Mississippi commission,

appeared before the Commerce Committee on March 21 last, and said:

The law justifies levees as adjuncts to channel improvements alone, because levees exert a direct action in enlarging and deepening the channel during periods of bank overflow, by causing all water to rise for a time to a higher level within the river bed than it would attain if not thus restrained. In other words, the volume of flow, and therefore the velocity and the scouring power in the bed of the stream, are all increased by levees during periods of overflow. Moreover, levees are upon a very large portion of the Mississippi River absolutely necessary to prevent widespread destruction to life and property by overflow; and any one who has witnessed the sublime spectacle of such a flood as now prevails throughout the entire valley of the Mississippi, submerging the banks to a depth of many feet and spreading out over the entire alluvial section to widths varying from forty to sixty miles, cannot avoid the conclusion that an adequate system of carefully maintained levees is required to make navigation safe and easy, and to render the carrying on of trade, commerce, and the postal service possible, in the sense of ordinary economic feasibility.

General Gilmore quotes and indorses the following as being correct and containing the true doctrine. General Barnard, writing of the Mississippi River in 1859, says:

Any check in the velocity of the stream, however small, will produce deposition. This is not mere theory; all experience of every observer of the river will confirm it, while it is in itself conformable to reason and common sense that such a check in the velocity of the stream below the outlet is the inevitable result of that outlet. Mr. TOWNSEND, (in the chair.) I understand that this improvement in the levees is only incidental to the improvement of the navigation of the river.

General GILMORE. The appropriation bill, if you recollect, rather restricted the use of the money.

Mr. HORN. Yes; some of our people are afraid that if you make a levee you will benefit somebody.

Mr. TOWNSEND. I understand the view of the commissioner to be that the improvement of the levees as proposed is the most feasible, scientific, and in some cases the only way of deepening and improving the channel by changing the current.

General GILMORE. It is a good way, certainly.

Mr. TOWNSEND. And while it exerts a very beneficial influence on the back country, it is not done exactly for that purpose, but fortunately in doing that work for the improvement of the navigation you incidentally benefit the back country.

General GILMORE. Yes, sir; and at the same time we provide for the carrying of the mails and for the commerce of the river.

Mr. GIBSON. Does your plan rest wholly or even for the most part upon experimental grounds; or is your plan for the improvement of the Lower Mississippi based upon principles well established in engineering science as applied to streams and water-courses?

General GILMORE. The principles are very well established; there is nothing experimental in our plan except certain methods in which we aim at cheapness.

Mr. GIBSON. These are matters of detail?

General GILMORE. Matters of detail.

Mr. GIBSON. Do you think your plan is so far matured that Congress might safely appropriate \$4,000,000 or \$5,000,000 for the execution of it?

General GILMORE. I do; because there are a variety of methods of doing the same work, and we have the plan for doing it by my method.

Mr. GIBSON. Are the parts of your plan, namely, the improvement of the reaches and the re-establishment of the banks by levees, so closely connected as to be interdependent, the one operating in low water, the other operating in high water, and both contributing to channel improvement?

General GILMORE. Certainly.

Mr. GIBSON. Both essential, therefore, to the general scheme which you have explained to the committee?

General GILMORE. Exactly; but in my judgment levees built specially for channel improvement might be better located than they generally are. But even as they are located the levees are an essential part of the system of improvement that we have projected.

Mr. McLANE. Please explain to the committee in what respect the language of the appropriation bill of last year embarrassed or restrained the commission in the improvement of the levees.

General GILMORE. It did not embarrass me, but it embarrassed enough members of the commission to render it nugatory.

Mr. GIBSON. The language of the law is, "No portion of the appropriation hereby made shall be expended for building levees, unless it be for channel improvement."

General GILMORE. The members of the commission were not in entire accord in the interpretation that they put upon that phraseology.

Captain J. B. Eads said:

The works proposed by the Mississippi River commission are intended to correct the river, and the most rapid and certain effect that can be produced by these works will be by confining the flood waters of the river, so as to get the benefit of the entire scouring force of the stream, because there is an immense amount of sediment to be removed and it is more easily removed by the flood water. The current is so much more rapid in flood that it more easily removes the sediment, and for that reason the gaps in the levees ought to be restored, so as to retain the flood within the river.

Mr. HORN. Is it possible, in your judgment, or practicable to build the levees high enough to retain the river in its bed?

Mr. EADS. I do not think it is necessary to build the levees any higher than they are to-day. Where these gaps occur the present flood does not go as high as it would if the levees were intact—if they were intact the river would have a steeper slope and more rapid current, thus facilitating the discharge of the water.

Mr. HORN. Do you think that a judicious system of levees would remedy the whole difficulty?

Mr. EADS. I do not think it necessary to establish any new system of levees. As I said before, I would not recommend the building of two thousand miles of levees as a work of river improvement, but I know as well as I know anything in my profession, that the levees have a beneficial effect on the navigation of the river, and as a large amount of the levees is still intact, I think it is the sheerest folly and waste to let those outlets exist when they could be so easily closed, and in my judgment the money required to close them could not be more effectively spent than for the restoration of the navigation of the river. There is an equity about it, too, which it seems to me ought to be considered. These levees were built by private enterprise, and when they were intact they undoubtedly benefited the navigation of the river, and therefore the whole country.

Now there is 5 per cent. or perhaps 10 per cent. of them only destroyed. The public has got the benefit of them in the past so far as they have affected the navigation, and it does seem to me only equitable that the public should restore the gaps that have been made in them now.

I think that while the commission is going on improving certain parts of the river that need rectification, if these gaps are permitted to occur and to remain we will have other work to do that we would not have to do if the levees at these points were restored. These views are not new on my part. Six years ago I had

the honor of addressing the Committee on Commerce, a bill of Mr. GIBSON for a Mississippi River commission being before it, on this subject.

Mr. HORN. I cannot see how you can carry out your plan for the improvement of the Mississippi and perform the work that you propose to do without restoring these levees.

Mr. EADS. That is just what I have been trying to convince the public for the last seven or eight years, and every day makes me more and more satisfied of the importance of doing it, and I say most emphatically that you have got to abandon that whole alluvial flood will become worse and worse every year. You have got to abandon that whole district, containing 36,000 square miles, or else you have got to make these improvements and control the river.

Mr. GIBSON. Do you mean that the floods will not only destroy the adjacent lands but will fill the river with sand-bars so as to impair navigation?

Mr. EADS. Yes, so as to destroy navigation and greatly increase the cost of any system of improvement which may be adopted ultimately.

Mr. GIBSON. Then I understand you to reassert what you said here six years ago, that it is imperatively necessary to close the gaps in the levees so as to get the benefit of the volume and of the velocity of the water to scour out the sand-bars and to aid in the rectification of the river.

Mr. EADS. I have reiterated that over and over again, and I have just said that every year makes me more and more confirmed in that view.

Major Harrod, member of the commission, said:

Captain Eads has described quite fully the principles upon which our plans are founded and the methods that we propose to adopt. Speaking for himself and Major Suter, also a member of the commission, he said: We are of the opinion that the bed is raised and the effective section impaired throughout that part of the river under discussion as the result of outlets and the local abandonment of levees. We beg, therefore, to submit the following conclusions:

1. That bayous and overflows afford no permanent or uniform relief, but produce changes of regimen detrimental to navigation and cause destructive floods.
2. That the direct influence of a levee system is to improve navigation and prevent destructive floods by the establishment of a regimen and the elimination of varying and abnormal local conditions.

3. That the conservation of floodwaters by artificial embankments is becoming of greater importance every year, both in preserving navigation and in preventing destructive floods, from the recession of the banks to lower levels, and has already, in many parts of the river, become essential.
4. That the act under which we serve contemplates the preparation by this commission of a complete plan for the regulation of the river and its banks. Any such plan must include the control and uniform maintenance of such conditions of the river bank as are consistent with the principles controlling the works already recommended by us. The present provision for such maintenance by the States and riparian owners is inadequate and hazardous.

Lieutenant-Colonel Comstock said:

You have, then, two things to do: to narrow your river where these shoal places occur in order to get deep water, and to keep your river where you have put it by holding these caving banks. The plan which the commission propose to follow is in principle the plan that has been adopted in Europe. The French are using it on a large scale between Lyons and Arles, and the Germans have used it on the Vistula, the Elbe, and Oder.

General Humphreys, though not a member of the Mississippi River commission, but having devoted ten years to the investigation of the phenomena of the Mississippi River and occupied the position of Chief of Engineers, was invited before the committee. It had been reported that he was opposed to the plans of the commission, but it was ascertained by his remarks before the committee that there was a substantial concurrence between them.

The CHAIRMAN. Mr. McLANE, please ask General Humphreys first whether a system of levees are absolutely necessary for the improvement of the navigation without regard to the prevention of overflows.

Mr. McLANE. Very well; I will ask him to state whether in his opinion a system of levees with or without outlets is not indispensable for the improvement of the river from the mouth of the Ohio?

General HUMPHREYS. Yes, sir; certainly.

Mr. REAGAN. In determining, as you did, the necessity of extending the levees from the mouth of the Ohio to the mouth of the Mississippi, did you consider whether it was practicable or possible to retain the floods of the Mississippi River within those levees?

General HUMPHREYS. Yes; that was the question. The object of constructing levees and raising them to certain heights was to confine the river within them, otherwise it would be a useless expenditure of money. The great object of making these measurements was to determine the question how high the river would rise if all the water was kept within its channel, and the observations were made because no one had any means of answering that question before.

Mr. HORN. And did you conclude that it could be done?

General HUMPHREYS. Yes, sir.

What do the commission say in their report? In the report dated February 17, 1880, we find the following observations:

There is no doubt that the levees exert a direct action in deepening the channel and enlarging the bed of the river during those periods of rise or flood when by preventing the dispersion of the flood waters over the adjacent lowlands, either over the river banks or through bayous and other openings, they actually cause the water to rise to a higher level within the river bed than it would attain if not thus restrained.

It would seem, therefore, that a closure of the crevasses might be expected to accelerate the removal of those shoals which have been produced by them, and if their closure be accompanied by the requisite contraction of the channel to a more nearly uniform high-water width, a lowering of the flood-level may be expected to such an extent as will ultimately render the maintenance of the levees as an aid to navigation practically needless above Red River and greatly lessen the necessity of their permanent maintenance for that purpose below Red River even at a reduced height. While it is not claimed that levees in themselves are necessary as a means of securing ultimately a deep channel for navigation, it is believed that the repair and maintenance of the extensive lines already existing will hasten the work of channel improvement through the increased scour and depth of the river bed which they would produce during the high-water stages.

In a restricted sense as auxiliary to a plan of channel improvement only, the construction and maintenance of a levee system is not demanded. But in a larger sense as embracing not only beneficial effects upon the channel, but as a protection against destructive floods, a levee system is essential, and such system also promotes and facilitates commerce, trade, and the postal service.

In their last report, dated November 25, 1881, they say:

It is considered by all that levees, by confining the flood waters of the river within a comparatively restricted space, do tend in some degree to increase the scouring and deepening power of the current.

The Appendix F is a paper on outlets and levees, signed by Majors Harrod and Suter, members of the commission, and contains an un-

answerable argument deduced from facts in favor of maintaining the levees as aids to channel treatment. Captain J. B. Eads says in his report dated April 12, 1882:

My views regarding the important agency of the levees in improving the low-water channel of the Mississippi were not expressed in that report with the degree of emphasis which I then desired, and I am unwilling to commit myself now to any expression in the present report which in the slightest degree tends to throw a doubt upon the necessity of or to justify any further delay in closing these outlets. On the contrary, I deem it proper to urge with redoubled force the absolute necessity of their immediate closure.

I venture to say that no member of this House who will take the time to read this masterly report will fail to be convinced of the utility of levees and of the whole system of river treatment as demonstrated with the clearness of a theorem in Euclid by Captain Eads.

Fearing that our commission bill might fail, as early as November 14, 1878, I induced General Humphreys, Chief of Engineers, to take the opinion of the Board of Engineers on the connection between levees and navigation, and they "held that the levee system, if undertaken, should be matured and developed in connection with the navigation improvement." This report was signed by the most eminent engineers, including the present Chief of Engineers, General H. G. Wright, and General J. G. Barnard, who spent many years of his professional life in the investigation of the phenomena of the river. In a disquisition upon the subject he concurred with all the engineers in declaring outlets as "utterly impracticable." He further says:

The idea that levees have a tendency to cause a rising of the bed is so simply absurd, so destitute of a single reason to justify it, that it hardly seems necessary to allude to it; it is the want of levees and that alone which can cause such a rising.

The same views are expressed by General Beauregard, whose long service on the river and genius as an engineer entitle his opinions to great weight. I append a letter from him.

If any subject upon which Congress has been called upon to act has ever been elaborated, fully investigated, and considered, it is the Lower Mississippi River.

Since we purchased the Louisiana territory it has been under survey and exploration, and by the very terms of acquisition, as well as by the enabling acts for the admission of the riparian States, absolute jurisdiction over it was reserved to the Federal Government and especially denied to the States. And now, after nearly eighty years of absolute neglect, and the engineers finally submit a plan for its improvement under the national jurisdiction—a plan that has been, as I before observed, more carefully prepared, more fully discussed, than the plan for any other public work in the country—a hue and cry is raised and the alarm is sounded that the national Treasury is about to be emptied into the remorseless waves that have swallowed up the fortunes and earnings and homes and hopes of so many thousands of our despairing countrymen.

Others, while expressing sympathy with the great public purpose, invent riders and provisos that embarrass the engineers and either modify or defeat their plans.

It appears to me that the legitimate function of Congress is to determine the objects worthy of appropriations from the Federal Treasury under the limitations of the Constitution. If it be admitted that it is competent for Congress to legislate for the benefit of the trade and commerce on the Mississippi River and to make appropriations under the power to regulate commerce for its improvement, questions concerning the plans best adapted to the purpose should be left to the independent determination of the engineers. This is the uniform rule departed from only when members of Congress insist upon dictating a policy to the engineers or instructing them as to the methods they may or may not adopt, in treating the Mississippi River under the power to regulate commerce.

I ascribe this difficulty not to local or sectional prejudice, but to the inveterate misapprehensions that prevail as to the phenomena of the Lower Mississippi. Our friends from other parts of the country think of it only as a river, and reason about it as they do about their own rivers, whereas the Mississippi from Cairo down is not a river in the ordinary sense of the word. It is a series of lakes, winding for eleven hundred miles through the alluvial region formed by it from Cairo to Port Eads, while the straight line from point to point is only five hundred miles, and presenting a coast-line of twenty-two hundred miles, equal to the whole Atlantic seaboard from Quoddy Head, Maine, to Cape Sable, Florida.

Into this vast basin the valley stretching from the Alleghany to the Rocky Mountains empties its rainfall by forty-three mighty rivers, fifty thousand miles of boatable streams, and on its bosom is borne a commerce twice as great as the whole foreign commerce of the country—safe without a navy to defend it, in the heart of the country facilitated by no canals, protected by no fortresses, no harbors, no buoys, no harbors of refuge, no piers, no breakwaters, none of the costly appliances adapted to the lakes and seaboard, because the conditions are different. Shall we do nothing because the engineers recommend a plan and instrumentalities unlike those you have been accustomed to see applied in upland streams and on the ocean front, and for which we have annually made appropriations in unstinted measure?

The engineers tell us that they must hold all the water in the river in order to secure the force and velocity necessary to carry the *debris* and burden to the sea; that when this is done they will con-

tract the channel at points where it is unduly wide, and that thus they can at the same time secure deep water at all seasons, prevent destructive floods and protect the valley from inundations; that levees and jetties and permeable mattresses are the instruments they desire to employ for this purpose; that the total cost will be \$37,000,000, \$33,000,000 for direct channel work and \$4,000,000 for stopping gaps in the levees. Now, there are those who are opposed to allowing the engineers to build levees for the purpose of protecting or reclaiming the alluvial lands, but they are willing that they should be built, provided in the judgment of the commission it should be done in the interest of the navigation and commerce of the river. The proviso in the present bill is in accordance with this view.

From the beginning I have insisted that all provisos and restrictions were unjust and illogical; but after consultation I yielded to the advice of friends, for whose patriotism and judgment I have great respect, but I still hope and believe even this proviso may be removed. The engineers insist that levees deepen the channel and thus facilitate the navigation in low water. But why is it that such exclusive attention is given to the obstacles to navigation in low water and none to the perils when at the flood stages of this inland sea? We do not legislate simply to secure deep water except for your shallow water-courses in the mountains.

The Constitution does not confer upon us authority to make appropriations merely to secure deep water. The language is "Congress shall have power to regulate commerce." Commerce is the subject to be regulated. And the first act, passed one month after the Government went into operation, declared its object to be to give "safety and ease," not deep water, to navigation.

Now we insist that this power in all its extent should be applied to the great interior basin as well as to the Northern lakes. We might defend the construction of levees upon the ground assigned by the engineers as above stated—that they control the water in its high stages so as to remove the obstacles to navigation in its low stages.

But, I ask again, why confine our solicitude for the river only to its low stages? Do its commerce and trade require no helps; can nothing be done to facilitate them? Are there no perils during the season of floods? I do not hesitate to declare that the losses of life and property, the increased charges of freight and insurance on the river are greater during the overflows than during low water.

If you may build dams across the beds of streams in the application of the slack-water systems to your rivers in the upland country, raise these elevations in the bed to secure deep water, why may you not upon the same principle in the alluvial streams raise these elevations, these dikes or levees, on the banks to secure deep water? Why, if you can dig a canal around the Des Moines Rapids on the Upper Mississippi, dig out the channel around the Falls to secure deep water at an expense of \$6,000,000, within a few miles, may you not throw up the dirt to make a channel of deep water at the same cost for five hundred miles?

If you may construct the Delaware Breakwater and the harbors of refuge and harbors of commerce on the eastern seaboard, costing millions on millions of dollars, and maintain your Light-House Service at an annual expense of \$2,500,000, and your life-saving service, and your sheltering piers, not for deep water but to give "ease and safety," why may we not upon this great inland sea maintain a line of levees which are continuous harbors, affording "ease and safety" to commerce and navigation in storms and at night; channel preservers and indicators, and answering all the purposes of your breakwaters, your buoys, your harbors, and your sheltering piers. Without them you can have no channel, no postal service, no foundations for light-houses, no shelter for your barges and smaller craft, no harbors of safety in storms, but every other appliance that may be devised for protection is borne away by the floods. With them you have security at all times, night and day, a well-defined channel, an inexpensive harbor that stretches its arms along the whole course of the voyage, affording shelter to the vehicles of commerce and facilities for all its exchanges.

Take the commerce on this basin, this inland sea, from Cairo to New Orleans and you will not find, you cannot find, one single public work for its benefit or convenience; and I insist that these levees are the only appliances that ever have been devised to answer the demands of this trade, and their cost is insignificant in comparison with the magnitude of the commercial interests to be subserved.

They should therefore be constructed to afford ease and safety to the navigation and commerce of the river. It is either these or nothing, for there are no other appliances that have been suggested.

Will it be insisted longer that nothing shall be done?

If under the power to raise revenue you may tax commerce, importations from foreign countries, so as to protect labor and capital in manufacturing industries, and under this same power or under the power to regulate commerce maintain a navigation act for the exclusive benefit of the shipping interest of the country, surely when you come to apply the power to regulate commerce you should be willing to afford incidental protection to the agricultural interests of the lower valley. The grounds from which we deduce protection from the commercial power are as solid and clear as those drawn from the revenue power. But the objects for which the protection is sought in this instance are out of all proportion to the interests

of a single industry like manufactures or shipping, for they embrace all the industries, the whole life of the people in the lower valley, an area equal in extent to the State of Indiana, of unsurpassed fertility, whose inhabitants fled recently from their homes only after heroic resistance to the relentless floods from adjoining States, as completely in flight as the Tartar Tribe from the banks of the Volga, suffering besides a loss of \$50,000,000 in values, anxieties and experiences that no tongue can portray and no one appreciate or realize, unless present to witness the widespread destruction, the numberless woes endured by a whole people, helpless infancy and old age, brave men and braver women, driven forth suddenly, from happy firesides and tranquil labors, upon a wild waste of waters, without shelter, without food. Is there no power in the Federal Government, since the States are prohibited from co-operation where joint action can alone avail, to prevent the repetition of such scenes and the desolation and dismemberment of society from such a cause? Powers should be construed liberally not only in behalf of favored industries demanding protection, but in favor of humanity and the preservation of society.

And if it has been shown that levees aid even in an incidental manner the improvement of navigation, are merely auxiliary and not indispensable appliances, they should be constructed on account of the great advantages they confer upon the people dwelling in the alluvial region. But having been demonstrated to be clearly necessary to the preservation and protection of the channel and as the appropriate means to afford "ease and safety" to navigation and commerce, upon the passage of this bill the gaps will be filled and the line made complete from the head of the passes to the mouth of the Illinois, as soon as the resources placed in the hands of the commission can be applied. And the great highway, improved and restored, will afford cheaper and safe transportation to the Northwest, sweetening the toil and bringing increased comforts, privileges, and happiness to the homes of the people freed from the tributes and exactions of corporate monopolies.

And when the next floods pour down upon the lower valley, secure behind their ramparts, rejoicing in peace and plenty, the people will recall the names of the courageous statesmen from all parts of our common country who have upheld their cause and shower blessings upon them. Nor will they fail to remember with gratitude the great engineer, J. B. Eads, who devised the plan, nor the patriotic President who urged its adoption upon Congress.

It may not be inappropriate, in concluding, to recall to this House and to the people of the valley the services of him who ever stood forth as the champion of their rights, not only as a commissioner at Ghent and in the Halls of Congress, in the meridian splendor of his powers, but in the evening twilight of his life; the last words ever spoken by Henry Clay in the American Congress were uttered in advocacy of the claims of their great river, as follows:

Sir, I have risen to say to the friends of this bill that if they desire it to pass I trust they will vote with me against all amendments and come to as speedy and rapid action as possible. Under the idea of an amendment you will gain nothing. I think it likely there are some items that should not be in the bill, and can you expect in any human work, where there are forty or fifty items to be passed upon, to find perfection? If you do, you expect what never was done and what you will never see. I shall vote for the bill for the sake of the good that is in it, and not against it on account of the bad it happens to contain. I am willing to take it as a man takes his wife, "for better or for worse," believing we shall be much more happy with it than without it.

An honorable Senator has gotten up and told us that here is an appropriation of \$2,300,000. With regard to the appropriations made for that portion of the country from which I come, the great valley of the Mississippi, I will say that we are a persevering people, a feeling people, and a contrasting people; and how long will it be before the people of this vast valley will rise en masse and trample down your little hair-splitting distinctions about what is national and demand what is just and fair on the part of this Government in relation to their great interests? The Mississippi with all its tributaries—the Red, Wabash, Arkansas, Tennessee, and Ohio Rivers—constitute a part of a great system, and if the system be not national I should like to know one that is national. We are told that a little work, great in its value, one for which I shall vote with great pleasure—the break-water in the little State of Delaware—is a great national work, while a work which has for its object the improvement of that vast system of rivers which constitute the valley of the Mississippi, which is to save millions and millions of property and many human lives, is not a work to be done because not national!

Around the region of the coast of the Atlantic, the Mexican Gulf, and the Pacific coast everywhere we pour out in boundless and unmeasured streams the treasure of the United States, but none to the interior of the West, the valley of the Mississippi. Every cent is contested and denied for that object.

Sir, I call upon the Northwestern Senators, upon Western Senators, upon Eastern Senators, upon Senators from all quarters of the Union, to recollect that we are part of our common country.

VIEWS OF GENERAL BEAUREGARD.

NEW ORLEANS, February 7, 1878.

MY DEAR GENERAL: I am glad to hear that the sphere of the Levee Committee has been enlarged to include the improvements of the Mississippi River; for the two objects are co-ordinate with each other, and if executed simultaneously, according to a well-studied plan, may be accomplished with little more than the amount estimated for by the United States levee commission of 1874, to reclaim only the alluvial lands of the Mississippi River by a system of outlets and levees, regardless of the improvement of the navigation of that important stream, which penetrates into the interior of the great valley of the West and has become so indispensable to its constantly increasing commerce.

It is evident that no definite plan of levees and improvements of the river can be devised until a thorough hydrographic survey of it and its principal tributaries shall have been made. This survey is earnestly recommended by themselves in their report, by Humphreys & Abbot in their Physics and Hydraulics of the Mississippi River, by Major C. R. Suter in his able report on the improvement of the navigation of the Mississippi River, (Executive Document 19, part 7, Forty-third Congress, second session, Senate,) and by Hon. A. G. Warfield's report, (Congressional documents, H. R. 494, Forty-fourth Congress, first session.)

While that survey will be in progress the old levees should be restored by the

General Government to their *ante bellum* condition and their gaps effectually closed, for the States in which those levees are located are no longer able to take proper charge of them or to insure that co-operation which is indispensable to success.

Two plans of protection against the Mississippi River have been warmly advocated: one of levees and outlets, by Messrs. Humphreys & Abbot, and by the levee commission, without even a thought being expressed that this great navigable highway of half the continent might be so improved, with a part of the sum estimated for, as to secure a ship-channel from the mouth to Cairo, or perhaps Saint Louis, while lowering, possibly, the flood-line between those extreme points. Their plan consists in abstracting from the river and conducting by separate channels to the Gulf such a volume of the flood discharged as shall be sufficient to bring down the flood-level to a height easily under control by levees; thus assuming that a reduction of the volume of water in the channel will produce a permanent lowering of the flood-line, while an increase of volume will permanently elevate that line—which is disproved by each one of the passes and bayous leading from the river to the Gulf. (See J. B. Eads's review of report of United States levee commission, marked "C," page 23.)

With regard to closing up crevasses the levee commission says: "If we guard against these crevasses by raising and strengthening our levees, an elevation of the high-water mark exactly proportional to the increased volume will be sure to occur. To contain a quart of water a vessel must have exactly the requisite number of cubic inches, and a like principle applies with equal force to water in motion"—as great a fallacy when applied to streams passing through alluvial soils as could have been uttered even by non-professional men, for the Mississippi River, especially, is doing nothing else but changing constantly its bed from Cairo to the Red River, a distance of eight hundred and twenty miles. Even in the second and fourth districts of this city we see that the river has shifted its bed at least half of its width in the last fifty years, the same at the Villere plantation, eight miles below New Orleans, and at the English Turn, a few miles further down. The levee commission, regardless of existing facts, maintain that, "Very numerous soundings with lead, adapted to bring up samples of the bottom, were made by the Mississippi Delta survey (physical and hydrographical) throughout the whole region between Cairo and the Gulf. They showed conclusively that the real bed upon which rest the shifting sand-bars and mud-banks, made by local causes, is always found in a stratum of hard blue clay, quite unlike the present deposits of the river. It is similar to that forming the bed of the Atchafalaya at its efflux and, as is well known, resisting the action of the strong current almost like marble. Clearly, then, the bed of the Mississippi cannot yield, and if the velocity be increased sufficiently to compel an enlargement of the channel it must be made by an increased caving of the banks, an effect which it is not quite so agreeable to contemplate." To this statement Captain Eads has answered, I think very properly, (see C., p. 8:) "Blue clay is found in the bottom and banks of the Mississippi at various localities, from the head of its alluvial basin to the Gulf. The exposure of the various strata in its banks above low-water mark and the intersection of these strata in various artificial excavations, their rapid destruction by the river current where the main stream forsakes its own channel and carves out a new bed through one of its many characteristic 'cut-offs,' the penetration of several of these strata by the artesian well at New Orleans before it had reached a depth equal to the present bed of the river at that place, and through which strata the river has evidently cut its way, all prove that the ordinary blue clay of the river will not resist the incessant action of the current."

The plan proposed by Captain Eads to prevent overflows and improve the navigation of the Mississippi is as follows: (See accompanying article from the New Orleans Picayune, marked "A," which gives so good a synopsis of the captain's plan that I prefer it to anything I might write. I inclose you also an article from the Cincinnati Commercial, marked "B," which gives in full the captain's views, and which you may consult for further information.) I feel no hesitation in saying that of the two proposed plans I give the preference to Captain Eads's, for it is founded, in my opinion, on sounder engineering principles, and I think if judiciously carried out will not only remove the forty-three low-water bars below Cairo, on some of which there is only four and a half feet of water, but would doubtless lower the flood-level, to what extent I am not now prepared to state owing to the want of reliable data on which to base any calculation.

If you permit me I will suggest that Congress should appropriate the sum of \$300,000 for a thorough hydrographic survey of the Mississippi River and its principal tributaries, with a view to increasing the navigable depth, obviating the existing dangers due to sand-bars, snags, &c., and to lowering its flood-line, thereby making a levee system more practicable and less expensive. Also another sum, say \$3,000,000, to allow Captain Eads, under the supervision of a commission of three or five engineers, to apply his plan of improvement in a section of the river of — miles, above or below Memphis, where the bars may be worst. That experiment, which is worthy of the stated sum, would not only test the system, but furnish data to make a correct and reliable estimate of the cost for the protection of the alluvial basin from New Orleans to Cairo, after the hydrographic survey above referred to shall have been completed.

I remain, dear general, yours, most truly,

G. T. BEAUREGARD.

General R. L. GIBSON,
Member of Congress, Washington, D. C.

UNITED STATES COAST AND GEODETIC SURVEY OFFICE,
Washington, D. C., June 1, 1882.

SIR: In reply to your inquiry of May 27, I send herewith the approximate length of the sea-coast of the United States, as measured from the small-scale charts of the Atlantic, Gulf, and Pacific coasts, upon a line drawn near to and parallel with the coast, avoiding all the minor indentations:

Sea-coast.	Miles.	
	Nautical.	Statute.
Atlantic coast, from Quoddy Head, Maine, to Cape Sable, Florida.....	2,372	2,732
Gulf coast, from Cape Sable, Florida, to the Rio Grande, Texas.....	1,008	1,162
Pacific coast, from the boundary near San Diego northward, thence through the Strait of Juan de Fuca and Gulf of Georgia to the forty-ninth parallel of latitude.	1,440	1,663
Alaska Territory, from Portland channel around Alaska Peninsula, through Bering Strait to Demarcation Point.	4,180	4,818
Alutian Islands (Alaska Territory) ocean and sea frontage.....	2,000	2,305

I am, very respectfully,

RICH'D. D. CUTTS,
Assistant in charge of office.

Hon. R. L. GIBSON,
United States House of Representatives.

Mackey vs. O'Connor.

SPEECH

OF

HON. ABRAHAM X. PARKER,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 30, 1882.

The House having under consideration the contested-election case, Mackey vs. O'Connor—

Mr. PARKER said:

Mr. SPEAKER: The second Congressional district of South Carolina is composed of the counties of Charleston, Orangeburgh, and Clarendon. The population by census of 1880 was: Charleston County, 102,800; Orangeburgh County, 41,395; Clarendon County, 19,190; making a total of 163,385. The Presidential vote is stated as follows:

Counties.	1880.		1876.	
	Garfield.	Hancock.	Hayes.	Tilden.
Charleston.....	8,162	11,440	15,086	8,778
Orangeburgh.....	2,724	3,625	4,486	2,835
Clarendon.....	1,473	2,513	1,894	1,425
Total.....	12,359	17,578	21,466	13,038

Republican majority in 1876, 8,428. Democratic majority in 1880, 5,219.

In the election of 1880 only one ballot-box was used at each poll, and the names of the national, Congressional, and local nominees of the opposing parties were all upon the two respective tickets.

The candidates for the office of Representative in Congress at the election held November 2, 1880, were Edmund W. M. Mackey, Republican, and Michael P. O'Connor, Democrat. By virtue of the laws of that State the governor, prior to each general election, appoints three commissioners of elections for each county; these appoint for their respective counties three managers for each election poll; these managers conduct the election, count the ballots, and make return to the commissioners of elections, who on the following Tuesday organize as a board of county canvassers and canvass and state the votes. From their statement the State canvassers declare what persons have been elected. This is, in short, the recognized State machinery of elections.

By virtue of the statutes of the United States the circuit courts appoint a court commissioner to be chief supervisor of elections of the judicial district, to whom the law gives ample powers of supervision to guard and scrutinize the proceedings of the election. And for the purpose of protecting elections when Representatives and Delegates in Congress are chosen a judge of the United States court has authority, upon proper application, to appoint and commission for each precinct two resident citizens, of different political parties, as supervisors to guard and scrutinize the procedure of the voting and the canvassing of the votes, and make full report to the chief supervisor in the premises. The vote of the three counties as certified by the secretary of state upon the returns made by the county boards of canvassers appears as follows:

Counties.	Total.	O'Connor.	Mackey.
Charleston.....	19,541	11,429	8,112
Orangeburgh.....	6,339	3,627	2,712
Clarendon.....	3,986	2,513	1,473
	29,866	17,569	12,297
O'Connor's apparent majority.....		5,272	

The vote of the three counties as presented to Samuel T. Poinier, chief supervisor of election, State of South Carolina, upon returns made to him by the United States supervisors of election of each poll of the vote counted and returned at their respective polls by the managers of election thereat, is as follows:

Counties.	O'Connor.	Mackey.
Charleston.....	10,888	12,707
Orangeburgh.....	4,057	4,157
Clarendon.....	2,513	1,473
Total.....	17,458	18,337
Mackey's majority.....		879

This is the position occupied by the parties after the election.

November 22 Mackey gave O'Connor notice of contest in legal form, to which the latter made answer December 22, 1880. A stipulation was entered into containing the following provisions:

Second. That for the convenience of both parties and the better to enable them to take such testimony as may by them be deemed necessary, all limitations as to time are hereby expressly waived, and testimony shall be taken at such times as may be agreed upon by the parties to said contest.

Third. That the presence of the opposite party, in person or by counsel, at the examination of any witness by the party by whom such witness may have been produced shall be distinctly understood and accepted as a waiver of any irregularity as to notice or time.

Fourth. That inasmuch as both parties intend to have the depositions of many of the witnesses taken in short-hand by a stenographer, which will render it impossible for such witnesses to subscribe to their depositions until the same shall be written out, which in many instances cannot be done for some time after such depositions shall have been taken; and inasmuch as the signatures of the witnesses in such cases could only be procured by requiring a second attendance of such witnesses at considerable inconvenience and expense to all parties interested; therefore in all cases where a deposition is not subscribed to by the party making the same, the signature of such witness is hereby waived.

January 3, 1881.

E. W. M. MACKEY.

ROBERT CHISOLM.

Attorney for Hon. M. P. O'Connor.

Under this there were taken on behalf of Mackey, contestant, over seventy depositions, and on the part of O'Connor, contestee, over ninety depositions, and thereafter, on April 26, 1881, the said M. P. O'Connor died.

After the decease of O'Connor several depositions were taken on behalf of Mackey in rebuttal of testimony which had been put in by O'Connor.

All of this testimony has been transmitted to Congress and is now before us.

On the 23d day of May, 1881, the governor of the State of South Carolina issued his proclamation providing for an election June 9, 1881, to elect a member of Congress "to serve for the remainder of the term for which the said Michael P. O'Connor was elected."

An election was held in pursuance thereof. Hon. Samuel Dibble was supported by the Democrats. No candidate was presented or supported by Republicans. Dibble was declared elected, received his credentials, was sworn in when the House met, and now occupies the seat upon this floor which belongs to that second district. It is true that the contestee, Dibble, comes here with his certificate from the secretary of state, and upon the *prima facie* case thus made is sworn in; but unless he comes here to fill an actual, an existing vacancy caused by the death of O'Connor, then he has no right here.

If Mackey was elected and not O'Connor November 2, 1880, then Dibble is without right and has no just or lawful standing.

Now, the result reached of giving color of election to O'Connor was by the manipulation of twelve precincts, eight of them in Charleston County, the four others in Orangeburgh County. One is the Haut Gap precinct, where the vote was almost unanimous for Mackey, but was by act of robbery forcibly reversed; and the other eleven are, seven precincts in Charleston County, to wit, Black Oak, Strawberry, Calamus Pond, Biggin Church, Brick Church, Ten-Mile Hill, and Enterprise; and four in Orangeburgh County, to wit, Fogle's, Fort Motte, Lewisville, and Bookhardt's, which the county canvassers refused to count. As to Black Oak the objection was made that the box and returns did not come through proper channels to them, but were sent by express.

As to the Haut Gap precinct there is no dispute of fact, and the contestee does not presume to present an argument upon it, and the State board recognize the fraud, but disclaim power to correct it.

HAUT GAP POLL.

on John's Island, Charleston County. Here, as everywhere else, the managers were Democrats. The managers and the supervisors kept independent poll lists, which corresponded, the names upon each being 1,083, and precisely this number of votes were found in the box. For member of Congress Mackey received 1,037 and O'Connor received 46.

The managers made and signed their returns, stating the facts correctly, and put them into the box with the ballots and sealed and locked the box and then wrapped it in a paper and sealed the paper with their seals, when it was given to one of the managers to take to the city. When the commissioners, acting as canvassers, opened the box it contained no returns, only a lot of ballots and a poll list. The canvassers counted the ballots so found and declared the result 1,052 votes for O'Connor and 19 for Mackey, thus more than reversing the result. Proceedings commenced in court to compel an honest count were avoided by the adjournment *sine die* of the board. The State board overruled the county board and re-established the true vote of the precinct, as to local officers, but held that they had no jurisdiction as to the vote for member of Congress. Thus Mackey is robbed of 991 majority, which no one disputes, and O'Connor is given 1,033 majority, which no man has now the assurance to claim he was ever entitled to.

TEN REJECTED POLLS.

The alleged grounds upon which the other ten polls were disfranchised are indicated in the following portion of the report of the Charleston County canvassers, as follows:

From the sworn statements and returns of the several managers at these polls appointed by us, it appeared that on the day of election a number of persons were present at these polls who assumed to act as legally appointed officials and who unlawfully used their assumed authority to hinder and prevent voters from vot-

ing as they desired, and by threats of violence to deter and prevent the managers from performing their duties. That there were also at several of the polls large numbers of armed persons who by actual violence as well as threats hindered and prevented voters desiring to cast their votes from voting as they wished, and prevented the managers from properly performing their duties in the exclusion or admission of legal voters.

For these reasons and the extent to which this intimidation and duress was carried we are of opinion that a legal election was not had at the polls in question, and have, therefore, declined to include them in our statements.

No box was received by us from Black Oak poll. A box was delivered by the express company, supposed to come from that poll, but we have heard nothing from any of the managers so as to identify it.

We, therefore, have not included this box in the statement.

THOMAS W. CARWILE,
E. L. ROCHE,
H. J. McCORMACK,

County Board of Canvassers, Charleston County.

The accusation aimed at the United States supervisors and marshals is patent and suggestive.

The evidence of the contest taken in connection with the cross-examination of his witnesses conclusively shows that this attempt to discredit those polls is merely a subterfuge to win a certificate of election, and is without facts to justify it. The cases of two of the precincts in question fairly illustrate the vicious character of this attempt.

ENTERPRISE, CHARLESTON COUNTY.

The supervisor, Robert Simmons, attests the correctness of the return. At the close of the poll there was an excess of 139 ballots in the box over the names on the poll list. A Democratic manager drew out 101 Republican tickets and only 38 Democratic tickets, after which the result and box were transmitted to the board of county canvassers, who, under the existing necessities of their party threw out the whole vote and declared it null.

Thus the managers begun the work by throwing out 101 Republican votes actually cast, and the commissioners completed the job by throwing out what the managers left.

LEWISVILLE, ORANGEBURG COUNTY.

The vote as returned by the managers of this precinct was:

For Mr. Mackey..... 700
For Mr. O'Connor..... 236

This return is established by J. J. Moore, one of the supervisors, and by T. C. Albergotti. The evidence is uncontradicted that all the Republican voters came to the ballot-box with an open ticket and folded it up in presence of the managers, showing that each voted but one ticket, and yet at the close of the poll a large excess of tickets was found in the box. There were forty-five packages of tickets containing more than one ballot, (generally from 3 to 5 and sometimes as high as 7), all of them Democratic, the narrow tickets being folded inside of the larger one. On the demand of the Republican supervisor, all the tickets thus found in each package were destroyed but the outside one, but notwithstanding this there was still an excess found in the box of 52 ballots. In drawing this excess out the manager drew out 40 Republican tickets and only 12 Democratic. After this "purification" there still remained the vote as above returned by the Democratic managers.

Yet the county canvassers supplement this work with their own, casting out the whole vote and disfranchising the people of the precinct. Upon testing those two "samples" the whole "lot" can be easily and correctly judged. One part of the prearranged scheme to give O'Connor the district was the tissue ballots and ballot-box stuffing. Connected therewith was the plan for the dishonest drawing of ballots from boxes and the overloading of the poll lists so as to provide names for unauthorized ballots. The open voting of the Republicans, the faithfulness and energy of the supervisors, and the courageous and exalted devotion of the voters to principle and to duty rendered that plan ineffectual, and then the scheme of reversing Hunt Gap vote and burying the votes of eleven other precincts was developed to defeat Mackey and the majority; and the sitting member comes before us as a result of all of this bad work. It appears that the ballot-boxes were located unusually high, being placed generally five feet high, and sometimes were still more elevated. The opening for the ballots was unusually large, being from $\frac{1}{2}$ by 2 inches, as at the City Hall poll, to $\frac{3}{4}$ by 4, as at the Niagara poll.

It appears that during the campaign the speakers advised the Republican voters to vote an open ballot so that in case the ballot-boxes were stuffed it could not be charged that they did it; nor could it be said, as it was in 1878, that the colored people had voted the Democratic ticket. The argument used on the stump was that in 1878 there were large numbers of Democratic tissue ballots found in the boxes which the Democrats said had been voted by the colored people. And during the hearing the following statement was entered by agreement:

To save further inquiry on this point, contestant here offers to admit, and by consent of counsel for contestee does admit, that the Republican voters throughout the second Congressional district were advised by contestant to go to the polls with their ballots open, and to fold them only in the presence of the managers and supervisors, so that all the officers of the election might see that they each deposited but one ticket in the ballot-box.

And this advice was almost universally followed. It also appears that all of the managers of the election appointed by the county commissioners were Democrats.

The secretary of the Republican county executive committee of Charleston County testifies as follows:

Question. Did the Republican executive committee for the county endeavor to have any Republican managers appointed throughout the county?

Answer. We did. In the meeting of the executive committee we selected names, one for each poll, and I, as secretary, was authorized to address a communication to the board requesting their appointment as managers.

Q. When the managers of election were announced by the commissioners were any of those parties appointed?

A. Not a single one.

Q. Did you observe among the managers of election appointed by the commissioners a single Republican?

A. Not one.

As part of the history of the case and as proof of the spirit and intent of many acts proved, the following authentic documents are full of instruction:

[From the News and Courier, Wednesday, October 7, 1874.]

The freedom of the ballot—Provisions of the United States election laws—The polling precincts must be designated ten days before the election.

The committee of five appointed under a resolution of the mass meeting of citizens, held on Thursday, have made the subjoined report, to which full publicity will, we trust, be given immediately by the press of the State:

To the Hon. H. D. LESESNE,

Chairman of Meeting of Citizens:

The committee appointed by you under the fourth resolution of the citizens' meeting respectfully report:

That, according to the laws of this State, the managers of election are required to have only one box at each voting precinct, and to cause all the votes for members to Congress and State and county officers to be put in the same box.

The votes, therefore, all become subject to the inspection and control of the supervisors of election, who may be appointed under the various acts of Congress by the honorable judge of the United States court. By these acts one supervisor from each party is provided for each voting precinct.

Within the city of Charleston the powers of these supervisors, in connection with the United States marshals, and his general and special deputies, are quite sufficient to secure a fair election. Here they are required to attend the polls, challenge, count, and canvass the votes, and examine, sign, and forward the returns; and the marshal and his deputies are authorized and required to keep the peace, support the supervisors, keep order, prevent fraudulent voting and fraudulent conduct by any officer of election, and, if resisted, may call the posse comitatus to their aid.

At the county precinct, outside the city, the powers of these officers are not so large, but even then they are required to be in the immediate presence of the officers holding the election, and to witness all their proceedings, "including the counting the votes and the making returns thereof."

B. C. PRESSLEY,
JAMES CONNOR,
JOS. W. BARNWELL,
E. W. M. MACKAY,
E. B. SEABROOK,

Committee.

You will notice that the above report sustains generally the printed instructions heretofore handed me.

The attention of all deputy marshals and supervisors is called to the penalties prescribed in section 5521 for failure or refusal to perform all duties required of them by law.

R. M. WALLACE, U. S. Marshal, Dist. S. C.

ROOMS OF THE STATE DEMOCRATIC EXECUTIVE COMMITTEE,

Columbia, S. C., October 27, 1880.

DEAR SIR: The attention of the State executive committee has been called to the instructions issued by Chief Supervisor Poinier to the supervisors of election in this State. These supervisors are directed to report "the number of ballots drawn out of the ballot-box and destroyed by the managers of election, because of the excess of votes over names on the poll list;" also the number of such ballots that "bore the names of the Republican candidates" and the number which bore the names of the Democratic candidates and Greenback candidates.

The instruction to report the character of the ballots drawn out and destroyed is unauthorized and illegal. The State election law, by which alone you are governed, requires (see Compilation of Election Laws, section 12) that "if more ballots shall be found on opening the box than there are names on the poll lists, * * * one of the managers or the clerk, without seeing the ballots, shall draw therefrom and immediately destroy as many ballots as there are in excess of the number of names on the poll list." You will, therefore, instruct the managers of election throughout your county at once, that they must not allow the supervisors to see or inspect any ballots drawn from the box in excess of the number of names on the poll list, in order to ascertain for whom such ballots were cast. The ballots must be drawn without being seen, and must be immediately destroyed, as the law directs.

By order of the committee.

JOHN BRATTON, Chairman.

To _____,
County Chairman.

SAMPLE FACTS FROM THE TESTIMONY.

In order to put before the House and the country the methods and maneuvers by which this crime against suffrage was perpetrated in that Congressional district on that election day I have selected from the testimony the following portions of evidence, the witnesses being officers appointed under laws of the United States. And to retain the graphic force of the narration I quote *verbatim*, letting the witnesses speak for themselves, only noting the fact that these things occurred in 1880 and under a republican form of government and in the United States of America.

CITY HALL POLL.

Testimony of C. Smith, (pages 17-20,) a supervisor:

Question. Did you keep a poll list?

Answer. Yes, sir.

Q. How many names did you record on your poll list?

A. Seventeen hundred and eleven.

Q. How many names were recorded on the poll list kept by the managers?

A. Seventeen hundred and twenty-nine.

Q. At the close of the poll when the ballots in the box were counted, in order to ascertain the whole number, did they exceed the number of names on the poll list?

A. The ballots in the box exceeded the number of names on the poll list kept by the managers to the number of 205.

Q. In what manner did the managers count the ballots in the box in order to ascertain the whole number?

A. They took the ballots from the box and separated them into piles, placing the straight Democratic tickets into one pile and the straight Republican tickets into another pile, and the split tickets, both Democratic and Republican, into a third pile, and then counted each pile.

Q. Do you recollect the number of Republican votes that they counted?

A. There were 452 straight Republican votes taken out of the box and counted.
 Q. In drawing out the excess, how many Republican were drawn out?
 A. Seventy-seven Republican tickets.

Q. How many different kinds of Democratic tickets were found in the box?
 A. There were two or three different kinds; there might have been three or four; there were at least three different kinds that I remember.

Q. On what kind of paper were they printed?
 A. On very thin paper; I believe it is described as tissue paper.
 Q. Select from these tickets [handing witness Democratic tickets marked Exhibits B, C, D, and E] the different kinds of Democratic tickets that were found in the box at your poll.

A. I think I can safely say all of those kinds were.
 Q. How did the Republicans at your poll vote their tickets?
 A. As a general thing they voted them open; that is, they approached the polls with their tickets unfolded.

Q. How did they fold them?
 A. They folded them just before they placed them in the aperture of the box.
 Q. Could you observe whether or not the Republican voters voted more than one ticket each?

A. I could tell to a certainty whether they had voted one or more tickets; I saw no evidence that more than one ticket was voted at a time by the Republicans.

Q. From what you observed during the day have you reason to believe that more than 375 votes were cast for the contestant in this case?

A. I am satisfied there were 452 Republican votes in the box with the name of E. W. M. Mackey on them for Congress.

Q. Are you satisfied that each one of those tickets was voted by an individual voter?

A. Yes, I am satisfied of that.

COURT-HOUSE POLL.

Testimony of W. H. Ahrens, (pages 26 and 27,) a supervisor:

Question. Did you keep a poll list?

Answer. I kept a list of the persons that voted there.

Q. Did the managers keep a poll list?

A. Yes, sir.

Q. Did your poll list correspond with that kept by the managers?

A. Yes, sir.

Q. How many names were on both poll lists?

A. Six hundred and twenty-eight.

Q. At the close of the poll, when the ballots in the box were counted, did they exceed the names on the poll list, and if so, to what extent?

A. They exceeded the names on the poll list to the extent of 135.

Q. In ascertaining the whole number of votes in the ballot-box, how did the managers proceed to count?

A. They took the box into an adjoining room and took the votes out and began separating the tickets of each political party's votes to themselves until they had counted to within 50 or 75 votes of all the votes in the box, when Mr. Barnwell came in and told the managers they ought not to unfold the tickets, but to count them without unfolding them, and after they had ascertained the whole number of votes, then, in case the ballots in the box did not correspond with the names on the poll list, they must draw out the excess.

Q. Who was Mr. Barnwell?

A. Chairman of the Democratic executive committee of this county.

Q. In drawing out that excess how many Republican tickets were drawn out?

A. Every one drawn out was a Republican ticket.

Q. In depositing their votes at your poll how did the Republicans generally vote?

A. They came up with their tickets open.

Q. Could you observe whether or not they were voting one or more tickets?

A. I do not think they were voting more than one ticket; they could not do it very handily, because they came up with their tickets open and held them so until they were sworn.

Q. When did they fold them?

A. When they were told to vote.

MARKET HALL POLL.

Testimony of John M. Freeman, jr., (page 33,) a supervisor:

Question. Did you keep a poll list, and, if so, what number of names did you record on your poll list?

Answer. One thousand and eighty-three.

Q. What was the number of names recorded on the managers' poll list?

A. Eleven hundred and twenty-five.

Q. Can you in any way account for the discrepancy in the number of names on your poll list and theirs?

A. I cannot.

Q. Are you certain that you recorded on your poll list the name of every person who voted at your poll?

A. I will swear positively that I did.

Q. Did you call the attention of the managers to the fact that their poll list contained more names than yours?

A. I did.

Q. What did they say about the matter?

A. They said they were told by M. Carville, one of the commissioners of election, not to regard any law but the State law, and to count according to their poll list.

Q. When the ballots in the box were first counted did they exceed the number of names on the poll list, and, if so, to what extent?

A. There were 61 ballots more in the box than names on the managers' poll list.

Q. What did they do with the excess?

A. All the ballots were put back into the box and the excess drawn out by Mr. Proctor, the Democratic supervisor, who was blindfolded by the managers for that purpose. He drew out 61 Republican ballots.

PALMETTO ENGINE-HOUSE POLL.

Testimony of John S. Connor, (page 39,) a supervisor:

Question. On the first count made to ascertain the whole number of ballots in the box, how did the managers make the count?

Answer. The managers opened the box and Mr. O'Brien went to take the votes out, and as he put his hand in I spoke to him and told him they were not to be disturbed at all, and he took them out that way.

Q. As the ballots were taken out were they unfolded?

A. Some were; some were put in loose, and some were folded. The managers took the ballots out of the box precisely as they laid there.

Q. In taking them out were any ballots found folded one within another?

A. Yes, sir; a great many.

Q. About how many?

A. Between 200 and 300. I did not count them, but I am satisfied there were between 200 and 300. The fact is I got one bunch with 20 in it; they were handed to me; they pulled out another bunch in which 23 ballots were found; there were other bunches found with 2 and 3 together.

Q. Were the ballots found in that condition Democratic or Republican ballots?

A. Democratic ballots.

Q. Were any Republican ballots found folded together?

A. Yes, sir; 2.

Q. After destroying the ballots found folded together was there any excess?

A. Yes, sir.

Q. How many?

A. Sixty-seven. When the managers found more than one together they would hand them to me. They would take one off and hand the balance to me, which I destroyed.

Q. What was done with this excess of 67?

A. After we counted them and found more than 1,501, the ballots were put in the box. I told the managers that it was not fair for them to draw out the entire excess as they could pick out the Republican ballots every time, so they agreed that I should draw half and one of the managers the other half, and I took out 34, which were Democratic ballots; and he took out 33, which were Republican ballots.

Q. In drawing those tickets, were you able to distinguish merely by feeling the difference between a Republican and Democratic ballot?

A. Yes, sir; I could; there was as much difference between the two ballots as between a piece of sheet iron and a piece of paper.

HOPE ENGINE-HOUSE POLL.

Testimony of H. W. Hendricks, (page 46-51,) a supervisor:

Question. Did you keep a poll list?

Answer. I did.

Q. How many names did you record on your poll list?

A. One thousand two hundred and fourteen.

Q. At the close of the poll, when the votes were counted in order to ascertain the whole number, how many ballots were found in the box?

A. Two thousand two hundred and eighty-nine.

Q. In counting those votes, what was the course pursued by the managers?

A. When the poll was closed, after making all necessary arrangements, the box was opened. They first undertook to shake up the ballots in the box, but I objected. They said they had a right to shove the tickets down so as to scatter them.

Q. In counting the ballots were any tickets found folded together?

A. Numbers of tickets were found folded together.

Q. Describe in what condition those tickets were found?

A. They were folded in packages apparently as if they had been compressed together.

Q. Were they Democratic tickets?

A. Yes, sir.

Q. You say they were folded in packages as if compressed together?

A. Yes, sir; they were in packages when they were taken out; I objected to their being counted; they were folded in two folds, lengthwise, and one fold across, and placed on top of each other and pressed together so tightly that they stuck together.

Q. How many packages of Democratic tickets were found folded in that manner?

A. I started to keep an account of them, but I got tired doing so; they took them out in packages and separated them; they put their hands in the box and endeavored to separate them in the box, but did not succeed, as the tickets were so tightly pressed together they would not separate except by being pulled apart.

Q. Did you keep any memorandum of the number of Democratic tickets found in that way?

A. I did for a time.

Q. Refer to that memorandum and see how many there were.

A. First there was a package with 4 in it, and then one with 8, and one with 9, one with 10, another with 10, one with 6, one with 5, one with 12, one with 10, one with 2, one with 7, one with 5, one with 8, one with 9, one with 14, and one with 6; after that I got tired and kept no account of the others which came out afterward. I objected to their being counted, but the managers decided against me; they said they looked upon them as being in book form.

Q. Did those tickets look as if they had been voted separately?

A. By no means. The four ruled against me all the time; I was very particular in keeping this memorandum; they took them out in their hands and counted them like you would a package of bank bills.

Q. During the day did you observe anything suspicious on the part of the managers?

A. I saw that the ballot-box was being stuffed, and I accused one of the managers of doing so.

Q. Did you yourself see any attempt on the part of the managers to stuff the ballot-box?

A. I did.

Q. State what you saw?

A. While we were waiting for the table to be brought from Mr. Howard's I saw Mr. Nixon put his hand inside his left pocket and then take it out and lift the lid of the box and put tickets in. I called Mr. La Coste to witness it, and Mr. McGuire, and when I protested against it he put his hand in and tried to scatter them.

Q. Were those tickets that Nixon put in the box Democratic or Republican tickets?

A. Democratic tickets. I had a light there; I put it over the mouth of the box; I then saw Nixon raise the lid of the box and put them in with his left hand.

Q. In drawing out the surplus of 1,071 votes, how was that managed?

A. By two of the managers—McGuire and Levin—who took turns in drawing. First one would draw out 100, one at a time, and then the other would do likewise. When drawing they were blindfolded.

Q. In the drawing out could you distinguish what kind of tickets were drawn out?

A. Yes; the best part were Republican tickets. They were one hour and a half drawing out Republican tickets before a Democratic ticket was drawn out.

Q. Describe how they drew them out.

A. They drew out Republican tickets, one after another, until they got nearly all out; they then searched for them. I advised them to take both hands, and they did so.

Q. How many Republican tickets were drawn out?

A. Five hundred and ninety-two. They counted them by fifties, and I took a tally of them.

Q. Before these 592 Republican tickets were drawn out, were any Democratic tickets drawn out?

A. Not one.

Q. Do you mean to say 592 Republican tickets were drawn out before a single Democratic ticket was drawn out?

A. Right straight. They counted them off as they drew them out, and whenever they found one they would go like a chicken and say here is one.

Q. When they stopped drawing Republican tickets how many were left in the box?

A. When they got through the final count there were 3 straight Republican tickets and 2 out tickets with Mr. Mackey's name on them.

Q. Were they Democratic tickets?

A. I think so.

Q. Examine this paper and see if that is your return of the election?

A. Yes, sir.

Q. Please state from that return what was the result of the vote declared by the managers for member of Congress.

A. Five for E. W. M. Mackey and 1,200 for M. P. O'Connor.

Q. Please describe how the ballot-box was located at your poll?

A. It was in front of the door, with a barricade in front of it, and it was elevated at least six feet from the ground. When I went to vote I had to reach up, and when a small man came up to vote they would have to turn the box on a slant so as to enable him to put his ticket in.

Q. How wide was the aperture?

A. About three inches long and one wide. I could put my thumb in it.

Q. How do you know the managers after drawing out those 592 votes could find no more Republican tickets?

A. Because they searched and searched. I told them to put both hands in, and they did; and when they found one they would cluck and say, "Here is another one."

Q. You could not see inside the box?

A. Yes, sir; I could. They searched so hard that they threw the ballots out of the box, and they fell on the floor.

Q. While searching was the box open?

A. Yes, sir; wide open; the cover was thrown back.

Testimony of J. H. Daggett, (pages 54, 55,) a deputy marshal:

Question. At any time while you were there did you observe anything suspicious on the part of the managers?

Answer. Well, everything was suspicious. I saw the ballot-box being stuffed, and I called the attention of others outside to it; it was done in a peculiar manner; over the hole in the top of the ballot-box, through which voters deposited their ballots, there was a card, and whenever a ballot was put in by a voter this card was raised up from the outside to enable him to drop the ballot in the box. Several times I saw Levin raise the card up from the inside and drop some ballots in the box; that is, I saw him have ballots in his hand, and I saw him raise his hand with those ballots in it to the hole in the top of the box, and when he withdrew his hand I saw no ballots in it.

Q. You are a Republican?

A. Yes, sir.

Q. You were interested in the success of that party?

A. Yes, sir.

Q. The Republicans came up to that poll and voted the ballot open?

A. Yes, sir.

Q. You know why?

A. No, sir; I never saw it voted so before in my life; when they were in line they came up with their ballots open.

EAGLE ENGINE-HOUSE POLL.

Testimony of J. A. Beattie, (pages 65, 66,) a supervisor:

Question. I want to know how many persons were recorded on your poll list as having voted at that poll?

Answer. Fourteen hundred and thirty-three.

Q. Did the number of names on your poll list of persons who actually voted agree with the number recorded on the poll list kept by the managers?

A. Yes, sir.

Q. At the close of the poll, when the votes were counted in order to ascertain the whole number, how many ballots were found in the box?

A. Two thousand and two.

Q. An excess of how many?

A. Five hundred and sixty-nine.

Q. At the close of the election, how did the managers count the votes in order to ascertain the number in the box?

A. After the polls closed, they proceeded to count the ballots; the Republican ballots were counted and laid in one pile at the end of the table, close to where I and others were sitting; the Democratic ballots were then counted and laid next to the box. When they finished their count it amounted to 2,002 votes.

Q. Then what was done with them?

A. Then there was some conversation held with some parties that gave them some instructions and told them they must go ahead.

Q. Who was this party?

A. I was told he was chairman of this county.

Q. Chairman of what?

A. Chairman of the Democratic party of Charleston County.

Q. Who told you that?

A. The chairman of the board of managers; I asked him who the gentleman was.

Q. You said they were returned to the box and the excess drawn out?

A. Yes, sir.

Q. How was the drawing out done?

A. One of the managers was selected to be blindfolded, and they kept up the drawing until the 569 were drawn out.

Q. Have you any idea how many of those ballots were Republican ballots?

A. I am positive there was not more than five Democratic tickets drawn out.

WASHINGTON ENGINE-HOUSE POLL.

Testimony of N. K. Reed, (page 69,) a supervisor:

Question. Did you keep a poll list?

Answer. Yes, sir; I did.

Q. Did the managers keep a poll list?

A. Yes, sir; that is, their clerk did.

Q. At the close of the election how did your poll list correspond with that kept by the managers?

A. Our lists corresponded exactly.

Q. What was the number of names on your poll list and on theirs?

A. Four hundred and twenty-eight.

Q. When the votes were counted in order to ascertain the whole number of votes in the box, what was the number of ballots found in the box?

A. Eight hundred and thirty-seven.

Q. An excess of how many?

A. Three hundred and seventy-nine.

Q. What was done with that excess?

A. After being counted, the ballots were put back into the box, and 379 were drawn out.

Q. How many Republican and how many Democratic tickets were drawn out?

A. One hundred and seventy-nine Republican, 197 Democratic, and 3 Greenback tickets.

Q. How could you tell the character of the ballots that were drawn out?

A. I saw the ballots as they were drawn out. Mr. Taylor drew them out and handed them to Mr. Martin, and I saw them as they were handed from one to the other.

Q. Did the Democratic supervisor unite with you in making a report of the election?

A. Yes, sir; Mr. W. B. Seignons, the Democratic supervisor, and I united in making our report.

Q. Is this the report? [Handing witness paper.]

A. Yes, sir; there are our signatures.

Q. In that report, signed by you and the Democratic supervisor, what are the number and character of ballots reported as being drawn out because of the excess of names over the poll list?

A. Just the same as I have already stated, viz: 179 Republican, 197 Democratic, and 3 Greenback tickets, making a total of 379.

Q. Before these ballots were drawn out, what was the number of ballots in the box?

A. Two hundred and forty-five Republican, 589 Democratic, and 3 Greenback.

Q. After those ballots were drawn out, what was the number of votes counted by the managers for member of Congress according to the return made by you and the Democratic supervisor?

A. Sixty-six for E. W. M. Mackey and 391 for M. P. O'Connor.

MARION ENGINE-HOUSE POLL.

Testimony of C. D. Ludeke, (page 74-5,) a supervisor:

Question. Did you keep a poll list?

Answer. I did.

Q. How many names did you record on your poll list?

A. One thousand one hundred and forty-one.

Q. At the close of the election, how did your poll list correspond with that kept by the managers?

A. Exactly.

Q. At the close of the poll, when the ballots were counted in order to ascertain the whole number, how many ballots were found in the box?

A. I think there were between seventeen and eighteen hundred—1,798.

Q. Were any ballots found folded together?

A. Yes, sir; a great many.

Q. Were any Democratic ballots found folded one within another?

A. A great many Democratic ballots were found folded together.

Q. About how many were found folded together?

A. There were so many taken out that I could not keep the tally. I counted packages containing 2, 3, 4, 5, 10, 11, 12, and 14.

Q. In all those instances, were the Democratic ballots folded one within another?

A. They were folded separately, placed one on top the other and pressed together, as if they were done so for the occasion; they had to be pulled apart in the counting.

Q. In what manner did the managers count the ballots after the box was opened?

A. After the box was opened the ballots were emptied out on the table; they then picked out all the Democratic ballots and counted them back into the box, putting them in the bottom; when they got through with the Democratic ballots, they counted all of the Republican ballots, putting them on the top of the Democratic ballots.

Q. During that first count, were any ballots found folded together?

A. Yes, sir; that is the time when they were picked out and shook apart and counted into the box.

Q. After the count, did the ballots in the box exceed the number of names on the poll list; and, if so, by how many?

A. As I stated previously, the names on the poll list were 1,141, and the ballots found in the box were 1,798—an excess of 657.

Q. Did that 657 include the ballots found folded together?

A. Yes; they would not destroy any folded together; they insisted upon counting all.

Q. Do I understand you to say that all the ballots found in the box were counted, whether such ballots were folded together or not?

A. Yes, sir.

Q. In drawing out the excess of 657 votes, how many of the ballots drawn out were Democratic and how many were Republican ballots?

A. Five hundred Republican and 157 Democratic votes.

Q. How did the Republicans at your poll vote?

A. They voted open ballots; that is, they came up to the box with their tickets unfolded.

Q. When did they fold them?

A. Just as they were about to vote.

Q. How did the Democrats generally come up with their ballots?

A. Shut up in their hands.

Q. If the excess of ballots had been created by the Republicans, could you not have seen them doing so from the way in which they were voting?

A. Of course.

Q. From what you observed during the election and during the counting and canvass of the votes, by whom was this excess of votes created?

A. By the Democrats, undoubtedly.

ASHLEY ENGINE-HOUSE POLL.

Testimony of J. F. O'Connell, (pages 81 to 83,) a supervisor:

Question. Did you keep a poll list?

Answer. My clerk kept one for me.

Q. How many names were recorded on your poll list?

A. Nine hundred and twelve.

Q. Did the managers keep a poll list?

A. They did.

Q. How many names were recorded on their poll list?

A. Nine hundred and twelve.

Q. Did the Democratic supervisor keep a poll list?

A. Yes, sir.

Q. How many names were recorded on his poll list?

A. Nine hundred and twelve.

Q. All three of the poll lists corresponded, then?

A. Yes, sir; we all agreed as to the number of persons who had voted.

Q. How many votes were in the ballot-box?

A. Eleven hundred and fifty.

Q. An excess of how many?

A. Two hundred and thirty-eight.

Q. What was done in regard to that excess?

A. The ballots were all put back into the box and 238 were drawn out and destroyed, of which 119 were Republican and 118 Democratic, and 1 Greenback, the only one in the box.

Q. Could you see the character of the ballots that were drawn out?

A. Yes, sir; they allowed me that privilege.

Q. Did you keep a tally of the number and character of the ballots as they were drawn out?

A. I did.

Q. Will you please state what was the plan pursued by the Republicans in depositing their ballots in the box at your poll?

A. They came to the poll with their ballots open, and folded them in the pres-

ence of the managers and supervisors, as they have been instructed to do by the Republican party.

Q. Did they all do that?

A. All that I noticed.

Q. Did you check off on any list the names of all persons voting the Republican ticket?

A. Yes, sir; whenever a person voted a Republican ticket the name of that person was checked off by me on a list I kept.

Q. How many did you check off?

A. Every Republican vote that was put in the box; the number I cannot state now, as it has been so long since the election. There were 119 Republican ballots destroyed and 198 counted, making a total of 317 that were actually voted.

Q. From the position you occupied, could you plainly see that each Republican voted but one ticket?

A. I could, because I was standing alongside of the ballot-box.

COOPER'S COURT POLL.

Testimony of E. R. Bolger, (pages 86 and 87,) a supervisor:

Question. Did you keep a poll list?

Answer. I did.

Q. Did the managers keep a poll list?

A. The managers' clerk kept the poll list.

Q. At the close of the poll how did your poll list correspond with that kept by the managers?

A. It corresponded exactly; both the managers and I had 547 names on our poll lists.

Q. At the close of the poll, when the votes were counted in order to ascertain the whole number, did the number of votes found in the box correspond with the number of names on the poll list?

A. No, sir; when at the close of the poll the ballots were counted, the number was ascertained to be 89 in excess of the number of names on the poll list. All of the ballots were then put back in the box, and one of the managers, being first blindfolded, drew out 89 tickets, of which 73 were Republican, with the name of E. W. M. Mackey thereon for Congress, and 16 were Democratic, with the name of M. P. O'Connor thereon. After drawing out these votes the managers then proceeded to canvass the remaining ballots for electors and Congressman; and for the Garfield electors it was found that there were 203 votes, and for the Hancock electors 349. The vote for Mr. Mackey was one less than for the Garfield electors, and the vote for O'Connor one less than for the Hancock electors—there being one Republican ticket without Mr. Mackey's name and one Democratic ticket without Mr. O'Connor's name. One of the managers then called attention to the fact that the number of votes counted aggregated 552, and that there were only 547 names on the poll list, so that it was determined to return the ballots to the box and draw out six more tickets, which was done, and the result was that six more Republican tickets were drawn out and six votes were deducted from the Garfield electors, and the same number from E. W. M. Mackey.

Q. In the two drawings how many tickets were drawn out altogether?

A. Ninety-five, of which 79 were Republican and 16 Democratic.

Q. After the excess of votes had been got rid of, what was the result of the count for member of Congress?

A. For member of Congress the whole number of votes counted and returned by the managers of election was 544, of which 348 were counted for M. P. O'Connor, and 196 for E. W. M. Mackey.

Q. Have you any reasons to believe that E. W. M. Mackey actually received a larger vote than was returned for him at that poll?

A. I have reasons to believe so, and know so.

Q. State how you know it?

A. Well, by drawing out 79 Republican votes Mr. Mackey's vote was reduced to that extent, because I am satisfied from the manner in which the Republicans voted that they had nothing to do with creating the excess of votes in the box.

Q. What was the manner in which the Republicans voted at your poll?

A. Every one that came up to vote came with their tickets flying, and folded them after the oath was administered to them, in the presence of the managers so that every one could see that they each had but one ticket.

Q. Did the Democrats do the same thing?

A. No, sir; they all had their tickets folded before they came to the box.

Q. If any Republican had voted more than one ticket could you have seen it?

A. I think I could.

Q. Do you know what was their object in displaying their tickets that way?

A. Yes, sir; so that every one could see that they each had but one ticket, and, also, so that they could be checked off by outsiders appointed for the purpose of keeping a list of persons who voted the Republican ticket. Fraud was anticipated, and that method was resorted to for the purpose of counteracting any fraud that might occur.

SAINT STEPHEN'S POLL.

Testimony of R. C. Browne, (pages 100, 101,) a supervisor:

Question. What was the number of names recorded on your poll list, and also on that kept by the managers?

Answer. Five hundred and thirty-two.

Q. How did the managers at the close of the election proceed to count the votes?

A. At the close of the poll the ballot-box was opened and the ballots were counted from the box onto the table or stand that was behind the structure on which the ballot-box stood during the day. When the count was completed it was found that instead of there being only 532 tickets in the box there were exactly 600—68 more tickets than names on the poll list. One of the managers, Mr. Smith, was then blindfolded, a handkerchief being tied over his eyes, and drew the excess out. In drawing the ballots out he crumpled them up so no one could see them and dropped them into a bag, which was held by a man who stood behind Smith, and, with his arms around Smith, held the bag in front of him, just alongside of the box. After the excess was drawn out the managers proceeded to assort the remaining ballots by placing all the Republican tickets in one pile, the Democratic tickets in another, and the Greenback tickets in a third pile. The Republican tickets were then counted, then the Democratic tickets, and lastly the Greenback tickets. After the count was through it was discovered that the whole number of ballots counted was 52 more than the number of names on the poll list. The question then arose as to what should be done, and it was suggested by Mr. Palmer that all the ballots be returned to the box and 52 more ballots be drawn out. Against this I protested, because, during the assorting of the ballots, I had noticed some one putting his hand from under the table onto the table where the ballots were, and I suspected at the time that the ballots on the table were being tampered with. Upon stating to the managers what I had seen, Mr. Smith said that in assorting the Democratic ballots he had seen Democratic tickets which he was satisfied had not been voted, as they had no appearance of having been folded. He said he thought that if he was allowed to go over the tickets he could pick out the tickets which appeared never to have been folded. By consent of the other managers he went to work and picked out, without counting them, a number of Democratic ballots which had not been folded. The ballots picked out were then counted and turned out to be exactly 52, which were destroyed. The canvass of the votes was then proceeded with.

It appears on page 102 that upon drawing out the excess of 68 ballots, 63 Republican and 5 Democratic ballots were drawn.

MUSTER-HOUSE POLL.

Testimony of A. D. Cooper, (page 109,) a supervisor:

Question. Did you keep a poll list?

Answer. I did.

Q. Did the managers keep a poll list?

A. Yes, sir.

Q. At the close of the election how did your poll list correspond with that kept by the managers?

A. They both corresponded, and both contained 723 names.

Q. When the ballots were first counted in order to ascertain the whole number of votes, did the number of ballots in the box correspond with the number of names on the poll list?

A. No, sir; 754 ballots were found in the box, and there were only 723 names on the poll list, an excess of 31.

Q. What was done with this excess?

A. The managers went to work and drew the excess of votes out. Owing to the difference between the Republican and Democratic tickets they could, in drawing out the tickets, easily distinguish one from the other. The Democratic tickets were on thin paper and the Republican tickets were on thick paper; any one, therefore, could put his hand in and feel the difference. Thirty Republican tickets were drawn out and one Democratic ticket.

Q. Was there anything peculiar in the manner in which the Republicans at your poll voted?

A. The Republicans came to the poll with open tickets, and, while being sworn, held their tickets up in their hands, and then, after being sworn, they folded their tickets in the presence of the supervisors and managers and deposited them in the box. I was in a position where I could see everything that was going on.

PINOPOLIS POLL.

Testimony of P. W. Gaillard, (page 122,) a supervisor:

Question. Did you keep a poll list?

Answer. Yes, sir.

Q. What number of names did you record on your poll list?

A. Two hundred and sixteen.

Q. Did your poll list correspond with that kept by the managers?

A. It did.

Q. When the votes were counted did the ballots exceed the number of names on the poll list, and if so, how many?

A. There was an excess of 39 ballots.

Q. What was done in regard to that excess?

A. After counting the votes and finding there was an excess of 39 ballots, they then blindfolded one of the managers, Mr. White, and he drew 39 ballots out of the box; of these 17 were Republican tickets and 22 Democratic tickets.

Q. What was the number of votes counted and declared for member of Congress by the managers?

A. Sixty-four for Edmund W. M. Mackey and 150 for M. P. O'Connor.

Q. What course did the Republicans at your poll pursue in voting?

A. Every man that voted the Republican ticket at my poll voted it openly; when he came to the poll he held his ticket open until he was sworn, and after he was sworn he folded it and dropped it in the box.

Q. Are you satisfied that every Republican at that poll voted an open ticket?

A. I am, because I was not two feet from the box all day.

ENTERPRISE POLL.

Testimony of Robert Simmons, (page 191,) a supervisor:

Seeing two or three folded together I called his attention to them, and then he commenced to take them out one by one. Whenever he caught hold of one that looked as if it had others in it I would say "There is more than one," and if it was so he counted one and gave me the others. In that way I captured ten tickets with others in them.

Q. Were they Democratic or Republican ballots?

A. Democratic.

Q. Did you make a memorandum of how many tickets each ballot contained?

A. Yes, sir; in some there were only 2, and there was one with 4, one with 5, one with 11, and one with 14, and one with 16; that was the last one. I have them now.

Q. Can you state how many those ten ballots contained in the aggregate?

A. Sixty-one, altogether.

Q. Those ten, you say, contained 61 ballots?

A. Yes, sir; here they are. [Handing tickets.] In the last ballot the whole 16 are not there, as I gave some of them away; I have here one with 13 other tickets in it, making 14 that were voted together.

Q. You say there were 16 ballots of this kind found in one parcel?

A. Yes, sir; in one parcel there were tickets like exhibit E.

Q. After these ballots found in the condition described by you were destroyed did the number of ballots still exceed the number of names on the poll list?

A. Yes, sir; there was an excess of 139 after destroying them.

Q. What was done with that excess?

A. All the ballots were put back in the box, and 139 were drawn out by one of the managers.

Q. How many Democratic and how many Republican ballots were drawn out?

A. One hundred and one Republican and 38 Democratic.

Q. Did you see the character of the ballots as they were drawn out?

A. Yes, sir; because they handed them to me to destroy, and I held them in my hand until they were through, and I then handed them to the managers and said, here is 101 Republican and 38 Democratic ballots.

Q. After the destruction of those ballots what was the result of the vote as counted and declared by the managers for member of Congress?

A. The number of votes counted for E. W. M. Mackey was 385, and for M. P. O'Connor 161.

EASTERLIN'S POLL.

Testimony of M. K. Wilkinson, (page 217:)

Question. Did the managers keep a poll list?

Answer. Yes, sir.

Q. How did your poll list correspond with that kept by the managers?

A. Our list tallied.

Q. What was the number of names recorded on your poll list?

A. Two hundred and twenty-one white and 228 colored, making a total of 449.

Q. What was the number recorded on the manager's list?

A. Four hundred and forty-nine.

Q. When the ballots were counted to ascertain the whole number, what was the number of ballots found in the box?

A. Five hundred and fifty-six—an excess of 107 more ballots than names on the poll list.

Q. In drawing out that excess of 107 ballots, how many Republican and how many Democratic tickets were drawn out?

A. One hundred Republican and 7 Democratic tickets.

ZEIGLER'S POLL.

Testimony of H. D. Edwards, (page 222,) supervisor:

- Question. Did you keep a poll list?
 Answer. I did.
 Q. Did the managers keep a poll list?
 A. Their clerk did.
 Q. At the close of the election, how did your poll list correspond with theirs?
 A. Our lists tallied exactly.
 Q. Did you keep the whites and colored separate on your poll list?
 A. I did.
 Q. How many whites and how many colored on your poll list?
 A. One hundred and forty-five each.
 Q. Making a total of 290?
 A. Yes, sir.
 Q. At the close of the election, how did the managers proceed to count the ballots in order to ascertain the whole number?
 A. They opened the box, emptied the ballots out, and after unfolding them they counted them back into the box.
 Q. Did the ballots tally with the number of names on the poll list?
 A. No, sir; there was an excess of 104.
 Q. What was done with that excess?
 A. They were drawn out and destroyed.
 Q. In drawing out that excess, how many Republican and how many Democratic ballots were drawn out?
 A. Fifty-two of each.
 Q. Refer to your return, and state what was the number of votes counted and returned by the managers of election for a member of Congress?
 A. For E. W. M. Mackey 91, and for M. P. O'Connor 199.
 Q. How many persons did you check off on your poll list as having voted the Republican ticket?
 A. One hundred and forty-three.
 Q. How many kinds of Republican tickets were found in the ballot-box?
 A. One kind; a check-back ticket. [Exhibit G.]

FULTON POLL.

Testimony of A. S. Boston, (pages 296, 297, and 298,) a supervisor:

- Question. Were you present at the opening of the poll?
 Answer. No, sir; I was not.
 Q. Why were you not?
 A. At the election of 1878 the poll was opened before the hour fixed by law, and, fearing that the same thing might be done at the last election, the Republicans went to the polling place the night before, so as to be there when the poll was opened. As day was coming on, two men, William Bradley and Ellison George, were sent to Mr. Lawrence's store to watch for him. Then some more men were placed on the road which we understood the other managers would have to travel to reach the place where the poll was formerly held. Just before daylight, while waiting, we observed a light through a thick oak thicket. We immediately went there and found the managers at the house of Jack Broughton. Upon making inquiries we were told that the poll was open, and that four persons had already voted. I asked permission to look into the box, but the managers refused. At that time it was only half-past five o'clock.
 Q. By whose watch?
 A. By Ben Richardson's watch, which I had in my pocket.
 Q. At what place did you find the poll?
 A. In a thick oak thicket, at an out-house of Mr. Jack Broughton's.
 Q. Was he one of the managers?
 A. No, sir.
 Q. Had the poll ever been held at that place before?
 A. Never before.
 Q. This, then, was a new place?
 A. Yes, sir.
 Q. Did the managers accept as correct the poll lists kept by you and the Democratic supervisor?
 A. Yes, sir.
 Q. How many names did you have recorded on your poll list?
 A. Three hundred and fifty-four.
 Q. How many did the Democratic supervisor have recorded on his?
 A. The same number.
 Q. What was the number of ballots found in the box?
 A. Five hundred and two.
 Q. An excess of how many?
 A. One hundred and forty-eight.
 Q. In drawing out that excess how many Republican and how many Democratic ballots were drawn out?
 A. One hundred and six Republican and 42 Democratic ballots.
 Q. After the excess was drawn out did the managers canvass the remaining ballots in your presence?
 A. Yes, sir.
 Q. What was the result of the canvass made by the managers so far as relates to member of Congress?
 A. For E. W. M. Mackey 193 votes were counted, and for M. P. O'Connor 161.
 Q. Are you satisfied that each Republican voted but one ticket?
 A. I am, because every man held his ticket open until he was sworn, so that everybody could see that he had but one ticket.
 Q. Could you tell what kind of a ticket each person voted?
 A. I could.
 Q. In keeping your poll list did you check off the name of each person who voted a Republican ticket?
 A. Yes, sir.
 Q. In this way could you tell exactly how many persons voted the Republican ticket?
 A. Yes, sir; on my poll list I checked off, as each man put his ticket in the box, the names of 299 persons, who voted the Republican ticket.
 Q. Of the 354 persons who voted at your poll can you tell by your poll list how many were white and how many were colored?
 A. Yes, sir; 300 were colored and 54 white. All the colored men, excepting one, voted the Republican ticket.
 Q. What kind of a Republican ticket was voted at your poll?
 A. A calico or check-back ticket. [Exhibit N.]
 Q. Were there any Democratic tickets on paper of the same color found in the box when the votes were counted?
 A. No, sir; not one.

MANNING POLL.

Testimony of R. F. Gamble, (page 305:)

- Question. When the ballots were emptied out of the box, did you observe anything suspicious?
 Answer. Yes, sir; on top of the ballots there was a piece of newspaper, and on top of that paper there was a batch of tickets which had never been folded.

Q. This piece of paper and those ballots were on top after the ballots had been emptied?

A. Yes, sir; they came from the bottom of the box, but in emptying the tickets out the box was turned over and they came out on top.

Q. What was done with those tickets?

A. Those which lay on top of the paper were all burnt, with the exception of one.

Q. After those tickets were burnt how many were left in the box?

A. The managers counted 1,033.

Q. And how many people had voted, according to the three poll lists?

A. Only 634.

Q. What was the excess of votes over voters?

A. Three hundred and ninety-nine.

Q. What was done in regard to that excess?

A. Three hundred and ninety-nine ballots were drawn out and destroyed.

Q. After the excess was drawn out and destroyed, did the managers canvass the remaining votes?

A. Yes, sir.

Q. What was the result of that canvass?

A. The whole number of votes counted by the managers of election for member of Congress was 633, of which 459 were counted for M. P. O'Connor and 174 for E. W. M. Mackey.

Q. In voting, what was the course pursued by the Republicans at your poll?

A. Every one came up with his ticket open, and folded it just as he was about to put it in the box.

Q. In keeping your poll list, did you check off the names of each person who voted a Republican ticket?

A. No, sir.

Q. Did anybody keep any list of persons who voted the Republican ticket?

A. Yes, sir; Charles Gamble did.

Q. Was there any understanding between you and Charles Gamble that he was to do so?

A. Yes, sir.

Testimony of C. E. Gamble, (page 309:)

Question. For what purpose in particular were you there?

Answer. To keep in a little book a list of such persons that voted the Republican ticket.

Q. You entered then the names in that book of such persons that voted the Republican ticket?

A. Yes, I did.

Q. While thus engaged how near to the box did you stand?

A. There was placed at the door a table on which the ballot-box sat, and I was on one side of the door near the table facing the box, within about two feet of the box.

Q. From the position occupied by you could you see every person as he deposited his vote?

A. Yes, sir.

Q. How many voters' names did you record in your book as having voted the Republican ticket?

A. Four hundred and thirteen.

Q. Did each of those persons come up with an open ticket?

A. They did.

Q. Did they fold them in your presence?

A. Yes, sir; right at the box.

CALHOUN'S POLL.

Testimony of H. C. Tindall, jr., a supervisor, (pages 316, 317:)

Question. After your arrival did you keep a poll list?

Answer. Yes, sir; I did.

Q. Did you record on that list the name of every person who voted at that poll during the day?

A. Yes, sir.

Q. Did you also enter on your list the name of the one person who voted before your arrival?

A. Yes, sir; Mr. Gallachut gave me the name and I commenced my list with that name.

Q. At the close of the election how many names did you have recorded on your poll list?

A. Seven hundred and three.

Q. How many white and how many colored?

A. One hundred and seventy-one white and 532 colored.

Q. At the close of the poll did you inquire of the managers how many names they had on their poll list?

A. After the votes in the box had been counted, Mr. Millett said: "There are 1,288 tickets in the box;" and Mr. Galachut said: "Well, then, there is an excess of 245, for my poll list only calls for 1,043."

Q. Can you in any way account for the managers having 1,043 names on their list while you had only 703 on yours?

A. I am satisfied that the name of every person who voted was entered on my poll list. I am also certain that 1,043 persons did not vote at that poll.

Q. At the previous election (1878) did you not keep the poll list for the supervisor at that poll?

A. Yes, sir; and the number of persons who voted then was exactly the same as at the last election.

Q. At the election of 1878, was the number of names on your poll list 703?

A. Yes, sir.

Q. When the ballots were counted did you keep a tally?

A. Yes, sir.

Q. According to your tally, what was the number found in the box?

A. Twelve hundred and eighty-eight.

Q. Was that the same number announced by Mr. Millett?

A. Yes, sir.

Q. When Mr. Gallachut announced that there was an excess of 245, what was done?

A. The managers went to work and drew out 245 tickets.

Q. In the drawing out of these tickets could you see the kind of ballots drawn out?

A. Yes, sir; I saw every ballot drawn out.

Q. Was there any attempt to conceal the character of the ballot drawn out?

A. At first it was contended that the ballots must be drawn out without being seen by anybody; but I contended that I was required to report the character of the ballots drawn out, and that unless I saw every ballot drawn out I could not make my report. It was then agreed to let me see them.

Q. How many Republican and how many Democratic ballots were drawn out?

A. Of the 245 votes drawn out, 128 were Republican and 117 Democratic.

Q. After that, did the managers proceed to canvass the remaining ballots?

A. Yes, sir.

Q. What was the result of the canvass for member of Congress?

A. I kept a tally of the votes as they were called out, and the result was 404 for E. W. M. Mackey and 639 for M. P. O'Connor.

Q. In voting what was the course pursued by the Republicans?

A. They came up to the box with their tickets open as they had received them from the man who distributed them, and they held them open until they took the oath, and after taking the oath they folded them and put them in the box.

Q. In keeping your poll list did you check off the name of each man who voted the Republican ticket?

A. Yes, sir.

Q. What number of persons were checked by you as voting the Republican ticket?

A. Five hundred and thirty-two.

Q. Did all the balance vote the Democratic ticket?

A. Yes, sir; 171.

Q. What kind of Republican ticket was used at your poll?

A. A calico-back ticket. [Exhibit N.]

Q. What kind of Democratic ticket?

A. Two kinds, both on tissue paper; one was a white ticket and the other a pink ticket. [Exhibit O.]

Q. Was any Democratic ticket found in the box on paper of the same kind as the Republican ticket?

A. No, sir; not one.

JORDAN'S POLL.

Testimony of Paul J. Mischeaux, (page 327-329,) a supervisor:

Question. Were you present when the poll was opened?

Answer. No, sir.

Q. Why not?

A. It was generally understood that the poll would be held at the school-house, and in order to be there in the morning when the poll opened, the Republicans sat up all night at a place near by. At five o'clock in the morning, an hour before the time for opening the poll, we all went to the school-house and there we met Mr. Davis, the Democratic supervisor, and a number of other people at the fire waiting for the managers to come. In the mean time we sent a man down to the store to find out if the poll had been opened there, but he came back and reported that no poll had been opened at the store. Toward six o'clock the Democratic supervisor, Mr. Davis, left the school-house, and after a while he came back and told us the voting was going on at the store. I immediately went up there and found the managers in a back building in the yard about twenty yards from the store. When I got up there they told me the poll was already open, and I could not inspect the box; they claimed that eighty men had already voted, and yet there were not a dozen men gathered there.

Q. Where was the poll held?

A. In Mr. Spratt's kitchen, within a private inclosure.

Q. What o'clock was it when you got there?

A. About a quarter past six. The managers said the poll had been opened at ten minutes past six.

Q. Did they say how many minutes it had been opened?

A. No, sir.

Q. After your arrival did you keep a poll list?

A. I did.

Q. How many names did you record on your poll list?

A. Five hundred and sixty-six, of which 466 were colored and 100 white voters.

Q. At the close of the election did you compare your poll list with that kept by the managers?

A. I did.

Q. How many names were recorded on their poll list?

A. Six hundred and forty-eight. They had on their list eighty-two names more than I had on mine.

Q. Was the Spratt in whose kitchen the poll was held the same man who was acting as clerk?

A. Yes, sir.

Q. You say they claimed to have 648 names on their poll list?

A. Yes, sir.

Q. When they counted the votes how many ballots were found in the box?

A. Nine hundred and six.

Q. An excess of how many?

A. Two hundred and fifty-eight over their poll list.

Q. In drawing out that excess, could you distinguish the character of the ballots drawn out?

A. I could; when the ballots in excess were drawn out, I stood right alongside of the man who drew them out and saw every ballot drawn out.

Q. Who drew the ballots out?

A. The clerk, Joseph Spratt.

Q. How many Republican and how many Democratic ballots were drawn out?

A. Two hundred and forty-seven Republican and only 11 Democratic ballots. In drawing them out Spratt felt for the Republican ballots.

Q. Did he consume much time in drawing the ballots out?

A. Yes, sir; he took a great deal of time a feeling for the tickets. He could easily tell, by feeling, a Republican from a Democratic ticket.

Q. What kind of ticket was the Republican ticket?

A. A calico or check-back ticket, like Exhibit N.

Q. What kind of ticket was the Democratic ticket?

A. A green ticket, a pink ticket, [Exhibit O.] and a plain white ticket.

Q. After the votes were counted and the excess ascertained and drawn out, what was the result of the canvass of the remaining votes?

A. For Edmund W. M. Mackey 215 votes were counted, and for M. P. O'Connor 433.

Q. In voting, how did the Republicans at your poll deposit their ballots?

A. They came to the ballot-box with their tickets open, and each man kept his ticket open until ready to deposit it, and then he folded it and put it in the box. This occasioned some delay and the managers got angry about it, and asked them to fold their tickets on the outside, but they would not do so.

Q. Did every Republican come to the box with his ticket unfolded?

A. Yes, sir; and folded it in my presence and in the presence of the managers. They were instructed to do so at all of our club meetings.
